This is the puzzling situation as union and management people and economists keeping close tab on the picture agree that the current recovery has not produced improvement in recession-induced employment that came from two earlier postwar recessions.

A recent study by the Federal Reserve Board points up that employment gains most certainly have dragged behind output (production) gains in the current recovery, but it adds:

"The lag, however, has been greater than in preceding postwar recovery periods and the level attained by unemployment has been higher and somewhat more sluggish in its response to rising activity."

"It's true—there has been a pickup in employment," declared Otis Brubaker, director of research for the United Steelworkers of America, as reports trickled in of an upsurge in Pittsburgh and Chicago, at Buffalo and on the west coast.

WHAT'S THE REASON

He cited Buffalo as an example where, at the time of his comments on the situation, between 17,000 and 18,000 were at work in a major steel industry plant in that city.

"At the low period last year, the figure was 13,000 but 2 years ago, at this time, 19,000 were at work.

"This is still a typical picture," Mr. Brubaker asserted. "The employment figures are not at all proportionate to the increase in operating rates."

As production figures spiraled upward, the USW research expert said there was no indication that this much steel was being used—or how much could be attributed to scare buying.

In surveying the lagging employment picture, Mr. Brubaker declared:

"There is no prospect that employment in the first half will go to what it was 2 years ago."

Newer and more modern facilities for production, and utilization of new techniques in the industry, permitting greater output with less people, were cited as reasons for the employment decline.

New techniques would include the new use of oxygen in both the open hearths and in a relatively new basic oxygen process.

"It's just another way of saying they are getting more productivity per man-hour which means simply less people turning out more tonnage," Mr. Brubaker concluded.

NO EXTENSIVE HIRING

William McChesney Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System, in testifying before the Joint Senate-House Economic Committee, said that "since last September, there has been little evidence of any extensive general rehiring of workers other than for seasonal reasons.

"By contrast, in two earlier recoveries, employment stabilized for a number of months after the recession bottomed but once recovery set in, employment increases were not halted until a new peak had been reached," the Martin report disclosed.

Looking ahead, the report said that "if inflationary tendencies can be checked, currently available manpower resources and unused capacity can provide the basis for an extended period of economic growth."

Viewing the current unemployment picture, which saw jobless figures nearing the 5-million mark—highest since 1941—union economists recalled that it was just about a year ago that President David J. McDonald expressed real concern over the state of the national economy in general and for the state of the steel industry in particular.

LOSS IN REAL WEALTH

Mr. McDonald said then that the Nation was suffering a loss in real wealth—goods and services which would have been produced but for the depression.

"Effective action to halt this loss and to eliminate the hardships and sufferings which are the consequences of unemployment in our industry and the economy is overdue," Mr. McDonald declared.

He outlined a nine-point program which would place the Nation on the road to recovery:

1. Federal income tax cut for lower income groups.

2. Eliminate or reduce Federal excise taxes which impede or reduce consumption.

3. Federal raising and extension of unemployment compensation benefits.

4. A broad program of construction and much-needed public works.

5. An expanded Federal housing program.

6. Passage of a Federal school construction bill.

7. Economic aid for distressed areas.

8. Increase the Federal minimum wage to $1.25 an hour and expand coverage of the act.

9. Implementation of the Full Employment Act of 1946 by other appropriate Federal fiscal and financial action.

FULL EMPLOYMENT ANSWER

(A résumé of the points above shows that none has come to pass in the real sense intended. Points 1 and 2 are virtually eliminated for budget reasons; there was some temporary relief on Federal extension of unemployment compensation; construction programs were stepped up in some areas; aid for distressed areas was vetoed, but likely will be revived again this year; and there was no real progress on points 5, 6, 8, and 9.)

President McDonald, arguing for full employment as the answer to recession problems of the Nation, said:

"When we spend money to start the wheels of industry moving again, we increase the real wealth and the real strength of the American economy. * * *

"We particularly want to emphasize the need for taking steps now which will provide the immediate purchasing power necessary to enable Americans to buy automobiles, refrigerators, and other consumer durables, and the need for instituting programs which will permanently increase the real wealth of America by providing schools, houses, and public works, while also releasing purchasing power which will end the current depression."

## Or Could They Really?

EXTENSION OF REMARKS
OF
## HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. WRIGHT. Mr. Speaker, as evidence of the continuing and growing editorial interest in the necessity for a systematic program of national-debt reduction and eventual retirement, I am taking the liberty of including here for the reading of those Members who are interested a further editorial published by the Greenville Piedmont, Greenville, S.C., Tuesday, March 3:

OR COULD THEY REALLY?

Representative JIM WRIGHT, a studious Congressman from Texas, has come up with figures indicating that in the next 28 years interest will be paid equal to the total amount of the present national debt, but Uncle Sam will still owe the whole principal.

That, says Representative WRIGHT, is neither nice nor necessary—in view of which he holds up the bright promise of retiring the national debt over the next 100 years, at an end saving of more than $485 billion.

Mr. WRIGHT would do this simply by paying on the $283 billion principal each year an amount equal to not less than 1 percent of the present debt. By keeping everlastingly at the program, he goes on, year by year both the principal and the interest decrease.

And at the end of a round century the Government is out of the red, and there's plenty of money available for highways, soil projects, water resources and whatever fine things congressmen may have in mind 100 years from now.

Representative WRIGHT's exciting prospectus makes passing mention of the fact that during the last four years the temporary debt ceiling has been extended three times and once raised permanently.

This would have to stop, of course, along with increased spending, more Government services and a lot of the other fiscal business that has been in progress for some time. They are details, however, that could doubtless be worked out.

Or could they?

## Military Aid Folly Too

EXTENSION OF REMARKS
OF
## HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. FEIGHAN. Mr. Speaker, under leave granted, I insert in the CONGRESSIONAL RECORD a very timely, thought-provoking editorial which appeared in the March 4 edition of the Cleveland News. It presents a challenge to Congress which appropriates taxpayers' money to the military for the purpose of national defense.

The incompetence of the military should not be clothed in secrecy. Congress will appropriate ample funds for national defense. However, Congress will not, and should not, countenance incompetence. Those responsible for this incompetence should be identified and relieved of their positions of responsibility. Congress owes it to the taxpayers to explore this program of wanton waste and expose the ineptitude of the military who administered it with such utter disregard for the taxpayers' money, and the purposes for which the appropriations were made.

MILITARY AID FOLLY TOO

All of the news accounts and editorials in this newspaper during the last 2 years exposing the expense, the waste and extravagance permeating United States foreign aid have concerned the economic assistance phase of our so-called mutual security program overseas.

We did not get into U.S. military aid abroad—about three-fifths of the total foreign-aid program annually—because the administration and the Pentagon hid that phase of the program behind an impenetrable veil of secrecy which kept even Congress in the dark.

A House foreign aid watchdog subcommitteeae, however, has just lifted that secrecy veil slightly, but enough to disclose that our military aid is pitted with watefulness and a callous disregard for American taxpayers' dollars which the subcommittee said shocked it.

The subcommittee's findings spell even more trouble for President Eisenhower's 1959 request for $3.9 billion in foreign aid spending than was building up before the House group reported its condemnation of what it learned firsthand about our military aid abroad.

This is illustrative of what it found:

One unnamed U.S. ally—presumably in the Far East—was building planes for the personal use of its officers with facilities this country had provided to keep up military equipment.

A foreign motor pool received enough U.S. tires in 1 year to put 44 tires on every truck in these countries.

American materials intended for military construction were used to build apartment houses for foreign civilians.

Poor recordkeeping by natives of another unnamed foreign country who knew little English tabulated receipt of American goods thusly: "For so many cases of 'this side up,'" One U.S. aid installation had a 185-year supply of ammunition. So it went.

One of the worst aspects of this House report is that after the subcommittee held lengthy hearings on military aid abroad, especially in the Far East, the Pentagon put such a tight secrecy lock on the information that the subcommittee was barred from issuing even a censored transcript of the testimony because the Pentagon claimed it would "reflect unfavorably on our foreign aid administrators and on policies of Allied nations."

This is a fine kettle of fish. Congress appropriates money for all types of foreign aid, yet the Pentagon is powerful enough to bar even a censored transcript of the testimony the House subcommittee heard on our overseas military aid.

It's high time Congress told the Pentagon who's boss in foreign aid funds and to investigate military aid spending as vigorously as it has economic aid expenditures abroad. There is altogether too much secrecy hiding the spending of billions of American taxpayers' dollars annually to foreign countries.

## The National Debt

EXTENSION OF REMARKS
OF
### HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. BROOKS of Texas. Mr. Speaker, our colleague, the Honorable JIM WRIGHT has brought to the attention of the House his proposal concerning the systematic reduction of the national debt.

This proposal was the subject of an editorial in the Beaumont, Tex., Journal, on February 28, 1959, and I would call the attention of the Congress to this article. The Members will note that the writer recognizes, as we all do, the wisdom of all of us paying our debts and reducing the principal and interest at the earliest practicable time and that Congressman WRIGHT's proposal may result in stirring up greater public interest in this problem and in putting the national debt in its proper economic perspective.

I ask unanimous consent that this editorial be printed in the RECORD:

TEXAN SUGGESTS SOLUTION TO NATION'S GREAT DEBT PROBLEM

In Texas, where there is room for a man to back off and take a long-range look at anything, it is possible to make a mountain shrink to the size of a mole hill.

That, in a visual sense, is precisely what Texas Representative JAMES C. WRIGHT, Jr., would have Congress do for the mountainous national debt. He suggests pushing it off 100 years into the future and, by simply applying a little downpayment each year, reduce it to nothing.

The Wright gimmick is this: Congress would tell the Treasury Department to set aside each year 1 percent of the present national debt of around $285 billion to pay off the principal of the debt. This annual payment would amount to about $2,850 million a year. This would reduce both principal and interest and completely wipe off the debt 100 years hence.

As it is now, the Government (the public) is paying more than $8 billion a year in interest without making any dent at all in the debt itself. Representative WRIGHT figures that with interest rates rising the Government may soon be paying nearly $10 billion a year in interest. At this rate, the Government will have paid in 29 years the total amount of the debt and still owe every dime of it.

His proposal would be costly, of course. The debt would be retired at the end of 100 years after $495 billion in interest and $283 billion in principal had been paid, or a total of $778 billion.

This staggering sum shrinks in comparison with the cost of no payment at all on the principal. WRIGHT says if this course is taken the interest bill alone for 100 years will be $980 billion, leaving the principal at $283 billion. Together, they would total $1,263 trillion.

All this is based on the assumption that the cost of running the Federal Government will stand still and stay put for 100 years. It has not been doing that in the past. Instead, it has been steadily rising.

It is unlikely, the need for money being what it is, that Congress will give the Wright proposal serious consideration. But the long-range look puts the costly mountain in proper perspective and may result in stirring greater public interest in perhaps the Nation's greatest roadblock to economic stability.

## The Right Reverend Monsignor Thomas Plassman, OFM, Former President of St. Bonaventure University, St. Bonaventure, N.Y.

EXTENSION OF REMARKS
OF
### HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mrs. St. GEORGE. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD the following article which appeared in the February 13 issue of the Olean Times-Herald, Olean, N.Y., concerning the death of the Right Reverend Monsignor Thomas Plassman, OFM, who for 29 years was president of St. Bonaventure University, St. Bonaventure, N.Y. The St. Bonaventure Alumni Association had planned to request the late Honorable Daniel A. Reed to insert this article in the RECORD. He and Monsignor Plassman had been close friends for many years. I am glad to do this in memory of my very dear friend, Dan Reed:

FORMER BONA PRESIDENT DIES IN OLEAN HOSPITAL

OLEAN, Feb. 13.—Father Tom is dead.

Thousands of alumni of St. Bonaventure University today mourned the Right Reverend Monsignor Thomas Plassmann, OFM, whose death at 10:45 this morning in St. Francis Hospital terminated a 46-year association with the Catholic educational institution. He had been a Franciscan priest nearly 61 years. He would have been 80 years old on March 19.

The internationally-known Franciscan educator was St. Bonaventure's president for 29 years, rector of Christ the King Seminary about 7 years and instructor on the college faculty for 10 years.

He joined the faculty as an instructor in 1910 and became president in 1920.

INFLUENCE CITED

He was away from the campus only 3 years while serving as provincial of Holy Name Province from 1949 to 1952. He returned in the latter year to head Christ the King Seminary.

Father Thomas exerted a deep influence on many generations of collegians and seminarians. His fighting spirit, magnetic personality, and friendly manner inspired students and faculty members alike.

Regarded as one of the Nation's great Catholic educators and scholars, Father Thomas spoke 18 languages and dialects. He understood nine other dialects.

His linguistic ability was acquired in student days. After 5 years in Catholic University, Father Thomas traveled to Egypt, Mesopotamia, Ethiopia, and Arabia in his efforts to trace the roots of Semitic languages.

SUPERVISED CONSTRUCTION

The ability of Father Thomas as an administrator helped him to overcome terrific odds. The college was hit by fire May 5, 1930. Flames destroyed the monastery, seminary, and church.

The fighting spirit of the president saw the disaster as a divine invitation to rebuild on a bigger scale. He collected funds and supervised construction of new dormitories, a chapel, classrooms, laboratories, a dining hall, gymnasium, stadium, library as well as a parish church for the village of Allegany.

He had served the Order of Friars Minor as Superior of the Franciscans on the faculty, as Visitor General to Canada, Mexico, and postwar Germany, as perfect of studies of Holy Name Province. He was responsible for the founding of Siena College at Albany. He served as provincial of Holy Name Province from 1949 to 1952.

BORN IN GERMANY

Born March 19, 1879, in Avenwedde, Germany, the son of a Westphalian woodchopper, the boy who was to become a university president completed elementary studies in his home village.

When he was 15 years old, the future priest crossed the stormy Atlantic to join the Francisan Friars in their U.S. missions. He was assigned to St. Francis Solanus College, now Quincy College, at Quincy, Ill. He had been baptized in Avenwedde as Bernard Plassmann. In 1898, when he entered the Fran-

ciscan Order at Paterson, N.J., he received the religious name, Thomas.

ORDAINED IN 1906

Father Thomas made his simple profession of vows at Paterson, September 15, 1899. Three years later, he made solemn profession while matriculating at Catholic University.

He was ordained priest at Washington, June 9, 1906, by Archbishop Diomede Falconio, then Apostolic Delegate to the United States. He received his Ph. D. in 1907 at Catholic University and his S.T.D. at Apollinaris, Rome, in 1909.

He arrived at St. Bonaventure in the fall of 1910, at the age of 31, fresh from his European and Asiatic studies. He soon was teaching oriental languages, hermeneutics, Exegesis, sacred scripture, dogmatic theology, and patrology. He sang in the choir and played in the band. He served as vicar and guardian of the monastery.

During his teaching years, he completed his thesis "The Signification of Beraka" (the Jewish benediction), highly regarded by philologists. A printer was found in the parish who could set the Hebrew and oriental letters in the work.

PRESIDENT AT 41

At 41 years of age, Father Thomas became president of St. Bonaventure.

One of his famous projects was the Bonaventure Railroad. An old trolley line which served the college had expired. Father Tom bought a leaky old steam locomotive, had it painted brown and white, his school's colors, and operated it between the campus and Olean, hauling carloads of fuel and food.

Once at a railroaders' banquet, the college president bragged to executives of the Pennsylvania & Erie: "My railroad may not be as long as yours, but it certainly is just as wide."

FOUNDED ACTION AWARD

Father Thomas in 1931 founded the Catholic Action Medal awarded each year to an outstanding layman. The first was presented to former Gov. Alfred E. Smith.

In 1946, Father Thomas donned the uniform of an auxiliary chaplain in the U.S. Army and investigated postwar Germany, helping to repatriate German prisoners of war.

Crowning a long list of honors, the Cross Pro Ecclesia et Pontiface was conferred in 1956 on Father Thomas by his holiness, the late Pope Pius XII. The rare papal decoration was presented by the Most Reverend Joseph A. Burke, bishop of Buffalo, during the celebration of Father Thomas' golden jubilee.

Father Thomas held six honorary degrees. He was a former president of the New York State Association of Colleges and Universities and the Catholic Bible Association.

MEMBER OF REGENTS

Father Plassmann was founder of the Franciscan Educational Conference and its president 38 years.

He was president of the Seminary Department, National Catholic Education Association; president of the Association of Colleges and Universities of New York State, head of the Catholic Historical Association and member of the State Regents College Council.

A poet at heart, he loved to write in what spare time he could find. He was the author of spiritual works such as "The Priest's Way to God," "The Seven Words of Mary, From Sunday to Sunday," "The Upper Room," "The Radiant Crown of Glory." He contributed scores of articles to periodicals and to the Catholic encyclopedia.

BUILDING HIS MEMORIAL

He spoke Hebrew, Syriac, Latin, Greek, Ethiopic, German, Spanish and Italian languages as well as a number of biblical and oriental dialects.

He had been president and consultor to the Catholic Biblical Association and was on the editorial board for the Confraternity of the Douay Bible.

The university's new $1 million arts building, Father Thomas Plassmann Hall, was dedicated to Father Thomas October 7, 1958, as a living memorial.

Surviving are a brother, Johannes Plassmann, of Avenwedde bein Gueterloh, Westphalia; and a sister, Sister Maria, a member of the Sisters of the Poor of St. Francis, Rechlingshausen.

One of his nephews is the Very Reverend Hugo Plassmann, OFM, procurator of the Franciscan Order, with headquarters in Rome, Italy. Other nephews are Otto, Hans, Hermann, Bernhard, Ernst and Joseph Plassmann, and three nieces, Catherine, Elizabeth and Maria Plassmann. Nephews and nieces are the children of Johannes and Margarita Plassmann, of Westphalia.

## Wage Rates and the General Welfare

EXTENSION OF REMARKS

OF

### HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. MICHEL. Mr. Speaker, inflation is not a condition which springs from nowhere. Its seeds are sown by the Government itself when we overspend our income. Once the seeds propagate and take root, we find many forces at work nurturing the spiraling vine, not the least of which is the demand for higher pay without a corresponding increase in productivity.

Dr. Wilford I. King, the nationally known economist and statistician; former adviser to the U.S. Public Health Service, the Department of Agriculture, and the Bureau of Census wrote me a few days ago relative to my personal interest in the workingman, pointing out that his real friends are those who insist on keeping the Federal budget balanced and our currency on a sound basis.

I should like, Mr. Speaker, to have reprinted at this point one of Dr. King's recent articles entitled, "Wage Rates and the General Welfare." Dr. King aerates several fallacies concerning proposed actions which are supposed to benefit the wage earner.

WAGE RATES AND THE GENERAL WELFARE

(By Willford I. King)

Aside from inmates of institutions, it would be difficult to find residing in the United States any person whose economic well-being is not affected materially by the currently existing rates of pay for human services. Of the 62,907,000 persons constituting in 1958 our Nation's employed working force, some 46,096,000, or more than 73 percent, are estimated by the Bureau of the Census to have been in that year clerks or wage earners. Their reason for having a vital interest in the wage-rate question is obvious. Usually, each is most intensely interested in his or her own rate of pay, and naturally, as a rule, the higher the rate, the better is the recipient pleased.

However, it does not necessarily follow that, in a given occupation, the highest obtainable rate of pay is the one which benefits most the employees working in that line. Why not? The answer is that, in the case of any type of labor, just as in the case of any other good, the volume thereof which can be sold depends upon its market price. It follows that, if the price is low enough, the total available supply can be marketed. On the other hand, the higher the price asked, the smaller the potential sales volume. In the case of labor, this means the larger is the percentage of unemployment.

So, when a labor union pushes up the wage rates in a given occupation to levels decidely higher than those which would offer employment to all competent workers in the field, the results are, of course, regarded as highly meritorious by those workers who retain their jobs, but, on the other hand, they may be disastrous for those whom they throw out of employment. And, nowadays, when public unemployment insurance to aid the idle is in vogue, the upgrading of the wage casts a heavy burden upon the taxpayers who support the unemployed.

One of the lines of propaganda put out by some of the union leaders responsible for forcing wage rates up above the level permitting full employment of the available working force sets forth the claim that raising wage rates, by increasing the buying power of the recipients, strengthens demand for the products of industry, and thereby generates prosperity.

If this were the actual result of pushing up wage rates, asking for a 5 or 10 percent increase would seem to be the height of folly. Why not call for a 50 or even a 100 percent raise and thereby bring on a first-class boom?

Unfortunately for the proponents of the just-mentioned theory it disregards completely the obvious fact that, in the absence of increased production, every million dollar increase in the income of the wage workers, reduces the incomes of the employing concerns and their stockholders by a million dollars, the result being that aggregate purchasing power is not elevated in the least. The notion that it can be thus increased is, indeed, no more logical than is the idea that it is feasible to lift oneself by one's own bootstraps. However, so strong is the influence of wishful thinking that the obviously fallacious nature of the theory is ignored by great numbers of union members and sympathizers.

Those leading the battle for ever-higher wage rates commonly imply in their propaganda that workers' gains resulting from wage advances, if not derived from enlarged production, come, as a rule, primarily out of the pockets of the over-paid officials and the other bloated plutocrats who are assumed to own most of the stock in the company under consideration.

As a matter of fact, however, the amount of wage advances which could be extracted from these sources, even if they were completely absorbed, is decidedly limited. Thus, the U.S. Statistical Abstract shows that, in 1956 (the last year recorded), in the case of the steel industry, a 24 percent advance in the pay of the wage workers would have absorbed all of the salaries then paid to both officials and clerks employed in that field. On the basis of the United States Steel Corp. reports, it appears that with steel prices rigid, a further advance of around 15 percent in wage rates would have eliminated all possibility of dividend payments by that concern. It follows that, if the steel companies had failed to raise the prices of their products, had cut off all salaries and dividends, and had been able to continue operations on the 1956 scale, they could have raised the pay of their wageworkers only around 39 percent. But U.S. Bureau of Labor Statistics reports show that, in the period between January 1950 and December 1956—a mere 7 years—average hourly earnings in the steel industry ran up 56 percent. Since, obviously, no industry can operate without a managerial and clerical

force, and since the stockholders would vote to elect new officers if the company never paid dividends, it is clear that, under existing conditions, wage advances of the magnitude occurring in industry in recent years must either be largely offset by greater productiveness on the part of the average wage-worker, by advances in the prices of the products sold, or by both.

And the notion that the salaries and dividends paid out by corporations go mostly to plutocrats is far indeed from the truth. Not infrequently, of course, salaries of clerical workers are lower than the earnings of the wageworkers, and such clerical stipends make up a sizable fraction of the total salary bill.

Furthermore, according to Keith Funston, president of the New York Stock Exchange, two-thirds of all stockholders have incomes under $7,500 per annum—scarcely a plutocratic figure. Of course, many of these are less prosperous than the upper-bracket wageworkers. And, as he puts it, "In addition, some hundred million Americans are indirect share owners through their investments in insurance and pension programs, banks, and other financial institutions which own stock." It goes without saying that a large proportion of these indirect investors in stocks are wageworkers or their dependents.

Indicative of the breadth of stock distribution which may characterize a large company is the case of the United States Steel Corp. as shown in its annual report for 1957. The stock of this company, which, in that year had on the average 271,037 employees, was held in 294,608 accounts, of which 139,668 were owned by women, 103,390 by men, and 51,530 were in joint ownership. No individual share owner held as much as two-tenths of 1 percent of either the common or the preferred stock.

Since, as indicated above, when unions push up wage rates faster than production increases, it is usually impracticable to impose any considerable fraction of the added cost of products upon either the salary recipients or the stockholders, it follows that most of the burden must be borne by the consumers of the products of the industries affected by the wage advance.

But do wage costs play an important or only a minor role in determining the total costs of most industrial products? Apparently, the easiest way to answer this question is to refer to the estimates made by the U.S. Bureau of the Census. Its figures indicate that, in 1956, while the proportion of the value added by manufacture represented by the wages of production workers varied from industry to industry, running, for example, from only 20 percent in the chemical and tobacco manufacturing fields to 42 percent in the steel industry and 52 percent in the making of textiles, the average for all manufacturing was 37 percent. And, if one is to gain a clear picture of the overall influence of the wage factor upon the prices of the final products of the manufacturing industry, he must not overlook the fact that wages play an equally important role in the cost of the materials used in making the final products, and also in that of the materials employed in producing those materials—and so on indefinitely. The evidence indicates, indeed, that, in toto, wage costs constitute the major part of the expenses involved in the production of most kinds of consumption goods.

Such being the situation, the conclusion must be that any wage advances unjustified by growth in production or increases in the price level, penalize decidedly not only those workers whom they cause to lose their jobs and the taxpayers who become their supporters, but also impose undue burdens upon the consuming public—an aggregate which includes practically all wage workers and their families and that, therefore, such wage advances are in conflict with the public weal.

## Economic Facts Significant to Agriculture in Maine

EXTENSION OF REMARKS
OF
## HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. McINTIRE. Mr. Speaker, there is considerable controversy over food costs and price spreads, and the consumer is many times inclined—without justification—to point an accusing finger at the farmer whenever there is an increase in food costs.

For the purpose of placing this matter of food costs in proper perspective, I am submitting to the RECORD a report prepared by the Maine Extension Service:

STATE OF THE ECONOMY

Recovery from recession is proceeding according to schedule except—and this is a pretty big except—the pickup in employment is lagging pretty badly.

The problem is that factories are rehiring only about 1 in 4 of the numbers laid off. Factory workers dropped 1.7 million while business was dropping. Since improvement set in the number had increased only 465,000 up to December. Most of the increase in production is the result of improved plants, machines, and their use, together with a little increase in hours worked by those who were on a part-time basis.

The figure for the unemployed in the country was 4.7 million recently—a still serious problem.

The crop in factory employment isn't new. The number of factory workers in the country had been decreasing even before the depression. The cut to the 5-day week and the 8-hour day hasn't stopped it.

What has been happening is that our increase in number of workers is in what is called the services—all the way from taxi drivers and store clerks to doctors, lawyers, and so on. They include well over one-half of all workers now. The number engaged in farming, mining, and factory production altogether adds up to well under one-half our employed.

One of the problems that comes with our mounting efficiency is where to find jobs for all the extra workers.

Some talk of the 4-day week, but few want it. It's easier to work than to stay home and mind the baby. And with a 4-day week or a 7-hour day many more would be holding two jobs and destroying the effectiveness of the further shortening of the work week from the job creating standpoint. And how to keep people out of mischief with all that time on their hands?

Seriously, we have the problem ahead of what use to make of the labor that increasing efficiency frees—what use will be of greatest advantage to the people of this country. And then how to get that use made within our free economy system.

To the farmer working over-hours and often plagued by the difficulty of hiring any labor that is at all effective this often seems a nasty sort of joke. From this standpoint the problem won't be solved until farm prices are such that he can pay competitive wages and earn a comparable living while working more or less the same hours as other people.

THE WIDENING SPREAD

This is about price figures—not human figures. When you stop to think about it, it isn't strange that the spread between what the primary producer gets for an article and what the consumer pays at retail keeps getting wider.

That's where our increasing employment—some of it goes—into what is done between the first producer and the consumer. For food, for instance, there is more and more processing. A great part of the food is sold almost ready to eat, now. And packaging has become a fine art. Some food is so wrapped up that it is getting to be a problem to ever get at it to eat it. But it looks pretty.

Then we haul the food around more. Not only does more of it come from far-distant places—sweet corn from Florida, lettuce and potatoes from California, apples from Washington, and so on ad infinitum—but even nearby products we haul farther. The route for Maine lettuce to Maine shore resorts is often via Boston or thereabouts. Even milk is hauled miles and miles in and back again, with processing en route.

A recent official report shows that the costs of all these things combined have increased as fast as the spread between producer and consumer has widened. It isn't a case of exorbitant profits anywhere along the line, usually; it's just piling on more handling and more costs.

FOOD COSTS

It cost what is supposed to be the typical American city family $58 more for food last year than the year before, or would have if they had eaten the same things as they did the year before. Of that $58, farmers got $26; processors, wholesalers, retailers, etc., got $32.

Food costs are supposed to be a little lower this year. If they drop, the farmer will lose his $26, maybe more; the others will keep their $32, or most of it, anyway. At least, that's the way it usually works. The handlers will have increased their costs—and their costs are usually covered by their returns. Th farmers' costs don't get that protection. Here are figures on the cost of that typical family's food supply for a year:

| Year | What the farmer got | What the handler got | What the family paid |
|---|---|---|---|
| 1947 | $467 | $444 | $911 |
| 1948 | 497 | 485 | 982 |
| 1949 | 435 | 493 | 928 |
| 1950 | 432 | 488 | 920 |
| 1951 | 497 | 527 | 1,024 |
| 1952 | 482 | 552 | 1,034 |
| 1953 | 445 | 558 | 1,003 |
| 1954 | 421 | 565 | 986 |
| 1955 | 395 | 574 | 969 |
| 1956 | 390 | 582 | 972 |
| 1957 | 401 | 606 | 1,007 |
| 1958 | 427 | 638 | 1,065 |

There are a lot of morals here if you want to figure them out.

For one thing, the city buyer who is mad at the farmer because of the high cost of food obviously is shooting at the guy who is not to blame. Even at last year's prices, the farmer was selling him his food cheaper than in the old days. And, more than that, drops in farmers' prices do not seem to do the consumer much good. He paid the farmer $55 less last year than in 1952, for instance, but his food bill was $31 more.

If Mr. Consumer feels like shooting anybody he had better aim at the system or his own demands for more services if he makes them. Any individual along the line has a good alibi. He is only getting back cost plus a moderate profit.

THE PRESENT STATE OF U.S. AGRICULTURE

In January the U.S. farm parity ratio reached slightly the lowest point since before World War II. Those big words mean that what the average U.S. farmer could get for the average farm product would buy a little less than in any time in the last nearly 20 years.

The situation is more the result of climbing prices of what the farmer buys than of dropping prices of what he has to sell. The prices he pays have gone up 2 percent on the average in the last year.

He now has to pay $2.98 to get as much of what he needs or wants as he could get for $1 way back in these old 1910–14 years. Two dollars and ninety cents would turn the trick a year ago.

Looking ahead the opinion seems pretty general that average farm prices will work downward this year.

The commodity doing the most to hold them up has been meat. Last fall's pig crop was 17 percent more than the year before. An increase of 13 percent is expected in the spring crop. Increased marketings are expected to lower prices at least moderately.

## Military Prowess Depends on Economic Strength

EXTENSION OF REMARKS
OF
### HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 11, 1959*

Mr. MINSHALL. Mr. Speaker, our Nation is urgently concerned with maintaining both its economic and its defense strength. Weaken one, and we automatically damage the other. If our economy is forced to forever bow to unlimited and unrealistic defense planning, we will no more survive as a Nation than if we sacrifice national security to fiscal parsimony. As a member of the Defense Appropriations Subcommittee, intimately involved every day with the ledgerbook details of our defense program, I was highly gratified to see the military aspect of the 1960 fiscal budget presented with clarity and restraint in this morning's Wall Street Journal. The editorial follows:

[From the Wall Street Journal, Mar. 10, 1959]

DEFENSE AND DEFICITS

Some people in Congress reportedly fear that the administration is putting its goal of a balanced budget next fiscal year ahead of its defense needs to deal with the Berlin problem.

This would be a very serious matter if it were true. In a war situation it cannot be reasonably argued that the budget should be balanced to the exclusion of other considerations, and Berlin could conceivably become a war situation. But does it follow that the United States now faces the alternatives of a balanced budget with inadequate defense or more deficits to get adequate defense?

In the first place, the United States is militarily prepared as never before in a situation short of war. According to military experts, we have the power to knock out the Soviet Union not once but several times over. President Eisenhower is apparently convinced that at this time we have the stuff to handle any contingencies that may arise out of the Soviet squeeze on Berlin. And Soviet knowledge of this great American retaliatory power, plus our determination to use it if necessary, is one of the best reasons for believing that the Kremlin will not push the Berlin issue over the brink into general war.

To be sure, military planning cannot be based primarily on what we assume to be Soviet intentions, and ours is not. It is always possible that Khrushchev is so bemused with Soviet scientific progress that he is capable of a fatal error of judgment. And that danger is one reason why we have such large and costly defense forces in being.

Moreover, to increase our forces unnecessarily at this time might actually make matters worse. When a nation is dealing with aggressors, it is important to be strong and firm and clear; it is also important, however, to be wary of actions that could be construed as belligerence.

But the question of how much defense is enough is one that can never be easily or dogmatically answered. Suppose it could be demonstrated—which no one has yet done—that the United States should start spending another several billions on the Military Establishment in the light of the Berlin mess. Would that mean that the forthcoming budget would have to be automatically unbalanced?

Spending for the Pentagon, nearly $41 billion in the next budget, is the biggest single Government expense, and has been for several years. But the cost of defense is not what has mainly brought total Federal spending to such towering heights in those years; the rise in Federal spending for civil benefits, including a lot of dubious and wasteful spending, has been much greater. So if Congress really believes more is needed for defense, the right way to get it is not by red ink but by curtailing these nonessential activities.

Why is it so important to balance the budget, at a time when we are faced with this danger from Russia? Part of the answer is that we are almost certainly going to face such periodic Kremlin-created crises for many years to come. If we go deep into deficits every time one comes up, we will seriously undermine the economic strength on which our military prowess depends.

The President is said to believe the Soviets may be trying to get the United States to spend itself into bankruptcy. It is not a new thought, but it is an eminently sensible suspicion. And it could happen, unless we finally decide, after nearly 30 years of damaging and almost constant deficits, to restore discipline to the management of our affairs. That is exactly what Mr. Eisenhower is trying to do.

So we think that those who criticize the administration for sticking to its budget proposals despite the times are posing unreal alternatives. The real alternatives are not a deficit in the budget or else a deficit in defense; the alternatives are irresponsibility or responsibility.

## Comments on the Extension of the Draft

EXTENSION OF REMARKS
OF
### HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of my colleagues an editorial which appeared in the St. Louis Post-Dispatch of Sunday, February 8, 1959, "The Draft Is Outmoded":

THE DRAFT IS OUTMODED

If the Armed Forces are to have the newest and best weapons that science and industry can provide, they should have men who are fully qualified to use them. Therein lies a manpower problem. A vastly improved National Defense Establishment could be had if a way were found to solve this manpower problem, the crux of which is the draft. The draft simply is not supplying the type of recruits that are needed, nor is it fair to the youth of the land.

As matters stand right now, military conscription is necessary until some better substitute can be devised. The draft inspires many to volunteer so that they can pick their own branch of service as well as the time they want to begin serving. If there were no draft, there would be insufficient volunteers. This is proved by the fact that during 1948–49 the armed services tried to maintain a combined force of less than 2 million men without draft quotas, and failed miserably.

There is little chance to devise a substitute for the draft between now and June 30, when the law will expire unless extended. It seems certain to be extended. The House voted last Thursday, 381 to 20, to extend it for 4 years.

Why would it not be wise to extend the bill just for 2 years, and during that time have a joint congressional committee, or a civilian-military committee, study the manpower problem seriously in an effort to reach a solution?

A good long look at the draft and how it has been functioning is badly needed. The Army is the only service using the draft. In recent months it has called about 8,000 men per month; less than 7,000 are inducted for the 2-year period of duty. About 90,000 sign up annually for a 6-month period of service followed by 5 years in the Reserve or the National Guard. Thousands of others volunteer for duty in the Air Force, Navy, Marines, and Coast Guard, which do not depend on draftees.

Some 1,200,000 youths come of military age every year. According to the Pentagon, some 660,000 persons enter the services, only 180,000 being inductees. Thus the chances are excellent the vast majority of the class that attains military age every year will not see service. That is not fair to those who are drafted or who volunteer.

Reference is sometimes made to the military pay increase bill which was passed last year by Congress after it had somewhat watered down the Cordiner report which stressed the need for better pay to keep the best men in the service. The matter of higher pay begs the question for those who enter in the lowest ranks. And even the higher pay now permitted is not sufficient to retain many of the very best and most badly needed men.

Surely a group of men such as those who turned in the Rockefeller and Johnson committee reports should be able to find a better solution to the manpower problem. The draft, as it stands now, is badly outmoded in this era of atomic-powered submarines, radar, ballistic missiles and space satellites. A thoughtful study to devise a space-age substitute is needed.

On March 3, 1959, I appeared before the Senate Armed Services Committee to testify on the very serious question of the extension of the induction provisions of the Universal Military Training and Service Act. A statement of my views on the subject follows:

STATEMENT OF HON. THOMAS B. CURTIS, OF MISSOURI, BEFORE SENATE ARMED SERVICES COMMITTEE, MARCH 3, 1959

Mr. Chairman, I appreciate the opportunity to testify before this committee on the very serious question of the extension of the induction provisions of the Universal Military Training and Service Act.

This act had a difficult birth and its life has been a strange one. If anyone doubt it let him ponder over its title. It is probably neither universal, military, nor training. It is theoretically a draft act, as it is popularly called.

I would like to review the legislative birth of this act from the time it received its undescriptive title if I had the time. Instead I will refer to the remarks I made on the floor of the House during various debates upon it. The first, April 3, 1951, pages 3220–3222 of the CONGRESSIONAL RECORD; April 12, 1951, pages 3786–3787; February 29, 1952, pages 1674–1678; May 17, 1955, pages 6497–6498, and stress the highlights.

Before doing this I would like to refer to the testimony I gave before the House Subcommittee on Education and Labor which reported out its version of the National Defense Education Act of the last Congress, an act which also does not live up to its title.

I quote: "Before Congress undertakes to extend the Federal Government's authority in the field of education it is essential that it thoroughly appraise the Federal Government's present role in this important area to determine whether its role is proper and conducive to the growth and stability of the educational system. Regrettably, this appraisal has not been made to any great extent to date. I am convinced that the greatest damage that is occurring in our educational system today stems from the role of the Federal Government during the past 8 years.

"Under the guise of a peacetime draft law the Military Establishment has effectively disrupted for the past 8 years the education and training of every youth in America. Even those who have not been drafted have had their plans disrupted by uncertainty. Those who have been drafted include potential teachers, engineers, scientists, and indeed any potential professional man or technician who have had 2 to 3 years taken out of the most crucial periods of their education. Their time has been devoted to largely sitting on their hands in a military uniform. If the military utilizes the peacetime draft system for its intended purpose, i.e., acquiring the personnel needed to carry out its functions, it would be an entirely different matter. Unfortunately, the peacetime draft law is being used to carry out the specious, impractical, and rejected philosophy that 'every American boy should have military training.' I say rejected philosophy because the Congress rejected the Military Establishment's request for universal military training. It was rejected, in part, because the military could never define by curriculum or even in general terms what constituted military training. During the debates on the various bills, members of this Committee on Education and Labor raised the point that if the bill really was to be a training bill it should be referred to the Committee on Education rather than to the Committee on Armed Services. Members of your committee warned, and I joined in that warning, that UMT would badly damage our educational system. I charge that the peacetime draft has been perverted in its use to a quasi-universal training program and indeed it has badly damaged our educational system and is continuing to do so.

"The first step that should be taken by this committee is to examine into this charge to see if it is substantiated. If it is, then it should recommend to the Congress what steps must be taken to require the Military Establishment to carry out the intention of the peacetime draft law and not subvert it. Such positive action should bring positive results, to wit: (1) We would improve our educational system, particularly in the area of scientists and technicians; (2) we would improve our defense strength because we would be getting our men trained in military science back to the jobs they are trained for and away from education for which they are not trained; (3) we would save billions of dollars that are presently being wasted on inadequate training and usage of personnel.

"In the 1920's and 1930 the American Legion sponsored a universal military training bill that was based upon an extension of the high school ROTC program. It had proved quite effective in training men for wars like World War I and to some degree World War II. The basis of this plan was the proper utilization of the educational facilities already existing in the society, rather than an attempted duplication of these facilities in the military.

"The need in modern warfare for technical skills, as opposed to close order military drill skills indicates that we should be utilizing the educational facilities that exist in the society in the field of vocational education, instead of having the Military Establishment duplicate them at the cost of billions of dollars.

"We achieve at least three things by following a program based upon utilization of the educational plant already in existence, to wit: (1) We get better trained technicians; (2) we get these technicians at one-tenth the cost; (3) we work with rather than foul up the civilian educational system.

"Fortunately, this is not a matter of theory. It is a matter that was proved conclusively in World War II by the Seabee personnel procurement system. To illustrate, the Seabees needed bulldozer operators. They did not take 18-year-old boys with a couple of weeks boot training camp experience and send them for a few months to a bulldozer operating school set up by the Navy. Instead they offered enlistment opportunity with a suitable rating to the experienced bulldozer operators in the civilian society and accepted them even though they were fat and 40—if they really knew how to operate a bulldozer. The accomplishment of the Seabees in World War II is fabulous and resulted essentially from this personnel system.

"The Seabee formula was abandoned when the war was over. The Navy now operates a bulldozer operators school and takes young men, whether they want to be bulldozer operators or not and sends them to this school for a few months. The results are obvious: (1) You don't have a very good bulldozer operator; (2) after the enlistment period is up the man involved may or may not take a civilian job operating a bulldozer * * * likely not * * * so the skill is lost * * * (the Reserve program has not been carried out successfully to retain these skills); (3) the cost to the Navy of running the school is considerable; (4) the talents of the naval personnel who run the school are taken away from the fields where they could be efficiently utilized."

Unfortunately the House Subcommittee on Education and Labor did not make the studies I recommended. No committee in the Congress or executive agency to my knowledge has made such studies. Yet the truth of my basic observations is borne out by our common experiences and requires some pretty strong evidence to rebut.

The reason I am before this committee in the Senate is because the House Armed Services Committee made no study into these important charges. In hearings covering a period of 4 days and lasting only 7 hours and 13 minutes according to the committee's own records the extension of this draft act was passed out unanimously by the committee. An examination of the hearings demonstrates that it received the most cursory type of study. Not one educator testified. Not one person in the field of technical training testified. The testimony was exclusively that of representatives of the armed services and various church and other groups who were concerned with the spiritual aspects of the draft law.

I am concerned with the efficacy of the draft law in providing the type of defense this country needs. Not so strangely the most efficacious measure to provide the strongest defense happen to be the least costly. A fat man never could fight with efficiency and a fat Military Establishment can't fight any better.

The speeches I referred to in my opening remarks give sufficient detail to follow up the points I shall now state. If this committee undertakes to make a real study of these points I should be happy to supply to your committee staff the many reference books and other materials I have accumulated on this subject, hoping that some day some committee or even executive commission would undertake this important study.

The points:

1. An enlistee is considerably more valuable than a draftee. Enlistees are obtained by making the military service as attractive as possible.

2. Draft laws are necessary if there are insufficient volunteers. Yet relying on the draft law to meet personnel needs tends to weaken the efforts to attract volunteers. It is like getting used to relying on a crutch.

Therefore, drafting as a basis for getting personnel should be abandoned just as soon as possible. Indeed, it should be abandoned on a trial basis—just as a crutch should be abandoned—to see if a system of attracting volunteers will not work. And to test different methods of attracting volunteers.

3. To defend our way of life without having the very defense we set up destroy our way of life we must rely on a small standing military force backed by Ready Reserves:

(a) To make a Reserve system work the regular Military Establishment must try to make it work. One good test of whether they have tried to make it work is whether they are in a position to testify in detail as to why it does not work. The testimony of the leaders of our Military Establishment over a period of years on the inadequacies of the Reserve and National Guard systems demonstrate beyond much doubt to one who looks a little beneath the surface that they have not tried to make either system work.

4. Modern warfare (even the World War II variety) requires 90 percent noncombatant skills and of these noncombatant skills an increasing proportion are technical skills:

(a) Most of these skills have their civilian counterparts and these civilian type skills are readily adaptable to their military counterparts.

(b) The civilian educational system, including the vocational, trade, industry, etc., schools, has the specialists in the field of education and training.

(c) The leaders of the Military Establishment are specialists in the field of military science. Military science is a different field from education and training.

Therefore, the 90-percent noncombatant skills needed by the Military Establishment should be taught through the civilian educational system. The 10-percent combatant skills should be taught by the Military Establishment.

Corollary: The 10 percent needed for combatant duties could undoubtedly be procured through volunteer enlistment, particularly if the bright uniforms, medals, honors and veterans' benefits were reserved for this group.

Corollary: The 90-percent noncombatant skills could be procured through voluntary enlistment inasmuch as the men would be moved by the greatest incentive there is to be employed in skills they know and like.

5. A–1 physical specimens are not needed for noncombatant skills. A one-legged man can be a stock clerk. A midget an airplane mechanic. Only one thing seems to serve as a check on utilization of personnel with physical limitations: the cost of veterans' benefits. But if veterans' benefits are reserved for combatants this problem is eliminated.

6. Military law and discipline is required for combat and those who might be in combat. It is not the best or most efficacious

system for utilizing noncombatant skills.

The Code of Military Justice of World War II evolved from centuries of battle experience was found to be inadequate when applied to the 90-percent noncombatant personnel. Without appreciating the fact that the error lay in trying to apply a system of discipline and law in an area where it was inappropriate we junked this time-tested code for a watered-down code which is no longer effective for combatant activity and doesn't do very well in the noncombatant area.

We should take a new look at the code for military justice. Set it up for combatant activities and combatants and withdraw it from noncombatant activities.

In other words, there is no sense in putting a military uniform on a Pentagon clerk. In fact, we cut down on the ability to recruit good clerks by subjecting them to military law.

7. A thorough job analysis of the technical skills needed by the Military Establishment should be done. At the same time an inventory of the civilian counterpart skills should be taken. Match the two groups to determine what may be lacking and set up an incentive system to encourage the training and the enlistment for training through the civilian educational system in those areas where there are skill shortages. Have a reserve system set up geared to receive these skills to keep them from becoming rusty and to keep them up to date with the needs of the military. Have a stepped-up civilian-type law during war or emergency to deal with absenteeism and malingering and I believe we will have a strong defense system.

Gentlemen, these are the points that have not been studied. I am satisfied a study of them would give a sensible answer to what some have looked upon as insoluble problems of how we are to have defense in modern warfare and sustain its cost, how we are to preserve and strengthen the educational system that will continue our advance in science and technology and yet have the manpower necessary to man the defenses, how to defend our way of life without destroying it, or setting it aside for the nonce saying we will reset it up after the emergency.

This committee has several months to study this serious matter. I pray that you take the time to make this study.

## The Antitrust Law and Relations With Foreign Nations

EXTENSION OF REMARKS

OF

### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the address delivered by the Honorable Loftus E. Becker, Legal Adviser, Department of State, before the antitrust law section, New York State Bar Association, at the University Club in New York City on January 29 1959.

The subject is most important. It deserves the attention of the Congress.

The text of Mr. Becker's address follows:

The topic that we shall be discussing at this time is "The Antitrust Law and Relations With Foreign Nations."

If I may begin upon a personal note, there seems to be a direct connection in my own life between antitrust and foreign relations. When, in the spring of 1951, I was called down to Washington to work for Gen. Walter Bedell Smith, who was then the Director of the Central Intelligence Agency, I was actively engaged for the defense in the Investment Bankers case. And, in the spring of 1957, when Secretary Dulles called me to my present assignment, I was in the Federal courthouse down on Foley Square attending a pretrial conference before Judge Dawson in an action brought under section 7 of the Clayton Act, where, mirable dictu, we represented the plaintiff.

Our topic today is timely and appropriate, because the cold war on the economic front is being intensified beyond anything that we have experienced before. The entire Sino-Soviet bloc is engaged upon a foreign trade offensive of unprecedented magnitude and it is actively seeking to extend its operations, not only in Europe, the Near and Middle East, the Far East, and Africa, but also to our very doorstep in Central and South America. You may be well assured that the force and impact of that trade offensive will not in the slightest degree be blunted by any antitrust concepts or practices. Sino-Soviet bloc economic penetration has behind it the full, monopolistic resources of the countries of that bloc. And with due regard to the value of our own antitrust concepts—which, after all, are directly related to the right of freemen to trade and act without artificial restraints—we should not underestimate the seriousness of the international economic struggle that lies ahead of us.

It is fitting, therefore, that you, who are engaged in the legal aspects of antitrust, both in and out of Government, and we in the Department of State, who are concerned with foreign relations, engage upon a discussion of how, and to what extent, antitrust concepts and foreign relations considerations conflict and must be reconciled. We should also consider how, and where in our Government, that reconciliation may be had.

The subject is a big one, and in any talk such as this, it is possible at most to touch upon certain highlights.

I shall not attempt to discuss here either the history or the merits of the great and continuing debate on the question of whether the so-called "extraterritorial" application of the antitrust laws, as permitted by the many court decisions distinguishing the Banana case[1] constitutes a violation of the principles of international law and an infringement of the sovereignty of friendly states.[2] That, alone, could be the topic of several talks of this character.

It is sufficient for our present purposes to recognize that whatever be the correct answer to that question, there are a number of friendly foreign governments, foreign officials, and even foreign courts, which believe strongly—or even passionately, I may say—that it is such a violation and infringement. Once that much be conceded, as it must be, in my opinion, we have a foreign relations problem of interest to, and within the competence of, the Department of State.

I would like to emphasis that this is only one of a great number of situations in which my Department cannot afford the luxury of securing a definitive decision on the merits of a particular controversy. We are under obligation to continue dealing with foreign governments whether or not we agree rationally or legally with the arguments presented by their representatives. And there are definite limits to the extent to which we can impose our will upon them. The practice of diplomacy is more often accommodation than decision.

It is by no means difficult to understand why this particular foreign relations problem exists. What Congress in the Sherman Act referred to as "trade or commerce * * * with foreign nations" very often appears to the particular foreign nation concerned, to be the trade or commerce of England, or The Netherlands, or Switzerland with the United States, over which that nation, too, has a co-equal right of control. Even more difficult is the case where the activities complained of by the Department of Justice consist of arrangements, legal under the local law, made and carried through by nationals of the foreign country in question, whether or not they have individual or corporate collaborators who are citizens of the United States. Not only foreign business men, but also their governments, tend to regard the legality of such arrangements as a matter for determination under the standards of their national law, whether or not such arrangements may have some degree of effect upon the foreign commerce of the United States.

In some instances a foreign government has a more or less direct interest in an enterprise charged with an antitrust violation. In others, papers are demanded which relate to what the foreign government deems to be its national interests. In still others, the foreign government believes that it and its nationals are entitled to some sort of an international "right of privacy."

In foreign eyes, moreover, both the Department of Justice and the courts of the United States are unduly sophisticated in tracing cause and effect, in assuming that business men intend the "natural consequences of their acts" in the context of highly complex business arrangements, and in treating all foreign subsidiaries of U.S. corporations as U.S. citizens, bound to conform to our standards of economic behavior.

From where we sit in the State Department, it is not sufficient to say that this irritation on the part of foreign nations stems only from the fact that their standards with respect to restraints upon competition differ from our own. True—that is frequently the case and it serves to intensify the degree of difference between us, but even nations having statutes or standards at least comparable to those of the United States, such as Canada, from time to time express a strong dissent from particular applications of our antitrust laws. The difference is as much psychological or emotional, as legal, and it can be compared with the heat of the debate as to whether the United States or the receiving state should have criminal jurisdiction over U.S. servicemen stationed abroad.

When we deal with antitrust matters beyond our borders, we are not only raising the technical legal issue of jurisdiction, but we must also, in most instances at least, face up to the issue of sovereignty.

That, I can assure you, is an issue which is capable of generating strong emotions in international relations, entirely aside from objective standards of international law. This is particularly true with respect to those underdeveloped countries which are just now gaining their independence and it is in and with those very same countries that we are encouraging private U.S. investment and trade.

Considerations such as these, moreover, explain why it is not sufficient to explain to foreign governments or officials, with citation of U.S. court decisions, that the United States has an absolute legal right to punish anyone for taking action anywhere, which has a substantial effect upon the foreign trade or commerce of the United States. Even though it be assumed that this is true,

Footnotes at end of speech.

it is too often a truth which, like the defense of truth in criminal libel, only serves to aggravate the offense.

If I may assume that we have by now established an area of potential friction in the foreign relations of the United States, I would like to discuss with you two related questions. First, what has been and is being done to deal with this foreign relations problem? Second, can our techniques in this area be improved?

As respects my first question, I shall, of course, have to proceed by way of example. Those of you who are interested in a much more complete review of the precedents and some excellent bibliographies will find them in Professor Brewster's study entitled "Foreign Commerce and the Antitrust Laws," which was published earlier this year.

Generally speaking, the President is the exclusive channel of communication between this Government and foreign nations. The Secretary and the Department of State operate under his direction in this regard, pursuant to a statute, enacted originally in 1789, which, in generality, compares favorably with the antitrust laws themselves.[3]

In a number of instances, the Department of States has acted as sort of post office in order to transmit the view of foreign governments directly to the court. In some of these instances, these communications have been delivered to the court without any expression of views on the part of the Department of State.

One example is the protest of The Netherlands Government with respect to the decree proposed by the Attorney General in the General Electric Lamp case,[4] which was transmitted by the Department of State for delivery both to the court and to the Attorney General. The requested delivery was made without comment.[5] Another similar instance was a statement from Foreign Secretary Anthony Eden delivered through the Department of State to the grand jury investigating the alleged cartel of the major international oil companies in 1952.[6]

In still other instances the foreign government has communicated directly with the court as did the French Government in a case involving the legality of the activities of a potash syndicate as to which sovereign immunity was claimed.[7] In that case there was also submitted to the court a letter from the Secretary of State to the Attorney General expressing the view of the Department that agencies of foreign governments engaged in ordinary commercial transactions in the United States enjoy no privileges or immunities not appertaining to other foreign corporations, agencies, or individuals doing business here.

As a matter of protocol and foreign relations, it would appear to be the better practice to have all such communications transmitted via the Department of State. But passing that relatively minor question, it would appear that this practice has merit where purely legal issues are involved, in that it gives assurance to foreign government concerned that its views have been considered by the decision-making tribunal.

As far as the domestic laws of the particular foreign government are concerned, the practice also permits the United States court to receive what would appear to be an authoritative interpretation of those laws. Moreover, if the issue raised is the legality of proposed action under the principles of international law, it is one that the court is well competent to decide because it is firmly established in the precedents that U.S. courts recognize and apply the principles of the law of nations.[8]

But this practice has, at best, a very limited application. What should be done in a particular case as a matter of foreign policy and foreign relations of the United States of America goes far beyond technical issues of international law. Indeed, there is a line of decisions in which the U.S. courts have recognized their lack of competence to pass upon issues of foreign policy, which they leave to exclusive determination by the political departments of the Government. As pointed out in *Chicago and Southern Airlines* v. *Waterman Steamship Corporation*, 333 U.S. 103 (1948):

"The President, both as Commander in Chief and as the Nation's organ for foreign affairs, has available intelligence services whose reports are not and ought not to be published to the world. It would be intolerable that courts, without the relevant information, should review and perhaps nullify actions of the Executive taken on information properly held secret. Nor can courts sit in camera in order to be taken into executive confidences. But even if courts could require full disclosure, the very nature of executive decisions as to foreign policy is political, not judicial. Such decisions are wholly confided by our Constitution to the political departments of the Government, Executive and Legislative. They are delicate, complex, and involve large elements of prophecy. They are and should be undertaken only by those directly responsible to the people whose welfare they advance or imperil. They are decisions of a kind for which the judiciary has neither aptitude, facilities nor responsibility and have long been held to belong in the domain of political power not subject to judicial intrusion or inquiry. *Coleman* v. *Miller*, 307 U.S. 433, 454; *United States* v. *Curtiss-Wright Corporation*, 299 U.S. 304, 319–321; *Oetjen* v. *Central Leather Co.*, 246 U.S. 297, 302."

A practical consideration leads to the same conclusion. Trial or discussion in open court of issues of the foreign policy of the United States with regard to one or more foreign countries would exacerbate, rather than solve, our foreign relations problems.

One variant of the practice of raising the issue of foreign policy directly before the court is illustrated by what was done in connection with the entry of the consent decree in the recently concluded United Fruit Company case.[9] At the time that that case was submitted to the court for signature, I was present in court as a representative of the Department of State. I was prepared to say, if asked, that the terms and conditions of that consent decree were not inimical to the foreign policy and the foreign relations of the United States. I wish to emphasize that, in so doing, I was not appearing as the legal representative of the Department. I was there, instead, to express the views of the policymaking bureaus which had made that determination.

In my view, this practice, too, has an extremely limited application. It can be availed of only where the Department of Justice and the Department of State are in full accord. It would be highly inappropriate to have the two Departments engage in a debate in open court on foreign policy and foreign relations issues, for the reasons that I have already indicated.

Since, therefore, the related issues of foreign policy and foreign relations can only occasionally, and in an extremely limited way, be presented directly to the court, we shall have to find our solution to these questions within the executive branch.

First, of course, it is essential that there be, at all times, a close liaison between the Department of State and the Department of Justice with respect to proposed action having foreign policy and foreign relations implications. It must cover the entire range of antitrust administration and enforcement, because we may, and do, experience foreign relations repercussions from the institution of an investigation, from the issuance of a Grand Jury subpena, from an informal request for documents, and from the terms proposed for a consent decree, as well as from the terms of a litigated judgment, to name only a few examples.

I can assure you that such close liaison does exist and that it has been my experience that the Department of Justice has been meticulous in consulting the Department of State upon such matters. It is entirely possible that mistakes have been made, but if they have, the Department of State must share the responsibility.

But liaison is not enough. We within the executive branch should be more alive than we have been in the past to the imponderables involved in international trade and commerce. Where, for example, entry into a cartel or some other price-fixing arrangement is expressly required by the law of a particular foreign country, there is a relatively solid issue for resolution. Even the United States courts, although they have extended the application of our antitrust laws overseas to a degree deemed offensive by many foreigners, have generally in their decrees not required a defendant to take action which is illegal under the law of the foreign country concerned. In one instance, of course—ICI [10]—the views of a United States court and of an English court differed upon this point, but ICI, so far as I am aware, is an isolated instance in the reported cases.

Far more frequently the compulsion to make arrangements or take action subject to objection under our antitrust laws is much more subtle. It consists more in the local climate of doing business, which is regarded benevolently, if not actively ecouraged, by the foreign government or governments involved, even though there is no affirmative requirement of law.

Now as you are aware, there are those who advocate strongly that this Government should meet this problem squarely by negotiating and ratifying an international treaty or convention against restraints of trade and monopolistic practices. Their views were ably stated by a dissenting minority of the Attorney General's Committee To Study the Antitrust Laws.[11]

I, personally, do not share their views. I believe that an effort to reach agreement upon such an overall basis in the present climate of national laws and international relations would be counter-productive.

Although there are a number of countries whose views respecting private restraints upon competition differ substantially from our own, there are, as you know, a number of antitrust laws in various foreign countries and, now, analogous provisions are being included in the charter of such supra national organizations as the Common Market and the Coal and Steel Community.[12] While it is true that the administsration and application of these foreign antitrust laws differ substantially from our own, they mark a healthy beginning.

We, too, have a number of bilateral treaties of friendship, commerce, and navigation having anticartel provisions,[13] and various economic cooperation agreements with participating countries also contain express anticartel clauses.[14]

I believe that we would be wise to continue and to extend this ad hoc approach.

One possible extension that comes to mind is for the Department of State to play a more active role than it has in the past in attempting to resolve problems or potential problems in the foreign policy and foreign relations field arising in the administration of our antitrust laws. While this has not always been the case heretofore, the Department's activity in particular cases has consisted mainly of advising with the Department of Justice as to the implications overseas of a particular action. I believe that the Department of State could do more in the way of affirmative consultation with the foreign governments concerned, with the view of

Footnotes at end of speech.

obtaining agreement that specific practices or arrangements are, or are not, contrary to our mutual interests. We would not, of course, be successful in reaching intergovernmental agreement in every such instance, as the Swiss Watch[12] case demonstrates. But the fact that the foreign government in question had been consulted in advance would tend to lessen the violence of its reaction to enforcement of our law. Moreover, through such consultation, both the Department of State, and through it, the Department of Justice, would be in a better position to receive and evaluate facts and arguments as to why the particular arrangement or activity should not be proceeded against under our law. I have no doubt that if this were done in more cases than it is done at present, there would be instances in which the two Departments would be thus persuaded by the foreign government, although they might not have been so persuaded had the same arguments been made by attorneys representing private litigants.

Let me emphasize that I do not wish to indicate that we should relax our efforts to explain to foreign nations the relationship between the application of our antitrust laws to the foreign commerce of the United States to the objective shared by a number of other countries of increasing the growth of world trade, free from artificial restrictions, whether of a governmental or private character. Many of these nations are members of the International Monetary Fund, the General Agreement on Tariffs and Trade, and other institutions, whose task it is to facilitate such growth by eliminating so far as possible exchange controls, import quotas, and other measures which adversely affect trade. We should continue to explain that private restrictive business practices can, and very often do, have the same adverse effect upon world trade as do the governmental measures.

There is, moreover, as you know, a well-established procedure for clearing in advance with the Attorney General the legality of a proposed arrangement or course of action under the antitrust laws. While this procedure has frequently been availed of with respect to proposed domestic arrangements and activities, I am informed that it has rarely been used in connection with overseas activities. It is possible that if the Department of State took a more active part in this procedure than it has in the past, more American businessmen might be inclined to avail themselves of it in the foreign field. In particular, the Department of State, through the information available to it, might well be able to give the Department of Justice objective advice as to the express and implied conditions of doing business in a particular overseas area. This, in turn, might materially affect the Department of Justice's clearance determination.

I would like to turn now to the question of what is or what should be done when there is a direct conflict of views between the Department of State and the Department of Justice with respect to a particular action in the antitrust field, or where from the outset it is recognized that issues transcending prosecution policy under the antitrust laws are involved. In the past, as you know, such determinations have been made at the Presidential level in the National Security Council. One instance of this was the advice given to the President by the National Security Council which led to an invitation to U.S. oil companies to participate in the Iranian oil consortium.[16]

I am not convinced that this is an entirely satisfactory practice. For one thing, the primary concern of the National Security Council is the national security and there are many issues with respect to the overseas application of the antitrust laws which should be considered as matters of national interest, even though the national security factor is not predominant. While the Council, itself, has a membership fully capable of passing upon the national interest in this field, I question whether its executive staff, the Planning Board, possesses the expertise or the time to give these issues of ever-increasing importance adequate staff preparation.

I confess that I do not have the answer to the question that I have posed, but I believe that it is a question deserving of serious study. In that connection, I may say that I have been authorized by Secretary Dulles to retain a qualified consultant, or consultants, to consider how our resolution of problems such as these could more efficiently be handled both within and without the Department of State. I believe that many members of the bar engaged in private practice have given much thought to these questions, and we shall welcome suggestions from the bar on these points.

What I have already said will, perhaps, forecast my opinion with respect to the proposal made in a preliminary report by the special committee on antitrust laws and foreign trade of the Association of the Bar of the City of New York[17] to the effect that Congress should by legislation vest in the President the power to grant exemption from the antitrust laws to any one or more persons, firms, or corporations, domestic or foreign, engaged or proposing to engage in any activity that may present a question of violation of the antitrust laws as applied to commerce with foreign nations. First I have a grave question as to whether such a law could be obtained from Congress. But more importantly, it is my belief that if we face up to the problems involved, with due appreciation of their complexity and importance, we shall be able through flexibility of administration of the antitrust laws to accomplish substantially the same result. Moreover, if we have within the executive branch a focal point where more time can be devoted to the study of the national and international aspects of our antitrust policy than is available to the National Security Council or any of the other of our existing supradepartmental agencies, we shall be able to develop more adequate policy planning in this field.

Antitrust actions, involving, as they do, the application of a national policy, the impact of such a policy on our foreign political relations, and the kind of foreign economic life which we are striving to create, require a careful assessment of all factors, some of which may be countervailing in particular cases, if they are to serve the overall national interest. This kind of appraisal represents judgment upon an amalgam of facts and circumstances, there is no easy generalization.

At any rate, I believe that the problems involved should receive more study within the Government, with the view of seeing whether we can make affirmative progress in solving these very real problems within the executive branch before we ask for legislation.

It is difficult to overestimate the complexity of the problems that require further study. As a Nation we are firmly committed in general to a policy of international trade and commerce, free of restraints by either governments or private individuals. While this is our ideal, we have our own governmental restraints in the form of tariffs and other restrictive statutory provisions and through our participation in GATT we have a machinery for intergovernmental consultation and action with respect to such restraints. In the case of the oil consortium that was formed at the time of the Iranian crisis, this Government gave its approval to private activities which might otherwise have been called into question under the antitrust law. More recently, the Federal Government, for reasons of defense, called upon the importers of crude oil to engage upon a voluntary program of limiting their imports. We have negotiated with various countries, notably Japan, quota restrictions which those countries impose upon their exports of various products to the United States market. These examples are only illustrative of the currents and eddies of practice in this area.

In brief, in the international field as in the national field, while this Government is committed to the principle that trade and commerce should be free of all unreasonable restraints, it does not as a Government invariably hew to a straight line in this regard. I am not satisfied that there is within the United States Government today a single focal point which can serve, on the one hand, as the place for solution of intragovernmental disputes on what the Government should do with respect to private international arrangements and activities operating within this context and, on the other hand, as a form where businessmen desiring to engage in international trade and commerce, and their lawyers, can seek as much certainty as to whether their activities accord with the national interest as it may be possible to give. I am well aware, as you are, that complete certainty in this field can never be obtained, but I sincerely believe that if we devote more study to this problem, we can work out arrangements more satisfactory than those that we have at present.

I cannot say how strongly I feel that we must devote more time and effort to a study of these problems and to their resolution.

## Courage and Ideals of Ex-Representative Brooks Hays of Little Rock, Ark.

EXTENSION OF REMARKS

OF

### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. NEUBERGER. Mr. President, all too few in the Senate or the House seem to have the will to stand against dominant or hysterical public opinion in their own constituencies. Yet just such courage is what the critical problems of the 20th century demand. I think most of America salutes Brooks Hays of Little Rock, Ark., who paid with the loss of his seat in the House of Representatives because he took a moderate and fair course with respect to the question of school integration and civil rights.

Mr. Hayes is no longer a Member of Congress because of what he did. Yet, in the history of our critical era, I predict that he will have a larger and more heroic place than many who have survived politically. Brooks Hays, despite his defeat, is still a great lay leader of the Baptist religion in our country, and he commands respect and admiration in every community because of his integrity and sincerity.

In the issue of Look magazine for March 17, 1959, ex-Representative Brooks Hays has written an illuminating and thoughtful article about the course of events in the Little Rock school crises—events which eventually led to his retirement from Congress, but which also have shaped the ultimate march toward a fair solution of this difficult issue.

I should like to read to my colleagues the concluding paragraph of Brooks Hays article. This is what this outstanding man has written:

I shall continue to work for the acceptance of three principles: (1) The American idea—the constitutional rights of all children (as distinguished from the social aspirations of their elders) must be recognized and enforced, though this will mean some altered patterns. (2) The Jefferson idea—the determination of educational policies to achieve a nonviolent application of those constitutional rights must rest finally to a large degree on the individual communities, and the State must not thwart that determination. (3) The Christian idea—those who work both inside and outside the political and governmental systems for equality and justice must have both a tireless devotion to these ideals and an attitude of love and patience.

Mr. President, that is the philosophy of a man who was defeated for reelection to Congress because he practiced that philosophy and lived up to it. His defeat is not an indictment of Brooks Hays, but of a district or state or nation in which such a defeat could occur.

Mr. President, for the information of my colleagues and for the records of the Congress, I ask unanimous consent that the article by Hon. Brooks Hays from Look magazine entitled "Little Rock From the Inside," be printed in the Appendix of the RECORD.

I should like to emphasize that the article in Look has been excerpted from Brooks Hays' forthcoming book "A Southern Moderate Speaks," soon to be published by the University of North Carolina Press. If the ideals and principles which I have quoted are a sample of the thinking advocated by Brooks Hays in "A Southern Moderate Speaks," then I predict that this is a book which ought to be on the desk of every Cabinet officer, Member of the Senate and House, Governors of the 49 States, judges, district attorneys—indeed, of all Americans who are charged with responsibility in these troubled times.

I am informed by the Public Printer that the article exceeds the usual length of inclusions in the Appendix of the RECORD, and that its cost for printing is estimated to be $222.75.

I ask unanimous consent that, notwithstanding the cost, the article by ex-Representative Brooks Hays, of Arkansas, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LITTLE ROCK FROM THE INSIDE

(By Brooks Hays)

Eighteen months have passed since the Little Rock school crisis broke upon the Nation. Is it possible to say now that we could have avoided the violence and misunderstanding that followed? As an observer who saw what went on behind the scenes, I can only tell you what actually happened.

For 15 years, I had served as Representative in the U.S. Congress for Arkansas's Fifth District, which includes Little Rock. My participation in the school crisis began that September of 1957. I was tormented by the realization that my home city was drifting toward a terrible crisis and that nothing was being done to avert it.

What is a Congressman's responsibility in such a situation? If it were a flood or a tornado, and Federal emergency help were required, the Congressman would certainly act. Then, should he not act in a situation in which the misfortune centered around human relations rather than physical forces? I decided to act.

Monday morning, September 9, I called Presidential Assistant Sherman Adams at the White House. This conversation served as the beginning of the negotiations which led to the Newport, R.I., meeting. When Sherman asked for some specific steps that might be taken, I suggested that President Eisenhower invite Governor Faubus to Washington for a conference. Though I had not talked to the Governor, I was convinced he would accept. I explained that, in dealing with Governor Faubus, Sherman would not be confronting a stubborn, last-ditch segregationist, a point of view which, up until that time, Governor Faubus had continually encouraged. At that stage, the Governor's actions justified my statement that, quite aside from the question of the propriety of his course (I thought he had been wrong in going against court orders by excluding the Negroes, not necessarily in calling out the National Guard), one would have difficulty in proving insincerity. I told Sherman that my one great concern was that the Governor not be driven into the arms of the few extremists in the Southern Governors' group.

FAUBUS APPEARS WILLING TO COOPERATE

Sherman thought that a favorable answer to three questions should be forthcoming before steps were taken to arrange a conference. They were: (1) Would Governor Faubus come with an attitude of constructiveness, with a give-and-take approach, with a desire to achieve something that would preserve the dignity and authority of Federal law? (2) Would the Governor indicate that he expected to comply with court orders, that he would avoid defiance and would accept jurisdiction of Federal authority in the field of school integration? (3) Would the Governor indicate that, "upon the President's request," he would remove troops from the high school?

The Governor's attitude, from my point of view, was very satisfactory. On the first point, there was no doubt about his desire to work constructively with the President and to avoid a showdown that would aggravate the tension. The Governor, of course, gave a qualified answer to points two and three, as I expected him to, but he had enough to say concerning his basic purpose of preserving law and order to make a convincing case for his actions in preventing violence, rather than preventing integration.

Governor Faubus told me that he was convinced that the overwhelming sentiment of the State and of Little Rock was in opposition to the admission of the nine Negroes to Little Rock's Central High School, and to any further steps under the plan approved by the school board and upheld by the Federal courts. The Governor said that if he went to see the President, he would like me to go with him.

On Tuesday, I talked many times with the White House. Sherman Adams took the position that the request for a conference should come from the Governor, and the Governor agreed. The White House did not wish to be in an attitude of initiating anything. Sherman indicated that I should create the wording of the Governor's request. I gave him some intimation of what the Governor should say and would say, and he commented here and there—reminding me that it was "my responsibility" and "my message" and that these were my overtures. I could understand his reason for being emphatic on that point, but he had some very clear ideas about what the telegram should and should not say. The Governor capitulated on language at practically every point.

When Governor Faubus agreed to indicate his respect for the courts in the request, I felt we had the basis for a productive conference. The Governor seemed anxious for a truce, with integration beginning by midterm, after the situation had settled down. He felt that the school-board plan should be changed, permitting integration to begin at the first grade, rather than the high school level. He had a strong desire for conciliation, but sought time to soften the adjustment. It seemed ironic that the Federal courts were forcing a showdown that neither side wanted, when true justice might best have been served by traditional judicial calm and exhaustive deliberation.

PROVIDENCE CROWDS ARE COOL

On Wednesday, the telegram was sent to Newport, where the President was vacationing. This was the Governor's message:

"DEAR MR. PRESIDENT: I have accepted summons from the U.S. District Court, Eastern District of Arkansas, to appear before that court on September 20 to answer certain allegations in litigation affecting the high school in Little Rock. Recognizing that we jointly share great responsibility under the Federal Constitution, I feel that it is advisable for us to counsel together in determining my course of action as chief executive of the State of Arkansas with reference to the responsibility placed upon me by the State and Federal Constitutions.

"The U.S. District Court has already entered an order relative to the integration of the high school in Little Rock, and this order has been affirmed by the circuit court of appeals.

"All good citizens must of course obey all proper orders of our courts, and it is certainly my desire to comply with the order that has been issued by the district court in this case, consistent with my responsibility under the Constitution of the United States and that of Arkansas.

"May I confer with you on this matter at your earliest convenience?"

The President's answer:

"I have your telegram in which you request a meeting with me. Would it suit your convenience to come to my office on Naval Base, Newport, either Friday, September 13, at 3 p.m or Saturday a.m., 14, at 9 o'clock? If you would let my office know your method of transportation to the Newport area, my staff will arrange to have you met and brought to the Base."

The Governor, his private secretary, Arnold Sikes, two pilots and I left Little Rock early Friday morning. The conference had been scheduled for Saturday. Adams had arranged for us to be met at the Providence airport by an aide and escorted to a hotel. The character of the reception given us at the airport convinced me that sentiment in that area was not friendly, and it became obvious within a short time that this reflected the national sentiment (outside the Deep South). No one representing the Governor of Rhode Island or the mayor of Providence was on hand to welcome us. There were curious crowds, but no cheering. It was rather pathetic to see Governor Faubus looking vainly for some sign of enthusiasm. I was beginning to understand the criticisms of the President's decision to confer with the Governor and to realize that I, too, was becoming a target for attack by extremists on both sides for my efforts to compose differences.

At Newport, we were met by Sherman Adams and taken to President Eisenhower's office. The President shook hands with his usual cordially. "How are you, Brooks?" he asked, and it was easy for me to say I felt fine. At that moment, I did.

President Eisenhower and Governor Faubus were in the President's private office only about 15 minutes, less time than Sherman had thought they might wish to have alone. The President (in sport coat and blue shirt, looking in the pink) came out with the Governor and suggested, as he helped Sherman rearrange the chairs, "Let's just sit here and talk." That we did for nearly 2 hours. The atmosphere was fairly relaxed. The Governor, being closer to the problem, was a bit solemn, and the President at that stage doubtless did not foresee the dilemma that would confront him within 10 days. Atty. Gen. Herbert Brownell, Jr., and Press Secretary James Hagerty came in for the last part of the discussion.

Governor Faubus stressed the importance of the time element. A way should be found, he felt, to get Federal court relief for Little Rock until the Supreme Court had ruled on the valldity of the State constitutional amendments and statutes (interposition and several other measures) approved either by the people of Arkansas in the 1956 election or by the Arkansas General Assembly in 1957. The President conceded that time was a factor, but thought that the matter fell so completely within the jurisdiction of the courts that little could be done by the Executive in that regard. There was some discussion of the various ways of complying with the Supreme Court decision, and the Governor expressed the view that the plan advanced by School Superintendent Virgil Blossom, and later approved by the courts, was subject to criticism. The President was inclined to think that any advantage in other plans, such as beginning in the 1st grade instead of the 12th, would be offset by disadvantages.

I remember how emphatic the President was in assuring the Governor that he regards the States as responsible for maintaining law and order and that the Governor's primary responsibility should be respected. "I do not criticize you for calling out the guard—our only difference is that I would have given them different instructions." The Governor at one stage said, "I expect to send the guard home." (This he did on September 20.)

The political aspects of the problem were touched upon, and the President expressed sympathy for those of us who live so close to the problem, at the same time minimizing the seriousness of the so-called political revolt.

I had the feeling when the meeting ended that we were leaving loose ends, and wished that an afternoon session had been set up. There was unfinished business. Still, I can see why the President would think that the matter had been sufficiently explored. In statements later issued to the press, both men gave assurance that the meeting had been "constructive" and that the decisions of the Court would be respected.

BROWNELL TAKES A RIGID POSITION

I had come to Newport confident that a carefully drawn agreement could be reached, and both the President and Governor Faubus had acted in a manner that had strengthened that opinion. What made me uneasy, however, was the uncertainty about the time element that both sides agreed was the key to a final solution. The rigidity of Brownell's position on this factor gave me some forebodings. Brownell seemed to have blocked a definite commitment to work for delays in further court action. The intention of seeking such delays was to permit questions of interposition and sovereignty. The courses of action that would then be available would be clarified by such court rulings. If the State laws were upheld, the situation would be eased, because then the Governor could say, "I am following State law." If they were invalidated, then he would have an answer to the cry that one heard in parts of Arkansas, "You are under a mandate of the people to prevent any degree of intergration." My assumption is based not so much on what was said at Newport as on what was not said. I was still hopeful of working out a timetable with the Governor when we returned to Little Rock. It is obvious to me now that this step should have been taken at Newport.

I left the party in New York and took a plane to Fort Worth. I called Governor Faubus on Sunday. He said, "I'd appreciate your coming back to Little Rock for a day or two if you can." I agreed at once. I sensed that terrific new pressures from extremists were being applied and that the Governor was in a difficult situation.

I am often asked if I think violence would have taken place had Governor Faubus not predicted that it would take place and then placed the troops at Central High School. My own opinion is that probably it would not have taken place, but one can only speculate. It has always been my opinion, however, that the Governor was sincere in his fear of the outbreak of violence. He was also aware that a majority of Little Rock people were opposed to desegregation, even when the solid Negro opinion to the contrary is taken into account. In the final analysis, it was this sentiment rather than the threat of violence that accounted for most of the Governor's actions.

Governor Faubus had too few political advisers who sympathized with his moderate views. Some of them exploited his promise not to force integration upon an unwilling community.

The Governor had been impressed by my reasoning that Federal law would ultimately prevail. Then in came the "practical men." "Don't let Brooks talk you into something; he's too visionary." I could hear them say. The Governor, priding himself on his political acumen, accepted this reasoning. He gave me every chance, however, to present my case. Never at any point did he show impatience, nor did he seem to tire of efforts to find a way out. He was not happy with the turn of events, and I do not believe he is happy about it today. There were moments of exaltation, perhaps, when the glow of acclaim in the Deep South cheered him, but underneath was a wistfulness for a smoother path to political glory and power.

Governor Faubus and I held numerous conversations at the mansion between Monday, September 16, and Friday morning, September 20, when the Federal court met to consider the school situation. On Monday, the Governor indicated his willingness to send the National Guard home, provided the target date for admission of Negro students was changed to a later date, possibly as early as September 30. He was quite concerned, however, that the constitutionality of the Arkansas sovereignty laws be determined as soon as possible, so he would not be caught between conflicting directives concerning his lawful action.

By negotiation with various prominent people in both public and private life, I arrived at this proposed course of action for the Governor: (1) That he write a letter to the parents of the Negro children, asking them voluntarily to keep their children out of school until a set date arrived (we had assurances they would agree); (2) that he guarantee to use his influence to create a peaceful atmosphere; (3) that he see that the local school authorities provide private tutors for the nine Negro children during the interim period; and (4) that he pledge to use his office to insure the peace after the proposed September 30 deadline.

One of the major stumbling blocks was the attitude of the Justice Department, which would make no commitment not to take Faubus to court. While this Department was also determined not to wait for State court action on the sovereignty laws, it did indicate that Federal action might be withdrawn once the school was integrated. The Governor would not write such a letter under those conditions. He seemed willing to go

along with Sherman Adams in the use of State patrols to control the school situation once the National Guard was withdrawn, but he was impatient with Attorney General Brownell for not meeting the Government's legal responsibilities.

By Tuesday, both sides had become belligerent. Adams said that the Governor could do anything he wanted to, if he had no regard for the consequences. Faubus now told me that he could not let the Federal Government ram integration down the throat of the city.

GOVERNOR FAUBUS IS READY TO FIGHT

Meanwhile, Washington sources informed me that the Justice Department was not eager for a fight, and was deeply alarmed at the possibility of a showdown of force against force. There was an alternative available. If the National Guard were federalized, then integration could be enforced without the Governor's open advocacy. All that would be required of him then would be for him to plead for peaceful acceptance of this move, and not to object to the federalizing, so that he could explain to the segregationists that he no longer had any control over the situation.

Wednesday morning, Sherman indicated to me that he was not convinced that federalizing the guard was the answer. When I visited the mansion that afternoon, Governor Faubus seemed ready for a fight. His growing irritation made the possibilities of a peaceful adjustment appear remote.

Late Thursday night, my wife and I left for Oklahoma City. When I called Sherman Adams and mentioned engagements I had in Kansas City on Saturday and Sunday, he asked me to cancel them and return to Little Rock. I phoned Harry Truman to explain why I would not be at a dinner planned for us by Mayor H. Roe Bartle and my friend Joe Culpepper, a Kansas City businessman. "That's all right," Mr. Truman said, and he added, "Brooks, I'd been thinking about you and feeling for you." "Thank you, Mr. President," I answered, "but you stood 8 years of it; I can stand 8 weeks of it." "No," he said, "it's harder on you than on me—I can cuss and you can't."

On Friday, Federal Judge Ronald Davies ordered the Governor to end his opposition to judicial authority and directed him to stop interfering with integration at Central High School.

Three hours after the decision, Governor Faubus went on television to announce his withdrawal of the guard. He said that the right of Negro children to attend white schools had been upheld by the Supreme Court, but that he hoped "by their own volition the Negroes would refrain from seizing upon that right until such time as there is assurance that it can be accomplished in a peaceful manner." He closed with an appeal for "reason and clear thinking and good order."

I returned to Little Rock on Saturday. Governor Faubus had flown to Georgia to attend the Southern Governors' Conference and had left Lt. Gov. Nathan Gordon as the State's acting chief executive. When asked in Atlanta if he believed there would be violence at the school, Faubus answered, "I think so."

On Sunday, I talked with various people regarding plans for protecting the Negro students if they appeared at the school. No one seemed to know the intentions of the nine students who had previously been turned away. I was determined not to make any contacts with the NAACP officials, either national or local. I disagreed with their tactics and, in the Little Rock situation, I could not even discuss the question with them without appearing to approve projection of the national organization into Little Rock's difficulties. One can oppose, as I do, the national organization's strategy and still believe in its right to function as an agent of its people's interests.

In the late afternoon, School Superintendent Virgil Blossom asked me, "Should I talk with Judge Davies about the necessity of having deputy U.S. marshals accompany the nine Negro students into the Central High School, if they appear?" I thought it would be proper for him to approach the judge.

He reported back to me that the judge would not talk to him—he merely referred him to U.S. District Attorney Osro Cobb. Blossom called Cobb, but Cobb thought he would have to have specific authority from the Department of Justice to seek such an order. I called Sherman Adams.

LOCAL POLICE REFUSE TO ESCORT NEGROES

Adams gave me a telephone number at which Cobb could reach a responsible top official of the Department of Justice. Some of the legal abracadabra seemed to annoy Adams, who is a businessman and definitely the executive type. By this time, I had come to appreciate more than ever his sense of justice and his tirelessness in discharging his duties. Cobb did not get the authority from the department when he called for further instructions as to Blossom's request for deputy marshals to escort the Negro students. The local policemen (officers and men) had balked at escorting. They pledged to do their duty in preventing violence, if the Negroes showed up, but as to escorting—they said, "No, don't ask that."

I knew Brownell's reasons for this ruling. He had publicly made much of the fact that title III had been taken out of the civil rights bill by the Senate during the 1957 debate. Since that title proposed to give the Justice Department authority to participate in suits for enforcement of Negoes' rights, he construed the action as a legislative declaration that he, the Attorney General, should exercise no such authority. It was up to the judges of the district courts, he believed.

Technically, that may have been correct—it would take a court decision to make sure—but I believe that since the Federal Government was responsible for Blossom's predicament, the Federal Government should have acted affirmatively and imaginatively to protect him, and to uphold its own court's orders with civil, not military, power.

The court had invited the United States to be a party to the action restraining interference with the school-board plan. The Government's failure to do so is the weak place in the Justice Department's case on Little Rock.

The city officials were still considering keeping the Negro children out until at least the following Thursday, so that inflamed passions could cool. But Acting Gov. Nathan Gordon indicated that a detachment of State police would be sent to the area. This fact, coupled with Mayor Woodrow W. Mann's confidence that the situation was manageable, led Blossom and the school board to make the fateful decision to go ahead with integration on Monday, even without the availability of Federal marshals.

I shall not dwell long on the unfortunate occurrences of that tragic Monday. I shared the feelings of horror held by all law-abiding citizens when acts of violence took place at Little Rock Central High School.

After the nine Negro students had been spirited into the school by means of the side entrance, the huge crowd which had gathered at the school quickly got beyond control. Blossom called to say that it looked bad outside and asked me if Federal troops would be called. Then the mayor informed me that fighting had broken out and that he needed about 150 soldiers as soon as possible. I called Sherman Adams, and he commented cryptically, "That's all the information I need." By 11 a.m., I was quite nervous, because Adams had not called back. Blossom telephoned again, and his voice was almost frantic as he asked, "Are the troops coming or aren't they?" As he saw it, the safety of the children depends on it. I tried to reach Adams again, but he was not available. I finally managed to talk with the Cabinet secretary, Maxwell Rabb. By the time he called back to say, "The troops are not on their way," the Negro students had been removed from the school on Blossom's suggestion. What influence this had on the administration decision to send in troops, after all, I do not know. It was apparent that the local police did not have sufficient manpower to preserve order with Negro students in the school.

Sherman Adams and I talked to each other later in the day, and he said, "You and I can sign off now—it's in other hands, I guess." On Tuesday, September 24, President Eisenhower ordered troops from the 101st Airborne Division at Fort Campbell, Ky., to go to Little Rock to see that integration at Central High School was carried out without further violence. At the same time, the Arkansas National Guard was federalized. On Wednesday, the nine Negro students attended school with the armed might of the U.S. Army protecting them from lawlessness.

Perhaps I could sympathize more fully than anyone with both the President and the Governor. My relations with each of them had been nonpolitical, and I had been privileged to have an intimate view of their struggles with the problem. I can say that I detected real pain in the President's expression and his words in announcing his decision to move troops into Little Rock. One can believe, as I do, that a better way could have been found and still not be interested in an assessment of blame. Close as I had been to the situation until a few hours before the President's action, I did not have all of the facts upon which to base a judgment. I know that the moral and intellectual resources of our Nation must be directed to avoid a recurrence.

My own experiences are also testimony to the difficulties encountered by moderates in dealing with such situations as arose at Little Rock. Governor Faubus told me in June that he would not become involved in my primary campaign for renomination on the Democratic ticket for a ninth term in Congress. I won renomination by a margin of 15,000 votes. I assumed, then, that as my fellow nominee for reelection to the governorship, Faubus would not oppose me in the general election with another candidate. On September 12, 1 week after the final date for filing of candidacies for the general election had passed, I had a letter from Faubus congratulating me on my primary victory and wishing me continued success.

As late as October 14, I spent an hour and 20 minutes in conference with the Governor to explore a way out of the Little Rock school difficulties. Two weeks later, the Governor's advisers were calling for my defeat. His former secretary had been released by the Governor to manage the campaign of my write-in opponent in the general election. It was not until 48 hours before the election, however, that my associates and I were sure that the Governor's organization was "giving it the works" to bring about my defeat.

HAYS' POLITICAL DEFEAT IS PROBED

I received 12,000 more votes in the July 29 primary than my write-in opponent received in the November election. I received 49 percent of the vote in the general election, or 1,249 less than my opponent, as shown in the official returns. Certain aspects of the general election were made the subject of an inquiry by proper committees of the House of Representatives. I personally have not precipitated these inquiries; rather they have

been instigated by John F. Wells, publisher of the Arkansas Recorder, who charged irregularities in several precincts in Pulaski County, which includes Little Rock.

It is clear from my experience that the political moderate in the South is caught between two highly vocal groups that entertain strong feelings. But there are many moderates among that multitude of segregationists in the Deep South who, when free to speak without inhibition, will confess to having a sensitive conscience and a dissatisfaction with the total picture of today.

The school segregation decisions have caused the development of two streams of traffic moving in opposite directions. We who are on the line down the middle have often felt lonesome and frightened, but, as more and more people have joined us, we are beginning to feel that it will not be long before almost everyone is moving in the same direction again. The decisions cannot now be recalled, but they can be interpreted in a way that will preserve the rule-of-law tradition and still meet with acceptance in the South.

I shall continue to work for the acceptance of three principles: (1) The American idea—The constitutional rights of all children (as distinguished from the social aspirations of their elders) must be recognized and enforced, though this will mean some altered patterns. (2) The Jefferson idea—The determination of educational policies to achieve a nonviolent application of those constitutional rights must rest finally to a large degree on the individual communities, and the States must not thwart that determination. (3) The Christian idea—Those who work both inside and outside the political and governmental systems for equality and justice must have both a tireless devotion to these ideals and an attitude of love and patience.

## Congress Should Enact Without Further Delay an Effective Area Redevelopment Bill Designed To Eliminate the Prospects of Another Presidential Veto

EXTENSION OF REMARKS
OF
### HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. VAN ZANDT. Mr. Speaker, following is the statement I made this morning before the House Banking and Currency Committee in support of area redevelopment legislation:

STATEMENT BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE, ON MARCH 10, 1959, IN SUPPORT OF LEGISLATION TO PROVIDE FEDERAL AID TO DEPRESSED AREAS

Mr. Chairman, over a period of years it has been my privilege to appear before this committee several times in support of area redevelopment legislation.

As a matter of fact, I am among a group of Representatives in Congress who are recognized as pioneers in this particular field.

As many of you know, my congressional district in Pennsylvania, comprising the counties of Blair, Centre, and Clearfield, has been plagued with chronic unemployment for years due to depressed conditions in the coal and railroad industries. At times as much as 18 percent of our total labor force has been unemployed.

Therefore, we know the meaning of "ghost towns" and the misery that follows in the wake of unemployment as we watch good American families being forced to exist on public assistance and surplus commodities.

Speaking of surplus commodities, in my three-county area there are 57,323 persons eligible for surplus food or 18.8 percent of the overall population.

In fact, in Clearfield County nearly 23 percent of the population are recipients of surplus commodities and dependent upon them for the necessities of life.

Mr. Chairman, at the present time in the two labor forces in my congressional district, here is the picture.

As of January 1959 in the Altoona area, out of a labor force of 53,600 there were 7,700 unemployed or an average of 14.4 percent of the labor force; while in the Dubois-Clearfield area, out of a labor force of 37,000 there were 5,200 unemployed or an average of 14.1 percent of the labor force.

Therefore, the unemployment situation in my congressional district is simply this. Out of a labor force of nearly 91,000, there are 12,900 unemployed or 14.3 percent of the labor force.

As I have said before, unemployment in my congressional district has been as high as 18 percent of the labor force. One point I want to emphasize is that unemployment conditions are not temporary or seasonal nor can we see any improvement in the coal and railroad industries.

As a matter of fact, employment in these industries is still on the downward trend and nobody dares to predict when employment will level off.

For an illustration, my hometown of Altoona is principally a railroad town because it is the site of the largest railroad shops in the world operated by the Pennsylvania railroad company.

Early in 1951 these shops employed 14,361; while last August employment dropped to 2,050.

According to information released on March 1 of this year, employment reached 6,000 and by the middle of April employment is expected to level off at 7,000. This means that in the city of Altoona alone, there has been a loss of over 7,000 jobs.

Mr. Chairman, this situation in Altoona is duplicated in the city of Dubois where hundreds have been furloughed by the Baltimore & Ohio Railroad.

Instead of having around 1,200 employees, as of March 1, 456 were employed with the expectation that employment in Dubois will level off at 600, which means that 50 percent of the B. & O. labor force will be jobless.

I have been pinpointing unemployment in the railroad industry in an effort to show the permanent loss of jobs. Similar facts reveal that the same condition exists in the coal, brick, and related industries in my congressional district.

We residents of central Pennsylvania recognized this chronic unemployment situation years ago and through local community effort, area redevelopment groups were organized for the purpose of diversifying the economy by attracting new industries.

To date we have enjoyed a measure of success, but it is such a mammoth task that we are convinced we cannot do it alone.

Before substantiating this statement, let me emphasize that we are not looking for a Federal handout. What we need primarily is additional borrowing power which, coupled with other forms of Federal assistance as contained in pending bills, will enable us to abolish unemployment in our midst.

In achieving this objective, we will not only rehabilitate our economy through diversification of industry, but we will, in effect, be barring a repetition of this chronic unemployment that we have been faced with for years.

Before giving you the highlights of my compromise bill, H.R. 4878, I should like to repeat a question constantly asked by many of my constituents—"Why is it that Congress sends billions of dollars to so-called underprivileged nations yet ignores the plight of good American citizens who through no fault of their own are unemployed?"

Mr. Chairman, the answer to this question is that Congress too long has ignored "the pockets of unemployment" that have brought suffering and despair despite national prosperity.

I hold no brief for the action taken by President Eisenhower in vetoing area redevelopment legislation last year. In my opinion, he was poorly advised.

Nor do I hold any brief for those who quibble and employ delaying tactics over the cost of area redevelopment legislation. Since we have billions to pour into foreign aid, we certainly have a moral obligation to care for the needs of America's unemployed.

Mr. Chairman, the fact that area redevelopment legislation is fully justified makes it pertinent to ask—"Why solicit a repetition of last year's veto by having the pending Douglas-Flood bill given similar treatment since it resembles to a marked degree the Douglas-Spence bill of the 85th Congress?"

Frankly, it will not be difficult for me to support the Douglas-Flood bill, but I must confess the possibility of another veto is a cause for great concern.

While there is no one in the Senate or the House who would stoop to playing politics with the misery of unemployment, we cannot ignore the fact that unless a bill is enacted the suffering of the people in the depressed areas is not going to be alleviated.

Mr. Chairman, among the sponsors of depressed area legislation there exist two conflicting points of view.

To begin with, in principle the administration has endorsed aid to depressed areas.

In addition, the two great major political parties also endorsed the principle in their 1956 platforms.

Therefore, the question that Congress must resolve is the extent of aid to the depressed areas of the Nation.

In an effort to reach this common objective, it is imperative that reasonable people should be willing to compromise.

In this connection, it is my belief that the President will find it possible to accept a reasonable compromise between the administration bill and the Douglas-Flood version of the legislation.

In my plea for a reasonable compromise, it must be thoroughly understood that I am not presuming to speak for the administration nor have I had any consultations with administration leaders on the subject.

Mr. Chairman, let us be practical and face the facts concerning depressed area legislation.

In the event of a Presidential veto of the Douglas-Flood bill, I have been unable to find anyone willing to flatly predict that the veto will be overridden by the House of Representatives.

The fear of being unable to override a veto is based on the fact that it requires two-thirds of the votes cast to accomplish that purpose.

Therefore—looking the facts right in the face—when you review the position of those Members of the House today in relation to their last year's vote on the Douglas-Spence bill, one finds that the margin of victory would be insufficient to override a possible Presidential veto of the Douglas-Flood bill.

Mr. Chairman, to improve the chances of enacting depressed area legislation, I introduced H.R. 4878, a bill which represents a compromise between the administration's approach and the Douglas-Flood proposal.

With a few exceptions, my compromise bill, H.R. 4878, offers the same types of aid con-

tained in the Douglas-Spence bill vetoed last year.

For example, instead of making every depressed area eligible for the same types of assistance, my bill provides different degrees of Federal assistance based upon the level of chronic unemployment and the need in such areas.

In this connection, it is my belief that areas which have suffered greater levels of unemployment should be entitled to a greater degree of aid than those communities whose problems of unemployment are of a lesser degree.

Briefly, my bill, H.R. 4878, provides for the following programs:

1. Technical assistance: Depressed areas would be eligible for technical assistance to help the communities to appraise their physical and human resources, which would prepare them to plan constructive programs to attract new businesses and expand existing businesses in these areas.

2. Community loans: Depressed communities would be eligible to receive loans from a revolving fund of $100 million.

We know that the conventional lending facilities in depressed areas are not as venturesome as those in growing and expanding communities.

The fund would put the depressed areas on a more equal footing with other communities in attracting new jobs.

3. Public facilities: Some communities need improvement in public facilities before they would become sufficiently attractive to new businesses which might desire to locate in these areas.

My bill provides for an establishment of a $25 million revolving fund from which these communities would be able to borrow.

While the figure may appear modest, attention is called to the fact that legislation is pending before the House which would establish special funds for community facilities.

Meanwhile, under my bill, H.R. 4878, a smaller fund would be allocated and earmarked to aid depressed areas.

In addition, the most depressed communities which do not have the sufficient resources to borrow funds would be eligible to receive grants up to a maximum of $25 million.

At this point let me stress that this is not an annual appropriation, but is intended to be a $25 million revolving fund from which these communities would be able to borrow.

The administrator of the program would be expected to limit the grants only to communities with the greatest need for aid and which do not have sufficient resources to repay the loans in the foreseeable future.

It should be stressed that this is no give-away program. Under the provisions of my bill, grants would be made only for projects which would provide lasting improvements and thus broaden the economic base of the communities.

4. Vocational training and subsistence: One of the big problems of the people in depressed areas is the fact that many of their industries have declined or disappeared, and, consequently, the demand for the skills acquired by the people in these areas has also diminished or vanished.

In order to enable these people whose skills have become obsolete to gain new employment, we must provide facilities to retrain them.

But many have been unemployed for a long period of time, and it would be unreasonable to expect that they could undergo an effective period of vocational training without any means of support.

Consequently, while the unemployed are undergoing training and if they are no longer eligible for unemployment compensation, they would be receiving subsistence payments equal to the average unemployment insurance in their State during the period while they are undergoing training, but not for a period exceeding 13 weeks.

Only the unemployed residing in the communities with the highest level of unemployment would be eligible for this type of aid and the total amount that would be appropriated for this program would be limited to $5 million a year.

Mr. Chairman, in brief, these are the provisions of my compromise bill, H.R. 4878.

They are modest, but at the same time will provide a sound program of Federal assistance to depressed areas.

All of us are deeply concerned by the latest reports about the rise of unemployment.

Experience has shown that the people in depressed areas are the ones that are mostly hit by any rise in unemployment and are the last to recover from the onslaught of recession.

Therefore, it is urged that we enact the program contained in my compromise bill, H.R. 4878, as a realistic means of providing an effective program to aid the chronically depressed areas of the Nation.

Since the cost of depressed area legislation has proved a stumbling block in the past and impeded our efforts, let me point out that the cost of the Douglas-Flood bill is $389.5 million as compared to the cost of the administration bill which is $53 million.

By way of contrast, my compromise bill, H.R. 4878, will cost $158 million or just about midway between the cost of the Douglas-Flood bill and the administration bill.

Mr. Chairman, at this point in my remarks I should like to include the following comparative analysis of the provisions and costs of the Douglas-Flood, administration, and Van Zandt bills. [Not printed in the RECORD.]

In connection with depressed area legislation, let me state that I have no pride of authorship.

My sole desire is to aid the people in the depressed areas and to attain such a laudable objective the spirit of compromise should be dominant in our minds.

As one who represents two chronically depressed areas in Pennsylvania with unemployment as high as 14 percent of our labor force and which has plagued us for years, my goal is that Congress enact without delay an effective bill in a form acceptable to the President, thereby eliminating the prospects of another Presidential veto.

Mr. Chairman, the residents of the 269 depressed areas of the Nation are entitled to this type of legislation, and it is my sincere hope that we can compromise any differences and enact a depressed area bill without further delay.

---

## Trends in Cancer Control

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Tuesday, March 10, 1959*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Trends in Cancer Control," published in the February 1959 issue of Progress in Health Services, a publication of Health Information Foundation, of New York City.

I may add that for a long time we have been chipping away at cancer. Progress has been made; and the article I am submitting for printing in the Appendix shows what has come about.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRENDS IN CANCER CONTROL

With the elimination of communicable disease as the leading cause of death, the rising death rate from cancer has made this disease a steadily increasing health problem. From seventh in 1900, cancer rose to become the second leading cause of death in 1938 and has remained there since. It is now the leading cause of death among women aged 30–54 and (excluding accidents) among school-age children. In 1900 this disease accounted for less than 5 percent of the deaths in this country, but by 1958 the comparable figure was 16 percent, or approximately one out of every six deaths.

Cancer took more than 250,000 lives in 1958, mainly in the middle and older years but including some 4,000 children under age 15. Its death rate is now higher among males than females, among nonwhites than whites, and is highest in the northeastern part of this country. Even though cancer mortality is rising, however, the prognosis for cancer patients is today much better than it used to be. Many forms of the disease previously incurable can now be treated.

Cancer is the generic name for a group of diseases characterized by the irregular and uncontrolled growth of cells. The invasive growth and metastasis (spread) of these cells, often through the lymph channels or blood, to other areas, usually leads ultimately to death.

Cancer is the end-product of an exceedingly complex chain of circumstances. Research into the etiology of this group of diseases investigates mechanisms within the cell, stimuli arising outside the cell, and hereditary and environmental factors. Malignancies of specific sites have been associated with different agents. The list of biological substances and chemical compounds known to cause malignant tumors in animals is impressively large and growing. Nevertheless, the cause of the overwhelming proportion of the malignancies seen in human populations remains unknown.

In 1900 about 80 persons for each 100,000 of the population died from cancer. This rate climbed steadily early in the century and reached 114 by 1926. After some fluctuation up to 1933, the rate began to rise again, but more slowly. It reached 128 by 1957 but dropped to 125 in 1958.[1] These rates were about 60 percent higher than in 1900.

Part of this increase is undoubtedly due to improved diagnosis of the disease and to the development of better techniques for case finding and detection. Thus many deaths perhaps erroneously attributed to other causes are today more correctly attributed to cancer. But part of the increase is probably real.

Mortality from cancer is low during infancy and the preschool years, and drops to its minimum level during the subsequent childhood period. In 1956 cancer caused 8 deaths per 100,000 among infants under 1, 11 at ages 1–4, and 6 at ages 10–14. At older ages the rate rose consistently to a peak of 1,464 per 100,000 at 85 and over. More than half the cancer deaths today are of persons aged 65 and over.

Women constituted a larger proportion of the cancer victims than men early in the century, but recently this has changed.

---

[1] Comparisons of long-term trends are based on mortality rates adjusted to the age distribution of the 1940 U.S. population and, except for the discussion of specific sites, to the Fifth Revision of the International List of Diseases and Causes of Death. Data for 1958 are estimated by the Research Department of Health Information Foundation.

Thus in 1900 the cancer mortality rate among females exceeded that for males by 65 percent. Later this ratio narrowed, and by 1946–47 mortality for the two sexes was at the same level. By 1956 the former positions were reversed—the male mortality rate now exceeded the female by 22 percent.

The female mortality rate from cancer, after rising continuously since 1900, began to level off during the late 1920's and early 1930's and has declined since then. In contrast, the male mortality rate has continued to rise steadily, in part because of the rapid rise of respiratory cancer among men, but also because in general cancers afflicting males more often occur in less accessible sites.

CANCER MORTALITY BY SITE

The distribution of all cancer deaths by primary site has changed greatly since 1930. For example, cancer of the respiratory system has become a more important part of the total picture. It accounted for only 3 percent of all cancer deaths in 1930, but by 1956 its proportion had risen to 13 percent. The death rates per 100,000 population for these years rose from 3.7 to 17.1. The rise in mortality from leukemia was also notable, from 2.3 to 6.0. However, death rates from cancers of the other major primary sites have generally been leveling off, and in some instances actually declining, since 1930.

The respiratory system has become one of the main cancer sites for males. Their mortality rate in 1956 was six times as high as in 1930, while the rate for females doubled in the same period. In 1930 this site accounted for 5 percent of all cancer deaths among males, but by 1956 the proportion was 21 percent. For females the comparable rise was from 2 to 4 percent.

Although part of this rise may be spurious (because of better diagnosis, case-finding, etc.), the strong sex differential and other factors suggest that most of the rise represents a true increase in incidence. This is the most rapid ever recorded for a noninfectious disease.

Recently a number of large-scale investigations have shown that lung cancer [2] occurs 5 to 15 times as frequently among cigarette smokers as among nonsmokers, and that there is a direct relationship between the incidence of lung cancer and the amount smoked. From a public health point of view, the conclusion of a cause-effect relationship between lung cancr and cigarette smoking has now been accepted by many responsible health agencies.[3]

But in addition, studies have shown other possible causal factors in the environment, especially motor-vehicle exhaust and other forms of air pollution. And also, specific factors in particular individuals may increase their susceptibility to environmental influences.

LEUKEMIA DEATH RATE RISES

Recent increases in the death rate from leukemia [4] have also attracted considerable attention. The largest increases in leukemia mortality have occurred among children and older people, where the rates were highest to begin with. During the preschool years leukemia accounts for nearly 50 percent of all cancer deaths.

[1] As used here, this term refers to epidermoid and undifferentiated types of carcinoma of the lung, but not adenocarcinoma.

[2] Statement by Sureogn General Leroy E. Burney of the Public Health Service, Department of Health, Education, and Welfare, on Excessive Cigarette Smoking and Health, July 12, 1957; and statement by John Vaughan-Morgan, parliamentary secretary of the Ministry of Health, to the House of Commons, June 27, 1957.

[4] A malignant disease of the blood and bloodforming organs, involving the excessive formation of white blood cells.

It is now widely accepted that exposure to nuclear and allied radiations (including X-rays used for medical diagnosis and therapy) can cause leukemia in man. The evidence for this is derived from extensive extensive laboratory investigations on animals and from studies of the distribution of the disease in humans.

These studies have shown a higher mortality from leukemia among radiologists than other physicians, a decrease in incidence of this disease in proportion to the distance from the center of the atomic bomb explosion among survivors in Hiroshima and Nagasaki, and a relationship to past exposure to X-rays for various conditions (including children exposed in utero during X-ray examination of the maternal abdomen and pelvis).[5] Nevertheless, many aspects of this relationship remain unexplained, and many investigators do not accept a linear cause-effect linkage.

Although cancer mortality as a whole has risen, a decline has been recorded for the digestive system as a primary site, and this despite its relative inaccessibility.[6] This site today accounts for only about one-third of all cancer deaths, while in 1930 the comparable figure was about one-half. Mortality from cancer of the digestive system declined 33 percent among females from 1930 to 1956—from 55.4 deaths per 100,000 to 37.2. For males the comparable drop was only 13 percent—from 59.7 to 51.9.

In a similar manner, opposing trends for the sexes in mortality from cancer of the genital organs have contributed to the current excess of male mortality from cancer of all sites combined. While mortality from genital cancer rose for males, from 10.6 per 100,000 in 1930 to 15.3 in 1956, the rate for females declined about 25 percent, from 31.9 to 23.8.

The better female record probably results in part from recent advances in obstetrical technique, from their greater propensity to seek medical care (even exclusive of pregnancy), and also from the widespread use within the last 10 years of the Papanicolaou vaginal smear test for early detection of uterine cancer. Among males, most of the mortality from cancer of the genital organs (94 percent in 1956) is from cancer of the prostate. Detection at this site often occurs at a late stage of the disease, when a cure is difficult to achieve.

Mortality from cancer of the breast—restricted almost entirely to females—has changed little since 1930, despite the accessibility of this site and intensive educational campaigns to promote early detection and case finding. In 1956 breast cancer caused 23 deaths per 100,000 females; and accounted for nearly one-fifth of the total female cancer mortality.

DISTRIBUTION AMONG POPULATION GROUPS

In 1914 (the first year these data were available), mortality from cancer among the white population exceeded the rate for nonwhites by 30 percent. But by 1950 mortality for the two groups was approximately the same. By 1956 the rate for nonwhites actualy exceeded the white rate by one-eighth.

Much of the more rapid rise among nonwhites is attributable to their increased mortality from cancer of the digsestive system, especially for males, in contrast to a decline among whites. Similarly, the rise among nonwhite males of mortality from cancer of the genital organs was more rapid. But cancer of the skin, an accessible site and only a minor component of the total of cancer mortality, is twice as frequent among whites.

Cancer mortality is highest in the urban and metropolitan areas of the United States and in the industrial Northeastern and North Central States. It is lowest in the South Central and Mountain States. The industrial Northeast exceeds the remaining regions of the United States, especially in mortality from cancers of the digestive and respiratory systems and the breast. The South, low in other forms of cancer, exceeds the national average in skin cancer incidence, especially among whites.

ILLNESS AND SURVIVAL

In 1959 over 700,000 Americans will be under medical care for cancer, and about 450,000 new cases will be diagnosed for the first time. More than 40 million Americans now living—1 in every 4, according to present rates—will eventually have cancer.[7]

No real cure is yet available for all cancers, and the results of treatment are still generally defined in terms of years of survivorship free of clinical evidence of the disease. However, the prognosis for cancer patients is more favorable now than formerly, especially where there has been early diagnosis.

A few years ago 1 cancer patient in 4 was being "saved"—alive 5 years after diagnosis. Today the proportion is 1 in 3. Currently, the number thus saved is estimated at 150,000 annually. There are 800,000 Americans alive today who have been "cured" of cancer—free of the disease at least 5 years after diagnosis. And at least an additional 500,000 cancer patients, diagnosed and treated within the last 5 years, will live to become "cured."

The record of improvement has been clearly shown in a study of survivorship in Connecticut. The proportion of male cancer patients in that State surviving at least 5 years from the time of original diagnosis in 1935–40 was 24 percent; the figure rose to 32 percent for those diagnosed during 1947–51. For females the corresponding improvement was from 33 to 45 percent.[8] This improvement in survivorship has involved most of the major sites, including some of the more difficult, inaccessible areas. But the greatest improvements were reported for cases diagnosed at an early stage of the disease.

Surgery and radiation, still the only effective methods of cure, are successful only when the cancer cells have remained localized in areas which permit such treatment.[9] These techniques have become immensely more effective than in former years, partly because other scientific and medical advances now permit them to be used more extensively against tumors that were previously considered inoperable or inaccessible to radiation. The operative mortality rate has decreased, and great advances have been made in knowledge of the radiation sensitivity of different types of cancer.

One of the most promising fields for research, and one which has expanded greatly in recent years, is chemotherapy. Some therapeutic chemicals have already shown effectiveness in temporarily halting the progress of certain cancers, alleviating pain, and rehabilitating the body to provide greater chance for survival. These chemicals are

[5] See W. M. Court-Brown, "Radiation-Induced Leukemia in Man, With Particular Reference to the Dose-Response Relationship," Journal of Chronic Diseases 8, 1:113–122 (July), 1958.

[6] This decline may be partly spurious, representing little more than improvements in the accuracy of reporting or changes in classification of primary site.

now regarded as valuable supplements to surgery and radiation. Moreover, hormones as well as radioactive substances have proved valuable against some forms of malignancy.

FUTURE RESEARCH GOALS

Although much is being done against the disease today,[10] far more could be accomplished mereby by bringing present knowledge more effectively to bear. Perhaps as many as 75,000 cancer patients will die this year who might have been saved by earlier and better treatment. The hope for the future lies in research into the nature and etiology of the disease, to discover an effective diagnostic test suitable for large-scale screening, and to find more effective therapies than those known at present.

THE IMPORTANCE OF EARLY DETECTION

Great progress has been made in recent years in the treatment of cancer, and current research on the causes of this disease hold the promise that major new discoveries may be just around the corner.

Nevertheless, the annual number of cancer victims continues to rise. With present knowledge it is estimated that some 40 million Americans now alive will eventually contract the disease. Not only do we need more effective methods of detecting and curing cancer, but the public needs a greater awareness of its role in the fight.

The rise of cancer as a cause of death can be attributed partly to the decline of deaths from other causes, notably infectious diseases, now readily subject to medical control. A population that lives longer naturally runs a greater risk of developing diseases such as cancer, which are especially prevalent among older people.

Fortunately, although cancer is an increasingly serious health problem for the population as a whole, the propects for the individual cancer victim are brighter today than ever before. Whereas a few years ago only one cancer patient out of every four survived for five years or more, now the record shows one of every three so surviving. Thanks to modern methods of treatment, an estimated 150,000 individuals were saved from cancer deaths last year.

Even so, the American Cancer Society, which has given much leadership in the fight against cancer, maintains that half of all those who develop cancer could be saved. The Society, other health agencies, and the medical profession have joined in urging the public to be on guard for signs that indicate the need for prompt medical care. Since early cancer often gives no warning signs, even persons with no outward symptoms are urged to see their physicians periodically for checkups. The improved prognosis for today's cancer victim may be due largely to the impression these early-detection urgings have made.

Whether from fear, negligence, or other factors, however, many people still fail to have regular physical examinations. In fact, despite the rising threat of illness in the later years, older people are less likely to have physical checkups than is the public at large.

More than half the cancer deaths in this country occur among persons 65 and over. Yet a recent survey[11] indicates that 45 percent of the persons in this age group have not had a physical examination in five years. A quarter of all these older people report that they have never had such an examination.

Medical knowledge has advanced so much recently that the public has reason to expect that better ways of diagnosing and curing cancer will soon be found. For the foreseeable future, though, the main hope for any individual lies in early detection of the disease. The person who fails to consult a physician regularly is depriving himself of the benefits modern medical science could give him.

GEORGE BUGBEE,
*President, Health Information Foundation.*

## Welcome W. Wilson, of Denton, Tex., Recipient of Flemming Award

EXTENSION OF REMARKS
OF
**HON. FRANK IKARD**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. IKARD. Mr. Speaker, on February 19, 1959, the 11th annual Arthur S. Flemming awards program, sponsored by the Washington Junior Chamber of Commerce and the American Security & Trust Co., was held here in Washington. The Flemming awards are designed for the following purposes: To recognize young men who perform outstanding and meritorious work for the Federal Government; to attract outstanding young men to Federal employment; to encourage high standards of performance in Government service; and to enhance appreciation of our form of government and the responsibilities it presents.

I am proud to say that a young man from my congressinoal district, Welcome W. Wilson, of Denton, Tex., who is the director of the southwestern regional headquarters, Office of Civil and Defense Mobilization, received a Flemming award this year. I have known Welcome Wilson since he came to Denton several years ago, and I know him to be a young man of outstanding ability, integrity, and honesty of purpose. He has a brilliant mind and is dedicated to his job and to the people he serves.

Mr. Henry M. Moore, chairman of the Arthur S. Flemming Commission, in presenting the award to Welcome Wilson, made the following statement:

This award is presented to Welcome W. Wilson for his outstanding leadership and creative ability in developing ways and means of enabling States and communities to combat and to repair the ravages of natural disasters. With five States under his jurisdiction—Arkansas, Louisiana, New Mexico, Oklahoma and Texas—Mr. Wilson had been in office only a short time when four of those States were stricken with a series of natural disasters, culminating in Hurricane Audrey which, in June of 1957, demolished Cameron, La. Tried by this ordeal, Mr. Wilson's previously developed plans for meeting just such a disaster revealed the imaginative planning and organizational ability that had created them, and, in largest measure, held casualties and damage to a minimum and speeded the recovery and rehabilitation of the stricken communities. Throughout the long disaster period Mr. Wilson, without regard to his own health or safety, supervised disaster operations, working long hours with minimum rest and sleep. The most significant accomplishment of the relief operation from the point of view of agency natural disaster planning was that the vast amount of Federal assistance rendered the stricken areas was supplied entirely from sources within the region, demonstrating that properly organized and administered, these resources can make a region self-supporting.

Later in 1957, Mr. Wilson and his associates revamped their regional planning in accordance with the lessons just learned. These improved operational plans were amply tested in the spring of 1958 when three of the States were again stricken by disaster. As a result of Mr. Wilson's foresight and leadership, relief and rehabilitation operations were again conducted with maximum efficiency.

In recognition of the significantly higher degree of preparation for combating nationwide disaster resulting from an attack upon the country with nuclear weapons, and an increased public awareness of the need for civil defense preparedness, I am honored to make the presentation of this award to Welcome W. Wilson.

## Synopsis of Resolutions Adopted by Governor's Interstate Indian Council

EXTENSION OF REMARKS
OF
**HON. E. Y. BERRY**
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. BERRY. Mr. Speaker, in October of 1958 the Governor's Interstate Indian Council, composed of 18 States, passed a number of resolutions. The States represented at the council include: Arizona, California, Florida, Idaho, Kansas, Minnesota, Montana, Nebraska, New Mexico, New York, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington, Wisconsin, and Wyoming. A synopsis of these resolutions is as follows:

(a) Resolution 3: The Governor's Interstate Indian Council favors legislation to amend Public Law 568, 83d Congress, the Indian Health Program Transfer Act. The primary purpose of the proposed legislation was to clarify the authority of the Surgeon General to institute a program for the provision of Indian sanitation facilities as a part of its overall health program, and S. 3694 will be a great aid in assisting the Public Health Service in carrying out its sanitation program.

(b) Resolution 4: The council strongly urges that Congress double the appropriation for vocational training for Indians to the amount of $7 million a year, and wholeheartedly endorses the philosophy of extending this vocational training program to nonreservation Indians.

(c) Resolution 5: The council requests the Secretary of the Interior and the Commissioner of Indian Affairs to adopt a program to extend certain health and welfare services to Indians residing off the reservations who would otherwise have been entitled to receive such services and benefits had they remained on the reservations.

(d) Resolution 6: The council resolved that the Secretary of the Interior be petitioned to present to Congress more clearly defined statutes to assure that no termination procedure be consummated without direct acceptance of the terms by the tribe and the consent of the State legislature.

(e) Resolution 7: The council resolved that the Secretary of the Interior be petitioned to inaugurate procedures for determining the status of those who claim to be Indians, and establish a roll on that basis in every tribe.

(f) Resolution 8: The council reaffirms its Resolution XI passed in 1957, requesting Congress to provide adequate appropriations for Indian education.

(g) Resolution 9: The council resolved that Congress effect passage of proper legislation amending the Claims Commission Act to clearly define just what matters constitute a valid and equitable offset to aid the Commission in making a fair and just adjudication in an instance when the Government by way of counterclaim and setoff, charges the tribe with certain services and benefits extended to the tribe in the past and other offsets such as for the operation and maintenance on old USIS irrigation projects against individual allottees and old unsettled obligations of renters of said lands belonging to the individual allottee—not obligation of the allottee or Indian tribe.

(h) Resolution 10: The council resolved that the Bureau of Indian Affairs be requested to initiate a more vigorous Indian reservation road improvement program in the immediate future, as good roads on a reservation are the lifeblood of educational and economic development.

(i) Resolution 12: The council resolved that the Bureau of Indian Affairs be urged to place more emphasis upon the secondary high school education program and make the facilities and opportunities for this kind of education more widely available to Indian youth on reservations, because the educational program on Indian reservations is the basic foundation on which the solution of all problems confronting Indian people will be based.

## Centennial of Oregon

EXTENSION OF REMARKS
OF
## HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. NEUBERGER. Mr. President, the Nation recently participated in the commemoration of 100 years of Oregon statehood, for our great State was admitted to the Union on February 14, 1859.

The Oregon Historical Society is ever in the forefront of acquainting the country with Oregon's illustrious traditions and legacy. On October 17, 1958, in the city of Portland, the Oregon Historical Society held its most successful and significant annual meeting. I was privileged to participate in the event, and to discuss briefly the legislation establishing the Fort Clatsop National Memorial near Astoria. Principal speaker of the occasion was the distinguished Oregon author, Stewart H. Holbrook.

Two documents presented at that time will help to acquaint the United States with the background and heritage of Oregon's first century as a State. These are the report of Thomas Vaughan, director of the Oregon Historical Society, and the president's message given by Mr. Donald H. Bates, retiring president of the Oregon Historical Society.

Because we have started the Oregon centennial, an event officially proclaimed by President Eisenhower under a resolution which I offered during the 85th Congress, I ask unanimous consent, Mr. President, that the report of Director Vaughan and excerpts from the message of President Bates be printed in the Appendix of the RECORD.

These thorough and informative documents should be of interest to Members of the Senate and the House, who last year enacted our legislation creating the Fort Clatsop National Memorial, the first such national historic shrine in Oregon under the active custodianship of the U.S. National Park Service.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

DIRECTOR'S REPORT

(By Thomas Vaughan)

An annual report to the society could not be made without commenting on the superb support of our 40 active and 6 exofficio board members. Our institution is in the middle of a great renascence which the board stimulated and is now carrying through the membership. Because of this hard determination we have been able to:

Embark on a huge library assessment and recataloging program which has already received national attention.

Continue our notable publications program which we now need to expand. Our books receive important national citations and they sell, too. In reference to this program we certainly hope to find money to match the fine Hill Foundation offer during the coming year.

Continue our 2-day annual spring forum, now in its fourth year. Next April 10–12, we shall have the Pacific Northwest regional meeting honoring the centennial.

Hold our second annual Trappers Rendezvous, which this year in Lincoln County was the high point of a busy summer.

Hold the fourth muzzle-loading turkey shoot at Camp Withycombe, attended by over 1,000 this fall. Next year we shall have the international shoot here in cooperation with the Multnomah Muzzle-loading Rifle Association.

The Oregon century farm program held in cooperation with Robert Stewart and the State department of agriculture was a very valuable program in public interest and leads to important new materials. Two hundred and twelve Oregon century farms were located this year and in 1959 there will be more eligible.

The long work devoted to a proper inventory and assessment of the battleship *Oregon* collections is now over. We are very pleased that we could provide this highly specialized service to the department of finance and administration.

In regard to our collections one of the very important areas that has been somewhat ignored is the great story of Oregon's maritime and interior waters. Thanks to Mr. Donald H. Bates, our marine history program is now moving rapidly forward. This is a brilliant achievement.

During the year Michael Haggerty was given a leave of absence to work with the Oregon Centennial Commission. Mr. Cai Lindquist, of Stockholm and Helsinki, came to join our staff via Salt Lake City. He serves as registrar.

Miss Jeannette Stewart, of Alaska, joined the staff April 1 to work under Mr. Duckett as chief catalog librarian, responsible for our important new library program. Mrs. Judith Scharf came to the society in July as public information representative. Associated with the colorful centennial van of history are Capt. Harry Paget, Edward Durham, and Sam Galloway.

During the year the board held four regular meetings and the executive committee six special meetings. The other hard working permanent committees of the society held a total of 20 meetings. Our temporary centennial liaison committee, one. The director also held over 200 conferences with various officers, subcommittees and board members.

During the year members of the staff spoke at 74 public meetings, appeared on 88 radio programs in Oregon and 56 special and regular television programs. We are grateful to these mediums for the interest shown our work. The society also gratefully recognizes the unusual number of editorials, feature stories and regular news coverage which our State newspapers gave to society activities this year. We are most appreciative of this important source of public support. From this has stemmed a larger historical interest which has been instrumental in the information of two new local affiliated societies in Linn and Yamhill counties. We extend warm congratulations to them.

In many ways the most important development for the Oregon country was the great legislative triumph achieved with the passage of the Fort Clatsop National Memorial bill. The society has owned this key property in Clatsop County since 1901. We are giving up our ownership to the Federal Government, for we feel the whole region will benefit from the magnificent plans the National Park Service has in store at Fort Clatsop. May I point out that hard as we have all worked in the society, in Clatsop County, in the State, this victory could not have been achieved without the drive, persistence and comprehensive support of Senator RICHARD L. NEUBERGER. To him, to Representative WALTER NORBLAD, and the other members of the Oregon congressional delegation we all owe heartfelt appreciation. The impact of this legislation will soon be felt both historically and economicaly in Oregon.

Our demanding work with the Oregon Centennial Commission continues. As a member of the commission, I am obliged to attend countless meetings important to some phase of our statewide planning. The centennial year will soon be with us. I earnestly beseech you as members or interested friends of the society to call at our offices of the centennial offices, Jackson Tower, as soon as possible. This is an Oregon commemoration. We need the help of every Oregonian to give the country and the world the kind of commemorative show they want and expect from our State.

Respectfully,

THOMAS VAUGHAN, *Director.*

PRESIDENT'S MESSAGE

(By Donald H. Bates)

One hundred years is not such a long span of history, particularly when some of us can vividly recall what has occurred for over half of it. The year 1958, however, closes the first big step of our statehood and in her activities this organization has participated for 61 years. That is good, for in other areas, lack of timely interest has resulted in the loss of records; here our archives are filled with data pertinent to our life and to the

accomplishments of those who have preceded us. This information, by generous donations, is increasing and will prove invaluable to our citizens through students and future historians.

I feel humble to note the time, energy, and money contributed by members, and especially the directors of the society to its many activities. It is more in evidence this year than in any period I can recall. When the impact of their current accomplishments is realized, you, too, will all be pleased.

The centennial commission is moving along a broad front to publicize our State's birthday next year. I hope we all contribute to this occasion and assist the commission in its assignment.

There are some excellent people on the staff of this society. The librarian, Mr. Kenneth W. Duckett, and Dr. Claude E. Schaeffer, museum curator, ably spark responsible activities. Mr. Thomas Vaughan, directing the management of the many services of the society, will speak for them. There are Priscilla Knuth, Bonita Stephan, Cal L. Lindquist, Jeannette Stewart, and Judith E. Scharf, all well qualified and assisting to good work of our director. The Van of History also carries an important staff: Harry Clark Paget, captain, with Samuel F. Galloway, and Edward A. Durham, entertain our citizens in many communities, and Mr. F. S. Burt paves the way for them in an extraordinary manner, and we hope he will carry on in cataloging the department of our marine documents.

At this moment the Van of History is in eastern Oregon. It is a caravan, a symbol of the people, through the joint enterprise of their spokesman, the Oregon Centennial Commission and this society, made possible only by the magnificent contributions of a great many persons. You will learn more of them through the caravan itself. Our staff and architects are responsible for its excellent appearance and exhibits. We are indebted to the coordinators, Sidney Burt and Arthur L. Crookham, including members of the centennial commission, who have so ably stimulated local people's historical interest in each of the communities to be visited. Attendance to the Van of History from all the advance work is proving fantastic and attests the quality of this nerve center.

As you are aware, there is an increasing interest in our society at the State legislature level. Legislators know we are here to foster all local historical enterprises, to assist them in every way possible, and to keep our State's historical records. All of them have helped us in this task.

For the immediate future we sorely need a new building to house our bulging library, archives, museum pieces, and also to accommodate extensive activities. It is urgent that we have a broader base of contributing membership. You personally can help us in this. Our activities are crowding every moment and while it is "more blessed to give than to receive," we must from necessity confine and curtail our services, within a balanced budget, expressly tailored for each activity undertaken. The integrity of the society is paramount and there is no place for personal aggrandizement in any personal, political, social, or religious field for we are in a position of trust to be held inviolate.

I find interest in historical things pertinent to this area extremely wide. I like early buccaneers, the mountain men, including trail blazers and those who manned the early waterways. To the scientists in geology and anthropology their fields of interests are no less glamorous. By and large there is a great interest, of many persons, in our early settlers who made the Territory safe and pegged down the last corner of our country. We, the directors of this society, must cater to them all.

Our State affiliated societies have increased their activities and we hope to do more to assist each one to reach its goal. The State of Washington had added excellent essays on Northwest industries and the Washington Historical Society published a fine volume on "Fort Vancouver," by Mr. Hussey. The citizens of the Province of British Columbia have been so stimulated by their successful centennial that records are now published covering each section of this area. The "Skeena River" saga, by R. C. Large, is a case in point. This river of destiny describes one of the routes into the Yukon. Some of our residents will still recall that "Grease Trail." Marion County has now the fourth volume published of the Salem area. It is good. We have Dorothy Johansen and Charles M. Gates new history "The Empire of the Columbia," a truly significant book. Dr. Burt Brown Barker will add much to the lore of Dr. John McLoughlin and his "Oregon the Unique Prize" will be on the shelves shortly. Our own Stewart H. Holbrook too, adds to the rich printed history of our State. This next year should increase, over the entire State, new and interesting records as the volume soon to appear on Oswego, Oreg., by Mrs. Kenneth Goodall, and the many local tales by others.

To my mind the foremost editor and moralist in the land speaks for the Royal Bank of Canada at Montreal. Simplicity of his words will describe my views; and, I believe, yours as to "what use is history?" I will also borrow from our Navy the significant statement "now hear this"?

Not all of us agree about the benefit to be had from studying the past. People who believe its experiences should be used today and passed along in trust to their successors, rub elbows with those who think that tradition and precedent are a ball and chain hindering progress.

What a pity it is that this should be so. The vital beliefs and good practices of our western world rest on the fulcrum of historic knowledge. There is no basis for our society save its past. There is no guide to business decisions except that given by experience. There is no personal maturity that is not built upon reflection on events of yesterday.

The record of things to be recalled is contained in books, in the minds of parents, in universities, and in business files. What are books but the thoughts of men of their time put down in type? What has a university to proffer except what it has absorbed of the past, to be communicated to every new generation with interpretation and adaption? What has any mother to pass on to her children except the accumulated wisdom of mothers of the past and the lessons of her own experience? What is the purpose of all our office work from the clay tablets of Babylon to the punched tape of today's electronic machines except to provide the history of transactions? There is one qualification to be made: we must use only what is true, significant, and applicable. We must, as Jean Jaures, French statesman, philosopher and orator said it: "take from the altars of the past the fire—not the ashes."

* * * * *

We are forever indebted to the past. It is the source of our very identity. In the present moment, which changes as we live it, the past is all we know. By telling us what our forefathers did, history inspires us in two directions: to respect their achievements, great in their day, and to strive to equal their resourcefulness and courage.

Children take many things for granted. They do not marvel over automobiles, airplanes, radio, television, the telephone. Many things seem to us very simple because someone ages ago or a half century ago was clever enough to think of them. It would be a healthy custom to pause, every once in a while, to pay a memory tribute to the explorers and inventors, the enterprisers and the artisans and the farmers, who laid the foundation of our prosperity. They blazed trails through the forest and over mountains, trails which we have widened into highways and along which we have laid railway tracks. They paddled their canoes along unknown rivers and lakes where we have developed a seaway. We have all those past ages open to us. Everything is in our history to tell us how we arrived at today's comforts and sorrows: the efforts, actions, and sufferings which wrung our civilization and culture out of chaos. That is one use of history. It is the record of societies of men and women, of the changes which those societies passed through, of the ideas which determined their actions, and of the material conditions and forces that helped or hindered their development. Arnold J. Toynbee, one of the foremost historians, has chosen selections which demonstrate his theory that all civilizations pass through similar transitions and that we can better understand our own times through a study of the past. We can use history to give us binocular or stereoscopic vision, so that we see all around today's problems. Life in the present takes on a deeper meaning in the larger context of time. When you put a picture of history into the viewer alongside one of a similar event of today, you get a roundness. The picture enables you to judge the necessity and importance of proposals for action today. It even provides examples of the results that may be hoped for, and warnings about the failures.

Therein lies the secret of a rewarding use of history. We are not seeking to put history under a microscope, to cut it into slices for critical examination. What we do want is to apply the experiences of the past to events today. A spark from another age may illuminate our problem, and help us to plot our course. Nothing can be more precious and useful to anyone than openmindedness. The hidebound politician cannot become a statesman; the one-idea business man cannot become a great captain of industry; the bigoted man or woman cannot enjoy the fullness of satisfaction that life proffers.

History contributes to openmindedness. It shows that people holding widely different views of social, political, and religious matters have lived worthily and contributed their share to achievement in the arts, letters, and sciences. Mature thinking is aided by history. The student of history is less likely than others to believe that any opinion is altogether right, that any purpose is altogether altruistic, that any calamity is altogether deplorable. He is less likely than people ignorant of history to pin derogatory labels on people; to emphasize differences so as to stir angry emotions; to allow prejudice of race, creed, or caste to dictate his association with people around him.

We need to pay attention to the significant things, and avoid wrangling over the trifles. If we become confused by the 50 different reasons given in various books for the outbreak of the two world wars, yet we have a better understanding of the cause than if we assumed there was only one reason, or no reason at all except fate.

When we read the story of mankind we find that there has never been a period which has not been regarded by some of its contemporaries as critical. History seems to be made up of one crisis after another. Ours appears to be more serious because we are in it.

DONALD H. BATES,
*President, Oregon Historical Society.*

## Deterrent Power

EXTENSION OF REMARKS
OF
## HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. DORN of South Carolina. Mr. Speaker, Gen. Bonner Fellers has proved correct in many of his analyses of foreign and military affairs. The following article is timely and warrants the urgent consideration of us all:

WHERE WE STAND

(By Brig. Gen. Bonner Fellers, U.S. Army (retired))

At a recent press conference, President Eisenhower was asked how the Government could hope to reduce expenses when the expanding missile program would be so costly. He replied:

"When guided missiles prove their efficiency, then certainly there must be some other kind of weapon that they are displacing * * * We have got to do some good hard thinking * * * not just pile one * * * system of weapons on another and so in the long run break ourselves."

This expresses the essence of effective, efficient defense. If our Government is to remain solvent and free enterprise survive, we must replace old-fashioned, inadequate, and expensive weapon systems with the most effective and hardest-striking modern weapon systems that American genius can devise.

The President did more than state a principle. He followed with a significant cut in military manpower. By June 30, 1959, our Armed Forces, principally the surface forces—Army, Navy, and Marines—must reduce their strength by 70,000 men.

Behind the scenes there is a more drastic proposal—this one is dangerous. It has been transmitted by letter from the President's National Security Council representative to the Joint Chiefs of Staff. The message suggests the idea of a minimum deterrent. By this is meant a deterrent only strong enough to knock out a limited number of enemy targets—principally cities. The theory is that the potential destruction would be great enough to be unacceptable to the Soviets.

The minimum deterrent program would effect vast savings in our air and missile development and production. But soon the Kremlin dictators would have decided air and missile supremacy. Nevertheless, advocates of minimum deterrent argue that, since we would have sufficient striking power to inflict unacceptable losses, it makes no difference how strong Red air and missile power may be. But the minimum deterrence theory is more attractive fiscally than militarily.

The manpower cut and the deterrent proposal represent two possible approaches to husbanding our defense dollars. The first would save money by buying the past. The second, also with the national pocketbook in mind, would risk burying our future.

In any event, whatever our course, the cost of modern defense is prodigious, and the accent on economy grows more and more pronounced. And the public question of which service gets the largest slice of the limited financial pie yields this startling fact year after year.

If the next war comes, each service, supported by the other two, plans to play the dominant role. This, in brief, is where each stands:

The Army holds there can be no victory in war unless land areas which support the enemy's military effort are occupied. The Army feels that, supported by the Air Force and Navy, it must win the land battle as the final decisive act of any war. Man, the Army reminds us, lives on the land. There he has his home, his village, his country. Therefore, the decisive element of victory must be to take the enemy's land from him.

The Army further argues that the United States and U.S.S.R. have reached parity in nuclear weapons, and neither could survive all-out nuclear war. As a consequence, such a war is becoming increasingly improbable. We must prepare instead for limited war in the form of bit-by-bit encroachment on the free world, the Army contends. To the soldier, the Army, with air and sea support, is the ideal limited-war weapon. But should an all-out war materialize, the Army proposes as well to defeat the Red army on its home ground.

To quote from Army doctrine:

"Army power is the power of discretion. It fights troops and captures Communist leaders rather than destroying a country. It can, in conjunction with the other services, preserve the peace, meet Korean-type wars, and defeat the full might of the U.S.S.R. in the event of an all-out war."

The Navy's concept of the next war is that nuclear-armed intercontinental bombers and missiles would knock out both our own and the Soviet land and air weapon systems. The Navy says her ships, safe at sea, would survive. And these ships—especially the carriers and submarines—could then make quick work, the Navy believes, of finishing off the enemy.

The Navy also claims a dominant role in limited war. The Navy can strike anywhere. It has its own movable airbases. It has a Marine amphibious force with tactical air support. The Navy's atomic submarines could strangle enemy shipping and are testing IRBM's to fire deep into enemy territory. As these atomic-powered vessels come into general use, the Navy feels it will be able to cruise or fight for indefinite periods of time in any critical area.

The Air Force maintains that its strategic bombers, and soon the ICBM, can strike and destroy almost instantly any target anywhere on earth. Thus, according to our airmen, strategic airpower has become our first line of defense and our principal war deterrent.

The Air Force holds, and the Army and Navy agree, that control of the air is a prerequisite to successful surface operations. But the Air Force claims more than the ability to control the air. With air control achieved, in either a limited or all-out war, the Air Force obviously could attack and destroy enemy surface forces on land or sea.

This latter air capability clashes head on with the traditional roles of the Army, Navy, and Marines.

Jointly subscribing to the theory that limited wars are more probable than all-out war, Army and Navy chiefs have launched an effort to reduce the fiscal year 1960 Air Force budget by some $6 billion. They would, of course, increase their own budgets accordingly.

The big bomber is almost obsolete, they declare, and will soon be replaced by ballistic missiles. This Army-Navy confederacy urges more money for missiles and for the expansion and modernization of our surface forces to meet the limited-war threat. Except for aircraft to support and transport their surface forces, the Army and Navy chiefs maintain that the Air Force as we know it today is gradually being phased out of existence.

The Air Force fights back. It points out that the only true war deterrent in the world today is the United States Strategic Air Command. And since it will be some years before the ICBM can even partially replace the intercontinental bombers, SAC needs more, not fewer bombers.

From this desperate interservice rivalry looms two potentially fatal dangers.

First, duplication brought about by each service planning to play the major role in war lifts defense costs even higher than necessary. This defense outlay combined with foreign aid and domestic expenses is, in the view of many, undermining our economy. If our economy collapses, there can be no adequate defense.

Second, interservice rivalry results in intolerable compromise. In some cases it leads to actual abandonment of defense measures vital to our survival.

In shaping its defense budget, the administration faced a quandary. It had decided to hold defense expenditures for fiscal year 1960 to some $41 billion. The services originally wanted close to $57 billion. Naturally, the line of least resistance was taken and something like a 30-percent cut straight across the board was imposed. The result will be a defense characterized by compromise, only partially responsive to this air-space-nuclear age.

THE RED THREAT

The United States had to move into the air-space-nuclear age. The enemy was already in it. Conventional surface weapons cannot materially influence air-space-nuclear weapon systems. One reason today's defense is so costly is that the Army and Navy are endeavoring to superimpose air-space-nuclear weapons on antiquated surface forces.

Enemy capabilities are well known. Both the Soviets and Red China are committed to vast standing armies to control their populations, hold satellite peoples in check, and threaten the free peoples on the Eurasian continent.

The Soviet-Red China axis, self-sufficient so far as strategic war materials are concerned, has little need for large surface fleets. But the Russians have more than 500 modern submarines, a frightful threat to free-world shipping and overseas troop transport. In addition, Red submarines will relatively soon be able to fire IRBM's with nuclear warheads against our cities and military installation.

Russia boasts the world's largest air force, Red China the third largest. The Red Chinese have some 2,500 modern combat planes, more than the Chinese Nationalist Air Force and America's Pacific Air Forces combined.

The Soviet Air Force consists of some 22,000 modern combat planes, mostly jet. The air defense force has 4,000 supersonic jet fighters. Russia's intercontinental bombers are believed close to our own SAC bombers in quality. How many ICBM's Russia has ready to strike is unknown. But the Kremlin arsenal of nuclear bombs and delivery systems is feared full enough to level the United States and Europe.

To counter these Red capabilities, we need not three war plans, but only one war plan which takes full advantage of the inherent capabilities of each of the three combat arms; once more in service-by-service format:

Army: Neither the United States nor the rest of the free world can afford armies comparable in size to those of the Soviet Union and Red China. Nor is there reason to do so. The Communist governments have neither the air nor the naval lift to transport their armies overseas. Not only is Europe vulnerable to invasion by the Red Army, but Soviet bombers and IRBM's could devastate Europe without a Red Army invasion.

Even were it possible for the NATO powers to create armies fully capable of defending Europe against Red Army invasion, Europe could still be destroyed from the sky before troops could be moved into battle.

Thus the United States need not create nor plan to create armies to engage the full weight of the Red armies. Consequently the Army is free to turn its attention to defense

of strategic bases, participation in continental defense, and other roles.

Navy. In a future war, we would not be sending millions of troops overseas. The Navy would be relieved of the hazardous transport role. The Communist powers have no surface fleet of magnitude; our own fleet can concentrate on base supply and resolving the menace of Red submarines. Our surface fleet can be materially reduced. The British, although steeped in naval tradition, have all but abandoned their fleet. The United States is, in fact, the only power today which clings to an enormous surface fleet.

The Navy takes violent exception to the idea that our surface fleet could safely be reduced. It is making a desperate fight for a nuclear carrier force. One ship is being built; six are planned by 1966. There are impressive advantages to the nuclear carrier. Mobile, it can cruise in critical areas without refueling for the duration of an emergency. Its air arm can attack enemy ships and bases; it can strike enemy inland targets; it can support landing operations; it is less open to sabotage or capture than an overseas land base.

But the carrier has a fatal weakness. It is vulnerable to air and undersea attack. In combat against an enemy with the largest air and submarine forces in the world the carrier cannot survive. The fireball of a megaton nuclear bomb is 4 miles in diameter. The heat it gives off is more intense than that from the surface of the sun. Thus a direct hit would not be necessary to melt a steel vessel.

The submarine, however, is not especially vulnerable to enemy air attack. Atomic submarines, eventually to be armed with nuclear IRBM's, could strike deep into enemy territory. Because such submarines will be able to fire the IRBM while submerged and then remain under water indefinitely, this striking potential obviously should be developed to its maximum.

A nuclear submarine costs some $200 million. Construction of nine has been authorized by the Congress. A nuclear carrier is more than twice as expensive as a nuclear submarine.

Despite the recognized vulnerability of the costly carrier and the obvious advantages of the submarine, the Navy is psychologically unable to abandon the carrier and go all-out for the submarine. Should the carrier go, with it goes most of the surface fleet and naval air arm. A carrier-vs.-submarine fight rages within the Navy itself, of course. The President and Congress should settle the matter—on behalf of the submarine.

Air Force. The Red Air Force is the most fearsome, deadly threat the United States has ever faced. The best defense against its nuclear and missile threat is an effective maximum war deterrent. The United States has one true deterrent. It is the Strategic Air Command. At this writing, SAC is believed to be stronger and have more experienced and talented crews than the Red Strategic Air Force. In ICBM, IRBM, and space development, the United States appears behind the Soviets. We must work unceasingly in these fields.

The Air Force is now developing the technique of firing an air-to-ground IRBM, or an air-launched ballistic missile. This means that SAC bombers will be able to release the ALBM 1,000 to 1,500 miles from the enemy objective, thereby increasing the effectiveness of the bomber and enhancing the safety of its crew.

In another field of endeavor we must make giant strides. We are desperately in need of an adequate antimissile defense missile. No expense should be spared to provide this. Our fighter-interceptor defense against Red bombers is inadequate. It must also be improved.

NATO

From the beginning, NATO has followed a surface-defense concept which commits NATO ground forces against the Red army. Since World War II the Soviets have kept some 175 regular army divisions in the field. In addition, there are 300 Red reserve divisions, well trained, with modern equipment. The central European satellite states have some 85 additional divisions.

Despite this enormous Red strength, at the 1952 Lisbon Conference NATO decided on 50 divisions and 4,000 aircraft as its minimum defensive force. Today, more than 6 years later, there are scarcely 21 NATO divisions between Switzerland and the North Sea. Of these, 5 are American and 3 British. Thus, the continental NATO powers, with a population of more than 200 million, have under 13 divisions on the line for the defense of Western Europe. The NATO air support for these 21 divisions is insignificant compared to the strength of the Red air force.

After Sputnik I was put into orbit, NATO members met in Paris in December 1957. There President Eisenhower personally promised European NATO members they would be supplied with the most modern of all weapons—the American IRBM's, Thors, and Jupiters. The concept was to emplace a line of IRBM's from England, southeast through Western Europe, and on into Greece and Turkey. Such a chain of well-stocked IRBM bases could send a devastating nuclear barrage deep into the Soviet Union.

But European NATO powers have not reacted as anticipated. While we offered our allies the IRBM as a striking force, we provided them almost no protection against Red nuclear attack. Actually, we are unable to do so. Quite realistically, the NATO powers envisage total destruction by incineration should the Reds retaliate with nuclear IRBM's and bombs.

At the close of 1958 only Britain had accepted and was emplacing a limited number of our IRBM's. These, as they should be, are under British command. Some 18 months ago Italy agreed to accept IRBM's, but as yet has not built bases for them. Turkey, under the muzzles of Red weapons, is eager for the IRBM but has not the technically trained men to handle it. Norway, Denmark, Belgium, Luxembourg, Holland, France, north Africa, Greece, and Portugal have turned thumbs down.

The Berlin crisis at the close of 1958 brought forth another NATO Conference. From it came a bold announcement that we would meet force with nuclear weapons. It was something of an empty threat in view of the fact that of all the NATO powers in Europe only Britain is accepting nuclear IRBM's.

The facts compel these conclusions: We should produce fewer IRBM's; we should have more ICBM's to be based on the North American Continent and able to reach any target in the Soviet Union.

THE LIMITED WAR FALLACY

The most dangerous assumption which Pentagon planners could make would be to rule out the possibility of an all-out nuclear war against the Soviets. Such a war can be avoided, but only if we lead in air/space/and nuclear weapons.

In determining the number and types of weapons we need, we must recognize the possibility that the enemy will probably strike first. Our weapons must, so far as possible, be given underground protection. We must have enough weapons to retaliate successfully after absorbing the initial enemy strike.

We must face the fact that war between the Soviet Union and the United States is a possibility. Conventional causes for war already exist. The Soviets have shot down American planes, killed some of the crew members, and interned others. Kremlin leaders openly criticize our institutions; they boast of a Communist-dominated world.

Recently the Soviets have undertaken a massive civil defense program. But the Russians know full well that we have no intention of striking unless we are attacked. One must then assume that the Red bomb shelters are to protect against American retaliation.

The second most dangerous assumption which Pentagon planners could make is that we can fight limited wars and thereby avoid all-out war. We cannot depend upon the Kremlin to keep such a war "limited."

Moreover, after war starts, its course may lead anywhere, regardless of the initial intentions of the adversaries.

The fact is, limited wars would be to our great disadvantage. Limited wars in the traditional sense cannot be decisive. Korea was a limited war which resulted in a most unsatisfactory armed truce. Victory in any limited war would not resolve the issue with the Kremlin. We would be weakened, bled white in manpower, and our economy strained. Meanwhile, the Kremlin's position would grow stronger in comparison.

We have but to glance about the globe to see an array of potential limited wars. The Formosa Strait, Southeast Asia, the Middle East, north Africa, and Berlin all present explosive situations. Commitments in one or more such conflicts would be most unfortunate.

But, if we did have to fight such a war, the weapon system which could strike first would be airpower. Airpower can move rapidly and decisively. At the outbreak of the Korean War our fighters crossed the Pacific with only two stops. During the Lebanese crisis, fighters moved from the United States to that area in 17 hours. It is routine for fighters to span the Atlantic nonstop in 5 or 6 hours.

With nuclear weapons the striking power of one of our fighters is now a thousand times greater than that of a B–17 in World War II. Development in the size and types of nuclear weapons has given tactical air a new dimension to its power and flexibility. On short notice, tactical air can deliver a variety of firepower ranging from small-arms bullets through rockets, napalm, and high explosives to nuclear bombs. With such a variety of weapons, tactical air can destroy enemy communications, troops, supply bases, and other military installations. This striking power combined with speed and range renders tactical airpower decisive in any limited war.

To place chief reliance on surface forces in limited war would mean that the conflict might be lost before our troops could be committed to battle. Dependence primarily on tactical air makes a would-be aggressor hesitant. He knows that before he can win he will feel the full weight of modern airpower.

Thus, tactical air becomes our best limited-war deterrent. Against this reasoning, surface-forces advocates will argue that ground forces will be flown into limited-war combat and arrive promptly with the fighters. This is conceivable but unrealistic. If the enemy initially has control of the air over the potential combat zone, it is unsafe to fly the troops into the area. In any case, it would appear clear that:

1. In limited war tactical air can be the first to strike;

2. Necessary reliance on the full exploitation of tactical air in limited war makes the surface combat role a minor one;

3. The great lesson in considering limited war is that we must be prepared to fight an all-out nuclear war.

If we are prepared to win an all-out nuclear war, we most certainly can win a limited war by using the same, if modified, means. And with the power to win an all-out war the probability of being able to avoid any kind of war is greatly enhanced.

CONCLUSIONS

The minimum deterrent idea suggested to the Joint Chiefs must be rejected. If the minimum deterrent in our hands is expected

to keep the Soviets from striking us, then a maximum deterrent in Red hands will keep us from lifting a finger in defense of our allies, ourselves, or to keep the peace of the world.

In the past we had a superior deterrent and the Reds had a minimum deterrent. The Red minimum deterrent did not prevent our entry into the Korean war because we had the means—SAC—to fight an all-out war if challenged. The Reds with their minimum deterrent were not in a position to challenge us, and we fought a limited war.

We know that at this time the Reds want to continue their gains without risking all-out nuclear war. Our real problem is how to deter the Reds from taking over critical and exposed areas such as Berlin, the Middle East, and Formosa without resorting to an all-out nuclear war. None of these critical areas can successfully be defended without our using nuclear weapons. And this means the risk of a nuclear world war.

If the consequences of all-out nuclear war are worse for us than for the Reds because we have gambled on the minimum deterrent theory, then, in a crisis, we will be more likely than our enemy to back down. The Reds know this.

Adoption of the minimum deterrent theory could end our influence in Europe and Asia.

Our leaders are now examining a program which soon would give us a minimum deterrent and the Reds a maximum deterrent. Should we permit this condition to eventuate, we shall have forfeited our present position in the world. The Reds would likely assume a bolder, more arrogant attitude toward the free world.

Our survival today depends upon:

A striking force capable of destroying Red military capabilities. It must consist principally of air-space-nuclear weapons.

An effective war deterrent, which means an effective striking force.

An adequate continental defense of antimissile missiles and fighter-interceptors, together with the techniques to handle the submarine menace.

Our conventional surface forces—the mass army and the surface fleet—must be largely displaced. Neither of these forces, nor the two combined, can be decisive against the Reds. Our major striking power has passed from surface forces to air, space, and submarine nuclear weapon systems.

The ICBM has not yet displaced the intercontinental bomber and is not likely to do so for at least 5 years. Consequently, our cut-the-dead-wood formula should not be applied to SAC's manned bomber force. Actually, SAC must be sufficiently strengthened to insure our overwhelming air and space superiority.

The President would be justified in cutting deep into surface force budgets. Their combined budget is over $20 billion. A 50 percent cut would be militarily safe.

None of our essential defense bills will be too high if we realistically tailor our arms budget to the needs of the times.

---

## Expansion of Base of Contributions to Political Parties

---

EXTENSION OF REMARKS

OF

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Tuesday, March 10, 1959*

Mr. HUMPHREY. Mr. President, since January of last year the American Heritage Foundation has been engaged in a program to expand the base of political contributions to the political parties.

One of the themes developed by the foundation, and now familiar to millions of Americans throughout our country, sums up the purpose of this undertaking:

Want to keep politics clean?

Don't pass the buck—give a buck to the party or candidates of your choice.

I take this opportunity to commend the American Heritage Foundation for this fine program. It is doing a wonderful job in bringing to more and more of our citizens the realization that politics is everybody's business, and that the financing of our parties and political candidates should not be left to only a few.

I ask unanimous consent that the annual report on the American Heritage Foundation's Contribute to Your Political Party program, as prepared by John C. Cornelius, president, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE AMERICAN HERITAGE FOUNDATION ANNUAL REPORT TO THE BOARD OF TRUSTEES BY JOHN C. CORNELIUS, PRESIDENT, DECEMBER 2, 1958

Last January, when the board of trustees of the American Heritage Foundation adopted Mr. Phil Graham's proposal to conduct an educational campaign—with the Advertising Council—designed to broaden the base of political giving, we looked at it as a trial run, a pilot operation, a pioneer experiment in practical politics. And so to our continuing "Register, inform yourself, and vote" movement we added this new dimension, "Want to keep politics clean? Don't pass the buck, give a buck to the party or candidates of your choice."

Both the Republican and Democratic National Committees wholeheartedly endorsed the project and agreed to direct a nationwide door-to-door solicitation timed to capitalize on our motivational campaign.

THE PROBLEM

In a speech, "The High Cost of Politics," at the University of Chicago, Mr. Graham had spelled out the hard fact that modern political campaigns cost huge sums of money. He issued this challenge: "How can we raise enough honest, untainted money to permit our politicians to run for office without becoming obligated to corrupt and selfish forces? And in doing this, how can we help to create a higher regard and respect for the importance of politics and people in political life?" Research uncovered these facts:

1. Only 2 percent of the American people contribute to political parties—an unhealthful situation from the standpoint of participating citizenship.

2. Approximately $200 milion were spent in the 1956 elections—including local, county, State, and national campaign expenses. About $50 million of this was so-called under-the-table money, according to one political scientist.

3. Surveys of Dr. Gallup in 1955 and 1956 indicated that 16 to 17 million families expressed a willingness to give $5 or more to a political party, if properly approached.

CAMPAIGN TIMETABLE

1. January to April: Planning phase. The American Heritage Foundation met and worked with the Republican and Democratic National Committees; the Advertising Council; our volunteer advertising agency, Foote, Cone & Belding; our volunteer public relations organization, Vernon Pope, and Mr. Graham's staff. The immediate problem was to work out an adequate psychological approach and copy platform embodying all phases of the new program. Result was the basic theme, now familiar to millions of Americans:

"Want to keep politics clean? Don't pass the buck—give a buck to the party or candidates of your choice."

2. On May 21 the campaign got underway with a news conference in Washington. General Sarnoff, T. S. Repplier of the Advertising Council; Michael Ryan of Allied Chemical, volunteer coordinator, and Cal McCarthy of Foote, Cone & Belding, and I presented the new program and Mr. Alcorn and Mr. Butler pledged the support of both parties. The event was well-publicized with all wire services, TV newsreels, and nearly every daily giving it top priority. Favorable editorials appeared in the New York Times, New York Daily News, New York Herald Tribune, Christian Science Monitor, Washington Post and Times Herald, the Des Moines Register and Tribune, and hundreds of other leading newspapers.

Regarding the new campaign, Harper's editor, John Fischer, stated, "If it works, it may turn out to be the most effective weapon for good government since the invention of the grand jury."

3. In June, 60,000 "Contribute to Your Party" car cards were posted in buses, trains, and streetcars from coast to coast. More than 3,000 three-sheet posters were put out by transportation advertising firms. These showings continued until election day.

Most of the Nation's principal columnists added their approval: Peter Edson, Marquis Childs, Sylvia Porter, Mrs. Eleanor Roosevelt, Charles Lucey, Roscoe Drummond, and others. The June 1 issue of the New York Times Sunday Magazine published General Sarnoff's fine article, "Campaign for Campaign Money," and other magazines announced their support of the new program.

4. In July sponsored advertisements began to appear in weekly and daily newspapers throughout the Nation. Between July and November, more than 600 newspapers made use of 3,000 mats.

One newspaper, the Washington Post, carried every ad offered by the Advertising Council. In California and Michigan advertisements were cosponsored by local candidates of both major parties.

In July, 5,000 house magazines received advertising and news copy which many of them used right up to the eve of election.

5. In August, all radio stations—over 3,000—and networks received a radio kit containing spot announcements and a disc of jingles, "Now is the time for all good folks to come to the aid of their party." Liberal use was made of these materials throughout August, September, and October.

6. In September and October, all television networks and 593 stations used the cartoon films, slides, and visual announcements urging Americans not only to contribute to their political party but also to register, inform themselves, and vote. This television kit resulted in more than 25,000 local station messages.

TELEVISION SUPPORT

Television support was exceptional. Nearly 100 top network shows carried our public service messages—among them "Ed Sullivan," "Today," "Steve Allen," "Hallmark Theater," "Perry Mason," "Red Skelton," etc. On September 21, "What's My Line?" devoted 15 minutes to a most effective appearance by Mr. Alcorn and Mr. Butler in behalf of the "Contribute to Your Party" program. Phil Graham spoke on CBS-TV's "Great Game of Politics." Arthur Godfrey interviewed me on the CBS-TV network for 12 minutes; so did Dave Garroway's NBC-TV "Today" show, and CBS-TV "Big Payoff."

Several other foundation trustees appeared on television in behalf of our campaign.

Among them were Mr. Brophy, Mr. Dowling, Mr. Farley, and Dr. Gallup.

MAGAZINE SUPPORT

Virtually every weekly and monthly magazine gave editorial or advertising support. Life, Saturday Evening Post, and Newsweek carried full-page advertisements especially prepared for each magazine by Foote, Cone & Belding. McGraw-Hill publications featured advertisements representing the businessman's approach to campaign financing.

The Reader's Digest article, "Back Your Ballot With Your Buck" by William Hard, touched off nearly 100 newspaper editorials. Free reprints provided by the Digest were sent to 10,000 political leaders.

A partial list of supporting magazines includes Nation's Business, New York Times Sunday Magazine, Ethyl News, Congressional Quarterly, Democratic Digest, Pennsylvania Farmer, Reader's Digest, Michigan Farmer, America, Chemical Week, Mademoiselle, Ladies Home Journal, Christian Herald, National Business Woman, Newsweek, Better Homes & Gardens, Redbook, Look, Catholic Digest, Parade, Scholastic, Voice of St. Jude, National Jewish Monthly, This Week, and the New Christian Advocate.

NEWSPAPER SUPPORT

Newspaper editorial comment on the campaign was broader than any foundation project since "Freedom Train" days. The Washington Post and Times Herald gave the campaign six editorials. The New York Herald Tribune carried three. Leading columnists vied with each other in praising the campaign. Full-page stories appeared in the Christian Science Monitor, Des Moines Register & Tribune, Kansas City Star, and so forth.

The Des Moines Register & Tribune syndicate and its general manager, Henry P. Martin, foundation trustee and our newspaper participation chairman, deserve special recognition for a series of editorial cartoons popularizing the concept, "Democracy is everybody's business. Give, register, inform yourself, and vote." Cartoon panels such as Walt Kelly's "Pogo" and Milt Caniff's "Steve Canyon" stressed the "Give a Buck" theme.

BUSINESS AND INDUSTRY

To enlist business and industry participation, a series of informal cultivation luncheons were held in key cities:

Boston, Mass., Michael T. Kelleher, host; Dr. Robert E. Wilson, speaker.

Chicago, Ill., Robert Galvin, host; John C. Cornelius, speaker.

Dallas, Tex., Fred F. Florence, host; John C. Cornelius, speaker.

Des Moines, Iowa, Henry P. Martin, host; John C. Cornelius, speaker.

Duluth, Minn., Harry Zinsmaster, host; John C. Cornelius, speaker.

Kansas City, Mo., J. C. Hall, host; John C. Cornelius, speaker.

Los Angeles, Calif., Leonard Firestone and Justin Dart, hosts; John C. Cornelius, speaker.

New Orleans, La., George Healy, host; John C. Cornelius, speaker.

New York, N.Y., John L. Burns, host; John C. Cornelius, speaker.

Wichita, Kans., William Graham, host; John C. Cornelius, speaker.

Similar luncheons are scheduled for December and January in Minneapolis (hosts: Peavey Heffelfinger and John Cowles), Pittsburgh (Henry J. Heinz II), Baltimore (Jacob Blaustein), and Milwaukee (Francis Trecker), all trustees of our foundation.

COMPANY PARTICIPATION

Sending materials to 23,000 member firms, one of our partner organizations, the U.S. Chamber of Commerce, urged companies throughout the Nation to participate in the program.

A unique campaign by Aerojet-General Corp. resulted in 11,000 of the firm's 15,000 employees giving a total of $25,000 to the party of their choice. Outstanding company campaigns were also conducted by Standard Oil of New Jersey, Continental Airlines, Allied Chemical, Hallmark Cards, Gulf, Cities Service, Iowa-Illinois Gas & Electric, General Electric, Maytag, Continental Can, Swift, Delaware-Lackawanna, Ford Motor Co., Johnson & Johnson, Sears, Roebuck, Timken Roller Bearing, Consolidated Laundries, North American Car, Pan American Petroleum, Ethyl, General Foods, Kellogg, Simoniz, Armour, Schering, Broadcast Music, and Metropolitan Life.

Never before have so many companies launched their own nonpartisan practical politics program. Employees were urged not only to register and vote their convictions, but to join a political party and to undertake specific party chores such as getting people to attend political meetings, soliciting contributions, etc.

Company participation in support of the foundation's new campaign was truly outstanding. It reflected the same high level of business leadership as in 1956 when a confidential study, made for our foundation by Dr. Gallup, showed that 19 percent of the American people were reminded to register and vote by citizenship programs in their own companies.

NATIONAL ORGANIZATIONS

Newest member to join the foundation team was the Japanese-American Citizens League—bringing the number of national participating organizations up to 153.

The foundation's role in relation to these membership organizations is that of clearinghouse, supplying how-to-do-it materials to them, and secondly, coordinator encouraging a division of labor so that each group conducts a special project of its own. Some of the many special projects undertaken by cooperating organizations:

Naturalized citizens program (American Bar Association).

First Voters Week (Jaycees).

Essay contest and distribution of national anthem records to rural schools (American Farm Bureau Federation).

Ringing church bells on election day (Lions).

Lincoln-Douglas debates and voters service centers (League of Women Voters).

Armed Forces Week (U.S. Department of Defense).

Community get-out-the-vote kits (B'nai B'rith).

Promoting advertising council newspaper ads (Newspaper Advertising Executive Association and Bureau of Advertising of the ANPA).

Company practical politics programs (N.A.M. and U.S. Chamber of Commerce).

"Register, vote and contribute" reminders to membership (Pilot International National Congress of American Indians, American Hotel Association, AFL–CIO).

Baby-sitting service project (Girl Scouts, Camp Fire Girls).

Encouraging use of our radio and TV materials (National Association of Broadcasters).

RESULTS ACHIEVED

A thorough study of the campaign's effectiveness, both in attitudes engendered and money collected, is being made for our foundation by Dr. Gallup. Complete findings will be available in January. Meanwhile, evidence now at hand clearly indicates that certain specific and tangible results were accomplished:

1. A good beginning toward a nationwide public awareness of the need for political giving as an essential phase of participating citizenship.

2. A growing realization on the part of the general public and both Houses of Congress of the necessity for improved legislation on election finances.

3. On November 4 more people went to the polls than in any previous nonpresidential election. This record vote was in part a result of the "Contribute to Your Party" campaign. A citizen who invests in a political party or candidate is more likely to vote.

4. Present estimates of the total collected in small gifts range from 3 to 12 million dollars. Reason for varying estimates is that many local and county committees and special candidates' drives do not give accurate reports to State and national committees. For instance, the foundation knows of one county where $5,700 was collected in small gifts, but the county chairman reported only $250 to the State committee. Greatest success was in the suburbs and smaller towns; greatest disappointment—the big cities.

5. Dr. Gallup gives this preliminary report of some of his findings:

(a) Forty-four percent of the American people report that they are aware of our new "Contribute to Your Party" program. According to Dr. Gallup, this 44 percent penetration is a remarkable achievement for a new campaign.

(b) Only 5 percent stated that they were actually solicited by a political party.

(c) Twenty-three percent reported they would have given $5 had they been solicited by the political party of their choice. Dr. Gallup says that this comes to approximately 24 million households and therefore $120 million in small gifts, with no strings attached, is available to the political parties.

The first nationwide bipartisan drive to broaden the base of financial support of our political system, our pilot operation taught us and the political parties many valuable lessons. We learned, for example, the need for greater coordination between the special gifts and small donors phases; the need for bringing more local and State politicians into the planning; the need for getting more people to join a political party; the need for recruiting more volunteer solicitors; the need for working out a different pattern for the big cities, etc.

Was the campaign a success from the standpoint of the political parties? Both Mr. Alcorn and Mr. Butler have already asked us and the Advertising Council to continue the "register, vote, and contribute to your party" program, giving special attention to the 1960 elections. Excerpts from their evaluation of our program:

Mr. Alcorn: "Your public service campaign is taking the curse from political financing. You broke the ice for the Republican Party with thousands who never before had contributed to a political party and, perhaps, thought there might be something tainted about giving to a political cause. Please continue. I pledge you the full-fledged support of our party from the smallest precinct to the White House."

Mr. Butler: "Your 'Give a Buck' program performed a truly outstanding public service in making the financing of our political parties the responsibility of all the people, not just a few. You are giving increased vitality to our political system through the participation of more and more people. Your program is the greatest step forward in the history of 20th century politics."

OTHER ACTIVITIES

A more complete report of all foundation activities for 1958 would have to mention the national anthem project and the Law Day U.S.A. program.

The national anthem project is still going on. So far, 85,000 schools are now using our new high-fidelity recording of the national anthem. This is the first time a high-fidelity disc of the national anthem is being made available to all schools throughout the Nation—162,000 in all—thanks to the generosity of our trustee, Mr. Louis Schweitzer, and the help of the Victor Record Division of RCA. Distribution to remaining schools will be completed in 1959.

At the request of U.S. Supreme Court Justice Tom C. Clark, one of the founders of the Freedom Train and of the American Heritage Foundation, we joined with the American Bar Association in cosponsoring the nationwide Law Day U.S.A. program. Our contribution was supplying educational materials to newspapers, magazines, radio and TV stations—stressing respect for law and order as the cornerstone of our American heritage. The importance of jury duty as a basic act of American citizenship was also emphasized. Widespread publicity in all media was partly a result of our foundation's efforts, according to Justice Clark and Mr. Ross L. Malone, president of the American Bar Association. General Sarnoff spoke at Law Day U.S.A. exercises held at the New York County Courthouse, and more than 20,000 separate Law Day U.S.A. programs were held across the Nation. We look forward to continuing our participation for 1959 in this timely program.

## No Inconsistency in Insurance Industry's Stand

EXTENSION OF REMARKS
OF
## HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the House of Representatives recently approved a bill sharply increasing taxes on life insurance companies. At the time that the bill was reported out of the Ways and Means Committee, 10 members expressed grave reservations as to the possible impact of this tax burden on a vital form of individual, and voluntary, thrift. I was pleased to associate myself with these views.

Now we find that the very points emphasized in our supplemental remarks in the Ways and Means Committee report on the life insurance tax bill, H.R. 4245, are being given serious attention by the other body, and public hearings on H.R. 4245 have been recessed while the economic factors implicit in this legislation are examined.

Some of the economic factors relating to H.R. 4245 and another significant tax bill, H.R. 10 (the Keogh-Simpson bill), are discussed in a recent editorial in the National Underwriter, a publication widely circulated in the life insurance industry. I call this editorial to the attention of my colleagues for their consideration:

NO INCONSISTENCY IN INDUSTRY'S STAND

The life insurance business is actively against inflation and in favor of a balanced budget. It is also against the huge rise in income taxes the companies would have to pay under the House-passed bill pending now in the Senate. And it favors the Keogh-Simpson bill, the 1959 version of last year's Jenkins-Keogh bill, giving self-employed persons somewhat the same tax break in accumulating retirement funds as employed persons enjoy under approved pension plans.

Is there danger that the public will think it detects an inconsistency between the latter two viewpoints and the first two? We believe there is no inconsistency whatever but since the layman is likely to jump to conclusions on superficial evidence, it would be well for life insurance men to be prepared for the accusation that the life insurance business is talking out of both sides of its mouth on the subject of inflation.

Treasury officials testified in ways and means committee hearings that the Keogh-Simpson bill would trim $365 million from anticipated tax revenues. Estimates vary considerably on what would be a fair increase in the tax bite on the life companies, but it would certainly be a lot less than the one contained in the pending bill. Probably the difference between a fair increase and the boost specified in the bill, plus the $365 million revenue loss inherent in the Keogh-Simpson bill would push the budget nearly half a billion dollars in the direction of imbalance.

How does this square with the insurance industry's implacable opposition to inflation and unbalanced budgets, John Q. Public may ask, if he thinks about the matter.

The answer is that the fight against inflation and in favor of balanced budgets is not really won if the victory rests on gross injustice to certain segments of the taxpaying public.

The imposition of a tax increase on life companies far in excess of any possible concept of fairness cannot be defended on the grounds that it would help balance the budget and fight inflation. Neither can the continuing of a manifest discrimination against the self-employed in their retirement plan accumulations be defended on those grounds.

It could be argued that by removing a discrimination against the self-employed and refusing to impose a discrimination against insurers, Congress would be encouraging people to save money that would otherwise add to inflationary pressures. We believe that to be true, but transcending all that is the matter of simple justice: Heaping an undeserved tax load on policyholders and on the self-employed is neither just nor defensible. There is no inconsistency in opposing such unfairness and at the same time fighting against inflation and unbalanced budgets.—W. M.

## Railroad Retirement and Unemployment Benefits

EXTENSION OF REMARKS
OF
## HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. LANGEN. Mr. Speaker, the House of Representatives of the Minnesota State Legislature on March 6, 1959, adopted House Resolution No. 8, requesting Congress to enact railroad retirement and unemployment benefits.

The resolution follows:

HOUSE RESOLUTION 8

Resolution requesting Congress to enact railroad retirement and unemployment benefits

Whereas a large number of residents in Minnesota are employed by railroads and are vitally affected by unemployment and retirement benefits of railroads; and

Whereas H.R. 1012 would provide an increase in retirement and unemployment benefits to employees of railroads; and

Whereas we are informed that the retirement fund for railroad employees is actuarially sound and that the increase in retirement benefit proposed in H.R. 1012 would not adversely affect that fund and would not result in increased cost to the railroads or their employees: Now, therefore, be it

*Resolved by the House of Representatives of the State of Minnesota*, That Congress be requested to enact H.R. 1012 as originally introduced without amendments; and be it further

*Resolved*, That the Chief Clerk of the House of Representatives be instructed to mail each Member of Congress from the State of Minnesota a copy of this resolution.

E. J. CHILGREN,
*Speaker of the House of Representatives.*
G. H. LEAHY,
*Chief Clerk of the House of Representatives.*

Adopted by the House of Representatives, the sixth day of March, nineteen hundred and fifty-nine.

## Haley's Business Proposal

EXTENSION OF REMARKS
OF
## HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. KITCHIN. Mr. Speaker, the time has come for all of us to become aware of the almost criminal act we are committing against the generations yet to come by continuing to amass more and more Government debt without any definite system of curtailing the principal. We manage somehow to budget the interest but little or no attention has been given to budgeting a set amount for the retirement eventually of our tremendous debt load. I think the gentleman from Florida has introduced a bill that is practical and deserves much conscientious consideration by this Congress. The following editorial from the Lakeland Ledger of Thursday, March 5, 1959, reflects the good business practicability of Mr. HALEY'S proposal:

HALEY'S BUSINESS PROPOSAL

Congressman JAMES A. HALEY, of Florida's Seventh District, introduced a bill this week for retirement of the national debt. It is the kind of measure that immediately commands the attention of businessmen throughout the Nation. For businessmen have long looked on disconsolately as the Federal Government has plunged ahead on an unbusinesslike basis.

There is no hope that Government will ever be as financially efficient as a private business enterprise. In the first place, Government is on a nonprofit basis. Second, it embraces a large area of service to people from whom no financial return can be expected.

But there is a margin beyond which lies peril for our Federal Government. The margin has long been exceeded by our national debt. It soars at the legal limit. Periodically there is a demand that the ceiling be raised. Each such proposal brings a reaction of heavy gloom among businessmen.

The Haley proposal is the essence of sound and solid arithmetic. Set aside 5 percent of the revenue each year to apply on retirement of the staggering debt, he says. But his proposal goes one important step further. Have no budget that exceeds estimated revenue, he urges. Instead of going a little further into the red, raise taxes, meet the problem head-on instead of prolonging the misery and adding to the burden to be carried by successive generations of Americans.

HALEY, it is clear enough, is not advocating that taxes be increased. He is advocating that the Government do something realistic

to pull itself out of the bog of debt. In effect, he is saying: Let's pay as we go and start paying off what we owe. And that makes extremely good sense to every businessman.

There is no valid reason why the Federal Government should not begin to reduce the great debt load. It is a problem that calls for a rigid application of national self-discipline. It is one that cannot go on indefinitely without resultful attention.

From the viewpoint of businessmen throughout the Nation, therefore, it is encouraging when a Member of Congress launches a direct attack on the problem as Congressman HALEY has done. He has proposed a sensible course in an area of astronomical figures.

## Scholl Canyon Win Is Tribute to Determination of Mayor

EXTENSION OF REMARKS
OF
### HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 11, 1959*

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article published in the Ledger, Montrose, Calif., newspaper dated March 8, 1959, entitled "Scholl Canyon Win Tribute to Determination of Mayor":

SCHOLL CANYON WIN IS TRIBUTE TO DETERMINATION OF MAYOR

(By Ed Delaney)

Three days ago, the battle of Scholl Canyon raged before the Board of Supervisors of Los Angeles County. The principal proponents of that reclamation project were members of Glendale City Council, the city manager and department heads, led by Mayor Zelma Bogue. She received much countywide publicity as being the one who is largely responsible for having stymied the efforts of private dump operators and vote-conscious politicians who tried to block Flendale's plans for proceeding with the project.

The purpose of the undertaking as she insisted is to develop a recreational area that will prove beneficial to all sections of the county—not just for Glendale. Her efforts, very ably augmented by those of City Manager C. E. Perkins, were crowned with success when on Thursday the supervisors reversed a previously taken position and approved the project.

That was not the first time the feminine fighter for Glendale took command of the city's forces to press for a matter which she felt was for the best interest of the taxpayers and the general welfare of the local citizens.

About a month before last week's stormy session in Los Angeles, she and Perkins appeared before the supervisors and prevented what appeared to be a planned move to indefinitely shelve the Scholl development project. Her persistence at that time resulted in Thursday's session, when victory was recorded for her and the "shock troops" of the city which she headed.

Taking the lead in projects for the welfare of the community during the past 20 years, has made Zelma Bogue the best known and probably the best liked woman in Glendale.

During World War II, she was named an honorary Navy recruiter by the U.S. Naval Department. She has received the coveted Gulick Award of the Camp Fire Girls and a Certificate of Merit from the California State Assembly. For years she had been on the advisory board of the Salvation Army and last year she was made an honorary colonel in the California National Guard. She has been given life memberships in practically all the local women's organizations, such as the Tuesday Afternoon Club, the Business and Professional Women's Club, the Soroptimists, the Civic League, and the Teen-agers Club—though she admits being past the age of those who are usually admitted to that group.

NAMED MAYOR

When she first ran for city council, she was opposed by five politically experienced members of the so-called stronger sex. She won. Two years ago she was reelected to a 4-year term on the council and received more votes than the two men also elected at that time. She was chosen as Glendale's first woman mayor.

Contrary to the predictions of some, she gained fame as one mayor who takes her duties earnestly and works at the job. Incidentally it is not financial remuneration that impels her to give so much time and energy to the obligations of her office. Council members, including the mayor, receive no salaries, but are paid $25 for each meeting of the council they attend. Until last year they received only $10 per meeting. So it is more or less a labor of love for the betterment of the city that keeps the council members and mayor at their tasks.

NOT A PUPPET

Zelma speaks her mind when necessary and can remain discreetly silent if the occasion demands. After weighing the facts of a case brought before the council for decision, she states her position. She is adamant to the blandishments of pressure groups and is not the puppet of any opinion-making mediums.

Many of the problems brought before the council have to do with construction of buildings, planning and zoning. She is not without some personal knowledge of these activities. She built and owns the apartment house in which she lives alone and has built several others which were sold.

Not infrequently when one such zoning or building case comes before the council, she is the only member who has personally inspected the location and bases her decision on what she observes. One seeing, she asserts, is worth a thousand tellings.

BLASTS JAIL

While serving on the county grand jury some years ago, she says she visited every jail in the county and discovered that Glendale had the worst. For 5 years she had labored to remove that blot from the reputation of the city. Only last week were her efforts crowned with success. The council approved plans and appropriated funds for construction of a million dollar police building and jail.

She believes in and personally practices the simple life as the best in which to preserve the fundamental principles of our Americanism. She endeavors to form her decisions on the city's expenditures, in the way they will affect the pockets of the taxpayers. Economy and efficiency are her guides when spending public funds.

When she took a firm stand on the Scholl Canyon project, she was not imbued with any desire to garner publicity, but to get the best deal for Glendale. Her stubborn and determined resistence to the efforts of powerful pressure groups and individuals was displayed in the meetings before the Board of Supervisors. Her stand may also cause some practical politician to hesitate about clashing with Zelma when she is about her city's business.

Despite the apparent decline in the political morals of some American statesmen, this Nation shall not perish from the earth, so long as we have women who will assume public office and carry out their duties with the intellectual honesty and zeal of Zelma Bogue.

## Comments on Federal Aid to Education

EXTENSION OF REMARKS
OF
### HON. KEITH THOMSON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. THOMSON of Wyoming. Mr. Speaker, it seems that some people are determined that the Federal Government shall take over the financing of the public schools, regardless of need. Fortunately not all educators have been misled. I respectfully commend to the attention of the House a copy of a letter from Evan J. Worley, principal, Niobrara County High School, Lusk, Wyo., to Dr. Walter W. Heller of the University of Minnesota, which was recently transmitted to me.

The letter is as follows:

Dr. WALTER W. HELLER,
*University of Minnesota,*
*Minneapolis, Minn.*

DEAR DR. HELLER: I have just read "Education U.S.A." dated February 12, 1959, and noted your comments on Federal aid to education and the U.S. Chamber of Commerce's contention that States have sufficient fiscal capacity to take care of their own school needs. You say the facts do not support the chamber's contention. Do you mean by this that the Federal Government is in better condition to pay for education than are the States?

I certainly disagree with you on this—at least as it applies to our wonderful State of Wyoming. This State is in good condition financially and definitely has the capacity to take care of its own school needs. Our problem here is to prove to the people that it is cheaper to keep our tax dollar in this State and spend it on our schools than to send that dollar to Washington and get back 40 cents to use on our schools. And I know of other States that are also in good condition.

Do you have any figures as to how much in debt each State is? I'll bet that the total debt of all 49 States is much smaller than that of the United States Government. Should a business in fair shape borrow from a business in poor shape? I can't see it.

I see that you are an economist. May I ask if you feel that a business can continually go farther into debt and survive? If we have more Federal aid, it means more deficit spending—isn't there a breaking point? I certainly can't see having our Federal Government going into debt deeper in order to send money back to the States to use for education when it means a cheaper dollar, probably more inflation, etc. I'm certainly glad I'm getting along in years—I'd hate to be a young person and see the tremendous debt that is continually piling up and will have to be paid eventually by the next generation and the next and the next—or don't you economists think that debt will have to be paid?

A local businessman referred to Federal money the other day as free money. I proceeded to try to straighten him out on his misconception—but I'm afraid too many other Americans (educators, included) feel the same way. How wrong they are.

Sincerely yours,

EVAN J. WORLEY,
*Principal.*

Mr. Speaker, I further commend to the attention of the House an editorial appearing in the Wyoming State Tribune, Cheyenne, Wyo., in its issue of February 17, 1959, showing some of the things

the State is in fact doing to take care of its educational needs. This certainly substantiates the position of Mr. Worley.

The editorial is as follows:

It seems clear that the 35th Wyoming legislature is dealing handsomely, financially speaking, with public schools and education.

Whether it is also dealing well of course remains to be seen.

The most important education bill is, certainly, the one approved by both legislative houses and which amends the school foundation program act. This boosts the value of the classroom unit—which determines State aid—by $700 and it also authorizes use of average daily membership rather than average daily attendance in computing classroom units.

The two changes, says an analysis by the Wyoming Taxpayers Association, will give close to a $1,000 increase in the classroom unit value as that has been computed through the current school years.

"Estimates are that over $3,500,000 more will be distributed in State aid to Wyoming school districts next school year than currently," the association said.

An appropriation of $1,250,000 (same as that provided 2 years ago) from the general fund is pending. Of that, the association says:

"With the expected balance in the fund to be used to finance the increased State aid distribution contemplated, it appears that something over $5 million in new and increased revenues must be found by the time of the 36th (1961) legislature."

That, concludes the association, will be a "sizeable and disagreeable task." Indeed it will.

The legislature has also—

Raised the effective limit of property taxation, for school district current operational expenditures, from 14 to 21 mills.

Four mills above that limit may be authorized by voters in unified districts without limitation as to duration (restricted to 4 years heretofore) and without provision for future district voter reconsideration or revocation of such authority.

As to school district reorganization, the association comments, and glumly so—

"It appears that again this session of the legislature, considerations as to desirable steps toward more efficient organization of school districts have been ignored and more money will be poured in by the State to further entrench the current situation."

## American Moral Flabbiness

EXTENSION OF REMARKS
OF
### HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. LEVERING. Mr. Speaker, under leave granted me, I am inserting in the CONGRESSIONAL RECORD a brief item from the Alcove, a weekly bulletin of the Mount Vernon, Ohio, Rotary Club, and reported by Mr. George T. Culbertson, Jr., for Tuesday, March 3, 1959.

This article tells of a speech by Prof. Raymond English, of Kenyon College, who warned the Rotarians about the dangers of our Nation's moral flabbiness and exposed some of the methods the Soviet leaders are using to weaken us in the international field. It is well worthy of the consideration of my colleagues.

The article follows:

PROF. RAYMOND ENGLISH WARNS AGAINST AMERICAN MORAL FLABBINESS

(By George T. Culbertson, Jr.)

In a sobering talk on the new trends of international relations, Prof. Raymond English, Kenyon College, told members of the Rotary Club Tuesday noon that Soviet Russia poses a grave danger to the United States during the next few years.

He compared the world today with an old patched intertube—trouble is likely to break out at any one of a dozen places—Berlin, Middle East, Quemoy, Korea, Indonesia, South America, Africa.

The United States is in the position to check one—possibly two—of these trouble spots, but if Khrushchev should manage to cause half a dozen outbreaks at the same time, we would be in no position to act on any of them, he said.

An ideal time for such a plan, English told the group, would be the summer of 1960. The gap will have been widened in the guided missile race, Communist leaders will be due for a boost and the United States will be deeply engrossed in a presidential election.

Attacking the present foreign policy, English said that it is the same policy that existed in the late 1940's that was so successful in containing Russia, but that since 1952, these conditions no longer exist. The foreign policy has lost its flexibility and is unable to meet changing conditions.

"Moral flabbiness seems to be the cause of our diplomatic troubles," he said. "We have been putting the wrong things first. We need a complete reevaluation of our way of thinking. More of our money should be spent on education and defense—our whole society is becoming flabby and hesitates to sacrifice."

English said that massive retaliation is no longer useful in detering small wars and uprisings. He stressed the value of developing highly mobile forces to cope with such situations.

"There is the danger," he said, "that by the mid 1960's, the balance of terror may swing to Soviet Russia. It is far better to fight several small wars to contain Russia than to have them wage an all-out war without retaliation."

## Steel Costs Are Determined in World Markets

EXTENSION OF REMARKS
OF
### HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. SIMPSON of Pennsylvania. Mr. Speaker, June 30 marks the end of the present 3-year contract between the steel industry and its principal unions. Various proposals have been advanced that will considerably add to the wage costs of the U.S. steel industry. In view of the extension of the Trade Agreements Act last year and the increasing imports of steel products, it behooves the steelworkers to maintain a wage-cost structure that will be competitive in world markets. No matter how high wages might be raised if our markets are lost to foreign competition, there will be fewer jobs and lower payrolls for everyone concerned.

The magazine, Steel, in its issue of February 23, 1959, presented a penetrating review of the prospects before the American public in an editorial entitled "Dear Mr. McDonald: Why a Steel Strike?" Under unanimous consent, I ask that it may be included as an extension of my remarks at this point in the RECORD:

DEAR MR. MCDONALD: WHY A STEEL STRIKE?

Almost everyone expects that you will pull members of your steelworkers union off their jobs when your present 3-year contract with the steel industry expires June 30.

The minority thinks you will borrow a leaf from the book of your intramural competitor, Walter Reuther, and ask your men to work without a contract until consumers get low on steel.

But, whatever the timing, the odds still favor a strike lasting 4 to 9 weeks.

That is because most people think steel industry management cannot be expected to come across with your $1 billion package (50 cents an hour) that calls for increased pensions and insurance, longer vacations, more holidays, more unemployment compensation, and larger shift premiums.

As a basic industry, steel is under compulsion to help hold the wage-price line as a means of averting inflation. It cannot grant increases in wages that exceed increases in productivity without raising prices.

Because of the wage-price spiral, steel and the products made from steel are already losing out in world markets. Here at home the St. Lawrence Seaway will provide still easier access for foreign steel to the heart of the American market.

Mr. McDonald, you need to help strengthen, rather than tear down, the position of the industry on which your million and a quarter members depend for their livelihood.

A long steel strike would deliver a lethal blow to the recovery in business that has not been felt fully by the automobile industry and hardly at all by the capital equipment industry. It would disrupt the Government's fiscal planning. It would increase unemployment, now numbering nearly 5 million. The prospect of a strike has already forced consumers to rush in for material they will not use for months.

Why not demonstrate true labor statesmanship by asking for a contract with adjustments that are reasonable and fair?

Really, Mr. McDonald, why is a steel strike necessary?

IRWIN H. SUCH,
*Editor in Chief.*

## Work Being Done by the Department of Health, Education, and Welfare in Implementing the National Defense Education Act

EXTENSION OF REMARKS
OF
### HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. LINDSAY. Mr. Speaker, I wish once more to illustrate the impressive work being done by the Department of Health, Education, and Welfare in implementing the National Defense Education Act. It gives me great pleasure to advise this House that a counseling and

guidance training institute will be conducted at Hunter College July 1 through August 7, 1959. Hunter College is located in the heart of Manhattan and in the heart of New York's 17th Congressional District. Hunter is one of the many institutions in the 17th District that makes the 17th one of the truly great communities of the Nation.

The selection of Hunter as the site for one of the Nation's training institutes under the National Defense Education Act results from preliminary arrangements concluded between the U.S. Commissioner of Education, Lawrence G. Derthick, and Dr. Harry N. Rivlin, dean of teacher education, College of the City of New York, representing the four municipal colleges—City, Hunter, Brooklyn, and Queens.

A central feature of the institute at Hunter will be a reexamination of guidance policies in the light of today's needs as the core of a training program for counselors.

What are some of these needs? The Congress has declared that the Nation is losing too much of our most valuable and precious resources—the talents of our children in our schools. We know, for example, that many able students do not continue their education beyond the high school. At any time, but especially in these critical times, we cannot afford such waste. The survival of our democratic way of life demands nothing less.

Consequently, the Congress, through the National Defense Education Act of 1958, authorized a program of federally financed counseling and guidance training institutes. They represent one of several features of the act designed, in the words of the act itself, "to insure trained manpower of sufficient quality and quantity to meet the national defense needs of the United States." Title V of the act is entitled "Guidance, Counseling, and Testing; Identification and Encouragement of Able Students." The cited title suggests the problem which the program of counseling and guidance institutes—such as the one at Hunter—will attack. It will do so by expanding educational programs for the professional preparation of counselors. The need is great for professional personnel to identify, counsel, and motivate the more able students to continue their schooling. This does not mean that current educational programs for counselors are not good. It is simply that a national condition exists, which the Congress has recognized by calling on our colleges and universities to meet it. The institute at Hunter is a response to this challenge.

We can take pride that we are in a good position to help meet the challenge. Physical facilities at Hunter, and nearby, will lend themselves admirably to the purposes of the institute. In fact, since 1950, there has been an on-going program of graduate training in guidance and school counseling at our municipal colleges. The standards of this program are high and well recognized. As a result, skilled training resources will be available to meet a critical need. This insures the leadership of a faculty for an imaginative program contributing to the maximum development and utilization of the rich talents possessed by the young people of the metropolitan New York area.

This institute is but one of some 40 that will be conducted this summer throughout the Nation under the authority of title V–B of the National Defense Education Act. But it represents the imaginative way in which the Office of Education is implementing this important legislation. It is an example of the sound principle of building on strength by utilizing the outstanding skills and resources of institutions well qualified to tackle this problem. New York City and other urban areas—indeed school systems throughout the Nation—stand to benefit enormously from this militant attack upon the problem of America's loss of able manpower.

I call upon the Congress once again to act promptly on the President's request for additional funds to carry out this and other vital programs authorized by the National Defense Education Act. I know that friends of education everywhere join me in urging this action.

---

## Treasury's Back Door: Some Lawmakers Seek To Block Agencies' Habit of Using Shortcuts to Spending

EXTENSION OF REMARKS
OF
### HON. J. VAUGHAN GARY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. GARY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very enlightening and interesting editorial from the Wall Street Journal of March 9, 1959, on the subject of the back-door approach to the Treasury:

TREASURY'S BACK DOOR: SOME LAWMAKERS SEEK TO BLOCK AGENCIES' HABIT OF USING SHORTCUTS TO SPENDING

(By Alan L. Otten)

WASHINGTON.—A small band of Congressmen is waging an intensive and intermittently successful campaign to block off some heavily traveled shortcuts to the Federal Treasury.

Sometimes the route used is authority to expend from public debt receipts. Sometimes it's contract authority. Sometimes it's a revolving fund, or the right to spend foreign currencies, or any one of several other shortcuts. All avoid entirely, or at least minimize, the usual review of Federal spending programs made each year by the Senate and House Appropriations Committees, indeed by Congress itself. House Rules Committee Chairman SMITH, Democrat, of Virginia, and House Appropriations Committee Chairman CANNON, Democrat, of Missouri, two of the leaders in the fight against these shortcuts, call them back-door approaches to the Federal Treasury.

Most Federal aegncies have to run the congressional gauntlet twice to get funds for their programs. First, the regular legislative committees must authorize the program. This authorization law, which must clear both Senate and House, in effect sets the framework, the limits, within which the program can operate. Then, the Federal agency carrying out the program must go back each year to the Appropriations Committees to get an allotment of money to carry out the already-authorized program.

DOUBLE SCRUTINY

From the Treasury's point of view, this double scrutiny has obvious advantages. Authorization bills are frequently passed under the spur of some unusual event or crisis; the second check gives time for a calmer second look. Legislative committees, over the years, tend to get a vested interest in their subjects; the House Agriculture Committee, for example, wants to spend as much as possible for the farmer, the House Banking Committee as much as possible for housing, and so on. The Appropriations Committees can weigh all these demands against each other.

Certainly, the most widely used of the devices at the moment is the authority to expend from public debt receipts. It was begun in the depression days of the early 1930's—to get the Hoover-created Reconstruction Finance Corporation operating to shore up business in the shortest possible time. But the practice of permitting Government agencies to borrow directly from the Federal Treasury spread to more and more programs over the years—housing programs, the Commodity Credit Corporation's price support program, Export-Import Bank lending, and many more.

By now, Congress has authorized Government agencies to spend some $150 billion this way. The General Accounting Office, Congress' watchdog over Federal spending, recently said the device "tends to perpetuate programs that might not otherwise stand the test of continued Federal scrutiny." But it also complicates the budget process in that unused borrowing power is always hanging over the budget. Right now, Federal agencies owe the Treasury something over $20 billion, but have unused authority to borrow another $25 billion.

The original justification for the borrowing device was that it was being used for Government lending programs. Since these loans would eventually be repaid, the argument went, it would complicate the budgeting process less to have the agency borrow the money from the Treasury than to go to Congress for a regular appropriation.

But several questions can now be raised about this claim. For one, not all lending programs depend on borrowing authority from the original legislative committee, and yet seem to get along satisfactorily. The rural electrification program and Farmers Home Administration, for example, are set up by having the Appropriations Committee itself set each year the amount that can be borrowed from the Treasury, and the Small Business Administration's lending funds come from a regular annual appropriation.

ITS USE SPREADS

Moreover, the device is being used for many lending programs when Congress knows right from the start there is little likelihood of repayment. Congress, for example, had to cancel $12.8 billion of the $26.6 billion the RFC borrowed from the Treasury, most of the loss being on World War II programs. Congress knows all along that only a small part of CCC price support loans will be repaid.

Finally, in recent years the device has spread to programs not involving lending at all—frequently being resorted to specifically to get around the annual Appropriations Committee review. Industry, Federal agency, or congressional sponsors of a program get tired of running the annual gauntlet and switch to the borrowing approach. For instance, last year, the Senate passed a mineral subsidy bill that would have allowed the Interior Department to go directly to the Treasury. There was no thought that this might later be repaid. Sponsors frankly admitted they were proposing to finance the

program in this fashion because in previous years the House Appropriations Committee had been hostile to mine subsidy bills and had refused to appropriate money to carry out authorized programs.

No one in Congress seems quite sure why some of the economy-minded Members were so long in waking up to the trend; some economizers frankly admit they were asleep on the job. The Treasury borrowing device got a big play in the antirecession bills ground out early last year—the Senate used it not only in the mining bill but also for housing, community facility loans, aid to depressed areas, and help for small business investment companies—and the surge of these bills focused attention on the financing approach involved in them.

Rules Committee Chairman SMITH last year did succeed in blocking finally some use of this approach. For example, as a price for having his committee clear the bills for floor action, he forced the legislative committee to switch to regular appropriations procedures on the minerals, depressed areas, community facilities, small business, and aid to education bills.

This year, Mr. SMITH is trying again. He's sponsored a resolution that would change House rules so that only the Appropriations Committee could OK the actual withdrawal of money from the Treasury. Legislative committees would continue to have the power to authorize programs—set the limits—but appropriations, contract authority, authority to spend from public debt receipts, and all the other avenues to the Treasury would have to be checked annually by the Appropriations Committees.

The Rules Committee has held hearings on the Smith resolution, and the testimony highlighted not only the arguments on each side, but, perhaps more importantly, the basic power struggle that will shape the outcome far more than the issues involved.

Testifying against the resolution were top members—Democratic and in several cases Republicans, too—of the legislative committees whose power would be diminished by the resolution: Armed Services, Banking, Interior, Public Works, Veterans' Affairs, Agriculture. They didn't argue, of course, that they were against the resolution because they would lose power. They argued that programs subject to their committees—farm price supports, highways, military housing, and many more—would be crippled if they had to face the delays and uncertainties of the usual appropriations route.

Testifying for the resolution were Representatives GARY, Democrat, of Virginia, MAHON, Democrat of Texas, KIRWAN, Democrat of Ohio, TABER, Republican of New York, and FORD, Republican of Michigan—men from both parties and all wings of the party, but also all members of the Appropriations Committee, whose power has obviously been seriously curtailed by the back-door devices. They, too, didn't phrase their arguments on power grounds, but rather argued that sound budgeting required all Government spending programs to get an annual review in one central spot.

Appropriations Committee members argue that with larger and larger amounts of Federal spending automatically required under basic laws—for price supports, or veterans' pensions, or interest on the debt, or public assistance payments to the States—the spending area subject to annual congressional control is shrinking all the time, and these back-door devices shrink that area still further.

House Speaker RAYBURN of Texas, who generally does not like to change the rules of the House, has thrown his weight against the rules change proposed by Mr. SMITH, and this opposition, plus the opposition of the various legislative committees, seems certain to block the resolution. Bills must be reported by the Rules Committee by a clear majority of 7 of the 12 members, and Mr. SMITH has only 6 votes, including his own. But Mr. SMITH is far from licked. For one thing, he is exploring ways of modifying the resolution to reduce some of the opposition. More important, though, if he and his five supporters on the Rules Committee stick together, they can force the other committees to change individual bills as they come along to an appropriations method of financing, just as they did last year.

SENATE RESOLUTION

In the Senate, too, agitation is mounting. Senator THURMOND, Democrat of South Carolina, has introduced a resolution generally similar in purpose to Mr. SMITH's. Senator BYRD, Democrat of Virginia, will include a similar provision in a general budget reform bill he'll introduce shortly.

The administration's position in the matter is somewhat ambivalent. Generally speaking, it approves using the back-door approaches on programs where they've always been used, but opposes them on any new programs.

Of course, there is no guarantee that even if all this spending were channeled each year in the regular fashion through the Appropriations Committee that any great economies would result. The Appropriations Committee could go through spendthrift stages just as well as other committees, or could find it difficult to spot areas for savings. But economy forces feel the change is worth trying and promise to keep up their fight to close the back door to the Treasury.

## Hawaiian Statehood Advances

EXTENSION OF REMARKS
OF
**HON. ABRAHAM J. MULTER**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of March 5, 1959:

HAWAIIAN STATEHOOD ADVANCES

The drive to secure admission of Hawaii into the Union as the 50th State is making significant and heartening progress. The latest evidence of this is the unanimous approval for statehood given by the Senate Committee on Interior and Insular Affairs. Last month statehood was approved by the corresponding House committee and the House Rules Committee has recently been holding hearings on the measure. * * *

Nothing has been more impressive in the recent discussion of this issue than the flimsiness of the arguments of those who oppose statehood. Sometimes these arguments are directly contradictory, as when some critics charge that Hawaii is in the hands of a few large corporations, while others claim it is really ruled by henchmen of Harry Bridges. Sometimes these arguments enter the realm of fantasy, as when they allege that admission of Hawaii as a state would give Communist propaganda grounds for accusing us of colonial imperialism.

But the most unworthy argument against statehood is the one which stresses the non-Caucasian nature of most of Hawaii's population. This is racism with a vengeance and directly contradictory to every ideal of our democracy. American citizenship is not, and should never be, restricted to white men, to people of European origin, or to any other such narrow elite. It is the glory of our Nation that here men of every color, origin, and religion have come together to live in freedom and equality, though these ideals have not everywhere been realized. Hawaiians of every background have proved their loyalty by fighting and dying for our country on equal terms with Americans from the mainland. Against that background statehood for Hawaii is an obligation the rest of us have long owed our fellow Americans who live in those beautiful islands.

## The Critics of the Federal Reserve Board

EXTENSION OF REMARKS
OF
**HON. THOMAS B. CURTIS**
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. CURTIS of Missouri. Mr. Speaker I am inserting in the CONGRESSIONAL RECORD an editorial which appeared in the New York Times on March 7, 1959, discussing "some of the spending-minded Members of Congress" criticism of the Federal Reserve Board:

THE RESERVE AND ITS CRITICS

It hardly came as a surpise to read yesterday that some of the spending-minded Members of Congress were critical of the Federal Reserve Board for its action in authorizing higher rediscount rates at four regional banks after the close of the market on Thursday. This is an old story for the Board. Not a whisper of criticism was ventured when, in the recovery from the recession of 1953–54, it permitted its easy money policy to continue into April 1955, when the recovery was reaching boom proportions. After the boom was over, in mid-1957, however, no one was too poor to venture his own particular second guess concerning that belated shifting of gears in 1955.

Even Senator DOUGLAS, who is actively supporting a policy of heavy spending in this, the 11 month of recovery, is quoted as describing this increase to 3 percent in the rediscount rates as extraordinary in view of the 4.7 million unemployed. Is Senator DOUGLAS trying to say that it is part of the Federal Reserve's responsibility to accommodate its policies to the unprecedented situation that obtained in 1958 when labor insisted upon, and obtained, wage increases of roughly the same magnitude as those obtained in the boom years? Is he saying that if money rates were to be cut in half tomorrow this would automatically eliminate the seasonal influences that have invariably made the months January, February, and March three of the four highest unemployment months of the year?

The fact is that by any historical test, or by any geographical test, 3 percent is a very low central bank rate. What is of more significance to the present situation is that for the Reserve to have permitted the rate to remain at 2½ percent would have been to continue a serious distortion in the interest rate structure. The monetary authorities would probably have dealt with this earlier had it not been that such action might have threatened the delicate problem of financing the Treasury's huge requirements. And who, if not the spend-happy boys in Congress, is chiefly responsible for the dimensions and complications of that problem?

It is traditional that the rediscount rate be held above the going rate in short-term paper. Until this week's increase in the rediscount rate was inaugurated a banker could borrow at this regional reserve bank at 2½ percent and immediately invest the proceeds of his loan in Treasury bills, the latest auction sale of which brought a price

to yield 2.816 percent. This is not a healthy situation if the Reserve is to be in a position to manage the money market. Across our border to the north Canada has adopted a policy of maintaining a differential of one-fourth of 1 percent between its rediscount rate and the Treasury bill rate. Under that arrangement, it is worth noting, the rediscount rate last week hit 4.32 percent.

## Rehabilitation Program at the Veterans' Administration Hospital, Lebanon, Pa.

EXTENSION OF REMARKS
OF

### HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. MUMMA. Mr. Speaker, Mr. Lisle C. Wochner, Chief of Special Service at the Veterans' Administration Hospital, Lebanon, Pa., supplied me with an article called "The Open Door," together with a covering letter.

Its meaning in this instance, can perhaps best be put in a few words as something new in rehabilitating their patients—a departure from the old. This is, of course, a two-way proposition, as he indicates, that requires understanding on the part of the people in the community and the trained professional staff of the hospital facility. As this article points out, this understanding is an actual reality there, and does go far in the treatment of hospitalized veterans and in solving some of the problems thus created.

Toward this common goal thus pursued by all concerned, the policy of outward and open cooperation has produced wonderful response as well as results.

It is gratifying to read this article that sets forth the honest and tireless efforts aimed at rehabilitation, and while the article admits it is not the easy path to follow at times, the treatment is well worth the cure. This in itself is heartwarming.

The letter and article follow:

VETERANS' ADMINISTRATION HOSPITAL,
*Lebanon, Pa., March 2, 1959.*

The Honorable WALTER S. MUMMA,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. MUMMA: At a group meeting held at the hospital on September 26, 1958, between city officials, representatives of various businesses in the city of Lebanon, and members of the hospital staff, it was indicated that an article or articles covering the hospital would be valuable to leaders of the community in furthering an understanding of the treatment of hospitalized veterans and the solution to some of the problems, which are thereby created.

Although the article has been published in a series in the Lebanon Daily News, January 19 through January 22, 1959, we are hereby sending you a copy for ready reference.

Sincerely,

LISLE C. WOCHNER,
*Chief, Special Service.*

THE OPEN DOOR

It was Monday morning when a local businessman telephoned the Veterans' Administration Hospital, Lebanon, Pa. He asked to speak with the ward physician of a certain patient who had visited his store the preceding Saturday afternoon. He explained to the physician that a group of patients on pass from the Lebanon Veterans' Administration hospital were shopping in his store. One patient was especially interested in buying a bicycle for his 12-year-old daughter. The businessman was pleased to show him the wide selection of bicycles available for sale. The three or four fellows who accompanied the patient on this shopping trip seemed to enjoy looking at the many differently styled and colored bicycles. The businessman noticed that the patient interested in buying the bicycle seemed to be trying to impress his friends by picking out the most elaborate and expensive bicycle. It so happened that the most expensive bicycle on the floor was a boy's bicycle. The patient decided this was the one he would buy for his daughter. In spite of the advice to the contrary given by the businessman and some of the fellows in the shopping group, the patient obstinately insisted on having the most expensive boy's bicycle. Employing considerable tact, the businessman did succeed in having the veteran postpone his purchase until he had given some additional thought to the matter of possibly buying a girl's bicycle. The veteran agreed to think it over and return the following Saturday, providing the businessman would set the expensive boy's bicycle aside so that it would be sure to be available a week later. This the businessman agreed to do without requiring any deposit from the veteran. In his talk with the ward physician, the businessman was informed that the veteran has a very great need to impress others and in so doing tends to show questionable judgment on certain occasions such as took place in the store on Saturday morning. In all likelihood, if he returns to the store and is not accompanied by a group of friends whom he is trying to impress, he will show better judgment and purchase an appropriate girl's bicycle for his daughter.

This story helps to explain why the open door policy is assisting veterans in regaining their health at the Lebanon Veterans' Administration Hospital. It demonstrates the good relationship between the hospital and the community. Without this good relationship, there cannot be an open door policy. Equally significant, without an open door policy, there cannot be a good relationship between the hospital and the community. Certainly one can close the doors and run a trouble-free hospital. By locking the patients in and the public out, it is quite possible that a hospital can be run without even being subjected to criticism. Occasionally, a family may object if passes are refused but all too frequently this essential family interest is lacking in a closed-door setup. On the other hand, if a pass is allowed and something goes wrong, taxpayers and their elected representatives, who are unaware of the role of the community in the treatment program, are quite likely to be highly critical of the hospital administration. The easy way to protect one's self against the charge of being lax would be to build up a tight security system and pretend that the doors are closed to protect the patient. Under such a system, a hospital usually prospers. Its census goes up and its cost per day goes down. The hospital might be free of scandals, suicides, assaults, street scenes—and also, alas, free of recoveries. Such policies can only perpetuate the old concept of a mental hospital as a place where annoying people are "put away" so that they never bother anyone. With the old closed-door system, they would never be given opportunities to learn to adapt themselves to new situations involving other people. This restricted environment practically doomed them to permanent hospitalization. This can hardly represent the honest desires of our present civilization. The administrative and clinical staff at the Lebanon Veterans' Administration Hospital is replacing such outmoded concepts with modern progressive open door policies.

The open door policy neither starts nor stops with the opening of the door. Simply opening the doors of mental hospitals could result in chaos and be detrimental to both the hospitalized patients and the healthy members of our communities. The open door must be backed by an active treatment program involving a psychiatrically oriented staff at the hospital and an understanding citizenry in nearby communities. The hospital staff must be prepared for the advent of integrated and coordinated psychiatric activities. This is a difficult and challenging task for the staff. It was relatively easy with the old closed door system to take care of, for example, the matter of haircuts. A schedule for wards was arranged and on the scheduled day all the patients on a certain ward were taken to the barbership and had their hair cut, whether they needed it or not. Along with the ease of scheduling haircuts under the closed door policies, there was frequently a "type" haircut prescribed for all patients and this, likewise, resulted in speed and efficiency insofar as getting large numbers of patients in and out of the barbershop was concerned. With an open door policy, barbershops are set up much as you will find them in any community. Patients are permitted to decide when they need a haircut and, even more important, they are allowed to select the type of haircut they desire. Barbers are on duty at convenient hours and the patients are given some choice in the matter of when they will have their hair cut. Initially, when such policies are adopted, a certain amount of confusion arises. But the patients soon learn that they cannot all wait until the day before passes are granted to secure haircuts. They learn that the shop is busier on certain days and at certain times of days and they, accordingly, have to make their plans so that they get to the shop when they can receive necessary services. This they learn to do in the same way that citizens in any community learn to utilize the services of the available barbershops. While learning this, they are actually learning how to adjust to new situations. This helps prepare them for leaving the hospital. Getting a haircut actually becomes part of the treatment program and assists the patients in regaining their health.

The open door policy has resulted in tremendous strides forward in other areas. For example, take entertainment and recreation. A decade ago, under the closed door policy, the entertainment needs of the patients were considered cared for when movies were provided several evenings a week, with bingo parties on the remaining evenings. No consideration was given to whether or not the patients enjoyed movies or playing bingo. On the evening that a movie was scheduled, all the patients finished their evening meal and returned to their respective wards. This return to the wards was essential because all the patients were then told to go to the bathroom because once they left for the movie, under the closed door policy, it was most inconvenient and practically impossible to get to a bathroom during the time involved in taking them to the auditorium, looking at the movie, and then returning to their wards. At a designated time, this being dependent on how far removed the ward was from the auditorium, each ward then marched their patients to the auditorium. If this was precisely coordinated and if the patients walked at the exact rate they were expected to walk, then the respective wards arrived at such time as to permit each ward group to enter the theater and take assigned seats in an orderly manner. It is to be remembered that occasionally not all patients could go to the bathroom as hurriedly as the ward attendants might have predicted and, accordingly,

the arrival time at the auditorium was not always on schedule. This, of course, led to long lines of patients in corridors awaiting their turn to enter the auditorium. It is also to be remembered that these patients left for the auditorium without knowing what movie was being shown and without having had any choice in the matter of whether they attend the movie. Any protests or any derogatory remarks concerning their forced attendance at the movie were considered evidences of uncooperative behavior and, of course, an accumulation of such recorded observations in their records was considered evidence that they belonged in a mental hospital and were not ready for any privileges. After sitting through the movie, in which they may or may not have been interested, the procedure was then reversed and they were returned to their wards by the platoon system through the long corridors. This regimentation continued even after they returned to their wards single file, being counted as they entered the ward by way of that heavy wooden door, which they knew would soon be locked behind them. The procedure was continued "by the numbers" to effect another visit to the bathroom and then to bed. Their evening of entertainment then concluded with a flash of light in their eyes as the highest ranking and most responsible employee on duty made a careful flashlight check from bed to bed to make certain that there had been no error in the count at the door when the men returned from the movie. Remember, too, that any patient who dared express dissatisfaction or resistance to the above regimented routines was considered uncooperative and, if his so-called uncooperative attitude and behavior continued, it was further considered proper to remove him to a ward with tighter security and less opportunity for entertainment.

Under a progressive system, with open-door policies such as are being practiced at the Lebanon Veterans' Administration Hospital, a totally different picture exists. Entertainment and recreation needs are arranged in accordance with the needs and desires of the patients. It is recognized that not everyone wants to attend a movie 3 nights each week. Likewise, not everyone likes to play bingo. In order to assist patients to take a part in activities in which they have an interest, a large variety of activities has to be provided. Lounges and writing rooms are made available for those who might prefer to use their leisure time on a certain evening to write letters. Other rooms are made available for those who prefer to listen to recorded music, watch television, or read books. Schedules are posted so that the patients will know when certain receration areas are available and they can plan their activities accordingly. Occasionally, dances are scheduled and those who are interested dress appropriately, attend the dance, and dance with ladies who have an understanding of the needs of convalescent patients and are willing to devote an occasional evening to helping them regain their health. Every now and then, a variety show is sponsored by some interested city, State, or national organization. Invariably, these variety shows are carefully chosen, of a high caliber, and satisfy the entertainment needs of a large segment of the patient population.

Smaller groups, and at times individuals, from nearby communities bring more specialized and extremely interesting entertainment to the hospital for groups with special interests. During the past summer, the hospital librarian arranged to have a father and his school-age son from nearby Lebanon come to the hospital library and exhibit their collection of rocks and minerals. This event was publicized throughout the hospital. More than 20 interested veterans attended and a most interesting discussion period was held. The father and son took just pride in their extensive collection of rocks and minerals. In response to questions asked by the veterans, they explained their hobby in interesting and stimulating detail. The beneficial effect on the veterans was manifested by the favorable comments heard in subsequent discussions and by the demand for books on mineralogy and related subjects in the hospital library.

There were other events at the Lebanon Veterans' Administration Hospital for groups with special interests during the past summer. A local businessman gave an illustrated discussion on the history of Lebanon County for those interested in historical events. Another interested citizen brought his hobby of pigeons to the hospital and fascinated and helped create an education interest in a group of patients who attended the display. Still another scheduled event brought trained dogs to the hospital. A nature talk by a biology teacher from a nearby community was of great interest to another group of patients. A husband and wife team, who were fortunate enough to have visited the Brussels World Fair during the summer, came to the hospital and gave a most interesting and colorful presentation of their experience at the fair. These and many other similar activities are designed to fill the needs of individuals. A patient who may have been apathetic and disinterested for months or even years may start showing the first signs of interest in life after attending one of these special events. When this spark of interest returns, the patient becomes accessible to other treatment activities. He will start showing an interest in group work and eventually gain the necessary motivation to seek individual attention and benefit by same.

With the open door policies being practiced at the Lebanon Veterans' Administration Hospital, the patients are encouraged to handle all of the responsibility which the physician considers them capable of assuming. This means that the patients are given more and more opportunity to take part in selecting activities, sharing these activities with others of similar interests who are making progress in the treatment program.

The open door policy is not an isolated area of progress in the treatment of the mentally ill. The philosophy of the open door is integrated with advancements in other areas of treatment. For example, with the use of the tranquilizing drugs during the past several years, many patients, who, for a decade or longer, have been almost helpless and in need of constant supervision are now able to do some things for themselves. With the use of appropriate tranquilizing drugs, their fears, tensions, and anxieties have been reduced and they come out of the corners and begin to express themselves. This awakening of interest will prove of little value if the patient remains behind the closed door and is unable to reach out and take part in activities requiring greater responsibility. Many of these individuals who have been sick for 6, 8, or 10 years have lost the capacity to do such simple things as use a modern telephone. Tasks such as operating an "automatic" elevator are a real challenge to them and initially they need assistance in order to learn how to do many of the ordinary everyday activities which healthy people take for granted.

It is obvious that this series of new events presents many challenges to the staff and makes a much greater demand on the staff for individual work with the patients. Patients, who formerly needed strict personal supervision for bathing and dressing, are now learning to take care of themselves. They are gradually developing pride in their personal appearance. This transition period places many new demands on the staff. It takes much longer to let a patient, who is learning these things, bathe and dress himself than it used to take to supervise a strict routine of bathing and dressing the patient. For example, the patient will be permitted to select the shirt and tie he wishes to wear. Under the old closed door system, it was easy and time saving to simply pass a shirt and a tie from the clothing room and tell the patient that's the one he is going to wear. But it is essential that the patients have adequate experience in making these small decision if they are ever going to progress to the point where they will make larger decisions. Only by mastering these elementary situations are they going to be able to move out and establish themselves in relation to other people in society.

As a patient improves and handles increasingly greater responsibilities, especially those related to self care and the ordinary activities about the hospital, it becomes necessary to assist him in making the big step from the Lebanon Veterans' Administration Hospital into the community. Here again there are easy, relatively trouble-free ways of helping the patient but these methods frequently fail in achieving the goal which is to help him continue improving. For example, the hospital could provide the bus and take a group of patients to town, have them return to the bus at a designated time and return them to the hospital. This simplified system, however, fails to give the men any training in learning their responsibilities of handling public transportation. Some of the men going on these passes may not have been outside the hospital for years and, likewise, may not have handled cash for many years. Furthermore, he isn't going to learn how to handle cash, read bus schedules, reach a predetermined destination and get along with people if all these things are done for him. He has to learn to do then for himself. When he approaches the bus, he may become almost panicky by not knowing whether he pays as he enters, pays as he leaves, the amount of the fare, whether he is going to be able to count his change properly, and many other matters which healthy individuals take for granted. Exactly at this point, when the patient is leaving the Lebanon Veterans' Administration Hospital for the first time and entering a public bus, the relationship between the hospital and the community is on definite trial. A bus driver who is unsympathetic or who lacks understanding of the situation can very easily throw a patient going on his first pass into a panic. If the open door policy is going to continue to work, then the bus driver actually becomes a part of the treatment program for this particular patient taking his first trip to town. By his patient understanding, kind guidance and genuine interest, the bus driver can actually help the patient make this first big step into the community.

Hospital staff understanding and cooperation is also essential at this point and here again we see the definite need for a closely integrated relationship between the hospital and the community. For example, the men going on pass may have no cash in their pockets until they withdraw funds from their hospital account on the morning of their departure. For these initial brief visits to town, a "uniform round sum" used to be authorized for each patient. Until the situation was fully understood by all the clinical and administrative people involved, these men were usually given $5, money of their own, for this first pass to town. Imagine the situation if 18 or 20 men start boarding the bus and each presents the driver with a $5 bill. Not only was receiving the change very time consuming but actually it is unreasonable to expect a bus driver to carry sufficient change to accept $5 bills for a small local fare. It is also unreasonable to expect a bus driver to remain patient, calm and understanding when confronted with such a situation.

Little matters like this were called to the attention of the staff and subsequently arrangements were made to release sums of money which included some small change. This resulted in a far more pleasant atmosphere at the point of departure and assisted the men in successfully completing this first and important step into the community. When the veteran successfully accomplishes his trip to town, he will have gained a bit of confidence and a bit of self-esteem, which will help prepare him for greater responsibilities and further advances in the treatment program.

If he is able to make the decisions necessary to successfully get to town and return to the Lebanon Veterans' Administration Hospital, he can start planning for a longer journey. His next step might well be to plan a visit to his former community. This would involve taking a bus to town then making his own arrangements for other transportation by either bus or train to get from Lebanon to his destination. As the patient repeats these experiences during a period of weeks or months, he gradually overcomes his fears, doubts, and anxieties, and slowly resumes his capacity to enjoy the rights, responsibilities, and privileges of citizenship in his own community.

So far, we have mentioned only the bus drivers in terms of helping the patients make this first big step from the Lebanon Veterans' Administration Hospital into nearby communities. Many other members of the community are, of course, involved. For example, occasionally, a patient may choose to ride to town by taxi. Here too an efficient system could be worked out if the ward nurse, knowing that the patient wants to go to town by taxi, would telephone the local taxi dispatcher, give brief and specific directions to the dispatcher, and then accompany the patient to the agreed meeting place and make certain that he gets his ride to town. By doing all this for the patient, he learns nothing about the responsibilities of making telephone calls, giving directions and cooperating in those directions in order to achieve a desired purpose. It is far better to instruct the patient to use one of the many conveniently located public telephones at the Lebanon Veterans' Administration Hospital, have him look up the number in the telephone book, dial that number and use his own money to pay for the telephone call, give his own directions to the taxi dispatcher and then assume the responsibility of being at the designated waiting place when the taxi arirves. In this situation, understanding dispatchers do much to help the patients at the Lebanon Veterans' Administration Hospital by assisting the veteran in establishing a specific meeting place where the taxi will pick him up.

Once a patient from the Lebanon Veterans' Administration Hospital arrives in town, many other members of the community begin playing significant roles in the treatmcnt program.

When a patient who has been hospitalized for several years goes to town on his first pass, he may become quite scared and momentarily appear confused and bewildered. At such a time, an understanding police officer or citizen may offer some friendly guidance, put the patient at ease and inform him about available commerical and entertainment establishments.

When the patient eats his first meal at a restaurant in town, he may become conspicuous by his reactions to the new surroundings. Remember, he has been used to eating in a dining hall, cafeteria style, menu prearranged, and in the environment of a large group of fellow patients. In the restaurant, he will receive a menu and for the first time in perhaps several years he will have an opportunity to select various courses. He will also have his first opportunity in many years to observe the prices of food and this, too, may prove rather interesting to him. All of this newness may cause him to be somewhat anxious and perhaps rather slow in presenting his order. This calls for special understanding and perhaps some kindly guidance on the part of the waitresses in the restaurants. Perhaps he is eating with one of his fellow patients who accompanied him to town and their emotional reaction to all this newness may cause them to forget about the other people in the restaurant and their conversation may be carried on in a real loud tone of voice.

By a kindly comment or explanation, an understanding waitress or proprietor can help these men relearn acceptable social customs. There are many ways in which intrested members of the community can help make these passes a truly gainful experience for the recovering patients.

Various members of the community will play their role for these patients on pass in the areas of entertainment and recreation. At the Lebanon Veterans Administration Hosptial, the patients will have become acquainted with certain recreation leaders and specially trained therapists who supervise their recreation activities. When these patients visit, for example, a community YMCA, they will feel lost initially because of not knowing the schedule of activities, not knowing what activities are available and having had only limited experience in taking part in activities with strangers. In order to avoid the risk of establishing an acquaintance with a stranger, they may sit in a chair and do nothing. Unless they are given information about the activities and encouraged to take part, they may spend their entire afternoon or evening sleeping in a chair.

After all, sleep is one way of avoiding social contacts and thereby avoiding the risk of rejection and lack of acceptance. If there are no activities on the schedule at the YMCA, which interest the patient, he should leave. A suggestion to this effect would be in order. Some information concerning activities elsewhere in the community might be offered. If he lacks interest in any other activities, it is quite likely that he will return to the hospital.

Occasionally, a patient on pass may fail and become a temporary behavior problem. While hospitalized, he does remain exposed to all mediums of advertising and some delightful jingle may remain in his mind as he goes out on his first pass. That refreshingly clear beverage or the drink preferred by the man of distinction may have impressed him sufficiently to give it a whirl. Not being accustomed to any alcoholic beverages, he might consume only a small amount and still have used what for him is an excess of alcohol. This will require a great deal of forebearance on the part of the community since perhaps for this one failure there may have been ninety-nine others who went to town on pass and succeeded.

Every effort possible is made to encourage wholesome and healthy habits on the part of the patients leaving the hospital. Patients are carefully evaluated so as to attempt to grant passes only to those who have improved sufficiently to control their habits and be able to benefit by the pass. Unfortunately, the adverse publicity given to one failure frequently overshadows any mention made or note taken of ninety-nine patients who utilize their passes to good advantage and progress toward recovery and return to their home community as worthwhile and productive citizens.

Most of the earlier discussion of the open door policy has been from the point of view of the patient going into the community. There is another equally important aspect of the open door policy which has to be considered. This pertains to having the community come into the Lebanon Veterans Administration Hospital. With the open door philosophy, this is achieved in many ways.

Visiting hours are more convenient. Appropriate facilities are made available to the family and friends as visitors. Visiting rooms are pleasant, well lighted, and well ventilated. The hospital canteen is available so that patients can accompany their visitors to the canteen and enjoy fellowship with refreshments.

The role of the volunteers is outstanding in this matter of bringing the community into the hospital. To a great extent, these volunteers coming into the hospital have a lot to do with the success and progress of the open door policies. These volunteers get into all areas of the hospital and actually learn about the treatment activities which are going on for the benefit of the patients. They learn and understand newer concepts of treatment programs for the mentally ill and, with this understanding, return to the community and help correct the many prejudices and untruths which exist in the minds of the uninformed.

At the Lebanon Veterans' Administration Hospital, there are approximately 440 volunteers on the rolls who participate in activities with the patients on a regular basis. An average of 325 of these volunteers visit the hospital each week. Without monetary compensation, these volunteers serve throughout the hospital in many capacities, providing that certain intangible benefit, which cannot possibly be achieved by a paid staff alone.

Some assist the nursing service, working on the wards and offering services directly to the patients while others work in such areas as central sterile supply and thereby indirectly offer their services to the patients. Some patients need assistance in being fed and this important role is played by volunteers working with the dietetic section. Other volunteers work in the physical medicine and rehabilitation section where they assist patients in the occupational therapy clinics, educational therapy section, manual arts therapy workshops, the hospital greenhouse and numerous other areas.

Another group of volunteers assist in the chaplaincy service. These volunteers assist in making the hospital worship services a more meaningful religious experience for many patents. They assist in providing the music for worship, in the distribution of hymnals and devotional literature and, for those patients who might otherwise not be able to get to the chapel services, they assist in transporting by wheelchairs. Volunteers assist regularly in passing out the elements for communion services.

Volunteers take an especially active part in assisting special service in providing entertainment and recreation needs for the patients. The volunteers in the music therapy program have helped organize patient orchestras and choral groups. Individual instrumental and vocal lessons are provided by volunteers. Social dance groups, at which interested patients are taught to dance, are sponsored by volunteers. Volunteers serving as hosts and hostesses help the patients on wards and/or at activities.

Other volunteers, serving as receptionists, greet and help to smooth the way for family and friends when visiting the hospitalized veterans. They provide an invaluable service through their kindness in helping relatives and friends to understand the ill veteran. By their friendly acceptance, they help the relatives and friends to realize the needs of the sick veterans.

In addition to the many services rendered by the volunteers who visit the hospital on a regular basis, there is another important group of people who come to the hospital from communities near and far. These peo-

ple usually come in organized groups and are referred to as casual volunteers. Approximately 700 casual volunteers visit the Lebanon Veterans' Administration Hospital each month and provide special entertainment programs. These consist of variety shows, band concerts, social dances, picnics, and many other forms of wholesome entertainment.

Although the value of these volunteers can never be measured in units of time, it is interesting to note that, during the year 1958, the regular volunteers devoted approximately 36,000 hours of service to the patients at the Lebanon Veterans' Administration Hospital. During the same period, the casual volunteers devoted approximately 21,500 hours of service. The patients at the Lebanon Veterans' Administration Hopsital are indeed fortunate in having such a responsive population of devoted citizens in Lebanon community.

The contribution of these dedicated volunteers is an essential ingredient in the open door policy, which is now an integral part of the treatment program at the Lebanon Veterans' Administration Hospital. One might justly say that, in the hearts of the patients and the eyes of the staff, the volunteers are truly the symbol of the open door policy. To the patient, this symbol provides a new hope for returning to his family and community. To the staff, this symbol points out new horizons of treatment goals. We are no longer satisfied with a comfortable status quo; the open door makes every achievement of today a challenge for greater accomplishment and more devoted service to the hospitalized veterans tomorrow.

## Mine Crisis Aid Fully Justified

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Friday, February 27, 1959:

MINE CRISIS AID FULLY JUSTIFIED

The fact Luzerne County and its subdivisions, among other things, are confronted with a potential loss of $30 million in coal assessments as a result of the Knox disaster, as developed at a meeting of public officials, coal company representatives and civic leaders in Hotel Sterling last night, is an added incentive to speed action on the rehabilitation of the industry.

This is not to imply there will be such a loss unless the industry tosses in the sponge because Government aid in sufficient amounts is not forthcoming to dewater the flooded mines and prevent further flooding. The Glen Alden Corporation, still the largest of the local producers, has made it clear, for instance, it is staying in business.

Logic would seem to dictate a positive approach rather than a negative attitude.

When the river broke into the Port Griffith mine, the first consideration was the fate of 12 missing men. That continues to occupy the top place on the agenda, although hope for their rescue has faded.

The second task was the plugging of the gap in the river to shut off the flow. That has been partly accomplished, but it will take months to finish the project.

Some pumping has been started and more is contemplated. The newest challenge is at the Lehigh Valley operations, particularly at the Dorrance, which has been closed as a precautionary measure due to the threat from the water in the Henry and Prospect collieries. From indications, the menace can be contained here if vigorous measures are instituted.

If that is done, with teamwork between Government agencies and the coal companies, the day will be saved, not only restoring jobs to most of those now idled, but protecting other operations in this field. Surely, with such a tremendous stake, any investment by the Government will pay a handsome return.

When we think of the billions that have been spent on foreign aid, farm relief, TVA development, river projects and other forms of assistance, the local program is just a drop in the bucket, so far as expenditures are concerned. The Federal Government and the Commonwealth have an obvious obligation to meet; moreover, both stand to gain by restoring the economy of the region.

## Poison in Your Water—No. 28

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Akron (Ohio) Beacon-Journal, September 6, 1957, chronicling how two children had gotten typhoid fever while attending summer camp in Medina County as a result of contact with a polluted stream near that camp. This is just another reason for vigorous Federal action and for full grants under Public Law 660 for cleaning up our foul and disease-ladened waters.

IT CAN HAPPEN HERE

The discovery of two cases of typhoid fever among children who attended a summer camp in Medina County puts added emphasis on the need for speed in solving some of the growing problems of sanitation in parts of Summit County.

Medina County and State health officials who still are working on the typhoid cases believe that the victims probably got the germs from a polluted stream near the camp. The stream was off limits from the camp, but that did not prevent the two girls who came down with typhoid from playing in it.

The stream suspected of being the source of the Medina County typhoid scare does not flow into Summit County, but there are small streams and ditches in Summit which are carrying effluent from inadequate sewage disposal systems and are little more than open sewers.

Summit County health and engineering officials are deeply concerned with the situation and are working toward a solution. So are the officials of the villages, especially those in the northern part of the county where new allotments are putting a heavy burden on existing sanitation facilities.

Typhoid fever is a comparatively rare disease today. It was brought to the present point of almost complete control by enforcement of proper health regulations and elimination of pollution of milk, water, and food.

Every effort should be made to see that conditions continue to prevail that will prevent the outbreak of typhoid or any other disease that can be spread by unsanitary means.

## A Day of Mourning of the Rumanian Nation

EXTENSION OF REMARKS
OF
### HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. MACHROWICZ. Mr. Speaker, the 6th day of March was a day of mourning of the Rumanian nation. It was 14 years ago that Rumania was subjugated by Soviet Russia.

On March 6, 1945, the late abject executioner of Soviet crimes, Vishinsky, installed with the help of Marshal Malinovski's guns and tanks a puppet government in Bucharest.

The circumstances of this act of interference and brutality are fairly known, but insufficient stress is laid on its political consequences. The plight of Eastern Europe is too often represented as the product of an implicable destiny, in the decrees of which the western world had no share. It is a misconception that our only relation to the problem of subjugated Europe is merely one of a remote moral character, a matter of pure generosity. The truth is that the Western Powers have contracted very definite obligations regarding the freedom and independence of the Eastern European nations. The binding legal character of these obligations originates both from the declarations of principle and intention made during the war—like the Atlantic Charter and the Yalta declaration—and from the guarantees recorded in the so-called peace treaties signed by the United States, the United Kingdom and the Soviet Union.

The puppet Government of Rumania has continuously infringed the provisions of the peace treaty. All the nonrepresentative governments recognized in East Europe have done the same. Being under Soviet control and direct military pressure the occupied countries have been transformed in Soviet bases and domains of ruthless economic exploitation. Rumania's fertile agricultural country, with the richest deposits of oil in Europe, is now in a permanent state of alimentary crisis, her population is impoverished and public health is reaching its lowest ebb. But despite these horrible hardships, the resistance against communism is ever present in Rumania, the sabotage widespread over the country and the deep allegiance of the people to the West stubbornly manifest. The situation is characteristic of the whole area of Soviet dominated Eastern Europe.

At this critical historical juncture it will be a tragic error to ignore, or gloss over this state of things in such a vital strategic point. By their old and proud traditions of freedom, by their economic and human resources, the nearly one hundred million of enslaved Eastern Europeans appear as a potential political force of the first magnitude. It is amply proved by now, that the Russians are intensely conscious of this fact and try by every means to annihilate this

pro-Western potential and its dangerous implications for Soviet imperialism.

The offensive of Khrushchev through the Berlin maneuver to achieve a settlement in Europe, with the final recognition of the Communist controlled area, indicates the urgency and importance the Soviets attached to this problem. The freezing of the status quo of Russian domination in Central and East Europe, would mean indeed the decisive step toward an ultimate Soviet control over the whole of Europe.

The two main ideas of the Russians in this campaign are to get rid of American military bases and what we call psychological bases; namely, the American presence in Berlin with its powerful psychological impact on the whole of Eastern Europe. These psychological bases should at no price be weakened, but on the contrary, a clear indication should be given that no deal will be made regarding the status quo. The best policy in this matter would be to actually raise the issue of Soviet domination of the entire East European area. Any negotiations in the Berlin crisis offer ample opportunity to counterattack on this vital matter and the most vulnerable point in the Russian offensive.

## Veterans of Foreign Wars Call for Balanced National Defense

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. John W. Mahan, commander in chief, Veterans of Foreign Wars of the United States, with national headquarters in Kansas City, Mo. The letter is dated March 3, 1959.

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
*Kansas City, Mo., March 3, 1959.*

The Honorable DANIEL J. FLOOD,
*U.S. House of Representatives,*
*Washington, D.C.*

MY DEAR CONGRESSMAN: As commander in chief of the Veterans of Foreign Wars, I recently had an opportunity to meet with leaders from your State during our annual legislative conference in Washintgon, D.C. Since talking with your constituents, I thought it advisable to write you on a matter that concerns all of us—national security.

The VFW, by resolution and by unanimity of opinion, feels that our country is losing basic military strength through proposed plans to reduce our Defense Establishment. We believe, and we are on record, that our country should have a balanced defense which is ready to move at a moment's notice, whether on the ground, on the seas, or in the air. We further believe that a reduction in our ground forces in the face of the Khrushchev challenge over Berlin is unthinkable. Even though the Berlin situation might be settled peaceably, there are still many trouble spots in the world where American support has already been committed.

It is our understanding that unless plans to reduce forces are halted the Army will lose one division and the Marine Corps will suffer drastic cuts in its combat strength. Our military strength must be great enough to insure peace.

We are told that Russia has 25 divisions on the borders of Western Europe alone. Instead of a reduction of forces, the VFW knows that the American people are willing to pay more for defense, if necessary, and we should keep our ground forces at least at the level recommended by the Congress, which was 900,000 in the Army and 200,000 in the Marine Corps.

We would appreciate hearing from you on this matter; and if you agree with us, I sincerely hope that you will lend your influence and support toward maintaining our military and naval forces at the above strength.

Sincerely yours,

JOHN W. MAHAN,
*Commander in Chief.*

## Our Housing Needs

EXTENSION OF REMARKS
OF
## HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. ADDONIZIO. Mr. Speaker, with the Housing Act of 1959 expected to come before the House shortly, I wish to commend to my colleagues' attention the able address delivered yesterday by Mr. George Meany, president of the American Federation of Labor and the Congress of Industrial Organizations, to the 28th Annual Housing Conference in Washington. Mr. Meany presents most persuasively the economic, social, and moral reasons why the Nation cannot afford to postpone action on our housing needs. As Mr. Meany stresses;

This is not primarily a spending program, but a lending program; not a waste of money, but a sound investment; not a surrender to inflation but a bulwark against inflation.

His address merits full consideration.

ADDRESS BY GEORGE MEANY

America is still a growing nation. Those who believe we have reached the last frontiers of progress are looking through the wrong end of the telescope. Many of us can remember the big headlines and the feeling of pride that swept the country when the 1920 census showed our population had passed the 100 million mark. Today, less than 40 years later, it is 175 million. By 1970 it is expected to go up to 210 million.

These human statistics constitute a key factor in any intelligent analysis of what America needs today and for the future.

It is encouraging to find independent citizens' organizations like the National Housing Conference devoting themselves to blueprints for a better future. You believe, as we do in the trade union movement, that America needs to build millions of new homes for its ever-growing population. You understand, as clearly as we, that there are compelling social and economic reasons why the Nation can no longer safely postpone action. We are therefore happy to serve with you for the realization of our common objectives.

Because of long years of neglect and inertia, housing has become one of our great national problems. It is a problem that goes to the very roots of our community and national life. It is a problem of such magnitude that it must be considered in the light of the whole national economic picture.

What does that economic picture look like today? Where do we stand as a Nation? Let us take a quick inventory.

A year ago industry was struggling in the midst of a serious slump. Today we have recovered 80 percent of the lost production. Yet we have reemployed only 30 percent of those who lost their jobs in the recession. As a result, there are still 4,700,000 people unemployed now—200,000 more than at this time last year.

This spells danger—in big letters. Our economy cannot afford to carry 5 million unemployed as a chronic drag against progress. The very safety of the Nation demands that the unemployed be put back to work.

What is the answer? Well, there are those in Washington who believe that the problem will solve itself as long as we achieve a balanced budget. They feel that everything will work out neatly and comfortably if the Government sits still and lets private industry work its way through the muddle, without any national planning, encouragement, or assistance.

And there are even some extremists who believe it is a good thing for the country to have a large group of unemployed. They like the idea of a surplus labor market as a weapon against union organization and higher standards. These are the same people who opposed any Government action during the depression of the 1930's, who prated about rugged individualism when we had 14 million people jobless.

Well, we have come a long way since then. The American people will not accept the idea that we must have long periods of widespread unemployment from time to time as part of our way of life. Neither will they accept the idea that by doing nothing everything will soon be all right. And they believe it is the responsibility of the Federal Government to act in a time of crisis like this—not merely to sit tight and hope and wait.

This is definitely and clearly a time for Government action. Something is radically wrong with our economy when we pile up more and more unemployment at the very time we are producing more and more goods. The problem is too extensive and too complex for private industry to cope with unassisted.

Each year more than three-quarters of a million young people enter the labor market looking for jobs. Each month automation spreads and improved methods of production are introduced, thus cutting down the supply of jobs.

In terms of gross national product, if we maintain our present level of production, we lose ground. If we raise that level by 1 or even 2 percent a year, we still lose ground. It will take an increase of almost 5 percent a year in the gross national product to obtain reasonably full employment in the face of population growth and technical advances.

How can we gain that essential 5 percent annual increase?

There is only one answer. We must increase our capital investment—investment for the important things the American people urgently need—investment in millions of new homes, in thousands of new schools, hospitals, airports and better roads.

This is not primarily a spending program, but a lending program; not a waste of money, but a sound investment; not a surrender to inflation but a bulwark against inflation.

Yes, it will undoubtedly take several billions of dollars of Government funds to start the wheels rolling for such a construction program, but most of the money will be

reimbursed. And private capital will quickly enter the market if the Government shows the way and insures the risk.

Each month, the Government spends many millions of dollars in experiments with rockets, missiles, bombs and other military devices. This is a vital and necessary expenditure for our national defense. Every right-thinking citizen understands that, in the face of the constant and determined efforts by the Soviet Union to undermine and if possible to destroy our free way of life, we must, no matter what the expense, be completely prepared to meet open aggression.

But, at the same time, we are firmly convinced that the strengthening of our national economy is equally important to our national defense. An economic collapse in the United States, which the Communist theorists have confidently predicted for many years, would result in victory for dictatorship without Soviet Russia having to fire a shot.

Thus an effective building program, that would restore economic health and prosperity to the country, must be considered an indispensable element in our national defense.

Let's examine another angle, the one we hear so much about in Washington these days, inflation. Fear of inflation seems to have become an obsession in certain influential quarters. Any proposal for the investment of Government funds is met with an emphatic and automatic "No" on the ground that it might upset the possibility of a balanced budget and cause further inflation.

When it comes to housing, this attitude just doesn't make sense. The real danger of inflation would come if we continue to neglect the Nation's housing needs and permit present shortages to become aggravated. Short supply in the face of great demand is the surest way I know of driving up prices. Obviously, the safe way to avoid inflation in the housing field is to build more now, before it is too late.

What are the facts about housing? Few of us can remember when there was enough to go around. Wartime restrictions on construction, the continuous growth of our population and high financing costs—all have contributed to a mounting deficit of decent homes. Slum areas in our cities and even in rural communities have not been replaced. As a nation, we are far behind the needs of our people and we are falling further behind each year.

Last year about 1,200,000 houses were built in this country. That was 150,000 more than the year before, but 200,000 less than in 1950. Yet, since 1950, the population has increased by 25 million. This year, because of tight-money policies, the prospects for home construction are only a little better than last year's.

It is time for all of us—and especially the Government—to realize that "a little better" is not enough. We can, and we must, do a great deal better.

To come up to minimum requirements, we must build at least 2 million housing units a year for the next 10 years.

That mark cannot be reached by the building industry without Government help in the form of liberal financing. Today, Government funds for home financing are virtually exhausted.

Labor, therefore, calls upon Congress to enact new legislation as promptly as possible to provide ample home construction financing at attractive interest rates.

This legislation should be part of a comprehensive housing program.

Too many of the new homes built today are priced far beyond the reach of the average American family. Congress should encourage the building of more homes that people in the middle-income bracket can afford to buy.

Remember, these financing programs are lending, not spending.

But there is a very important housing field where the Government must spend—at least until private capital can be encouraged to undertake the risk on a broader scale. I refer to slum clearance, low-cost public housing and the redevelopment of blighted urban areas.

Besides the economic factors involved, there are overriding social and moral reasons for spending Government funds for these purposes.

There can be no intelligent disagreement with the conclusion that slums breed disease and crime. The problems of juvenile delinquency oppress our great cities primarily because millions of young people are brought up in a slum environment. For every Al Smith who can triumph over the handicap of being raised in a substandard tenement, there are thousands of potential gangsters in the making in our slum areas.

Only last week the mayor of Cleveland came to Washington to plead with Federal officials for loan guarantee for a private slum clearance project in his city. He told an enlightening story about the results of a previously completed slum clearance project in the Woodland area of his city. Before that housing development was started, the mayor said, the Woodland area was responsible for 80 percent of the crime in Cleveland. Now crime in the same area has been reduced to less than 1 percent of the city total.

To my mind that experience provides justification for an all-out attack against slums, for the expenditure of far more Federal money than ever before for slum clearance and public housing. All over the Nation, municipalities have plans ready, but they are forced to mark time for lack of funds and they are getting no help at all from the Federal Government.

As I indicated earlier, housing is only one of the many fields of essential Government investment. The school shortage is perhaps even more acute. We need many more hospitals and laboratories to safeguard the health of our people. Federal support also must be given on a large scale for larger and more modern airports and for better roads.

The economic impact of such a construction program would be far reaching. It could set off a chain reaction for nationwide prosperity. It would provide tremendous stimulus to such basic industries as steel, cement, lumber, glass and brick. But it would also give a sharp lift to the production of home appliances, furniture, floor coverings, textiles and dozens of other items which go into every American home. It would create millions of new jobs for years to come, not only on construction sites, but in the mills and factories of our Nation.

To the timid souls who say America cannot afford to spend the money, we reply that America cannot afford to miss the opportunity. Let us match our faith in the future of our country against their fear. Let us build a better America.

## Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
### HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. METCALF. Mr. Speaker, Dr. Flemming, Secretary of Health, Education, and Welfare has perfected the formula under which he alleges that the classroom shortage can be eliminated if only the States will cooperate by changing the constitutions and the States and local districts by changing their rules as to the incidence of taxes and debt limits for bonds on property.

Application of Dr. Flemming's formula to the Congress of the United States would reveal much to Mr. Alcorn's surprise that the Republicans actually won the last election. A minor change in the Constitution and rules of the House and Senate would give the Republican Members two votes for each single Democratic vote.

Under the Flemming formula the Republicans would organize the House of Representatives by a vote of 306 to 283; the Senate by a vote of 68 to 64. Of course, that is a very narrow margin and anticipating further losses in the next election perhaps it would be well for Dr. Flemming to make his ratio of Republican votes three to one Democratic. Minor obstacles to effecting this change are the Constitution of the United States, the rules of the House and Senate, but with the cooperation of the Democratic Members these minor obstacles can be overcome.

## Do Ducks Smoke?

EXTENSION OF REMARKS
OF
### HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. HERLONG. Mr. Speaker, hundreds of millions of dollars are being spent in the field of research in an effort to discover the cause of cancer—so far without success. Some people, equally without sucess, have sought to place the blame for lung cancer on tobacco. As a pertinent item in the search for the truth, I include herewith an article by John Troan, Scripps Howard science writer, in the Washington Daily News, Monday, March 9, 1959:

Lung cancer is increasing in ducks as well as humans.

If you're in the mood for a wisequack, you could ask: "How come—since ducks don't smoke?"

Dr. Ernest J. Witte, chief veterinarian for the Pennsylvania Health Department, says the answer might be air pollution.

Dr. Witte reported today a 54-year study of animal deaths at the Philadelphia Zoological Garden showed lung cancer among ducks now occurring with high frequency.

He said this prompted speculation about the growing amounts of cancer-causing chemicals in the air "as a result of increased industrialization."

AIR POLLUTION?

"The high frequency of lung cancer (in ducks) in the past 10 years," he reported, "would seem to emphasize the importance of air contamination—since these species are kept in outdoor pens throughout the year."

Dr. Witte set forth his findings in the journal, Cancer Research. Louise S. Lombard, now with the Argonne National Laboratory at Lemont, Ill., also helped conduct the study.

The research revealed both cancerous and noncancerous tumors are on the increase in the animal world. But most of this seems

to be linked to the fact animals—like humans—are living longer.

However, some of the findings couldn't be correlated with longer life span among the zoo occupants.

PARAKEETS HIT

Among these were lung cancers in ducks and kidney cancers in parakeets. These tumors apparently are due to something other than aging—but nobody can say what.

Skunks and badgers are getting more cancers of the thyroid, a neck gland that serves as the body's carburetor.

Dr. Witte said these thyroid cancers "may be related to social pressures" in the zoo "rather than to iodine deficiency." He said some rats cropped up with such tumors after developing oversized thyroids which followed "crowding and group conflict."

## Unborn Americans Cannot Vote

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. ALGER. Mr. Speaker, like many million other Americans, I have fought in a war. Modern warfare has a single basis of comparison with that of ancient times. It consists of 10 percent doing and 90 percent waiting.

During my time of waiting, I had a lot of hours, days, weeks of thought.

I thought, "Do I hate these Japanese people whose property I am going to destroy, whose lives I am going to snuff out?"

This was no easy question. It required the searching of my soul. It demanded that I look into myself, my family teachings, my religious experiences, my formal education.

My answer finally came: "No. I do not hate these Japanese people, whose property I will be called upon to destroy, whose lives I will be called upon to snuff out. I do hate their ideas—that they were justified in their massacre at Pearl Harbor; that they are supermen, accountable only to their leaders; that inhuman cruelty to those other than their own countrymen was natural, even praiseworthy."

I am glad I thought this problem out for myself so many years ago, because, now, I find that I must dedicate my every effort to destroy an idea while respecting and admiring many of the men who hold that idea.

I refer to the idea that it is right to continue one's self in office by providing luxurious Government services which will not alter the present tax structure materially, but which will so increase the national debt that a child born in the United States of America in 2059 will be paying for what is done today.

I am quite confident that no Member of the 86th Congress will be running to retain his same seat in the 136th Congress. The voter of 2059 will have no opportunity to express his resentment of the tax burden we put upon him by using his ballot to defeat any of us.

In my book, it is cowardly, unsportsmanlike, and un-American to injure someone whom you are dead certain will not be able to fight back.

Balance our national budget by cutting all unnecessary expenses to the bone.

Meet present-day problems in the present—do not defer paying for what you get until the next century.

It is not liberalism to promise everything to your contemporaries while leaving your descendants the responsibility of footing the bill.

That, to me, is liberality. That, to me, is the philosophy of the libertine.

Can you still be brave and live with yourselves when you remember, "Taxpayers of today can vote. Taxpayers as yet unborn cannot"?

## Labor Legislation

EXTENSION OF REMARKS
OF
### HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. UTT. Mr. Speaker, under leave to extend my remarks I would like to insert herewith a letter from Mr. Adolf Schoepe, president of Fluidmaster a manufacturing organization in my district, on the subject of labor legislation. It is most forceful and convincing and I hope that my colleagues will bear the comments in mind when such legislation comes before us.

FLUIDMASTER,
*March 6, 1959.*

The Honorable JAMES B. UTT,
*House Office Building, Washington, D.C.*

DEAR JIM: I am enclosing a copy of a statement presented by Donald J. Hardenbrook before the Kennedy Subcommittee February 5, 1959, on the behalf of the N.A.M. and its members.

It is my opinion this statement, for the most part, reflects the views held by wage-earners, businessmen, and the public. It deserves your consideration and support. In addition I should like to offer some further comments and observations.

The Kennedy bill and the administration bill are both entirely inadequate. I am hopeful strong amendments will be offered from the House and Senate floor and that they will have the needed support of Congressman BARDEN and Senator MCCLELLAN.

As you know, section 14B of the Taft-Hartley Act makes provisions for the States to pass State right to work laws. Nineteen States have such laws at this time. Kennedy has not proposed in his labor reform bill that section 14B be repealed from the Taft-Hartley Act. In the speech on the floor of the Senate, he made known his position that he would oppose any such amendment from the floor at the time the Kennedy bill was under consideration. We should avoid this political boobytrap. Obviously, his strategy is to isolate section 14B for the purpose of a successful allout attack at a later date. As long as 14B remains in the package it will be most difficult, if not impossible, for the union bosses to obtain its repeal. Kennedy is running for president every day and in every way and is looking for union boss support for 1960. He is not in favor of right-to-work laws and would move with dispatch to abolish section 14B and the laws presently on the books in 19 States at the opportune time.

We need a return to constitutional government. We need government responsible to the people and not responsible to the union bosses. We need government that will not tolerate the violation of civil rights or civil liberties from any quarter. Finally, we need officials in local, State, and Federal government who are both willing and able to prosecute vigorously those who violate our rights and liberties. We must have effective legislation based upon these American concepts if we are to remain a free people in a free economy.

Surely the McClellan committee, McConnell committee, Kefauver committee, Un-American Activities Committee, and many other congressional committees have clearly demonstrated time after time the need for laws with teeth in them and the need for public officials who have the moral courage, political honesty, ability and the intestinal fortitude to give them real meaning.

Under the guise of collective bargaining, our international unions have grown into a huge monopoly and private forms of government. They have become a sanctuary for gangsters and Communists. For the most part they recognize only union law, which they themselves make and administer. The executive, legislative, and judicial branches of the Government extended official recognition when they accepted and sponsored compulsory union membership by allowing unions and employers to enter into collective-bargaining agreements requiring union membership as a condition of employment or continued employment. Under this type of agreement union members soon learned that they did not have the right of free speech or the right to worship, except where these rights did not conflict with union law. History has proven that where people can only enjoy part-time freedom they wind up with a full-time dictatorship. When our Government extended official recognition to these private governments, it also gave them the power to tax, make their own laws and establish their own courts. Unions and the union bosses enjoy all the benefits and all the privileges of a foreign government without the responsibilities of citizenship.

Under the Federal preemption doctrine, States rights in the field of labor legislation have been so curtailed or impaired as to no longer enable them to pass and enforce effective labor legislation. While this program has been underway, the many international unions or private governments have entered into agreements and arrangements which, for all practical purposes, amounts to one huge, private government, which may even now be equal in power to our own Constitutional Government.

Under the Taft-Hartley Act the wage-earners' rights in collective-bargaining matters are well protected from employer abuses. He enjoys free elections by secret ballot under Federal law and supervision. However, he has little protection under this law from the abuses and violence practiced upon him by union bosses. His right to vote by secret ballot in the election of local and international officers should be protected by amendment to the Taft-Hartley Act. Likewise, strike action should not be permitted except by authorization of the membership obtained by secret ballot. Such balloting should be conducted under the direct supervision of the Government. The machinery of the National Labor Relations Board could be used for these purposes.

The right of secret balloting becomes meaningless so long as the international unions are allowed under their law to impose trusteeship upon local unions. Therefore, the Taft-Hartley Act should be further amended in order to take this power

away from the unions. This power should rest with the courts. Any international union wishing to place a local union under trusteeship should be required to show cause in the proper court of jurisdiction. The court should determine if and under what circumstances the trusteeship is warranted. Any such trusteeship should be imposed by the court and operate only under its direct supervision for a period to be determined by the court, not by the international union. All of the rules and penalties prescribed by law for the election of public officials should be made applicable to union elections. The same principle should apply in the case of trusteeships.

The Byrnes Act, more commonly known as the Antistrike Breaking Act, makes it a crime to have persons transported in interstate commerce for the purpose of interfering with certain employee rights related to collective bargaining. Persons doing the transporting and those being transported are subject to fine and imprisonment. Also guilty are those who aid or abet in the violation. This act is aimed directly at employer conduct. It does not apply to the use of muscle men by unions transported in interstate commerce for the purpose of practicing violence or otherwise illegally interfering with the rights and liberties of employees, employers and the public. The Byrnes Act should be amended to apply with equal force to unions and their muscle men.

There are many case examples available, and should you be interested in examining some of them, I will be glad to furnish them.

After you have had an opportunity to consider the contents of this letter, I would appreciate hearing from you.

Sincerely yours,

FLUIDMASTER, INC.,
*Adolf Schoepe, President.*

## The Story of "Mr. Peanut"

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief history of the founding and development of the immensely successful Planters Nut & Chocolate Co., Wilkes-Barre, Pa., the city of its founding and where its main offices are located. This history takes the form of a letter, which I sent to each Member of Congress this week:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., March 11, 1959.*

DEAR COLLEAGUE: Peanuts, one of the Nation's six basic farm commodities, have long been America's favorite snack—at baseball games, at the circus, and to add taste and enjoyment to parties of all kinds.

And possibly the most important contribution to the peanut industry as we know it today has been made by Planters peanuts, founded in Wilkes-Barre, Luzerne County, Pa., in 1906.

The development of Planters is the story of Amedeo Obici, an Italian immigrant, who came to this country as a boy of 11. At the turn of the century, he soon found himself the proprietor of a fruit stand with the conventional peanut roaster. Young Amedeo, however, foresaw a future in the peanut business and soon had two floors of an old frame building in Wilkes-Barre devoted exclusively to the processing of blanched Virginia salted peanuts which Amedeo and his new partner, Mario Peruzzi, called Planters peanuts.

The next step was the creation of Mr. Peanut, the company's popular trademark, and today, this insignificant beginning has resulted in a worldwide organization with factories in Suffolk, Va., San Francisco, Calif., and Toronto, Canada.

However, the headquarters of Planters still remains in Wilkes-Barre. From there, over 300 Planters salesmen are directed and controlled. All sales and promotional plans are developed in Wilkes-Barre, where Planters president, Mr. Frank A. English, maintains his office and executive staff.

Premiums have been basic Planters selling tools for many years—the pen and pencil set enclosed herewith is the latest in a long line of Mr. Peanut premiums, which is for your use with our compliments.

Sincerely yours,

DANIEL J. FLOOD,
*Member of Congress.*

## Judy Price Day

EXTENSION OF REMARKS
OF
### HON. ALVIN R. BUSH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. BUSH. Mr. Speaker, on February 12, 1959, we memorialized the 150th birthday of our great President, Abraham Lincoln. On Tuesday, February 10, 1959, the town of Danville, Montour County, Pa., paid a fitting tribute to one of its leading and outstanding citizens, Edward Foley Price, who like Abraham Lincoln served his God by serving men. Under leave to extend my remarks, I include the following article by news editor Jack Feeley, of Danville, Pa.

JUDY PRICE DAY

Mr. Price, known to his friends as Judy, was honored with a special day; the first time in the history of the community such honor has been accorded to one of its residents.

During this day, Mr. Price's hundreds of friends, from tykes to men with whom he has worked and lived all his life, recounted the myriad contributions made by him to Danville and its people.

Sincere messages of congratulations came from across the United States, and several countries overseas.

Vice President NIXON and Pennsylvania Governor Lawrence added their plaudits for this man who is loved and respected by all who know him.

Danville, by honoring Mr. Price were attempting to repay, even in a small way, for the many things he has done and continues to do.

Mr. Price, son of an industrialist, has had an illustrious career. He has been a World War I aviator, top athlete at Lehigh College in Pennsylvania, high school coach, Danville Borough and Montour County official, bank officer, State Hospital and Geisinger Memorial Hospital trustee, to name but a few positions.

As a coach at Danville High School he inspired boys to win—but, also, to do much more.

One of the young me he coached so many years ago emphasized this in a letter:

"It is considered a joke today to speak of coaches building character. But Judy Price did just that.

"Every one of us is a better man today because of him. He taught us confidence in our individual selves and pride in the team. I can still hear him saying, 'There'll be no stars on this blankety-blank ball club.'"

Mr. Price's greatest love remains young peeople. He has given unselfishly of time, money, and work, so that youngsters could enjoy more opportunities for recreation.

In truth, there are many facilities in Danville which would not be in existence except for Mr. Price's efforts.

Everyone in town, except Mr. Price, admits to this fact.

The Danville News, in describing Mr. Price and his dedication to community, wrote:

"It's difficult to describe the effect Edward F. Price has had on Danville, and the many contributions he has made to its well-being.

Perhaps the best way is to say the Montgomerys may have founded Danville, but Judy was among the men to make it.

"It would take a lot more than these columns to review what Judy has accomplished, what he is still doing, and what he will continue to do.

"So we won't even try. If for no other reason than we don't relish Judy looking for us, and waving that black cane like an Irishman going after a Black-and-Tanner.

"We might say that Judy shines, in areas where most of us, although we might try hard, seem to fail. He's best at being a human being."

Much of what Mr. Price has done for his fellow citizens is cloaked in secrecy. That's the way he demands it.

At the February 10 banquet, after receiving the plaudits of his townsfolk from all walks of life, Mr. Price said:

"Let me tell you this. Nobody owes me a dime. What little I did, I did because I wanted to, and I had fun doing it. That, to me, is the only way for a man to live."

Mr. Price will long be remembered in central Pennsylvania as the man who gave so much and asked nothing in return.

Pennsylvania and America were made great because of men of the caliber of Mr. Price.

We could use many more of them in this trying and complex world of today.

## Taxation

EXTENSION OF REMARKS
OF
### HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks I would like to call to the attention of my colleagues a letter which was addressed to the editor of the Wall Street Journal by Will Clayton on the subject of taxation of cooperatives.

TAXATION

Editor, the Wall Street Journal: Mr. C. H. Lushbough's letter in your February 10 issue is critical of your January 22 editorial calling attention to the fact that in practice cooperatives and their members are permitted to handle their affairs in such way as to avoid payment of income tax.

Mr. Lushbough compares the issuance of stock dividends by noncooperative corporations with the issuance of certificates of interest to members of cooperative corporations, neither being taxable to the recipients. He says that the object in both cases is the conservation of working capital. But he fails to mention that in the case of the noncooperative corporation, the earnings represented by the stock dividend have already

paid a tax to the Federal Government of 50 percent of such earnings, whereas the earnings of the cooperative corporation represented by certificates of interest are, by the very issuance of such certificates, rendered free of income tax; and since the courts have held that such certificates are not taxable to the recipient, it follows that both the cooperative corporation and its members escape taxation and the Federal Government loses the revenue.

Mr. Lushbough makes the further point that the patronage rebate is nontaxable to any type of business, whether legally organized as a cooperative or not, and he wonders why so few corporations take advantage of the opportunity which is legally open to all.

Maybe he has something here. This would certainly be an easy way to abolish the income tax without bothering with legislation or a constitutional amendment.

But the truth of the matter is, in a free enterprise society such as I hope ours will continue to be, the motivating force on which it is founded is the profit and loss system. If we must abolish this system in order to participate in weighty tax favors by our Government, the day we do that will mark the end of our free society.

WILL CLAYTON,
*Houston, Tex.*

## Poison in Your Water—No. 26

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. DINGELL. Mr. Speaker, all parts of our beloved land witness dirty, foul, and polluted waters.

An article from the Newark (N.J.) News of October 20, 1957, chronicles how the "Dirty Whippany River, Hurdle for Park Plan."

The river in question has been so fouled that 40 percent of the flow in the river each day is waste matter. That river is so polluted that while it supplies only 12 percent of the water in the Passaic River watershed it accounts for over 80 percent of the pollution there.

DIRTY WHIPPANY RIVER HURDLE FOR PARK PLAN

WHIPPANY.—Construction of a system of parks from the headwaters of the Whippany River in Mount Freedom to its confluence with the Rockaway and Passaic Rivers in Parsippany-Troy Hills Township hinges on the clearance of pollution from the Whippany River.

Russell W. Myers, Morris County parks director, said his office has given thought to the mammoth project and probably would take specific steps to start it once the pollution is cleared up.

Steps are being taken by the Whippany Paperboard Co., which empties wastes into the Whippany River, to remove the pollution. But the wastes, though not dangerous to health, will continue to discolor the water. In addition, nonpolluting wastes from the Morristown sewage disposal plant and the Greystone Park State Hospital plant are emptied into the stream, according to Frank De Hooge, superintendent for the Passaic Valley Water Commission, which owns the water consumption rights to the stream.

FORTY PERCENT WASTE MATTER

The waste matter amounts to 40 percent of the flow in the river each day, according to De Hooge's figures. He said the average flow in the river is 25 million gallons daily. Of this, he said, 10 million is waste matter from industry and sewage plants.

De Hooge said that although the Whippany River supplies only 12 percent of the water in the Passaic River watershed, it accounts for 80 percent of the pollution.

In view of the figures, De Hooge cautioned the Morris County commission. He said: "If I were them I'd go a little slow on plans to use the river for recreation."

Myers noted, however, that the stream is a "splendid recreation area from many aspects." He said that the Morris County Board of Freeholders had pledged its aid to return the stream, as much as possible, into its natural condition once the sources of pollution are eliminated.

LONG-RANGE PLAN

Myers emphasized that the string of parks would be accomplished under long-range planning and would not be started for a number of years.

Myers envisioned a system of municipal parks that would be tied together by county-maintained park areas on the order of Branch Brook Park in Essex County. The parks would contain recreation areas, hiking trails, wildlife sanctuaries, and, in the Troy meadows, a nature preserve.

Myers' office has given up on the prospect of creating swimming areas in the river. Generations of untamed industrial and municipal exploitation as a sewage disposal outlet have defiled the stream to the point where it is no longer suitable for swimming.

## The Late Reverend George J. Goeckel, Pastor of St. Cecelia's Chuch, Exeter, Pa.

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Saturday, February 28, 1959:

REV. GEORGE J. GOECKEL

As a parish priest, hospital chaplain, and college professor, the Reverend George J. Goeckel, pastor of St. Cecelia's Chuch, Exeter, and native of Wilkes-Barre, combined three careers in the 35 years he labored in the Roman Catholic Diocese of Scranton since his ordination.

Member of an old and respected city family, he was one of a score of clergymen St. Nicholas congregation furnished to the church here and elsewhere. The late Monsignor Charles J. Goeckel, pastor of St. Nicholas Church, was a cousin.

The Reverend Father Goeckel was known for his vigor and zeal as well as for his intellectual attainments. Endowed with a refreshing frankness, he possessed the courage of his convictions and was as interesting as he was convincing when he espoused a cause.

His students at the University of Scranton, where he taught Latin, knew him as an educator of considerable capacity as well as a dedicated priest. A ready wit enhanced his popularity and effectiveness.

Parishioners, students, and patients will remember him chiefly for the example he set in his own life. Wherever duty called, he responded with a zest that left no room for doubt about the outcome. In thousands of homes in Luzerne and Lackawanna Counties, there will be genuine regret today in the wake of news of his passing.

## We're Widening Our Lead Over Russia

EXTENSION OF REMARKS
OF
### HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks, I desire to include the following text of an article which appeared in the March 1959 issue of Nation's Business. In this article, Dr. Demitri B. Shimkin, authority on Soviet industrial power, answers some very interesting questions concerning our military and economic strength as compared with the Russians.

WE'RE WIDENING OUR LEAD OVER RUSSIA—COMMUNISTS ARE STRETCHING THEIR RESOURCES, SACRIFICING FUTURE GROWTH FOR TODAY'S GAINS

The greatest danger facing America today is a lack of self-confidence in the face of Russia's military and economic strength.

That's the opinion of Dr. Demitri B. Shimkin, who is interviewed this month by Nation's Business.

Clearly, a dispassionate assessment of true Soviet strength and weakness is needed at this time, along with an equally unemotional analysis of our own economic problems and possibilities.

Dr. Shimkin provides such an assessment.

A student of the Soviet Union's economic and social system for about 20 years, he is currently on leave from his regular post as a senior research specialist in the Foreign Manpower Research Office of the Bureau of the Census.

While on leave, Dr. Shimkin has been engaged as a senior scientist at the George Washington University in Washington, where he is completing a monograph on the Uralic languages (Finnish, Hungarian, etc.). A native of Russia, Dr. Shimkin served from 1941 to 1946 with the War Department General Staff, specializing in supply problems arising out of lend-lease to Russia. From 1946 to 1947 he taught at the National War College; from 1947 to 1948 he was a member of the Institute for Advanced Study at Princeton University, where he wrote an award-winning monograph on the Soviet automotive industries.

In 1953, while at Harvard's Russian Research Center, he wrote the book, "Minerals, Key to Soviet Power." He has written numerous articles and papers on the Soviet system.

At the Census Bureau, Dr. Shimkin has specialized in research on Soviet industry and, in 1955, he was one of several authorities who drafted a comparative study of the United States and Soviet economies for the Joint Congressional Committee on the Economic Report. In 1956 he was a consultant to the Defense Department's Weapons System Evaluation Group.

Here is how Dr. Shimkin answered questions submitted by Nation's Business:

"Do you believe that the Soviet Union is likely to achieve its goal of economically outstripping the United States and the rest of the free world?"

I emphatically do not. Exaggeration aside, Soviet postwar growth has been no faster than that of Western Europe, Japan, or Australia. American growth from a high

wartime peak, although slower, has also been substantial. Today, the margins of skills, or resources, and of inherent economic efficiency in the West are sufficient not merely to maintain the gap, but even to increase it.

In Europe, the widening of markets caused by an American-inspired revolution of anticipations and by greater integration are providing impetuses for future growth. In this country, the essentials for vigorous growth are greater than ever, but we need to rekindle our national self-confidence and clarify our goals in terms, not of vague objectives, but specific means attainable within the framework of free enterprise. Overall, I see every possibility for healthy growth of the free world, a diffusion of economic strength and initiative into Western Europe, the British Commonwealth, and, in part, Latin America. The newly independent countries of Asia and Africa, however, are likely to have persistent political-economic problems.

In the Soviet bloc, the economic promise of Poland and China may exceed that of the Soviet Union itself.

"Does the Soviet Union face significant economic problems?"

Yes. In striving for world supremacy, the Soviet Union constantly overcommits its resources for grandiose military and economic programs, at home and abroad. Actually, it tries to gain its key targets without much regard for secondary ones. It stresses workable expedients rather than basic solutions. Thus, in Soviet coal mines, lavish mechanization has been superimposed upon inappropriate, old-fashioned layouts. The results have been only two-thirds as much production and a fifth of the American man-year productivity, with 2,000 continuous coal cutters compared to 500 in the United States.

In agriculture, Soviet output has been increased through vastly expanded acreage, constantly cropped, in marginal dry lands, rather than through soil improvement, irrigation, and higher yields. With low fluctuating yields, the net costs are high; moreover, long-term soil deterioration is inevitable.

Also, the gaps between availabilities and priority demands have been closed by stagnation or sacrifice elsewhere. Soviet housing is notorious. Only an eighth of all Soviet food stores have refrigeration. The repudiation of state bonds in 1956, the recent discontinuation of state wages and social security for 2 million farm laborers, and the cutbacks in education illustrate the exactions demanded by Soviet industrialization. The absence of effective controls over air and water pollution by Soviet industry and admittedly poor labor safety also take their toll.

"What other problems do the Russians face?"

In industry and transportation, overloading and the desire to minimize investment have led to widespread technological and structural obsolescence, with corresponding drags upon efficiency and productivity. Miserable roads and inadequate rural electrification contribute toward spoilage and excessive costs in marketing food. Dependence upon low-calorie solid fuels, coupled with transport of petroleum primarily by tank car rather than pipe, lead to a ton-mileage per unit of industrial output 40 percent higher than in the United States. An inadequate variety of products from Soviet rolling mills necessitates extensive and wasteful metal cutting in Soviet machinery industries, with less finished output and heavier investment for lathes, planers, and shapers per ton of steel consumed than in the West.

Finally, the militaristic direction and the totalitarian nature of the Soviet system have generated profound social injustices, particularly toward the rural population. The Soviet peasant receives little schooling, inferior medical care, and no social security, yet he is specialy subject to compulsory work on roads. His children are required to start farming at 12, and may be conscripted at 14 for work on railroads, or in factories and mines.

In fact, all Soviet adolescents today, young aristocrats apart, represent a savagely deprived class. Even members of the managerial class cannot feel too happy at the loss of bond holdings, nor at the full usurpation of power by the Communist apparatus. Thus deep grounds for unrest exist. While state coercion may hinder their open expression, their effects upon productivity gains and creativity are hard to exaggerate.

"What about the Russians' striking progress in such fields as cosmic rocketry?"

Such a contradiction is one of the basic characteristics of the Soviet system. It gains results by intense concentration upon selected sectors. The costs of rocket-launching successes are the stagnation of agricultural research; tuberculosis mortality at least five times that of the United States; the absence of a single civilian automotive proving ground. But the system represents great skill in psychological warfare, in selecting a course of action to hide Soviet weaknesses and substitute for them an image of ruthless power hypnotically effective upon the fearful West.

"Will Russia reach the targets fixed in its new domestic program?"

The current program appears to be a speed up of previous Soviet plans for this period, especially in relation to metal production. Its prospects can be gauged this way: Historically, the Soviets have done well in their heavy industrial output goals, but poorly in agriculture, consumer goods and services, and in productivity gains. Overall, this pattern is likely to continue. However, the depletion of prime iron ore, coking coal and bauxite resource is creating new problems of relocation, processing and substitution.

"Why are they taking such severe measures?"

The most important reason is the steady deceleration of gains in industrial productivity. According to my estimates, Soviet postwar man-year productivity gains through 1950 were about 10 percent per year; between 1951 and 1956 they ran 5 to 6 percent a year; and in 1957 and 1958 they were less than 3 percent. At the same time, the Soviet labor force is entering into a period of slow growth, caused by low birth rates and excessive mortality during the 1940's. Thus, Soviet industrial manpower requirements must be met by employment at earlier ages, and by transfers of manpower from agriculture and services to industry, construction, and transportation. Such transfers will mean continued rapid city growth, and necessitate substantial housing and utilities programs to maintain even today's low standards.

"How will Soviet economic growth over the next 5 or 10 years compare with ours?"

This question really involves two facts that must be explored in turn—a clarification of what we mean by economic growth, and an understanding of the limits within which the rate of growth may be predictable.

Economic growth involves several dimensions. One is the expansion of economic activity of an essential homogeneous type. By this measure, the Soviet Union has been growing at least 5 percent per year since 1951.

This estimate is substantially lower than the official Soviet version, which excludes civilian and military services (a slowly growing component), which makes inadequate allowance for capital consumption, and which is constructed on a gross rather than net basis.

In Soviet agriculture, the difference between the rise of gross output and that of income originated, at constant prices, is particularly large, since productivity increases have been moderate while mechanization and fertilizer costs have been high and rapidly mounting.

The second dimension of growth is qualitative change, a matter of substitution by improved products or methods rather than of intensified economic activity alone. By this measure, Soviet progress has been much less favorable. Many types of substitution, such as the switch from steam to diesel and electric locomotives, which took place years ago in the United States, are just getting underway in the U.S.S.R. The pressure to maximize economic activity regardless of costs keeps obsolescent plants and even industries—such as peat fuel—in operation. Conversely, the past decade has witnessed an exceptionally rapid rate of product change in American industry.

The third dimension is the accumulation of national wealth. While the Soviet Union has greatly increased its capital resources, its mines, powerplants, and factories, it has had no counterpart to the tremendous westward and southward shifts, the improvements in housing, the suburbanization and the reduction of rural-urban differences which have taken place in the United States since 1940.

Our rural electrification, our national highway program, our telephones, are unique accomplishments.

Thus, no single measure can encompass economic growth. By some measures, the Soviet Union has been growing faster; but by others, the United States leads.

So far as the future is concerned, I am not a prophet. However, one basic change in relative resource availability as between this country and the Soviet Union is taking place. That is in the population of working age, essentially 15 to 60, from which the labor force is drawn. Between 1950 and 1956, a 14 million-person increase in the Soviet population of working age provided a basis for rapid growth, while in the United States growth was retarded by a mere 4.5 million-person rise in the corresponding age group. That was a long-term effect of our great depression.

Conversely, the consequences of World War II will hold the rise of the Soviet working-age population, 1956 to 1965, to 8 million, while the American rise will be 12 million. Consequently, if we employ our human resources effectively, we can maintain an economic expansion over the next decade surpassing that of the Soviet Union by any measure.

"What do you see as the principal economic challenges facing the United States in the coming decade?"

Politically, a high employment policy will be inescapable. Therefore, the decisive question is whether employment will increase through vigorous growth or through shorter hours and overstaffing. If we take the second course, we are due for continued inflation because of higher costs, increasing difficulty in competing in world markets, and a sharp loss of influence internationally.

To follow the first course, we must, I believe, face five general problems:

First, we must make effective use of our technological advances. The crucial need is for the prompt and effective dissemination of information to smaller business, coupled with ready licensing and improved marketing. A decentralized pattern of cooperation between government and private enterprise, broadly similar to that of our soil conservation districts, might prove useful in attacking this problem.

Of equal importance is a serious and continued effort to maximize feedback of the practical developments made in military fields, such as printed electrical circuits, into civilian technology. A vigorous policy, not merely of declassification, but of active dissemination, would have two other conse-

quences. By introducing compatible standards into civilian technology, it would expand the mobilization base for scarce commodities. By changing military production in many fields from special order to standard items, it would reduce procurement costs.

Second, to take advantage of new machines and new techniques, a vigorous program of technical and vocational training appears essential, both for new workers and the present labor force. The effects of the medical profession's refresher programs in making possible the prompt exploitation of advances show the potentials of such an effort.

Third, we need a systematic, timely expansion of natural resources, especially minerals, water, and timber. In general, one of America's historic advantages has come from well balanced and low-cost raw materials supplies. However, for many years we have failed to develop our domestic resources at rates commensurate with foreseeable demand. We have become increasingly dependent on foreign sources. Today, new methods of exploration, of refining, and purification, of management, and of substitution permit substantial strengthening of our resources base.

Fourth, to promote effective capital formation, to establish new businesses, to maintain a healthy consumer demand and to control inflation, we must have a wise system of financial management. The problems in this field are innumerable and complex—the development of sound criteria for amortization in a highly competitive, technologically advancing economy, the reduction of the sensitivity of income tax yields to moderate business fluctuations are two examples.

Fifth, we need balanced growth to maintain stable cost relationships domestically and an effective posture in foreign affairs. Yet, while the various segments of our economy expanded rather proportionately between 1940 and 1951, practically our entire economic expansion since then, especially the growth of employment and of companies, has been in the service sector. The growth of manufacturing, which underlies productivity gains in other sectors, has been measurably slower in the United States than in the Soviet Union or Western Europe.

"Why has our manufacturing growth tended to slow down as compared to our growth in the service industries?"

Apart from somewhat unfavorable cost, price, profitability, and demand trends, I think the following are significant:

Since World War II, a tremendous amount of product substitution has taken place. Many new commodities—tubeless tires, transistors, synthetic diamonds—have appeared, while other products have become obsolete. Also, American industry has developed an extraordinary capacity to saturate markets. Under such conditions, business mortality is high. How to reduce it, how to promote economic stability under conditions of rapid technological advance, present fundamental problems.

"What impact will Soviet foreign trade and aid programs have on the United States?"

I think Soviet foreign trade is a dual phenomenon. In one sphere, its purpose is to import commodities difficult or costly to produce in the Soviet Union: Heavy-duty copper wire, which has constituted the bulk of British exports to the U.S.S.R. in recent years, is an example. To pay for those imports the Soviets must export, and the product exported is generally some short-run overage, which is dumped for what it will bring. Since the Soviets may shortly be importing the same product, the ensuing market disruptions give them both a political and an economic bonus. This kind of an operation can be bothersome, but is rarely a major threat.

But Russia also uses foreign trade as one instrument in a strategy of penetration and subversion designed to deny selected areas to western trade and investment, if not to convert them to active hostility. Such operations are exceedingly dangerous, but the counter to them is only partially economic. Political stability and military viability are the essentials.

In the economic field specifically, perhaps more attention is needed in the promotion of geological and other resources exploration by newly developing countries, and in the development of vocational training.

"Will Soviet technology mean an increasing problem for us in the years ahead?"

Soviet military technology has been original and effective for many years, and will unquestionably give us serious problems. Also, in certain areas such as the machine-tool industry, there is a possibility of genuine Soviet competition in world markets. Finally, Soviet research, like American, British, or Swedish research, always has the possibility of breaking through to new potentials in fields such as thermonuclear power.

In the military field, the Soviets have gained advantages from the continuity, on a large scale, of their effort, and from its integration by specialized, permanent institutions. One of the most notable has been the Academy of Artillery Sciences which has united the soldier and the scientist in coordinated planning, research and development in systems design, ballistics, propellents, metallurgy, etc. In addition, the Soviets have carefully followed, and often exploited effectively, new scientific developments in the West.

Our own effort in large-scale research is essentially an outgrowth of World War II. It has expanded far more rapidly than the Soviet effort, but still suffers from inadequate coordination, insufficient attention to basic research, and inadequate use of accumulated findings, both domestic and foreign.

"Can study of Russian experience and developments help our economic growth?"

Certainly. I would stress three aspects: know-how in the organization and administration of military-scientific programs; provision for highly specialized training; and substantive accomplishments in varied fields such as crystallography, geochemistry, and soil science. In general, they have a more orderly approach and more patience. By anticipating substantial needs for specialized personnel in dynamic fields such as metallurgy, they have kept better balance than we between basic research and application.

Even in areas where we generally excel, such as statistics, they have ideas worthy of emulation. For example, they gather fuller, more current data on physical capital in industry (numbers, types, and ages of metal working equipment, electrical apparatuses, etc.) and on capital utilization (number of shifts of operation, etc.). As a result, they have a better understanding of their investment requirements. In addition, while they have comprehensive statistics on their professional and subprofessional manpower, our statistics in this basic area are partial, contradictory, and out of date.

"How will the development of West European economic union affect our future?"

The breakdown of barriers in Europe and, above all, the changing outlook of the European consumers are creating new markets and new economic strength. At the same time, if these advantages are to persist, trade barriers with this country and the British Commonwealth must be held to a minimum. However, since European productivity is rising rapidly, we must, to compete effectively in our own and foreign markets, maintain increasing productivity and the active innovation of new goods. Certainly, it does not seem probable that industry can effect economies by reducing wage levels. Thus, from this standpoint as well as that of the Soviet military threat, we have the choice of vigorous progress or serious trouble.

"Can we handle these problems on the basis of a private-initiative economy?"

Of course. In fact, I can conceive of no sound program that does not originate through cooperative efforts at the local level. However, if that does not eventuate, the cumulation of unsolved problems will bring about centrally imposed answers. Overall, I think the issue boils down to a question of initiative. If private enterprise does not take an active role, not merely in accepting economic expansion but in helping frame its direction, and in educating the public as to the alternatives open to it, then we will have increasing state control.

---

## Stable Dollar, Balanced Budget, Farm Assets

EXTENSION OF REMARKS

OF

## HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. CURTIS of Missouri. Mr. Speaker, I wish to take this opportunity to insert in the CONGRESSIONAL RECORD a clipping from the Weekly Star Farmer of February 18, 1959, written by Roderick Turnbull a well known and highly respected reporter and commentator on agricultural matters.

STABLE DOLLAR, BALANCED BUDGET, FARM ASSETS

(By Roderick Turnbull)

President Eisenhower has laid before Congress a financial program calling for a balanced budget, which simply means the Government would not spend any more in the next fiscal year than it collects.

It is not a Scrooge budget; in fact, the President expects the Government to collect $77.1 billion in taxes, a record, and spend approximately the same amount. But it looks as if he would have a hard time holding the line. Congress indicates it is in the mood to spend far more and add to the public debt of $283 billion. When the Government spends more than it takes in, as it is doing this year and has been doing most of the time for several years, it can only borrow to keep paying its bills or deliberately print money. This can be one cause of inflation.

Inflation, as many authorities now are pointing out, hurts people who are on fixed incomes, such as old-age pensioners, schoolteachers, white collar workers who find it difficult to get raises in pay, people living off of insurance, or their savings and the like.

But we would like to insist, also, that inflation hurts farmers in a situation where farm products are in ample supply or in surplus. Inflation, to a large extent, is the reason for the price-cost squeeze, which is the farmer's major current economic difficulty.

Inflation made its greatest strides from 1945 to 1951, with the big jump in 1950 and 1951. The consumer price index jumped from 76 points to 111 from 1945 to 1951. Since that time the index has moved up to 123.7, a more gradual increase, but still always going up.

It is significant that back in 1940, when the first social security benefits were paid, the maximum was $60 a month. Now the maximum for any retired worker is $127 a month, but the $127 today has about the same buying power as the 1940 $60.

Inflation is felt first on commodities which are in short supply. One definition of inflation is that more money is in circulation than products to be bought. So people with

money are in competition for products available and prices go up. But there are no shortages of farm products, thus prices lag.

When you see the figure that the Government is in debt, $283 billion, do you ever wonder to whom does it owe the money?

Banks, the places where we have money on deposit and where we do our banking business, have lent the Government $67 billion. It owes Federal Reserve banks $25 billion. Government trust accounts have lent Uncle Sam $55 billion. These include the social security fund, unemployment insurance reserves, civil service retirement funds and others. A whopping $133 billion comes under the heading of private, nonbank investors. These include individuals who have bought savings bonds and other securities to the tune of $65 billion, insurance companies which have invested $12 billion in Government paper, mutual savings banks, $7 billion, and corporations, $16 billion. The latter investments are mostly short-term deals, such as Treasury bills, for tax reserves.

Included in the $133 billion also are funds of State and local governments invested with the U.S. Government to the amount of $17 billion. Miscellaneous investors, such as the Federal land banks, account for another $16 billion in this category and even foreign governments come in for about $6 billion. We have rounded out the figures, which is the reason the total doesn't quite reach the $283 billion.

Few persons can escape having some personal interest in the Government's debt and the fact that it must be paid off. It is your bank's money, or the money in your retirement fund; it is the money you expect to get some day as social security payments, or when you collect on your insurance policy. It is money you expect to get when you cash your savings bonds.

Therefore, if anything is done to cheapen this money in the future (inflation) you won't get as much back, in purchasing power, as you lent to the Government originally.

The interest on this debt is now running at $8 billion a year.

That is as much money as all the farmers in Missouri, Kansas, Oklahoma, Arkansas, Iowa, Nebraska, Wyoming, Colorado, and New Mexico received last year for everything they sold—not net, but gross. And last year was the best year this area has had in a long time.

The farmer has a tremendous stake in a stable dollar. He should, therefore, lend his support to a balanced budget for whatever effect it may have in contributing to that stability.

## Fiftieth in the Union

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of March 8, 1959:

FIFTIETH IN THE UNION

Once Alaska became the 49th State, is seemed certain that Hawaii would sooner or later become the 50th. This is happening with gratifying speed, and it now is likely that the Senate will approve the Hawaiian statehood bill by Easter. The measure is ready for debate on the Senate floor; Senator JOHNSON hopes it can begin this week. Since the bill is sponsored by over half of the Senators, there can be little doubt about its passage. Some of the Southerners are expected to oppose it—two more new Senators will inevitably dilute the Southerners' influence as a group. But delay is the most they are expected to accomplish.

The arguments for Hawaiian statehood are as strong as they were for Alaska, if not stronger. Hawaii has over half a million people to Alaska's 160,000. As long ago as 1940, the Territory voted overwhelmingly to join the Union. To object to the fact that Hawaii is separated from the continental United States by 2,000 miles of water is as foolish, in the world of today, as objecting to the fact that California is separated from Washington by 3,000 miles of land.

The United States has ruled Hawaii for over 60 years, and it is time the citizens of this thriving and highly civilized archipelago were enfranchised. The first official 49-star flag is to be run up over Fort McHenry in Baltimore on July 4. We suggest that someone have an extra star in his pocket just in case.

## Immigration Legislation

EXTENSION OF REMARKS
OF
### HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. BOLAND. Mr. Speaker, the distinguished junior Senator from Massachusetts, JOHN F. KENNEDY, is now in the process of drafting immigration legislation which would replace the rigid national origin quota system which has been the criteria for admission into the United States as an alien for decades.

In a letter to the editor of the New York Times today, Senator KENNEDY lucidly explains the desirability and his reasoning for sponsoring immigration legislation that would reunite blood relatives in the United States and provide for the entry of nonrelatives without a quota limitation based on country of origin.

Under leave to extend my remarks, I ask that Senator KENNEDY's letter appearing in the New York Times of today be printed in the RECORD.

The letter follows:

ADMITTING IMMIGRANTS—SENATOR KENNEDY EXPLAINS PROVISIONS OF BILL FOR ENTRY OF NONRELATIVES

To the EDITOR OF THE NEW YORK TIMES:

A letter to the editor of the New York Times by Richard Robbins, printed in your issue of March 4, has been called to my attention. It is a thoughtful and cogent statement of the undesirability of replacing the rigid national origins quota system in our immigration policy with merely a blood relationship formula. I wholly agree with the basic conclusions expressed by Mr. Robbins.

Insofar, however, as he assumes that the bill I am preparing would be limited in the way he describes, he is mistaken. At the press conference called by the Antidefamation League to announce the publication of a booklet I wrote entitled "A Nation of Immigrants," I emphasized the point that I planned to introduce a bill to replace the national origins quota system, and that preferred status in immigration would be given to relatives of American residents. But I also stated—and this has been overlooked in many of the comments upon my position—that the bill I was working on would retain provisions for the admission of nonrelatives.

The proposal for the elimination of the national origins quotas has two phases: First, it will admit relatives for the purpose of reuniting families that have long suffered from unnatural separation. They will be admitted without the rigid restrictions of the national origins formula which currently imposes tiny unworkable quotas on many countries.

REDUCING BACKLOG

Thus we would reduce the huge backlog of applications by brothers, sisters and other close relatives of American citizens. (It is estimated that currently this backlog exceeds 200,000 relatives who have been waiting for many years.) It would render unnecessary many of the private bills introduced in each session of Congress to ameliorate particular hardship. Finally, the natural desire of members of the same family to help each other would assist the assimilation process.

Second, the proposal would provide for the admission of nonrelatives—refugees and so-called new-seed immigration—under a flexible formula that would take into account America's needs, our historical position as a home for the persecuted, and our standing as a world leader.

While the statistical formulas to govern the various categories of admission are still to be worked out, at least as many nonrelatives as we now admit annually would be eligible for admission under the new program. There would be one important difference—quota limitations based on country of origin would be largely eliminated.

This is one of 10 proposals I mentioned at the press conference. It is by far both the most difficult and the most delicate. I am confident, however, that we will ultimately be able to enact a law which is consistent with our position of leadership in the free world.

JOHN F. KENNEDY.

WASHINGTON, *March 6, 1959.*

## Andrew J. Sordoni, of Wilkes-Barre, Again Honored

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Tuesday, March 3, 1959:

AWARD FOR MR. SORDONI

Choice of Andrew J. Sordoni for the Back Mountain Community Service Award at the annual dinner of the association next month was a surprise only in the fact that he had not been singled out for this distinction previously. As a summer resident of Harveys Lake and head of the Commonwealth Telephone Co. with offices at Dallas, the Harveys Lake Light Co. and Sterling Farms, to say nothing of his extracurricular activities, the former State senator easily qualifies for special recognition by this group.

The Back Mountain, among other places, is deeply indebted to Mr. Sordoni and this expression of its appreciation will reflect

the sentiments of the community. It is no secret that the area holds a special place in Mr. Sordoni's affections because of his many ties there, personal and business.

Unquestionably, he has contributed as much as any individual to its development from a rural district into a thriving residential community with industrial possibilities. It is the good fortune of the Back Mountain to have a man of his caliber linked with its progress, for it augurs well for the future.

Honors are nothing new in the life of Andrew Sordoni, but this recognition should carry with it special significance and satisfaction for him.

## Life of a Midsouth Congressman

EXTENSION OF REMARKS
OF
## HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. EVERETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of my colleagues to an article by a distinguished Washington correspondent, Mr. Morris Cunningham, which appeared Sunday, March 8, in the Memphis Commercial Appeal, a great southern newspaper. In recent days much has been said and written about the salaries and the staffs of the Members of this House. In the following article Mr. Cunningham has clearly and accurately described many of the duties, burdens, and cares which fall upon one who chooses to engage in a career of public service by becoming a Member of the legislative branch of our great Government. I suggest that all of my colleagues will find the following remarks to be a true, enlightening, and thoughtful description of our activities:

MR. MIDSOUTH CONGRESSMAN AT TIMES FEELS OVERWORKED

(By Morris Cunningham)

WASHINGTON, March 7.—Mr. M. S. (for Midsouth) Congressman draws $22,500 a year before Federal income tax, retirement, insurance, and other deductions, but sometimes feels overworked and underpaid.

He has a staff of between five and seven assistants to help him keep track of affairs in his district and the rest of the world.

His constituents demand he be informed on everything from the winter boll weevil count to Khrushchev's latest blast and the chances of atomic war.

He is a member of at least one committee and of two or more subcommittees. He must attend their meetings, put in time on the House floor debating and voting, stay in touch with party leaders, answer his mail and telephone calls, spend time with visitors from home—and see that Farmer Brown, his good friend, gets a copy of the agriculture yearbook.

He must maintain two offices and two residences, since he's in Washington half the year and in his district the other half.

The average Mr. M. S. Congressman is married and has children. The children get their schooling in snatches. Some of it in the school back home and some of it in Washington, since Congress convenes in January and usually quits in August.

MUST BE EVER ALERT

Sometimes Mrs. Congressman will stay in Washington and start the kids in school while Mr. Congressman goes home to visit around his district during the fall. Maybe the family will reunite at Thanksgiving, maybe not until Mr. Congressman returns around Christmas for the start of the next session in January.

And every other year, Mr. Congressman, if he wants to keep his job, must run for reelection. Sometimes he's lucky and doesn't draw an opponent. But he must be ever alert.

If he's opposed by a formidable challenger, he must reconcile himself to commuting between Washington and his district for at least 2 months—flying here to vote and briefly looking after some of his office affairs, then flying back to the district to resume his campaign. What with the vagaries of air travel, this can be a grueling ordeal.

Along with everything else, Mr. Congressman, as well as Mrs. Congressman, are required to attend innumerable banquets at countless conventions which attract friends and constituents from home.

One night it's a farm organization, next it's a veterans group, next a political dinner, and on and on.

FAMILY OBLIGATIONS

And with all this, they must rear their children, go to church, look after their health, and, somehow, find time for that family association known as togetherness.

It's no wonder Mrs. Congressman sometimes complains her children see their father more frequ ntly on television than they do at home.

Mr. Congressman must also be ready to donate his money. After his election, he quickly finds he's a sitting duck for everything from a Red Cross drive to a campaign for new window curtains in a local school.

To help him with his problems—including ducking an occasional brickbat from a newspaperman, colleague, administration official, or political enemy back home—the average Mr. M. S. Congressman has about six aids.

His top aid may be a man or a woman, but is a person experienced in governmental know-how who refuses to take "No" as an answer when the Veterans' Administration says no, they cannot grant a pension to Banker Jones because of the permanent disability he suffered when he dropped his rifle on his toe at National Guard camp.

Mr. Congressman probably pays this top aid the top allowable salary of $13,344.62, and often wishes he could raise it. To earn this, the aid works from 9 to 6, 5 and sometimes 6 days a week, and sometimes on holidays and Sunday afternoons when Congress is in session. When Congress quits, the aid accompanies Mr. Congressman to his district and establishes and runs his office there. The aid relies entirely upon the salary, receiving no travel or living expenses.

The next aid probably makes $8,192.10 a year, and, like the other one, is a highly competent typist and stenographer who can turn out one letter after another. This aid must also be versed in Government because, when Mr. Congressman and the other one leave for the district, this one is left in charge of the Washington office.

THIRD HANDLES MAIL

The third one is a girl who is an excellent typist who knows something about filing and devotes herself mainly to handling the mail.

Besides this, Mr. Congressman may have a young boy who will attend page school part time and run errands, operate the duplicating machine, drive Mr. Congressman's car to the airport to meet visitors when he can't make it, and perform a variety of other chores, including fetching the Congressman a ham sandwich and glass of milk for lunch.

Then, back home, Mr. M. S. Congressman probably has two field secretaries. One will be located at one end of his district and the second at the other end. One may make $4,047.37 a year and the other perhaps $3,072.66.

It's their job to deal firsthand with the problems of the about 350,000 constituents in the district, process and investigate them, and then pass them along to Mr. Congressman.

These problems can range from organizing local support for a Federal-local flood control project to getting storekeeper Smith's boy an appointment to West Point.

In addition to his salary, Mr. M. S. Congressman gets 20 cents a mile for one round-trip a year between his home and Washington, which figures out to between $400 and $500 a year. That's the only travel allowance he gets. On it, he can make about three round-trips home a year. Additional trips—to speak at a Kiwanis Club luncheon, for instance, come out out of his own pocket.

PAYS DIFFERENCE HIMSELF

He also is allowed up to $1,200 a year for rental of an office in his district; if the Federal Government is unable to furnish adequate space in the post office or other building. He gets only what he spends of this up to $1,200. He also is allowed $600 a year for expenses in his district, excluding rent. No office equipment is furnished for his district office and he can't move it from Washington. So he must buy and maintain whatever typewriters and other machinery he uses at home.

He is allowed 3,000 minutes of free long-distance telephone time a year—and usually exceeds this and must pay for the excess. He is also allowed 20,000 words in telegrams and $400 a year for airmail and special delivery stamps—which he also usually exceeds. Another allowance is $1,200 for letterheads, envelopes, and all other printed matter.

And next time you have lunch with him, remember that Mr. Congressman gets no allowance for entertainment. When he picks up the check, it comes out of his salary.

He has the services of the Capitol physician but if he goes to the Government hospital here—the Bethesda Naval Hospital—he must pay $19.80 a day, again out of his own pocket.

## James A. Adams, Dean of Wyoming Seminary, Kingston, Pa., To Retire This Year After 39 Years' Service

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Record of Thursday, March 5, 1959:

JAMES A. ADAMS, DEAN AT SEMINARY FOR 39 YEARS, TO RETIRE JULY 1

The dean is retiring.

For thousands of Wyoming Valley residents and many hundreds of his former students scattered throughout the United States, he needs no further identification. For those less familiar with Wyoming Seminary, he is James A. Adams, dean of Wyoming Seminary since 1936 and a member of the faculty for 39 years. Dean Adams, whose integrity and depth of understanding have made him one of the most popular administrators in the 115-year history of the school, will retire July 1 for reasons of health.

In giving up his post, the dean, as he is known to faculty veterans and incoming freshmen alike, will be able to look back over a career in schoolwork that began 45 years ago. The only event he permitted to interrupt his service to education was World War I, in which he served as a member of the American Expeditionary Force in France and Germany.

Despite his 60-odd years, the Dean retains a youthfulness of mind and spirit that puts him in intimate touch with the dreams and aspirations of young people. He feels with them what they feel, and hopes for them as they hope. It is this quality of sympathetic understanding that marks him as a man in whom young people and their parents can place their trust, and has gained for him the respect of his colleagues and the community.

A native of Orono, Maine, he is the son of hardy Scotch-Irish parents; and, in spite of nearly 40 years residence in Pennsylvania, Dean Adams, whose personality is mirrored in his ready smile and firm handclasp, retains many of the characteristics so apparent in people of Yankee stock. His habits of thought and manner of speech still reflect his New England background.

Following graduation from the public schools of Orono, Dean Adams entered the University of Maine from which he received the degree of bachelor of science in mathematics in 1915.

In the years preceding participation of the United States in World War I, he served as principal of secondary schools in Exeter and Jonesport, Maine, and as teacher of mathematics at the high school at Norwood, Mass.

When the United States entered the war, the youthful teacher enlisted in the Army where he served as master sergeant at an evacuation hospital on the western front.

Following his discharge in 1919, Dean Adams returned to teaching, accepted a position as submaster and teacher of mathematics at the high school at Biddeford, Maine. It was at this time that he married the former Mildred Ordway, a native of Waterford, Maine. The following year, the young couple came to Kingston where the future dean had been employed as head of the mathematics department.

Confidants of Dean Adams are aware that his original intention was to spend no more than 2 years gathering experience at Wyoming Seminary and then to move on. When asked why he changed his mind and decided to make his career at the school, the dean readily replies that it was the influence of the late Dr. Levi L. Sprague, president of Wyoming Seminary from 1882 to 1936, that convinced him to stay in Wyoming Valley and help build the institution with which he has become so closely identified.

The dean is frank to admit, as are many others, that Dr. Sprague was the one man who most influenced the course of his life. "I saw the chance of a lifetime to work under the guidance of a great administrator and schoolman," said the dean.

When Dr. Sprague died in 1936 and Dr. Wilbur H. Fleck moved from the dean's office to the presidency of the school, Dean Adams was elevated to the position in which he has served for 23 years. In this post, as second in command of the school with its nearly 500 students, he has been responsible for the day-to-day administration of school affairs including most of the discipline problems. In addition, the dean's office, which is the nerve center of the school and repository for all student records, acts as a three-way contact point between teachers, students, and parents.

In surveying the field of education from his vantage point of nearly 50 years experience, Dean Adams is mainly impressed by the belief that schools are doing a much better job than when he entered the profession. "For example," he said, "we are now teaching subjects that used to be considered too difficult for secondary school students, and were reserved for college classes. I am happy but not surprised that this is so," he added, "because I know American young people have the intelligence and ability to compete successfully with the youth of any nation."

He is particularly proud of the fact that although enrollment at Wyoming Seminary has doubled in the last 15 years, academic standards have remained high, a fact that in no small part is due to his constant supervision of the curriculum.

Despite the many duties of his office, the dean has continued to teach his highly regarded course in advanced mathematics. In addition, he has served as a member of the Board of Readers in Advanced Mathematics of the College Entrance Examination Board from 1927 to 1939. For several years, his summer vacation was given over to study and in 1934 the degree of Master of Arts was conferred on him by Columbia University.

A member of the Rotary Club and Torch Club, both of which he has served as president, Dean Adams is also an active member of Kingston Methodist Church.

When Dean Adams presents the class of 1959 to the board of trustees at commencement, he will view the end of a parade of over 5,000 students who have passed through Wyoming Seminary during his tenure. Many of his former students have risen to positions of rank in government or military service while others have become prominent in the professions. Among them are several members of the board of trustees including Dr. Ralph W. Decker, president of the school.

Others who have been taught or guided by Dean Adams are Pennsylvania State Supreme Court Justice Benjamin R. Jones and Luzerne County Orphans Court Judge Paul R. Selecky. Retired Air Force Gen. Elwood R. (Pete) Quesada, who was recently appointed by President Eisenhower to head the Federal Aviation Authority, is another of his former students.

Dean Adams remembers all the young people he has helped to educate, but the memories of some stand out more clearly from the others. The two boys who most impressed him, he said are Dr. Joseph Donchess and Dr. Eric Faigle. Both, he recalls, suffered great hardship and overcame severe handicaps to acquire an education. Today, Donchess is chief surgeon at the United States Steel Co. Hospital at Gary, Ind., while Faigle is dean of the College of Liberal Arts at Syracuse University.

Locally, he has cause to remember Drs. Jacob G. Hyman and Charles N. Burns, two former students, who pulled him through a serious illness 2 years ago.

When Dean Adams arrived in Wyoming Valley in 1920, the school was just starting a period of building which reached a high point early this year with completion of the new Wyoming Seminary Gymnasium on North Maple Avenue. Among the other buildings the dean has seen rise on the campus are Sprague Hall, in which his office is located, Carpenter Hall, Nesbitt Stadium and reconstruction of the dormitories on Sprague Avenue.

An active man by training and temperament, Dean Adams does not intend his retirement to be a period of idleness. He and Mrs. Adams, who will celebrate their 40th wedding anniversary in October, plan to live in Wyoming Valley, resting and following their common hobbies. When conditions permit, they will travel as they have in the past. Together they have visited the West Indies, Europe, the western United States, Alaska, and Canada.

Although the dean will no longer be actively engaged in the affairs of Wyoming Seminary, he does not intend to drop his interest in the school to which he has given nearly 40 years of service. "I want to rest," he admits, "but I also want to continue serving the cause of education in Wyoming Valley whenever the opportunity presents itself."

## Chronic Unemployment Areas Need Help

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the Lawrence (Mass.) Evening Tribune on March 3, 1959.

The article follows:

CHRONIC UNEMPLOYMENT AREAS NEED HELP

The United States Conference of Mayors appealed to Congress the other day for Federal assistance for the revival of industry in chronic unemployment sections of the Nation. In this connection, Mayor Buckley submitted some robust facts and figures relating to Lawrence and the manner in which the so-called area redevelopment bill could benefit this area. There is belief that something may come from this legislation this year.

We have in mind that last September, President Eisenhower, in withholding his approval from an area redevelopment bill at that time, emphasized that every year for the previous 3 years he had strongly urged the adoption of a program of Federal assistance to communities of substantial and persistent unemployment for the purpose of assisting those areas to develop a sounder and more secure economic base.

He regretted that no action along these lines had been taken by Congress until 1958 but that he was greatly disappointed that he found himself unable to approve that particular bill. The President killed it with a pocket veto after Congress had adjourned.

While the current bill calls for $389 million in Federal loans and grants, the administration proposes a $53 million aid program at present. It is to be hoped that some kind of a compromise, as to the amount, can be arrived at so the latest bill will not receive veto treatment.

Incidentally, even the program contemplated by last year's bill could not be of immediate help to any community because Congress, before adjournment, failed to provide money with which to carry out the bill's purposes.

Last year's bill also was defective because its assistance in certain instances would have been available in areas in which employment was traceable essentially to temporary conditions. Federal assistance to communities where unemployment is not clearly chronic would necessarily mean the assumption of responsibility by the Government for the direct support of local economies—an assumption of responsibility that the President left would have profound consequences.

President Eisenhower is in favor of the enactment of area assistance legislation soundly conceived to carry out the purposes which he has repeatedly stressed as being in the national interest. He has expressed the hope that Congress, this year, will enact such an area assistance program.

Lawrence can use the type of assistance that the present area redevelopment legislation proposes for areas suffering substantial and persistent unemployment. Among other things, it would provide low-interest

loans for private industry, and public projects and grants for public facilities in addition to informational, planning and technical assistance where unemployment has become chronic.

## Here They Come Again

EXTENSION OF REMARKS
OF
## HON. LEE METCALF
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. METCALF. Mr. Speaker, in the January 13, 1956, issue of the Outdoor News Bulletin, the Wildlife Management Institute warned that "the familiar clique of western cowboys again are hitting the trail in their ceaseless effort to bring all public domain lands under the control of the individual States." The article follows:

HERE THEY COME AGAIN

Astride a fresh mount is the familiar clique of western cowboys who again are hitting the trail in their ceaseless effort to bring all public domain lands under the control of the individual States. Their hopes this time are cinched on a closely guarded plan of the New Mexico Land Resources Study Council. The plan is said to parallel that which led to the ceding of the tidelands to the various States by the Federal Government, the Wildlife Management Institute reports.

Prime movers in the new organization are Floyd Lee and Dee Brownfield, widely known New Mexican stockmen, whose names have been linked with many previous attempts to alter the administration of the public domain and the national forest lands for the sole benefit of the grazing interests.

Turning over the public lands to the various States would be tantamount to handing them directly to the grazing interests. Stockmen already dominate the grazing district advisory boards and no more than token recognition is being given these lands for their other resource values such as watersheds, timber production, hunting and fishing, and other recreational uses.

This danger is underscored further with the realization that most of the State-owned lands in the West are controlled largely by stockmen. Although they have virtual control of the land, the grazing interests have not assumed many of the responsibilities that go with land ownership. A few States are doing a conscientious job of managing their lands, but the administration of State lands in New Mexico is among those having the weakest record.

In New Mexico the land is administered by an elected land commissioner who generally is a representative of the livestock interests. The prevailing philosophy is that the lessee would take better care of the land than would a governmental agency. The lessees, therefore, are given full control over the State land, and they have the power to restrict all other uses of the land.

Among the 18 persons presently listed by the Silver City Press as being members of the land resources study council are State land commissioner Johnny Walker, of Sante Fe, and land commissioner candidate Murray Morgan, of Alamogordo.

Apparently, Mr. Speaker, this plan did not get off the ground. But another is taking form. According to the March 1 issue of the Denver Post, this Congress will be confronted with another in a continuing series of attempts to separate the taxpayer from his revenue-producing assets, the public lands of the Western States.

Associate Editor Leverett Chapin writes of a plan to reduce valuable Federal land holdings, bought with the funds of all the taxpayers, by one-half or more. Chapin says the proposal that the land be sold to the States for resale to private owners would exclude Forest Service timberlands, and those which protect high-altitude watersheds, national parks and monuments, lands earmarked for defense purposes, Federal fish and wildlife preserves, and Indian lands.

There have been several similar proposals during the years I have been in Congress. The last time we went over this ground the clause to protect national parks mysteriously disappeared on the way through committee.

Several of the sponsors and principal supporters of previous land grabs have also disappeared. In this respect, I hope history repeats itself. Two articles from the Denver Post of March 1, 1959, follow:

TWO HUNDRED MILLION ACRES—NEW MEXICO GROUP TO SEEK SALE OF U.S. LAND

(By Leverett Chapin)

A plan to transfer some 200 million acres of Federal public lands to State and private ownership will be advocated within the next few weeks by the New Mexico Land Resources Association, a private organization formed by prominent New Mexicans, it was learned Saturday.

Aim of the group will be reduce Federal land holdings in 11 Western States by one-half or more.

The plan is expected to call for the purchase of the Federal public domain by the States on long-term payments at low interest rates. The land would then be resold by the States to private owners on similar terms, with present users of the land having the first option to buy.

MORE MINERAL RIGHTS SOUGHT

The resources association is also expected to launch a drive to obtain for Western States 90 percent of the oil and mineral royalties from Federal lands instead of the 37½ percent they now receive.

This proposal would provide the States an additional $45 million a year or more. Additional revenues would amount to $8 million a year for New Mexico, $4 million for Colorado, $15 million for Wyoming, and varying amounts for other States.

Under present law the largest share of oil and mineral royalties, 52½ percent, goes into the Federal reclamation fund for western water and power projects.

Most of the lands the New Mexico group wants to put in State and private ownership, under the purchase plan, are grazing and other lands administered by the Bureau of Land Management, a branch of the Department of Interior.

However, the plan is expected to call for the transfer by the Federal Government of large tracts of land which are administered by the U.S. Forest Service although they are not counted as timbered land.

Exempt from the sale provisions would be Forest Service lands which are timbered or protect high-altitude watersheds, national parks and monuments, lands earmarked for defense purposes, Federal fish and wildlife preserves and Indian lands.

News of the proposals of the resources association which would amount to a major shift in Federal land policies in the West, reached Denver when "confidential" copies of a preliminary draft of the recommendations began to appear here.

Clarence E. Hinkle, Roswell, N. Mex., attorney and president of the association, told the Denver Post every effort had been made to prevent premature disclosure of the plans.

SOME RECOMMENDATIONS REVISED

He said the recommendations have been revised to some extent, although the plan, generally, is the same, and that the final version is now awaiting publication which may come in 6 weeks or 2 months. He urged that no publicity be given the report until that time.

The published study and recommendations will represent 3 years of work by the association and the Southwest Research Institute of San Antonio, Tex. The institute was employed to survey Federal and State land resources and policies in cooperation with the University of New Mexico and other State agencies, including the New Mexico Economic Development Commission.

Denver experts on public lands said the report may be expected to touch off a controversy similar to those which developed several years ago when Wyoming stockmen proposed to be allowed to buy grazing lands. At that time, the then U.S. Senator Frank A. Barrett (Republican) of Wyoming authored a bill to give States 90 percent of oil and mineral royalties from Federal lands.

POWERFUL INTERESTS BACK LAND PROGRAM

The New Mexico Land Resources Association, which is preparing to publish recommendations that some 200 million acres of public land be sold to Western States and private users, is composed of influential residents of that State and supported by multi-million-dollar business interests, its membership list shows.

Officers of the association are Clarence E. Hinkle, Roswell attorney, president; A. D. Brownfield, prominent stockman and former legislator of Deming, vice president; S. Y. Jackson, head of the Albuquerque School Board, secretary; and Floyd Lee, San Mateo rancher and head of the New Mexico Woolgrowers, treasurer.

Prominent stockmen, railroad and oil company officials, mining men, attorneys, land company executives, and the heads of two State institutions of higher learning are included on the association's rolls.

Sustaining members include such corporations and groups as the El Paso Natural Gas Co., Kennecott Copper Co., New Mexico Cattle Growers Association, New Mexico Oil & Gas Association, the Pack Foundation, Public Service Co. of New Mexico, Santa Fe and Southern Pacific Railroads, and the Anaconda Co.

The Land Resources Association was organized 3 years ago.

"This is the first time," says President Hinkle, "that so many diverse interests in any State have organized to study land problems as a public service to try to recommend a land policy for the future.

"Land problems won't be solved overnight. But we have been floundering without a policy suitable for the maximum development of the West."

Preliminary drafts of the association's recommendations which have appeared in Denver show the principal contention of the New Mexico group is that Federal ownership of more than half the land in the 11 Western States is not conducive to the economic development of the West through free enterprise and private proprietorship.

## Poison in Your Water—No. 29

EXTENSION OF REMARKS
OF
## HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD an article which appeared in the El Dorado, Ark., Times, October 1, 1958, where Dr. James Hawley warned of the dangers of raw sewage and other waste converting streams in the area into open sewers.

The article follows:

DR. HAWLEY WARNS OF DISEASES CAUSED BY OPEN SEWERS IN CITY

"Over the past 8 years 34 persons in Camden were stricken with paralytic polio and a recent survey showed that all but 1 lived in areas that do not have sewers," Dr. James Hawley said in a talk here Tuesday.

Dr. Hawley spoke during a panel discussion on the need for an adequate sewer system at the noon luncheon meeting of the Rotary Club.

In his remarks Dr. Hawley warned of other diseases that can be caused by open sewers. "Just because you happen to live in an area that has a sewer system does not mean you are safe, since flies and animals can carry the virus over the entire city," he pointed out.

Concerning the $1,150,000 bond issue for extending and improving the municipal sewer system, Dr. Hawley urged those present to cast their vote in favor of it at the special election on October 14.

This is why 20 local doctors voted unanimously to support the proposed sewer system at the last meeting of the Ouachita County Medical Society, he said.

The panel also included Bill Shelton, chamber of commerce manager, who pointed out that industries regard sewer system of towns being considered for one of their factories. He said one of the main reasons one industrialist gave for not coming to Camden was the inadequate sewers. "Raw sewage is dumped into the Ouachita River," the industrialist stated on his report in turning down Camden.

"At the present time four large factories are considering Camden as a possible location. They have made preliminary study of the town but as yet don't know about the sewer situation, but they will find out," he said. The sewer bond issue must pass if we expect to bring industry here, he said.

H. K. Thatcher also spoke on the effect the raw sewage has on Ouachita River, which goes in at four different places. People who have boats know the terrible condition this creates, he said. "We must clean up our river or we will lose the economical value of what we are trying to do," he said with regard to getting a 9-foot channel for navigation.

The panel discussion was led by Mayor James Rowan. The floor was thrown open for questions after each panelist spoke.

Panel discussions like this are being held all over the city in an effort to inform the public of the need for sewer improvements. The next meeting will be on Wednesday night at Whiteside School starting at 7:30 p.m. It will be open to the public and individuals may ask any question they wish.

All Rotarians who expressed their opinion spoke in support of the project. Approval was indicated by the enthusiastic reception given the panel in their efforts.

Guests at the meeting were Jimmy Chambers and Frank Anthony of El Dorado and H. S. Neal of Stuttgart, all visiting Rotarians. Steve Bratton of Camden and Bobby Tutt and Herbert Asberry of Harmony Grove High School were junior Rotarians.

## Eastland Bills Will Fortify Internal Security

EXTENSION OF REMARKS
OF
## HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. EVERETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit for the attention of my colleagues an editorial which appeared in the Nashville Banner, a great newspaper of my home state, last Saturday, March 7. This editorial deals with the vital legislative program introduced in the other body by the distinguished Senator from Mississippi, the Honorable JAMES O. EASTLAND. Senator EASTLAND's program, as pointed out in the following editorial, would reverse several recent rulings of the Supreme Court in cases involving communism and other subversive activities. I believe that the views expressed in this editorial merit the careful consideration of my colleagues in this House:

EASTLAND BILLS DESIGNED TO FORTIFY INTERNAL SECURITY

As chairman of the Senate Judiciary Committee, Senator JAMES O. EASTLAND is in a position to push—with the help it merits—the seven-point legislation now introduced to reverse recent rulings by the Supreme Court on Communist and kindred subversive cases.

The 85th Congress came within one Senate vote of doing that last year, with the bill by Representative HOWARD SMITH of Virginia, which would have restored the right of States to enact their own antisedition laws. Under the Court decision in the Steve Nelson case, that convicted Communist was freed because his conviction was under a Pennsylvania statute—the court holding that it was invalid because Congress had preempted that field.

This time the legislative program presented, and by Senator EASTLAND, involves the seven bills recommended by the American Bar Association's house of delegates—calling clearly for corrective action by Congress to close the loopholes recklessly opened by the Supreme Court.

Specifically, the Eastland bills would reverse the judicial decisions in the Yates, Nelson, Bonetti, Cole, Watkins, Witkovich, and Kent cases—itemized instances of flagrant challenge, and among them rulings that shocked the White House no less than concerned Members of Congress.

This newspaper has said again and again that the job of repairing internal security jeopardized by these blows at the legal structure belonged to Congress. Where by eccentric interpretation of a law it is wrested out of legislative intent, Congress can act for redress by the law itself; and where some twilight zone exists, Congress can enact appropriate and adequate legislation.

It is not an area of responsibility to accord the kid-glove treatment, for the chips are down and the issue faced for what it is.

A host of Congressmen see the obligation clearly, as does Senator EASTLAND. The indications now are that with the backing of the bar association and other influential organizations—equally concerned with America at large, for internal security—the measures will pick up substantial support.

They merit that. They demand it.

It is not enough to simply deplore this opening of hazardous loopholes, more and more evident as the record is studied. The case calls for responsible action by Congress—elected to represent, and the only lawmaking body in the Federal Government. To it America looks for requisite defenses where, under the impact of judicial recklessness, they have been weakened.

## Fiscal Responsibility

EXTENSION OF REMARKS
OF
## HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. ALGER. Mr. Speaker, shortly after the adjournment of the 85th Congress, this short item—without attribution—became widely circulated in the press:

If Patrick Henry thought taxation without representation was so terrible, he should see it with representation.

How often great truths are spoken in jest.

Section 7 of the Constitution places the responsibility of originating all revenue-raising bills with the House of Representatives.

No matter how many times in the past we have failed to live up to it, it is still our constitutional responsibility.

If we must collect the money to meet the expenses of our Federal Government, we must, at the same time, be seriously concerned with the cost of that Government.

There are numerous governmental luxuries which we would like to provide for the American people. But we can't afford them.

Many an American family would like to live in a penthouse. But, because they can't afford it, they settle for their mortgaged bungalow.

Many an American family would like to eat steak regularly. Instead, because they can't afford it, they get along with more ham hock than steak.

Many an American family would like to have a new car every year. Yet, because they can't afford it, they make the old jalopy do.

It would be a matter of wisdom for the Members of the House of Congress designed to be closer to the people to follow the example of the people.

It would be a matter of wisdom for us to legislate against those Government services which, while they may seem helpful, are actually luxuries.

Abraham Lincoln provided a most useful yardstick for such services when he said on July 1, 1854:

The legitimate object of government is to do for a community of people whatever they

need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities.

In all that the people can individually do as well for themselves, government ought not to interfere.

We are not alone in our making-ends-meet problem. Sweden has its problem, too. Let us look at Sweden's problem in the words of the U.S. News & World Report for January 23, 1959:

Swedes got a jolt from their Socialist-dominated government. The 1959 budget called for heavy boosts in * * * spending, indicated a deficit of $500 million. The alternative: higher taxes in a land where a couple with two children and $300 a month income pay out nearly $100 a month in taxes and social contributions.

Sweden's Socialists have still another way out—a way which is, even now, being suggested to them by American liberals.

As you well know, both Socialists and liberals enjoy thinking of themselves as being interested solely in people; not things.

Our liberals are not concerned with increasing current taxes to pay for the governmental services they so glibly advocate. They reserve the privilege of increased taxes for your children and mine; for your grandchildren and mine. Taxpayers today can vote. Taxpayers as yet unborn cannot.

I say, "Cut governmental luxuries to the bone. Balance the budget."

I thoroughly agree with the late Joseph G. "Uncle Joe" Cannon, of Illinois, former Speaker of the House of Representatives, in his most frequently quoted remarks:

America is a hell of a success. Why tinker with it?

## Peace by Brotherhood

EXTENSION OF REMARKS
OF
### HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. PORTER. Mr. Speaker, if the world had more of the true spirit of brotherhood, we would not have the frightening problems that threaten our very existence.

Gerald G. Acklen, acting editor of the Grants Pass Daily Courier, has written an excellent editorial about Brotherhood Week and included several valuable quotations. I want to share this editorial with my colleagues and other readers of the Appendix, and I ask unanimous consent to append it hereto:

THIS IS BROTHERHOOD WEEK

A peaceful world depends upon better understanding and respect for each other in a spirit of brotherhood and adherence to ethical principles. If these are lost, civilization gradually disappears.

Every great movement for bringing about better understanding with, and greater respect for each other, helps advance civilization.

President Eisenhower, honorary chairman of National Brotherhood Week, February 15–22, has issued this statement:

"Our abundant plains and mountains would yield little if it were not for the applied skill and energy of Americans working together, as fellow citizens bound up in common destiny. The achievement of brotherhood is the crowning objective of our society.

"On this circling planet, with nations poised for mutual advancement or destruction, we must enlarge our spirit of brotherhood to include all men who live under the banners of liberty and law."

The National Conference of Christians and Jews is a powerful medium set up to bring about harmony among humans. Annual Brotherhood Week is a period of special emphasis for the promotion of this cause. In calling attention to the importance of the week the press committee for the group has gathered statements from various individuals engaged in different activities. Excerpts from some of these are reprinted here:

Secretary of Labor James P. Mitchell says, "Brotherhood is needed now."

His statement goes on to say in part:

"Brotherhood is a concept that has attracted mankind for centuries.

"It stands in the face of the infinite variety of man's social, cultural, and physical differences, and cuts through them all to relate directly to the only real unifying feature of humanity, its sharing of a spiritual nature.

"It is thus a concept that ranks as one of man's finest discoveries.

"As such it has tremendous power.

"If it has eluded mankind, it is only because man has permitted his tangible differences to obscure his basic oneness. But this in no way diminishes the force inherent in the idea.

"Any effort, such as Brotherhood Week, made to bring that force to bear in the solution of grave problems is to be commended and shared."

George Meany, president of the American Federation of Labor and Congress of Industrial Organizations, declares, "The AFL–CIO is dedicated to the eradication of discrimination and segregation in our land. It is determined to achieve, in our time, the full measure of brotherhood among men."

Meany says:

"The trade union movement, which is founded upon the principle of brotherhood, stanchly supports National Brotherhood Week.

"The brotherhood of workers in free and democratic trade unions is fundamental to social and economic progress for American wage earners. Discrimination because of race, creed, color, or national origin, is thus especially repugnant to the American labor movement."

Gen. Carlos P. Romulo, Philippine Ambassador to the United States and the United Nations, stresses the "four faces of peace" in his statement:

"There was a time when we were told that we would have peace, but it is a peace by mutual terror. Now, it doesn't seem to be mutual any more. Modern technology sems to have made it possible for one nation to have such superiority, that it can shoot an intercontinental ballistics missile through outer space and destroy not only one nation but the whole world.

"It has also been said that peace has four faces, peace by power, peace by trade, peace by diplomacy, and peace by people. It would seem to me that peace by people should have been called instead peace by brotherhood because it is only when peoples of the world understand and believe in and carry out brotherhood that there can be real peace."

Dr. James R. Killian, Jr., Special Assistant to the President for Science and Technology, and chairman of the Massachusetts Institute of Technology, points out that science and education are vital forces toward brotherhood in a divided world. Excerpts from an address given by Dr. Killian illustrate his point:

"As President Eisenhower once said in marking National Brotherhood Week: 'Brotherhood is one of the most demanding—and most rewarding—principles in our lives. Its application is not limited to our homes or to our homeland. The responsibilities of brotherhood stretch around the world; and wherever men dwell, their needs and their successes are for all to share.'

"I have been fortunate and happy in a career that has permitted me to be associated with two fields: education and science, in which prejudice has no rightful place and does great damage when it appears. A philosopher once observed that 'unrelated men give little joy to each other.' It is one of the functions of education and one of the accomplishments of science that men unrelated in interests are encouraged to work together and thus to find joy in each other. Especially does science tend to bridge the cleavages and boundaries of our time and to bring together its practitioners in a commonwealth of thoughtful purpose. This commonwealth of science is today one of the greatest forces toward brotherhood in a divided world."

Faith Baldwin says it is necessary to live in the spirit of brotherhood to help promote it. She says:

"I believe that we use the term 'brotherhood' too often too lightly.

"To agree that we should do unto others as we would be done by—a teaching which did not originate with Christianity nor cease there, but is implicit in all religions—is not enough. Nor is it enough to be tolerant of other people, their race, color, or religion. It is not enough to agree in theory that, being human, we are brothers, hence suffer or enjoy the same experiences and, as Mr. Shakespeare pointed out, bleed equally when stabbed.

"You cannot contribute anything to the ideal condition of mind and heart known as brotherhood, however much you preach, posture or agree, unless you live it."

Cornelia Otis Skinner sums it up in another way, quoting George Bernard Shaw as saying, "Hatred is the coward's revenge for being intimidated."

"Even in cases of strong personal dislikes for individuals, if they were analyzed we would find that the person we think we hate has some quality of which we are jealous or which we are afraid might harm us.

"Again in Shaw's words: 'We are all children of one Father and the sooner we stop calling each other names the better.'"

The theme for the week is: "Brotherhood for Peace and Freedom—Believe It—Live It—Support It."

One week is too short to achieve the aim of those working for brotherhood among all Americans. But it is a good itme to get started.

We can do our part by taking that theme to heart.

## Poison in Your Water—No. 27

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Gainesville (Tex.) Daily Register, September 3, 1958. This article shows the

tremendous shortage of water in this county and the need for vigorous efforts to clean up our diseased and polluted waters. The situation in the Wichita Falls area is so bad that industry is refusing to enter that area because of the shortage of water supply in the future.

[From Gainesville (Tex.) Daily Register, Sept. 3, 1958]

WATER FOR FUTURE

"Lack of water is driving new industry away from Wichita Falls" is the flat allegation made in a recent feature story appearing in the Wichita Falls Times. The article goes on to point out that new industry means more jobs, more homes, more business for groceries, clothing stores, service stations, banks, cleaners, and many other businesses, and more valuation on tax rolls.

"New industry," says the Times, "helps the whole community, bringing payrolls and a healthy impetus to the economic life. But because sufficient water could not be assured a fertilizer plant last year abandoned Wichita Falls as a site. The loss to the community: 100 jobs.

"Only last month a national canning company virtually wrote Wichita Falls off its list because assurance of 4 million gallons of salt-free water per day could not be given. The company plans to build a new canning plant. Such a plant would be of tremendous benefit to the Wichita Falls area because it would provide a natural market for Wichita Valley farmers. But Wichita Falls could not assure the canning firm of sufficient water, so the company is looking elsewhere. Fifteen Texas cities have been eliminated from its list for the same reason.

"A petrochemical company is planning a new plant. Wichita Falls is so short on a long-range supply of water that efforts have been made to interest the company in using reclaimed water from sewage disposal," the Times article continues.

"Wichita Falls is a natural site for a tanning industry, which requires high-quality water. New processes have lowered the amount of water needed, but Wichita Falls still cannot give sufficient assurance of supply to attract a tanning industry.

"New industrial plants are amortized over long periods of time. If Wichita Falls cannot show a long-term supply of water, industry is not interested in locating here. * * * Even industries that do not use large quantities of water are not interested in Wichita Falls. They know that it will be difficult to get employees. They also realized the disadvantageous economic effects of lack of sufficient long-range water supply on their business and the community."

Gainesville, like Wichita Falls, is also handicapped in obtaining industry because we have no surface-water supply. Though we apparently have a good supply of underground water to meet our immediate demands, industry is not interested. Industrial users must see the water on the surface before they move into a community. They cannot depend on estimates of underground supplies.

The recently adjourned 85th Congress gave a tremendous push toward making more water available to the State. Congressional approval of the Johnson bill authorizing the President to name a 14-man commission to study the Texas water picture will provide some of the background for future development. There was also an appropriation of $28,993,000 for 38 water-development projects in Texas.

Exploratory steps have been taken by Gainesville with an eye toward the creation of a surface supply of water through a proposed reservoir on Fish Creek. This project should remain high on any list of long-range development plans for the city. We know that the cities with adequate supplies of good surface water are the communities that will experience the greatest growth and prosperity in the future.

---

## Attack on the FBI—IV

EXTENSION OF REMARKS
OF
## HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks, I include the fourth in the series of articles by Pulitzer Prize winning reporter, Edward J. Mowery, dealing with the campaign to discredit the Federal Bureau of Investigation. The following appeared in the Newark Star-Ledger of February 4, 1959:

HOW FBI MOVED IN TO PLUG SPY LEAKS

(By Edward J. Mowery)

WASHINGTON.—For 14 years, groups hostile to the Federal Bureau of Investigation have charged the agency with conducting illegal searches during the Amerasia spy case and bungling the exhaustive investigation.

The FBI's role in the sensational espionage conspiracy is told here for the first time by a top spokesman of the Bureau.

Charge: The FBI was impotent in preventing the theft of classified Government documents by conspirators in the Amerasia spy case.

The facts: The FBI was told that Government documents were being stolen, which might also indicate the more grave offense of espionage. It was the FBI's clear responsibility to investigate and give its findings to the Department of Justice. The Bureau was (and is) responsible for protecting this Nation's security.

The information received indicated that classified documents containing wartime secrets were going to unauthorized persons, possibly jeopardizing security, and the documents were in the office of Philip Jaffe, editor of the pro-Communist Amerasia magazine. Jaffe also allegedly had connections in governmental departments, indicating the possible source.

The arrest of six Amerasia case subjects plugged a leak that could have reached floodtide proportions in a period of grave national emergency.

Jaffe's Communist connections were well known to the FBI which had every reason to assume that such purloined data would have been used against the best interests of the United States.

Charge: The FBI tramples on civil rights by making arrests without warrants and conducting illegal searches. It happened in the FBI apprehension of Emmanuel Larsen, coconspirator in the Amerasia case.

The facts: The FBI search of the Larsen apartment was subsequently ruled illegal. The Bureau acted on information indicating a leak of vital wartime secrets. The primary and immediate concern was to identify those getting this data and stop the leak. Investigation had established that Larsen was involved.

On April 6, 1945, FBI agents entered Larsen's apartment (No. 207) to obtain intelligence information to assist in protecting against Soviet espionage operations. They observed that the flat contained classified Government documents which they didn't disturb. They then took a typewriting sample from a machine on the premises.

On June 5, a warrant for Larsen's arrest was obtained from Federal Judge Henry A. Schweinhaut. Larsen had moved the previous day from No. 207 to No. 227 (1650 Harvard Street NW., Washington). He was arrested on June 6 and when asked if he had official Government documents in the apartment, he answered affirmatively and led agents to the documents.

The April 6 visit of FBI agents to Larsen's apartment—to halt a mushrooming espionage operation—was subsequently ruled "illegal." Five years later (May 31, 1950) testimony before the Senate Foreign Relations Committee (executive session) indicated the urgency under which the FBI moved in this case.

Senator Millard E. Tydings, Democrat, of Maryland, committee chairman, questioned Assistant FBI Director Louis B. Nichols as follows:

Tydings: "Was evidence sought * * * by entering the apartment * * * without legal process and without knowledge of the accused?"

Nichols: "Our chief and immediate concern * * * was * * * who was getting this information and how to bring a stop to it. Our internal security function was one of prevention as well as apprehension and prosecution. We put first things first. We did enter the premises * * * where we observed classified documents * * *. This was prior to the arrest (Larsen's) on June 6."

Tydings: "Were these entries * * * before arrest made by the agents * * * without legal process * * * (or) knowledge of the subjects?"

Nichols: "Obviously, the entries were made without the knowledge of the individuals involved."

Tydings: "I would like to say now on the record that I thank you * * * for giving us this account of what happened. I understand how during the war your first concern—and properly so—was to put an end to whoever who getting these documents. And zeal to that end was more important than anything else, with men fighting and dying all over the world.

"* * * If you had a little more zeal in accomplishing that (feat) than maybe in a sober moment we might think was necessary, I would be the last to criticize you, because I think your primary objective of stopping this (espionage) business was of major concern.

"And I think that all who know the facts * * * are going to give you commendation rather than criticism."

Charge: The FBI's illegal arrest of Judith Coplon permitted her to escape imprisonment for espionage.

The facts: The FBI received statutory authority in 1934 to make arrests without warrants if there was reason to believe that the subject would escape before a warrant could be obtained.

On the basis of this authority and on specific orders of (then) Attorney General Tom Clark, Judith Coplon was arrested without a warrant by FBI agents on March 4, 1949. She was accompanied by Valentin Gubitchev, third Secretary of the U.S.S.R. Foreign Affairs Ministry.

On appeal, the Coplon arrest was ruled illegal by the U.S. Court of Appeals because there was no warrant, the court holding that there were insufficient grounds to show that Coplon was likely to escape. Evidence gathered in the case was ruled inadmissible.

As a result, Congress adopted legislation giving the FBI statutory authority to make arrests without a warrant for any offense against the United States if here are reasonable grounds to believe that the person has committed or is committing such a felony.

## The Draft Dilemma: A Way Out

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an interesting article written for the Nation magazine, issue of March 14, 1959, by John C. Esty, Jr., associate dean and military service adviser at Amherst College, Amherst, Mass., and a captain in the Air Force Reserve:

THE DRAFT DILEMMA: A WAY OUT

(By John C. Esty, Jr.)

Selective service and the teacher shortage carry one major common denominator; they are both serious national problems to which no acceptable solution has been found. Curiously enough, everyone knows about the shortage of teachers, but appallingly few people understand the dangers of the present draft situation. It is my intention to point out a few of these, and then show how both problems might be solved by one stroke.

On February 5, the House Armed Services Committee brought to the floor of the House of Representatives a bill to extend the draft beyond June 30, 1959. In his report, Chairman CARL VINSON, of the committee, made a convincing defense of the bill. It is worth examining some of his reasoning. In the first place, he pointed out that in 1948, when there was a hiatus in draft legislation, there were 1,384,000 men in the Armed Forces on a voluntary basis. This was well short of the 2 million men deemed necessary at the time; if projected to today's need of 2.5 million, it would be manifestly inadequate. (But since 1948, higher pay rates, incentive pay, and fringe benefits, have combined to make a military career more attractive. In other words, we just don't know what strength levels we could predict today with voluntary service.)

Speaking to the point of alleged inequitable liability to the draft, Mr. Vinson cited Department of Defense figures to show that on November 30, 1958, 9 out of 10 qualified men attaining age 26 had served, or were serving, their obligation and that for all registrants, the ratio was 7 out of 10. Projecting present strength levels and annual replacement needs, it was estimated that in 1963, of those reaching 26 years of age nearly 8 out of 10 qualified men will have served; and of all men in the age group—including 4-F's and other deferments—the ratio will be 5½ out of 10.

During committee hearings, the Chief of Staff of the several Armed Forces testified unanimously on the absolute necesisty of extending the draft. It was clear that each of them benefited from selective service—even though only the Army requires draftees—because of the large number of volunteers produced by its pressure. Debate on the House floor generated only mild challenging of the wisdom and acuity of these military leaders. In the end, an amendment to extend the draft for only 2 years, and to establish a factfinding committee, was beaten down, and the bill to extend the draft for 4 years passed, 381 to 20.

The opposition expressed itself mainly on the customary ground of hopeful abdication from world responsibility and sincere revulsion over mandatory bearing of arms. But unlike the debate 4 years ago, when the final vote was 394 to 4, there was a new element of discontent, partially characterized in the concern of a number of freshman Congressmen over the military effectiveness of present procedures. Their argument centered on the need for a new concept of manpower usage, more imaginative recruitment, and reenlistment policies, and the obvious inequities and uncertainties felt by young men who are facing the draft. They emphasized the waste of money and morale attending forced conscription, and envisaged much bolder applications of the Cordiner Committee recommendations for an all-volunteer, competitively attractive armed service. Their efforts were overriden by powerful bipartisan leadership in the lower House.

However, the insurgents were successful in the creation of a subcommittee on manpower needs. Under the chairmanshp of MELVIN PRICE, of Illinois, this group will examine "all phases of defense-manpower utilization, including * * * the utilization of technically trained personnel in technical positions * * * a determination as to whether additional combat organizations may be created by more efficient utilization and without increasing the total strength of the military forces, and such other matters as may be pertinent to the foregoing." It is expected that a report will be available by midsummer (although anyone familiar with the involutions and sprawling elusiveness of the military organization might agree that a fair report would take 2 years). In any case, it is to be hoped that the subcommittee, in preparing its report—

(1) Will realize that the Defense Department figures of Mr. Vinson overlook the working of the youthful mind. The statistics quoted deal with what can be said about 26-year-olds. But surely a young man does not wait until he is 26, then look back to see if he has been handled justly. The figures for the men of age 26 in 1963 pertain today to the man who is 22. He senses that only half his age group will have to serve, and wonders how to get in the half which won't. Even worse is the superimposition of service needs on a population curve just starting to bulge with the war babies. In 1963 about 1.8 million men will turn 17. Projecting the same service needs on this group means that only one-third will serve. In other words, the inequity is not even static; it progressively worsens.

(2) Will take a long hard look at the Reserve program, the most involved and most confusing of all the manpower programs, with the exception of a few outstanding units. The 6-month program seems to me to bear utterly no relation to national defense in the nuclear age. Reserve-unit meetings are almost universally a farce. Why is the program so slick in theory and so chaotic in practice? The answers aren't to be found in Pentagon charts or generals; you have to go to the reservist who sits through boring, irrelevant programs one night each week.

(3) Will realize the demoralizing effect on young men as they witness the Selective Service machinery, clogged with an ever-increasing input and much smaller military demands for the output, deferring larger groups for poorer reasons. For example, in the 4 years that fathers have been deferred by Executive order, almost a million men otherwise qualified have escaped the draft; in 4 more years, the figure will at least double. Several hundred thousand more will escape because they have the inclination or the money to continue their schooling. The key point now is that deferment, which extends the age liability legally to 35, is necessary only to age 26, after which age the draft boards are instructed to induct no one. The college senior, who is generally within hailing distance of 26, thus sees his chance to escape and is sorely tempted to make a try for it. With so many ways to avoid the draft and watching so many men succeed at it, he loses his sense of duty. If he cannot become a father conveniently or doesn't get to graduate school, the uncertainty of his status undermines any constructive plans for the future. (I have elaborated on this distressing phenomenon in "Draft Dodger or Patriot: The Dilemma of the College Student," the Nation, Jan. 10.)

(4) Will examine just who the people are who have been escaping. The largest category by far is the 3 million or so who are physically or mentally unacceptable. General Hershey has suggested that some civilian defense duties be assigned to this group. Certainly there must be many thousands whose intellectual talents—albeit lodged in infirm bodies—could be used. The million draft-free fathers could be utilized some way without causing undue community hardship, especially those who have been educated or trained in critical specialties. And what of the group over 26? Most of those who would be acceptable are the very ones deferred to continue their graduate training, the very ones whose talents could be of inestimable value directly in the national service. In other words, certain policies of the draft act systematically preclude a great reservoir of brains and talent to the Defense Establishment.

(5) Will see the problem simply: Too many men with two few places to utilize them effectively, and scandalous disuse of talent, particularly brainpower.

There is one more chance for a public look at manpower legislation before it crawls back under the obscuring mantle of short-sighted, unimaginative execution.

Last week the Senate Armed Services Committee began considering the House bill on the draft. They will have to deliberate on the feasibility of several proposed alternatives, the most satisfactory of which is clearly a volunteer service established to compete in the market place qualitatively and quantitatively for manpower. Epitomized in the Cordiner report, this concept is an old story to Congress and apparently presents too bold a gamble for our military leaders. It has clearly not been sufficiently or seriously enough explored by either the Pentagon or Congress, and one gets the uneasy feeling that this is partially because it is a new idea. The small steps already taken to implement part of the Cordiner proposals have proved effective in raising the reenlistment rate, although the very duties for which the Pentagon says men are needed most received the poorest incentive increase. In any case, the whole concept seems unfortunately to be a dead issue.

Realistically, then, it would seem as though we must continue to operate under a system of forced conscription of some people for some military duties. The problem therefore reduces practically to finding meaningful and defense-related occupations for the huge surplus of trained brainpower which drains systematically out of the manpower pool. At this point I would like to suggest that the Senators view the problem, thus reduced, in juxtaposition to another national problem even more serious—the shortage of teachers. The instant, striking observation is that the wasted talent in one pool is potentially what is needed desperately in the other. Could we not create a scheme whereby the two problems resolve each other?

So much has been written about the teacher shortage that its existence no longer needs elaborating. Two points will suffice. Both the Rockefeller Brothers' report on education and the Fund for the Advancement of Education have positively stated that it will take something like one-half (about 2 million) of all our college graduates in the next 10 years to meet the need for teachers. Recently about one-fifth have been entering teaching. The second point is that with all the efforts of hundreds of agencies and groups to increase the supply of teachers, the requirement cannot possibly be met; we probably can't even come close. But there is one untapped source of potential teachers

which could supply the quantity and motivation needed: the surplus selective service manpower pool.

With the advent of Russia's sputnik, it became clear that education and training were major weapons in national defense. Congress recognized the relationship in the title of the National Defense Education Act of 1958. It would seem logical, therefore, to make teaching an extension of national service, and permit young men to satisfy their obligation by becoming teachers at whatever level they are able to find a job and for a specified period of time—say 3 years.

The principle would appear to be especially applicable to those who are now escaping the draft entirely because they are over 26, fathers, or physically unqualified. The relief valve thereby created to the presently unmanageable surplus would eliminate many of the inequities which are a function of too many men with too few places to utilize them.

The idea is somewhat similar to Walter Reuther's plan of a broad, Federal scholarship program in diplomatic, teaching, technical and service subjects to induce young people into these fields voluntarily in place of military service. The Reuther plan, however, is offered as a substitute for conscription, whereas my proposal seeks to make the best of a bad situation—the draft—with which we shall presumably be forced to live for at least another 4 years.

The proposal is not radical, for there is plenty of precedent for exempting certain groups and providing alternative service. Ministers, for example, are exempt from military service; conscientious objectors may serve as medical guinea pigs and in hospitals; workers in essential industry are deferred as long as they remain essential (although this is not strictly alternate service); teachers of science can often be deferred, and will not be drafted at all if they teach until age 26. It must be said that the draft law is at least this flexible, and some order may be brought out of the impending chaos through Executive action. But these groups comprise only some thousands annually, while the proposal to make teaching an alternative form of service would involve several hundred thousand men each year. This should probably be the province of Congress to sanction, and anyway, constructive action seems to be too much to expect from manpower officials without prodding from Congress.

The proposal has these features:

1. The Selective Service System would be retained for its value in providing military inductees and volunteers, and for readiness in case of sudden large-scale need.

2. No great increase in administrative machinery is necessary. The procedure for reporting alternate service and employment in essential industry already exists. An approved list of institutions at which teaching could be credited is available from the Veterans' Administration and regional accrediting agencies. A man who has taught for 3 academic years at an approved institution would be considered to have discharged his service obligation.

3. If the number of vacancies now existing and projected in our schools and colleges were filled by alternate-service teachers, and there are more than enough trained, talented men in the draft pool to do this, then it would be possible for all young men (except the physically and mentally unqualified, who might be used in civil defense) to fulfill some sort of obligated service. This would more truly meet the "universal" concept and ease the democratic conscience.

4. Many more trained minds could be utilized in the defense effort than at present, at no additional cost to the Government.

5. The chance is provided for wholesale recruitment of potential teachers, many of whom might be permanently "captured" for the profession.

6. With more applicants than vacancies, the teaching profession could raise standards all along the line; if a prospective applicant didn't qualify, he would simply be inducted for military service.

There are a number of objections to this proposal—all of them, I think, answerable. It is dangerous to force people to teach. Quite true, but I have talked with many college students about the plan, and almost unanimously they would feel so grateful for the chance to use their education and settle their plans, that they would give maximum effort gladly. It is not a good idea to recruit teachers on a temporary basis. There is always this risk anyway, and thousands of young women just out of college enter teaching with every likelihood that they will leave for marriage and a home after a few years. Isn't the proposal a case of special rewards for a privileged class? Yes, but we appear to provide the opportunity for any American with the urge and the brains to go to college, and it's certainly more democratic than to allow a privileged class to escape the draft completely, as now happens. If you provide alternate service for teachers, why not for social workers, foreign service people? Why not.

The defense of this country rests fundamentally on two great systems: The one for enlisting talent in its service, the other for developing that talent. Both systems are now inadequate and can only deteriorate in the future. A relatively simple act of Congress could transform the weakness of one into the strength of the other.

## Adverse Witnesses

EXTENSION OF REMARKS
OF
### HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. UTT. Mr. Speaker, I rise as one of a growing group who advocate: First, a balanced budget; second, economy in the Federal Government; and third, the continued control of the constitutional powers of the House of Representatives to originate money bills.

I call to my support four adverse witnesses.

First, I call Thomas Jefferson.

He wrote to Samuel Rerchibal in 1816:

To preserve our independence we must not let our rulers load us with perpetual debt. We must make our election between economy and liberty, or profusion and servitude.

And, again in 1816, he wrote to Governor Plumer of New Hampshire:

I place economy among the first and most important of republican virtues, and public debt as the greatest of the dangers to be feared.

Second, I call Andrew Jackson.

In his fourth annual message to Congress, in 1832, he declared:

The soundest maxims of public policy and the principles on which our republican institutions are founded recommend a proper adaptation of the revenue to the expenditure, and they also require that the expenditure shall be limited to what, by an economical administration, shall be consistent with the simplicity of the Government and necessary to an efficient public service.

Next, I call Grover Cleveland.

In his 1893 second inaugural address, he declared:

The lessons of paternalism ought to be unlearned and the better lesson taught that while people should patriotically and cheerfully support their government, its functions do not include support of the people.

And I call Woodrow Wilson, who, 40 years later said:

The duty of economy is not debatable. It is manifest and imperative.

Mr. Speaker, I have additional evidence to submit.

The Democratic national platform of 1932 asserted:

We advocate an immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus, and eliminating extravagances, to accomplish a saving of not less than 25 percent in the cost of Federal Government.

Franklin Delano Roosevelt, running on that platform, included this in one of his campaign speeches:

Any government—like any family—can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse.

Also, it is appropriate at this time to recall that in 1943 Senator Harry Truman declared on the Senate floor:

It seems that when public funds are to be expended no one has any interest in what happens to them, no matter what his responsibilities may be under his oath of office.

I dislike to make such a statement, but unless this body and the House of Representatives exercise their prerogatives in connection with the pursestrings of the Government, much of the money appropriated will be thrown away for no good purpose whatever.

It seems that—in the past—the Democratic Party openly advocated that stand which I take today. I want a balanced budget, economy in the Federal Government, and the continued constitutional control of money bills by this House.

Certain liberal gentlemen may say that times have changed.

Indeed, they have—for them.

I have used many quotations. I close with one.

Patrick Henry flung this challenge on May 29, 1765:

If this be treason, make the most of it.

## Guarding the Port

EXTENSION OF REMARKS
OF
### HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an editorial which appeared in the New York Times on March 4, 1959, entitled "Guarding the Port":

GUARDING THE PORT

In the last 15 years the antismuggling responsibilities of the customs service in the port of New York have been carried out by a steadily declining staff. During the war years there were approximately 800 enforce-

ment men in this important arm of the Treasury Department. After the war the roster was reduced to about 500 men. Now it is less than 250. The 5-day week means that it is no longer possible to maintain constant surveillance on the hundreds of piers where ocean vessels dock. Nowadays on the average pier there is no regularly assigned customs man to check ships and their seamen against illicit imports, including narcotics.

New York is an obvious target for every heroin-smuggling ring serving as a transmission belt from Europe or Asia. The potential apparatus for smuggling includes many of the 12,000 ships that come into this port every year.

The customs service budget, among others, is a matter of current discussion. In this connection top officials of the agency have said that there was no intention of replenishing the staff assigned to the traditional guard against smuggling. An increase in the budget is being sought, but it is for statutory salary increases and for more men to handle pyramiding details involved in the entry of commercial cargoes. Studies show, they said, that there is no satisfactory ratio between the size of the port guard and the number of narcotics seizures. In other words, a double port guard would not necessarily mean twice the number of seizures.

This seems to be an appallingly negative enforcement philosophy. It might as well be said that there is no use having policemen, inasmuch as they cannot possibly do away with all crime. Surely we cannot, on the ground of economy, the real reason for the cutback, do anything to perpetuate our growing reputation as a wide-open port.

## Thomas G. Masaryk, Founder and First President of Czechoslovakia

EXTENSION OF REMARKS
OF
### HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. WOLF. Mr. Speaker, March 7 was the 109th anniversary of the birth of a man of great ideals, a great champion and a symbol of human freedom, the George Washington of Czechoslovakia—Thomas G. Masaryk.

As Mr. Joseph Mekota, one of the great leaders of Iowans of Czechoslovakian descent in the city of Cedar Rapids, recently wrote to me:

Thomas Masaryk is regarded in the hearts of all Americans of Czech origin—and by the people who live today in subjugated Czechoslovakia—as the Great Liberator, an outstanding teacher and statesman.

Thomas Masaryk worked unceasingly during the First World War to gain support for Czechoslovakia's longing for independence. He came to the United States in 1918 and convinced President Woodrow Wilson of the justness of his cause. On October 18, 1918, the Czechoslovak Declaration of Independence was formally published in Washington, D.C., and the constitution of the Republic of which Masaryk was the first President, was based in large part on our own Contitution.

Perhaps the spirit of freedom is catching—at any rate, Mr. Masaryk married an American lady, and his devotion to freedom never wavered. The bond and spirit of friendship between the peoples of Czechoslovakia and the United States have always been very strong.

Unfortunately, the new area of democracy for all the world which was the hoped-for result of the allied victory in World War I did not become a reality. The Czechoslovaka Republic, the first fruit of that victory, was short-lived. Nevertheless, the memory of the freedom enjoyed by the Czech people from the date of the adoption of the constitution in 1920 until the Nazi occupation of Czechoslovakia in 1938, has not, and will not, be forgotten.

Mr. Speaker, I visited Czechoslovakia in the summer of 1957. It is a tragic thing to see the work of Thomas Masaryk set aside now by a Communist state. But freedom still burns in the hearts of the Czech people. We must keep it burning so that some day soon, with God's help, it can begin to glow and burst into the flame of liberty once more. We must dramatize here in America that we are conscious of their sacrifice. For this reason, I am happy to join tomorrow with those Americans who claim kinship with Thomas Masaryk in the hope and prayer that the light of liberty will aagin shine in the lives of the subjugated nations of the world. I propose, also, that we resolve to honor him every day in 1960—the 110th year of his birth. We can do this by issuing in his honor one of the champions of liberty stamps.

The champions of liberty series of stamps were conceived for the purpose of doing honor to leaders of other lands, and I think it would be a highly proper and desirable action to honor in this way one of the greatest statesmen and democratic leaders of this century on the 110th anniversary of his birth.

Mr. Speaker, I have today written to the Postmaster General of the United States, urging that one of the two champions of liberty series stamps to be issued in the year 1960 be issued in honor of Thomas G. Masaryk.

It is my earnest hope that the Members of the House and of the Senate will see fit to express to the Postmaster General their endorsement of the issuance in 1960 of a Thomas G. Masaryk postage stamp.

## Checking on Drivers

EXTENSION OF REMARKS
OF
### HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 24, 1959*

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD, an editorial entitled "Checking on Drivers" which appeared in the Washington Evening Star on March 9, 1959. This is in line with H.R. 4946 which I introduced on February 24. The title of my bill is to establish penalties for the operation of a motor vehicle in interstate or foreign commerce without a valid motor vehicle operator's license and to provide for a register in the Department of Commerce in which shall be listed the names of persons refused a motor vehicle operator's license or who have had such licenses revoked.

The editorial follows:

CHECKING ON DRIVERS

One of the serious loopholes in the system which most States have set up to bar reckless drivers from the highways is the lack of information about license revocations which a driver may have undergone in another jurisdiction. As a result, applicants for automobile permits frequently are given the right to drive in a State, despite the fact that another State has suspended or revoked their licenses for dangerous driving.

To meet this threat to public safety, the Federal Bureau of Public Roads has proposed to Congress the establishment of a national clearinghouse to list suspended or revoked licenses, as reported by State authorities. The list would be open to all State traffic and highway officials wishing to check on the driving record of an applicant for a driver's license. The Government would act merely as the repository for such records, with any action against drivers to be the sole responsibility of State and city authorities.

In view of the constant shifting of residents from State to State, such a central checkup headquarters could serve a very useful purpose in making the highway safer.

## Price of Government Handout Is Loss of Freedom

EXTENSION OF REMARKS
OF
### HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 11, 1959*

Mr. MINSHALL. Mr. Speaker, for 6 years we have heard President Eisenhower and Secretary of Agriculture Benson plead for a flexible farm program which would do away with lost markets, crippling allotments, huge surpluses, high costs to the taxpayer, and would return freedom and dignity to the farmer. Within the last few months we have learned of the millions of tax dollars paid to a few big business farms. We have also heard from a Michigan farmer named Stanley Yankus who protests being penalized $4,562 for growing more wheat on his few acres to feed his chickens than the law said he should. The law under which he is being penalized was enacted by the 75th Congress in 1938. The Fort Lauderdale (Fla.) Daily News recently told the Yankus story—and it embodies the story of the whole farm mess today—in an eloquent editorial, which I submit for the RECORD:

PRICE OF GOVERNMENT HANDOUT IS LOSS OF FREEDOM

Just how far the American people have gone in surrendering their individual freedoms for a mess of Government pottage was poignantly illustrated the other day in the testimony of a Michigan farmer before a House subcommittee.

The farmer, Stanley Yankus, of Dowagiac, Mich., appeared before the congressional group for one purpose. He wanted all the

people of America to hear his story and to think about the high price they are paying for the privilege of getting handouts from the Government.

The story of Stanley Yankus is not unusual. It is happening to many farmers who still believe they have a constitutional right to manage their own affairs but who, unlike Stanley Yankus, haven't the courage to stand up and fight for their rights.

Yankus owns a 100-acre farm in Dowagiac. He also owns some 5,000 chickens whose main source of food has been the wheat that Yankus grew on his farm.

Some time ago farmer Yankus was told by the Federal Government that he had to restrict the amount of wheat he was accustomed to planting each year. This acreage restriction, he was told, was approved by a majority of wheat growers who had agreed to reduce their acreage by a fixed percentage in return for the Government's promise to buy all the wheat they could produce on their reduced acreage.

Now Yankus didn't go along with this deal, and since he didn't grow any wheat to sell to the Government or anybody else, he could see no justification for the Government to step in and force him to cut down the wheat crop he needed to feed his chickens. He claimed this amounted to "confiscation" of his property so he went ahead and planted his usual number of acres.

The Federal Government then hailed farmer Yankus into court where he was eventually fined a total of $4,562 for refusing to abide by the acreage allotment program. When he refused to pay the fine, Federal agents seized $1,700 from his bank account and threatened further reprisals unless he paid the remainder of the fine.

This happened last June, and after months of vainly protesting against this violation of his constitutional rights, Yankus finally got a chance to tell his story to a House subcommittee and to the people of the Nation.

But even this hasn't done him any good. He got some sympathy from some Congressmen on the subcommittee, but the majority shared the sentiment of Representative J. FLOYD BREEDING, a Democrat from Kansas and a director of the Kansas Association of Wheat Growers, who told Yankus he had two sons engaged in farming who would go broke without Federal Government price supports.

The reply of Yankus to that argument is a classic that every American ought to well remember.

"It's sad to go broke," said Yankus, "but if we guarantee everybody against going broke, we'll all be like we're in jail cells."

Even though he spoke the truth, and the assembled Congressmen well knew it, the Michigan farmer didn't secure any relief from his appearance before the legislators. So, a few days ago he wrote the Government a check for $3,370.56 and enclosed it in a letter to U.S. Attorney Wendell Miles at Grand Rapids, in which he revealed he was giving up his long fight, selling his farm, and migrating to Australia where he would have more freedom.

"I feel kind of bad," he stated, " but if I had it to do over, I'd do the same thing again. I've got two strong hands and a mind. I made good once and I can again."

"The only thing I'm guilty of," he wrote Miles, "is fighting for my constitutional rights."

Today the Yankus farm, its buildings and its 5,000 chickens are in the hands of an auctioneer and will be sold on April 5. Yankus, himself has already applied for a passport and within a few months he will probably be in Australia getting prepared to start a new life for himself in a nation which still permits its farmers the right to grow whatever they choose to grow on their own property.

The tragedy of all this is that the acreage allotment program which cost this Michigan farmer $4,562 in fines and which ultimately drove him out of his native land to find greater freedom somewhere else, has proved to be utterly worthless. It is penalizing the small farmers like Yankus for the enrichment of the big wheatgrowers who have now piled up such tremendous stocks of surplus wheat at the taxpayers' expenses that the Nation would have more than enough to meet all it needs if not a single bushel was harvested this year.

Truly, this case well illustrates that the price of Government handouts is the loss of our individual freedom. But, outside of a few men like Stanley Yankus, who cares about that today? It's much easier to grab the handouts and ride the "gravy train" and permit our children, if they are still able, to try to regain the freedoms that we are bartering away.

## Needed: Western Action

EXTENSION OF REMARKS
OF
### HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the New York Times of March 10, 1959, entitled "Needed: Western Action":

NEEDED: WESTERN ACTION

While Premier Khrushchev campaigns in East Germany, intervenes in West German politics and gives voice to all sorts of plans, threats, and promises in his campaign to drive Western forces out of Berlin, the Western Powers are still engaged in preliminary consultations on how to meet this Soviet challenge. Since it is the Soviets who do the challenging, and since the Western response must rest on agreement among democratic nations, this seeming discrepancy of effort is to some extent inevitable. But the situation enables Mr. Khrushchev not only to keep the initiative but also to make ever new tactical proposals, without ever yielding in substance, in order to keep the Western Powers off balance.

To be sure, the Western Powers are moving in the right direction. They are discussing an American draft for a new note to Moscow which welcomes the Soviet agreement to join in a foreign ministers' meeting but firmly rejects the conditions which the Soviet attaches. The note particularly rejects the Soviet proposal to limit the conference to a discussion of Soviet plans for a peace treaty with a divided Germany and Western withdrawal from Berlin and insists on discussing the whole German problem in all its aspects and implications, including German reunification in freedom and European security.

At the same time Prime Minister Macmillan is visiting Paris and will then go to Bonn and Washington to report on his visit to Moscow and to help concert Western policies for firm but flexible negotiations, with a summit meeting in mind.

Meanwhile, though the North Atlantic allies do discuss plans for meeting a military challenge over Berlin, President Eisenhower is obviously pursuing a policy of avoiding any provocation, either military or political. He has rejected any immediate steps toward any kind of Western mobilization. In fact, the United States and some Western allies are now actually reducing rather than increasing their armed manpower. Likewise, while the President welcomes congressional support of his stand, he seems to prefer an informal and implied rather than formal endorsement.

Inevitably the question must arise whether the West is not moving too slowly or leaning backward too far for its own good. Indeed, the lack of a definite program or even an agreed frame of reference is already arousing some fear among the Western allies that flexibility and disengagement may turn into new appeasement. This does not strengthen our alliances and can only encourage Mr. Khrushchev in his present tactics.

This newspaper has long advocated a concrete and comprehensive Western program to oppose the Soviet plan. It has also advocated a congressional resolution to express our national determination to stand fast in Berlin. We believe that the latest events give new point and emphasis to these suggestions.

## What Now, Khrushy?

EXTENSION OF REMARKS
OF
### HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, February 18, 1959*

Mr. BOSCH. Mr. Speaker, Nikita Khrushchev has come up with another suggestion on the Berlin situation which will never work. I refer to his suggestion that it might be possible to have a garrison of neutral troops stay in East and West Berlin or a security garrison of American, British, French, and Russian troops there. Someone must insist on fulfilling the pledge made as a part of the Atlantic Charter, to wit, the right to self-determination. What is wrong, I ask, in permitting free and open elections so that the peoples of East Berlin may decide their own fate?

It has often been said that we win the wars and lose the peace—could this be because of our inability to match or our inability to estimate the diplomatic and political dealings of the Russians? I have maintained for many years that the source and core of our troubles in the world are, to a great extent, the result of the commitments made at Yalta, Teheran, and Potsdam. This present crisis in Berlin pinpoints the necessity for a full and open disclosure of everything that went on in those conferences. How is it possible that we reach an agreement at Yalta on occupation zones in Germany, also in Berlin, and yet make no provision for access to Berlin? Surprisingly we seem content with an oral arrangement for supply corridors to Berlin—oral arrangement was all we had at the time of the bitter lesson of the Berlin blockade of 1948–49. What is our status today? True, we have something in writing, but all it did was to provide an obligation to take the measures necessary to insure the formal functioning and utilization of rail, water and road transport but with no specific written delineation of the military corridors to Berlin.

Mr. Speaker, it seems to me that now is the time to call for a unity of purpose and a determination to correct the inequities of the past. Let us not be led into a trap of flowery promises and no performances.

Under leave to extend my remarks, I include an editorial from the New York Daily News on this subject which I commend to the attention of my colleagues:

WHAT NOW, KHRUSHY?

Nikita Khrushchev, most loquacious dictator in U.S.S.R. history, broke several of his own records yesterday. He had a 2-hour talk with Erich Ollenhauer, West Germany's Socialist chief and political rival of Chancellor Adenauer.

KHRUSHCHEV IN REVERSE?

Then the beefy Kremlin bossman really went all out by stating that he had changed his mind about positively kicking Western armed forces out of West Berlin. Now, he says amiably, it will be perfectly all right by him if a garrison of neutral troops stays in East and West Berlin. Or, come to think of it, it would be okay as an alternative to keep a security garrison of American, British, French, and Russian troops posted there. That is almost what Berlin has now—the glaring gimmick being that, under Khrushchev's plan, U.S.S.R. troops then would be circulating in West Berlin, too.

What's Khrushy up to? Can he be trying to drop that hot Berlin potato before a possibly humiliating showdown, with our General Eisenhower not giving an inch? Or, ever hopeful, is he giving another try to the cynical Communist tactic of promise everything, perform nothing?

In any event, all Communists are by definition professional liars. Let's wait for deeds, not words.

## Metropolitan Area Residents Affected by Federal and State Tax Laws

EXTENSION OF REMARKS
OF
### HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mrs. DWYER. Mr. Speaker, I have reintroduced, for consideration by the 86th Congress, two bills I first introduced during the preceding Congress. Both represent efforts to deal fairly and equitably with residents of metropolitan areas, especially those areas that are located close to State boundary lines, insofar as such residents are affected by Federal and State tax laws.

The first bill, H.R. 5307, would allow as a deduction from Federal income taxes, the reasonable and necessary expenses incurred by individuals for transportation to and from work. The maximum deduction fn any one taxable year would be $300, and the deductible expenses would include transportation costs either by private automobile or public transportation.

I share the conviction with many of our colleagues that this is a long overdue reform in our tax structure. Especially for those who live in the subrubs of our large metropolitan regions, the costs of transportation to and from work—the costs of commutation—are considerable. In my own Sixth Congressional District—where the number of commuters represent a fair average for the metropolitan New York-New Jersey-Connecticut area—I know of a great many instances where people must pay from $300 to $1,000 in commutation costs each year.

These travel expenses, I believe, are a necessary and legitimate cost of holding one's job, just as necessary and just as legitimate as those expenses presently authorized to be deducted on income tax returns. It is not always possible or even desirable for families to establish their homes in areas immediately adjacent to their jobs. Jobs change and employment opportunities shift, and seldom is it possible for the employee to control these circumstances. To insist that the taxpayer move his home every time he changes his job is obviously impossible and unjust, especially in crowded metropolitan areas. But we unfairly pressure such a person in this direction when we discriminate against him by refusing to permit normal, standard tax treatment for his necessary costs of traveling to and from work.

This legislation would in no way favor one group of taxpayers as against another. It would simply recognize a situation that has grown increasingly significant in recent years—the great migration to the suburbs of America. It would help restore a measure of fair and equitable treatment for these millions of our people. And it would remove the unjust price tag from one of our country's most precious freedoms—the freedom to live where one wants to live.

My second bill, Mr. Speaker, House Joint Resolution 288, proposes to amend the Constitution by prohibiting any State from taxing the wages or salaries or other compensation for personal services received by a person who is not a resident of that State.

This measure, too, has been introduced by several of our colleagues, and I am hopeful that with greater awareness of the elementary justice involved in this proposed amendment there will come the support necessary to win the approval of the Congress.

While the problem this amendment would solve affects residents of New Jersey and Connecticut especially, it also affects residents of several other States who have been recently subjected to the tax laws of the States in which their jobs are located.

Here, again, we are confronted with the same fundamental questions: shall American citizens be free to establish their homes wherever they choose? Or shall we permit citizens who exercise this right to be penalized because of it?

Not only is there a cherished principle involved here—and who does not, in theory at least, subscribe to the dictum, there shall be no taxation without representation—but there is also much at stake from a practical viewpoint. Income taxes levied by some States have grown steadily heavier, and, of course, it has been this growing burden that has prompted some to seek added revenues from outside their boundaries. But States like New York have gone even further and discriminated against nonresidents in such a way that the nonresident's tax is more than the resident's tax, when both are in similar circumstances. Of course, the nonresident receives few if any of the benefits and services provided residents, for which the tax was levied in the first place.

But then there is little reason to expect logic where there is no justice.

Mr. Speaker, 60 percent or more of the American people have chosen for a variety of reasons to live in metropolitan areas. They are fully aware of the special problems, as well as advantages, which life under such crowded conditions means. And they are willing and able to solve these problems if they are allowed the means to do so. They ask no special privileges, no subsidies, no unwarranted exemptions from civic responsibilities.

They ask only justice, fair play, and equal treatment with fellow citizens living under different conditions. It is time, I believe, for Congress to recognize that America is no longer a rural nation. It is time for us to give the city and suburban dwellers of America a fair break.

## All Teamsters Carry the Stigma of Hoffa

EXTENSION OF REMARKS
OF
### HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. BENTLEY. Mr. Speaker under leave to revise and extend my remarks in the Appendix of the RECORD, I desire to call to the attention of the House the following editorial which appeared in the March 2, 1959, issue of the Saginaw News. As I stated yesterday, the Congress has a very real responsibility to insure that no one private individual can possibly possess the amount of power that now lies in Mr. Hoffa's hands. This is even more alarming when it is realized, from past experience, the motives which have caused Mr. Hoffa to make use of such power as he possesses. If this Congress adjourns without having taken concrete, positive and adequate action to meet this serious situation, it will have failed in its obligation to the American people and the responsibility will rest on the Congress leadership and the majority party in this respect.

ALL TEAMSTERS CARRY THE STIGMA OF HOFFA

A chill which has nothing to do with its sunny climate is sweeping across Florida these days as word spreads that Teamsters Union President James R. Hoffa is on the move to organize the State's workers all along the Gold Coast and across the citrus belt.

Gov. Leroy Collins has already invited him, politely, to take himself elsewhere. Declaring that Hoffa has been "personally discredited," he said he wished the man would "keep out of Florida."

To which Hoffa replied: "I don't think Collins can talk about Hoffa without speaking against Teamsters and all working people in Florida."

This is the trap in which Teamsters are caught, whether they choose to recognize it

or not. Governor Collins says he has no "feeling of antagonism toward the Teamsters Union" but he has all sorts of misgivings about the man who runs it.

How to separate the character of the man from the character of rank and file teamsters is always the problem which confronts any who stand for decent working conditions for labor—and decent treatment from organized labor leadership.

We can well imagine the shudder running through the Florida business community at mere mention of Hoffa's arrival on the organizing scene. The little businessman can't escape him either. Hoffa and his top lieutenants have been shown to be ruthless in their organizational efforts. One needs only mention the McClellan committee's investigations to envision what Florida may well be in for.

This is the stigma the Teamsters carry, and it must weigh heavily upon the good and decent men in the union who have no stomach for the dark gray side of their organization's acts.

Hoffa puts the reputation of his Teamsters and of "all the working people" on the line to defend himself against the public's personal antipathy for him. He gives guilt by association a reverse twist—all who condemn him condemn every man who holds a job controlled, or to be controlled, by the Teamsters.

He can't hide behind them, but few dare to disassociate him. Some openly bask in the power-by-association light that membership under Hoffa lends to them. Others, not overly troubled by ethics, see only what the union has done for them and consequently pass lightly over Hoffa's underworld connections and irregular financial exploits.

There may well be truth in Hoffa's declaration that "there is too big a spread in Florida between wealth and poverty." For certainly it is true that you need something besides sun to enjoy life in Florida.

But the AFL–CIO long ago decided that that something decidedly was not Hoffa. Governor Collins agrees, and great numbers of the American people agree. But neither the parent union which ousted the Teamster because of their president nor Governor Collins nor the unorganized public can do anything about Mr. Hoffa until the loose labor laws of this land which allow assembly of the tools of power are tightened against men of his ambition.

To rail against unrestrained power and the men who wield it in cynical disregard of the Nation's interest is so much wasted breath. The power to combat power lies with Congress. Whether it has the courage to invoke it is a decision resting with the conscience of each lawmaker.

## Help for Oil, Not for Textiles

EXTENSION OF REMARKS
OF
### HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. McINTIRE. Mr. Speaker, although the New England area is almost a 100 percent deficit area in oil production, it nonetheless has an industrial complex that primely relies on residual oils.

Because residual oils are of such great importance to the State of Maine and its sister New England States, I am submitting to the RECORD this appropriate editorial which appeared in the March 5, 1959, issue of the Bangor Daily News:

HELP FOR OIL, NOT FOR TEXTILES

Strange indeed at times are the workings of the Federal Government. It seems ready to jump through a hoop whenever the oil industry has a bit of trouble; yet stubbornly declines to help the long-ailing textile industry.

Right now, President Eisenhower is giving consideration to putting a mandatory curb on fuel oil imports. This is because the voluntary quota program hasn't worked out. Domestic producers say foreign competition has created an oversupply at home.

But what happens if a mandatory clamp is put on imports? First, it will further hurt relations with two good oil-exporting neighbors—Canada and Venezuela. They are already displeased by the voluntary plan.

But, to bring the issue closer to home, an import curb is going to boost fuel oil prices in Maine. Maine consumers will, in effect, as the Maine delegation in Congress has pointed out, be called upon to help subsidize the oil industry.

We can understand that the Texas oil millionaires hate to give up any of their Cadillacs. But the people in Maine aren't in a position to support them in the manner to which they are accustomed. Nor are they inclined to do so if they could, considering that Maine's textile mills are barely limping along, because of Uncle Sam's helpfulness to foreign competition.

## Student Loan Program Booms

EXTENSION OF REMARKS
OF
### HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 17, 1959*

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith a very interesting editorial written by Mr. Robert Ingalls in the Corvallis (Oreg.) Gazette Times:

STUDENT LOAN PROGRAM BOOMS

In 1958, Congress passed the National Defense Education Act. One of its less publicized provisions authorized the Federal Government to give colleges $295 million to put into student loan funds. The act stated that the participating college had to put $1 of its own into the loan fund for every 9 Federal dollars received.

Several people said at the time the program was unnecessary—that loan and scholarship money already went begging. Apparently they were wrong.

Arthur S. Flemming, the Cabinet member representing the education department calls the reception of the loan program the most surprising thing in the whole act. He says the study-now-pay-later philosophy of today's students represents a revolution in thought. U.S. Commissioner of Education Lawrence G. Derthick contends the popularity of the loan program is "more than anyone had any reason to expect."

Between passage of the act and December 31, 1958, colleges and universities asked for $62 million to meet student loan requests. Approximately 1,200 colleges representing 80 percent of the college population made requests. Congress, figuring the loan fund would take awhile to get started, had appropriated only $6 million.

Another thing that has educators excited is the seeding effect of the Federal money. The Office of Education says that of the 883 colleges which had no loan programs at all last year, 466 have stated them under the stimulus of Federal dollars.

How about all that private money that goes begging? "The thing about that money," Joseph Moffit, assistant dean handling the loan program at Georgetown University, explains, "is that it has strings attached. To qualify for the money, a student often has to be from a certain county or sometimes even have a certain last name." Other educators claim many of the former programs required the student to repay the money in a fairly short time at going interest rates and they couldn't afford it.

There has been a great deal of fuss about a provision in the act requiring borrowing students to sign a loyalty oath to the United States. Reed College even refused to accept any of the money because of this clause. However, bills have been introduced in the Senate to eliminate this particular feature which is odious to some people. It is difficult for us to understand why people feel discriminated against to have to swear allegiance to their own country and benefactor, but those arguing against the provision point out that some $4.8 billion could be paid to farmers under the price-support bill and no such loyalty oath at all is required under these circumstances. Why should students and educators be singled out?

Because of the success of the program's first year, Congress will undoubtedly pour many more millions into the program. It is a great step forward in education and it doesn't cost the taxpayers a thing.

## Urban Renewal

EXTENSION OF REMARKS
OF
### HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. ALGER. Mr. Speaker, yesterday it was my pleasure to call the attention of my colleagues to a detailed study of urban renewal. This study on my part, documented with 52 exhibits, was prompted by the interest of my district, the city of Dallas, in making a study of urban renewal, and of course the possible use of Federal funds. Naturally, I was immensely concerned as a Congressman because this would involve the expenditure of taypayers' money. I was further interested because as a small businessman and realtor I know something about land development, urban renewal, condemnation, building codes, and other matters involved in urban renewal. This study may be found on page 3223 of the RECORD of Monday, March 9.

Today it is my great pleasure to announce that Dallas officials have decided to make urban renewal a local, not a Federal project. It is with great pride that I announce this to my colleagues and that I compliment these city officials and the citizens themselves for their initiative, local pride, and sense of responsibility.

Knowing that Dallas is similar to many other cities the country over, I know my colleagues and the people of other areas may benefit from the Dallas experience. Therefore I am including the newspaper account of this decision on the part of the officials of the city of Dallas.

DO-IT-YOURSELF SLUM CLEANUP PLAN FOR WEST DALLAS BARED BY OFFICIALS—COUNCIL ACTION EXPECTED MONDAY

(By Kenneth Smart)

City officials Saturday announced an unprecedented do-it-yourself revitalization program for West Dallas as a private enterprise-local Government answer to the city's worst slum problem.

The plan features creation of a new city department, cooperation of Dallas lending agencies and use of existing city powers without resorting to Federal urban renewal aid.

Mayor R. L. Thornton, chief architect of the plan, said the area will now be referred to as Dallas West. The plan could lift Dallas West out of the mud and make it a comfortable community of modest homes in 5 years, he declared.

The area encompasses 599 acres north of Singleton and west of Hampton.

POLICY GROUP

As a first step, the city council Monday will create by ordinance a five-member Dallas West Revitalizing Commission. This group will be the policymaking body for a new city department to be established to coordinate improvement efforts.

The mayor pledged his personal assistance to Dallas West citizens interested in forming neighborhood improvement organizations.

The plan apparently spelled an end to the city council's avowed intention to order a referendum on Dallas participation in an urban renewal program.

"In view of this measure, I intend to propose to the council that if the citizens of Dallas desire to go any further on an urban renewal program, they should make it known by submitting petitions in substantial numbers," said Councilman W. C. (Dub) Miller.

Under Texas' urban renewal laws, petitions by 5 percent of the qualified voters in a city can force a referendum on urban renewal.

DALLAS' ROLE

The city's role in Mayor Thornton's program will be mainly one of building streets, sewers, and water mains necessary to serve the area, then demanding strict enforcement of minimum housing standards. Private agencies will lend money to individuals for home repairs.

"By doing it this way, it will not necessitate using Federal funds and, in the end, will cost no more than what the city would have to pay if we went into a Federal urban renewal program," Mr. Thornton said.

No cost estimates have been prepared, but the city's share in a Federal program was estimated by a Chicago engineering firm as between $2,770,000 and $3,340,000, based on a 599-acre area east of Hampton and north of Singleton.

Private enterprise participation will come mainly from approved FHA lending agencies, which Mayor Thornton described as "willing and ready" to grant home repair loans to citizens who can qualify.

Up to 90 percent of the loans would be guaranteed by FHA, and standard FHA interest rates would apply, the mayor said.

REPAIR LOANS

In the past lending agencies have been reluctant to make home repair loans on West Dallas property, but the mayor said several firms have agreed to participate in the program.

Loan applications would be made through the new city department, then submitted to FHA-sponsored lending agencies.

"This is no charity package. It is a pay deal," Mr. Thornton stressed. "These people will have to help themselves."

PROTECTION OFFERED

"What we are doing is making credit available to people who couldn't get it before and at the same time providing leadership and protection for them."

The course charted by the mayor dispels once and for all speculation that West Dallas may be converted to a heavy concentration of industry.

Instead, the city is accepting a recommendation by DeLeuw, Cather & Co., a Chicago engineering firm, that the Dallas west sector be maintained as a residential area of modest homes.

CLEAR FUTURE

"With the future of the area clearly in mind, the city now can go in and spend money to build streets and sewers," said City Manager Elgin Crull.

No new bond funds will need to be voted for the work, he added.

The DeLeuw, Cather report estimated that 75 percent of the families in the area are financially able to make needed repairs to their homes, provided credit is available to them.

The Chicago engineers said special urban renewal powers of condemnation would be necessary to clear and redevelop property along Singleton and in a 13-block area in the vicinity of Chihuahua and Morris. Instead, according to the mayor, the city will rely on its existing powers to open new streets and abandon old ones to resolve platting difficulties.

WORKING TOOLS

Mr. Crull said this power and the city's tough new housing code are the only legal tools needed to proceed with the revitalization program.

Out of 3,029 residential structures in the area, 82 percent are considered severely deteriorated.

Storm drainage is poor, streets are largely unpaved, and many dwellings still lack connection to city water and sanitary sewer mains.

Mechanics of the revitalization program are indefinite, but the mayor indicated a small area—possibly a single block—would become a pilot project. Sector by sector, the entire Dallas West area, east of Hampton gradually would be improved.

METHODICAL PROJECT

"We'll take a section at a time, hit it methodically, and that will stimulate pride that will give other sections encouragement to do the same thing," the mayor said.

"We have every faith that the citizenship over there will organize their own neighborhood improvement groups to get the job done."

Mr. Thornton said the plan is no jumped-up gimmick but a program that has been months in the making. He said it is without precedent anywhere else in the Nation.

The new city department will be a small one, possibly staffed by four or five people including a director, a building inspector, and clerical and stenographic help, Mr. Crull said.

After the council approves the broad framework Monday, the next step will be the appointment of the new commission.

## Dan Reed

EXTENSION OF REMARKS

OF

### HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. DORN of South Carolina. Mr. Speaker, the passing of our beloved friend, the Honorable Dan Reed, is still difficult for us to realize. When a man of Mr. Reed's character, ability and patriotism passes from the Congressional scene, it leaves a vacuum. His loyalty, nonpartisanship and love of America has always been to me an inspiration.

When I first came to this Congress, he encouraged me to stand up for our country regardless of politics or pressure. He was a great American in the tradition of the founding fathers of our country. Dan Reed was forthright, courageous, and pro-American. He stood up for States' rights, the free enterprise system, and individual liberty.

Congressman Reed believed that those things that made America the great Nation that it is also could preserve America. Mr. Reed fought inflation, extravagance and waste in government. He believed in frugality, independence, thrift and virtue in government as well as in private life. The State of New York and the United States have lost a great statesman and we have lost a dear friend.

Mrs. Dorn joins in my deepest sympathy to his immediate family and to his constituents to whom he devoted so much of his time and affection.

## We Mustn't Embarrass Our Thieving Allies

EXTENSION OF REMARKS

OF

### HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the following editorial which appeared in the March 2, 1959, issue of the Saginaw News. This is merely another reason for an overall review and reappraisal of the foreign aid program which many of us on the Foreign Affairs Committee and in the House of Representatives have been calling for during these past 6 years.

WE MUSTN'T EMBARRASS OUR THIEVING ALLIES

A short item from Washington Monday reported simply that a congressional committee had announced "much waste in American military aid overseas."

Findings were by a House foreign affairs subcommittee which had to operate in the usual behind-closed-doors hearing fashion, since Defense and the State Department are skittish about upsetting our allies.

What the committee wanted to say was that some of these good friends are plain thieves. They've been pilfering and diverting all sorts of supplies we've sent them under the foreign military assistance program for civilian resale or personal use.

In an apologetic tone, the committee report explained that "the scarcity of consumer goods and the low pay scales of military and civil service personnel provided an incentive for stealing of United States military supplies."

American taxpayers mustn't be told which countries have been flimflamming us, for two reasons:

"First, many of the events described reflect unfavorably on officials or policies of allied nations.

"Second, publication of full details would provide the Communists with material which would be used to create dissension among our allies."

Admitting that this is an especially touchy time, what with Premier Khrushchev's ultimatum to the West to get out of Berlin by May 27, or else; and admitting that all the cooperation and unity that can be mustered will be needed to face out this challenge—we fail to see that it also demands suffering in silence as the price of foreign cooperation.

Maybe the Communists would use the details to cause dissension. Maybe, too American taxpayers might cause a little dissension. And maybe they should.

We've got a job of defense on our hands—defending ourselves and defending our allies who are in the front ranks. If they are allies it must be that they don't hanker to fall under the Soviet yoke of slavery.

But if they'd quit on us because we caught their civil and military employees redhanded, and blew the whistle on them, it is hard to believe that their love of freedom is as passionate as we have trusted it to be.

There has been much sober talk these past few weeks of beefing up the military strength of our allies and our own establishment in preparation for a showdown over the Berlin issue.

The beefing up would be done predominantly at American taxpayers' expenses. If President Eisenhower, with his military and diplomatic advisers, decides that this is the necessary course, Americans will unite behind him to pay whatever the price must be to defend freedom—and that doesn't stop at dollars.

What vexes us is the plaintive but timid attitude of official Washington toward our allies whose officials and national policies have tolerated waste and stealing directly harmful to their own national interest. Obviously, too, there has been a cynical contempt for the interest of American taxpayers as far as these unidentified allies are concerned.

A typical American working full time earns $4,500 a year—but $1,393 of it is taken from him by his Government in direct and hidden taxes. There is nothing soft-handed about Uncle Sam when he demands an accounting at income tax time. And the taxpayer isn't filled with the milk of human kindness when he reads about America's allies stealing from him, but being just too thin-skinned to be chastised.

---

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

## LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

## REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

[Streets northwest unless otherwise stated]

Speaker, Sam Rayburn

Abbitt, Watkins M., *Va.*
Abernethy, Thomas G., *Miss.* 6278 29th St.
Adair, E. Ross, *Ind.* 4000 Mass. Ave.
Addonizio, Hugh J., *N. J.*

## Order or Disorder in the Space Age?

EXTENSION OF REMARKS

OF

## HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. ENGLE. Mr. President, the United States has achieved a great international status for its accomplishments in the area of managerial efficiency. We have been represented as the model for democratic decision-making and speed of production. But as we move into the space age we find great confusion in both the decision-making process and the production process. We are facing the greatest threat to our survival in our history; yet we are not drawing on our genius for organization and management. The time is now if we are to develop the kinds of procedures which will guarantee our national security and enable us to become the leaders in the space age.

Last week I addressed myself to these problems before the Western Space Age Conference in Los Angeles, and I ask unanimous consent to have my remarks on that occasion printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

IMPROVING FEDERAL PROCEDURES IN THE MISSILE AND SPACE CONTEST

(Excerpts from speech by Senator CLAIR ENGLE at Western Space Age Conference, Los Angeles, Calif., March 5, 1959)

I am sure that everyone here is aware that I have only recently become a member of the Senate Armed Services Committee, and of the Senate Interstate and Foreign Commerce Committee—and more particularly, the Aviation Subcommittee which deals with civilian aviation. On the other hand, for a number of years I have taken a great interest in the aircraft and missile business. I have spent three tours of active duty with the Air Force in research and development and the missile field.

But obviously I am not an expert on missiles and aircraft design and construction. And I intend, in these remarks, to stay within my specialty—which is legislation and government. I have spent some 16 years in the Congress of the United States, and I am much concerned with the procedures in government affecting production in the aircraft, missile, and space field. I know that these procedures, both legislative and administrative, have a direct effect on the speed and efficiency with which Government programs are put into operation.

THE SUBJECTS

There are two aspects of administrative and legislative management in the production of aircraft and missiles that I particularly want to mention:

First, the contracts, the continuity of the contracts, stretchouts, and termination; and

Second, the complexity of the governmental organization in the aircraft, missile, and space production field.

THE CONTRACTS

We in California have had brought home to us in a particularly acute fashion what it means when a major defense contract is canceled, or stretched out to any appreciable extent. I do not have to remind you of what happened in the summer of 1957 when the Defense Department canceled the Navajo contract. There have been others that have been canceled more recently.

We need to take a hard look at this situation to see to what extent such contract cancellation and stretchouts are a necessary and unavoidable part of our national defense effort.

TECHNOLOGICAL CHANGES

Clearly there are sound technological reasons why some defense cutbacks are made. The extent to which obsolescence makes this necessary is reflected, for example, in the statement of Assistant Secretary of Defense W. J. McNeil before the Joint Economic Committee of the Congress on February 10, in which he listed, on the one hand, the programs which have been or are being phased-out or canceled and, on the other hand, work being accelerated.

BUDGETARY PROBLEMS

However, not all defense cutbacks can be accounted for solely on technological grounds. A great deal has in the past depended upon budgetary considerations—and here the record is not so good. Our defense budget, on which our national existence depends, receives less consistent treatment than any other part of the Federal budget.

AN EXAMPLE

As an example, let us review briefly some of the things that happened during 1957 in the way of management of defense funds. In April, the Department of Defense, making new estimates of expenditures through the fiscal year, found that its major programs were moving much faster than they had been aware of, and that expenditures might be as much as $2 billion more than anticipated. To reduce or defer the anticipated overrun of $2 billion, contracting agencies in the Department of Defense were sent telegrams and ordered to curtail or to cease overtime expenditures. Some contractors were asked to withhold voluntarily all or a part of their April, May, and June billings. The result of that was that a budget surplus was created more by deferment of payments than by reduction of obligations. Thus, the Government entered the fiscal year 1958, on July 1, 1957, with a large carryover of bills—and at the same time, new budget appropriations which had in many ways been cut to the bone.

Those contractors who voluntarily or otherwise agreed to deferred payments found themselves with sudden and unanticipated demands upon their working capital, all without additional compensation or profit. The Defense officials found themselves in the awkward position of having to reconcile a large carryover of unpaid bills with orders to hold defense spending to $19 billion in the 6 months from July 1 to December 31, 1957.

AFTER SPUTNIK

After Sputnik No. 1, in October 1957, the Defense Department, faced with a demand for acceleration of defense activity, found itself right up against the debt ceiling, with legally available cash nonexistent. When the new orders really started up after January 1958 contractors had to bid hurriedly and simultaneously on more projects than they could handle. As a result some companies came out overloaded and others had insufficient work.

SPECIFIC REMEDIES

Here are five specific steps I think should be taken:

1. We can insist that the Department of Defense and its branches do a better job in forecasting and budgeting their cash requirements for years ahead. The Department of Defense should provide for an earlier review of the allocation of these needs to particular projects or contracts. This would enable the Congress to make more adequate budget reviews and should facilitate the letting of contracts once appropriations were passed.

2. Carryovers of unpaid bills from one fiscal year to the next can and should be eliminated or minimized. Abnormal peaking of cash requirements in any particular year or period distorts the rate of defense expenditures, gives the Congress and the people of the United States the wrong picture, and accomplishes no more than putting off the day of reckoning.

3. The Congress and the Treasury must make certain that a sound and regular flow of defense contracts is not impeded by the debt ceiling.

4. Recognizing that neither curtailing nor stepping up a firm's production under a defense project can be done without a sizeable adjustment of plant, facilities, personnel, and financing, a contractor should have at least 6 months' notice, wherever possible, of requirements to accelerate or decelerate work on a particular contract.

5. If it is found necessary to continue to make limitations on progress payments, as has been common in recent years, the Government should recognize that such limitations involve an increased financial burden borne by the contractor by increasing the compensation allowed him.

GOVERNMENTAL ORGANIZATION

On the second point—the complexity of the governmental organization in the production of aircraft, missiles, and space vehicles—we find that this governmental organization is often responsible for the difficulties that arise. Especially after Sputnik I, the Government agencies in the missile and satellite field have simply flowered, with new committees, new responsibilities, new people, each one of whom is supposed to exercise an important function in this field. I believe that a member of the missile industry looking at these organization charts and this mass of committees will be just as confused as I am—although as a legislator I have had years of familiarity with organizational charts. The one that Trevor Gardner presented in Life magazine over a year ago showed 90 bases that needed touching for complete coordination of space activities. No wonder we are having difficulty keeping up with the Soviets.

MORE CZARS

The successful firings of IRBM's and ICBM's by the Russians led to the appointment of William M. Holaday as Guided Missile Director; the launching of Sputnik I brought in two czars—Roy W. Johnson as Chairman of the Advanced Research Projects Agency (ARPA), and James Killian as

the President's special assistant on science and technology; and concern over military domination of space activities resulted in the appointment of Dr. T. Keith Glennan as Administrator of the Civilian National Aeronautics and Space Administration (NASA). Meanwhile, Donald Quarles, Deputy Secretary of the Department of Defense, has responsibilities that tend to put him in direct conflict with all of these people. And we have just scratched the surface of those who are involved in the decision-making process.

AGENCY HODGEPODGE

At the top levels of decisionmaking, we find a proliferation of committees. The NASA law created a Space Council, which is chaired by the President himself. It also set up a Civilian-Military Liaison Committee to coordinate space activities. The Chairman of this Committee is Guided Missile Director Moladay, who has no authority to give orders to any of the members. About all that happens at the regularly scheduled meetings, attended by people from NASA, ARPA, military organizations, and others, is that information is exchanged. NASA itself has 13 coequal committees consisting of 15 or more members each. To complete the jurisdictional complexity and overlap, both NASA and agencies of the Defense Department give assignments to research and development units of the military services. As would appear inevitable, disputes arise on the control of certain projects and the solutions are always compromises which satisfy no one and cause further delays.

VIEW FROM THE PRESIDENCY

If we were to look at it from the vantage point of the President, we would find him advised by so many agencies that he could not possibly know where the decisions should be made. Here is an incomplete listing of the groups he turns to for assistance: The National Science Foundation; the National Science Board; the chief scientific adviser, Dr. J. R. Killian, Jr.; the Federal Council for Science and Technology (proposed); the President's Scientific Advisory Council; the special aviation adviser, General Quesada; the National Security Council; the Federal Aviation Agency; NASA; the Bureau of Standards; and the Department of Defense with all its subdivisions such as ARPA and Guided Missiles and the military services. If Mr. Eisenhower wanted to know about the value of a certain proposal, I doubt if he would be sure where to turn or whether he could get better information from someone other than the adviser he was consulting.

SPECIFIC EXAMPLES

General Medaris: It cannot be doubted that this confusion, overlapping of jurisdictions, and absence of a clear line of command are reflected in aircraft and missile production lags. Gen. John Medaris, Commander of the Army Ballistic Missiles Agency, at a congressional hearing, said: "We have no handicap in the use of our resources once the resources are approved to us and our line of approach is approved." Inherent in the whole process of missile development is the decision-time element, the time required to get decisions as definitive approvals or guidelines on which to proceed.

I asked General Medaris recently how many people—as a minimum—he would have to get in the same room to get a decision that would be firm. He counted off at least five—the Secretary of the Army, the Army Budget Officer, the Secretary of Defense, the Defense Budget Officer, and someone from the Bureau of the Budget. I asked him if he thought he ever could get them all in the same room at the same time, and he said he didn't think so. At the hearing, he cried out rather forlornly: "Some place there has to be one man who can make a decision, who can give a command, and who has the resources to carry it out."

Dr. von Braun: Dr. Wernher von Braun, Director of the Development Operations Division of the Army Ballistic Missiles Agency, went even further in criticizing the constant interference with project development. He could not understand why there had to be so many committees. Medaris went from Huntsville, Ala., to Washington once a week to get decisions while Braun visited the Pentagon twice a month for committee meetings. And if that wasn't enough, from time to time the committees visited the Huntsville project.

Admiral Hayward: Rear Adm. John T. Hayward, Director of Research and Development, Department of the Navy, commented at a House Space Committee hearing: "U.S. supremacy in space science is threatened not by lack of talent, but by lack of skill in bureaucracy."

Admiral Hayward believes that we should have one U.S. space program. With regard to the confusion on organization and lines of command, he commented that it was not a question of standing the heat in the kitchen," but "who it was who was in the kitchen." He said, "In the atom business you never had that—you knew who had the responsibility. You knew how it was done, and the military got what we needed."

Admiral Hayward testified that when he had a program he was anxious to see carried out, he would bring it to Admiral Burke, Chief of Naval Operations, and then he would take it to the Assistant Secretary of the Navy for Research and Development for his approval. He would also go to the Secretary of the Navy, Mr. Gates. Once it has cleared the Navy Department, the program goes to the Assistant Secretary of Defense for Research and Development, Dr. Herbert York—and then Dr. York may or may not present the matter to Roy Johnson of ARPA or to William Holaday, the Director of Guided Missiles.

This isn't a complete count. Admiral Hayward said there were at least 10 places where he could be vetoed. He then went on to say that after he gets the program approved in all these places and even after appropriations are made by Congress, he still has to fight back down the line to get approval for the expenditure—and at any time the Bureau of the Budget may step in and impound the funds for the project.

AMMUNITION—KOREA

That these problems are long-standing can be shown by the trouble we had getting adequate ammunition to Korea as the war dragged on. It took 18 months from the time the money was made available to get the first ammunition from the manufacturers. When we look at a chart of the operations of the Army Ordnance Corps, we find that an average of 113 days elapses from the original order for ammunition to the award of the contract to produce it—then it has to be produced. According to ordnance lingo, there are 11 action offices and 35 steps to be taken in the process.

NOT EXECUTIVE BRANCH ALONE

The presentation of this whole range of shortcomings in the defense effort does not mean that I am blaming the executive branch for all of the problems, or that the confusion has been confined to this administration. The ammunition hassle in the Korean war is a case in point. At the time, President Truman told me that he spent 80 percent of his time trying to make the Federal Government work—to keep the gears in mesh. The Congress bears much of the responsibility, since it enacts the legislation creating many of the executive agencies involved in the decision-making process. Furthermore, it has its own overlapping jurisdictions, such as the Senate Armed Services Preparedness Investigating Subcommittee covering much the same ground as the Senate Space Committee.

SUMMARY

I have dwelt today on two subjects:

First: The contracts, the continuity of these contracts, stretchouts, and termination.

Second: The complexity of the governmental organization in aircraft, missile, and space production.

I have not suggested all the answers—I don't know them all. But I know we must get the answers.

If we are to be superior to the Soviets, the first requisite is to have the system of government that can maximize our scientific and industrial capabilities.

Two oceans and time will not be protections from now on. The world is shrinking and we must face the new order in the world. We must move fast.

Our form of government, our way of doing business, is relatively new in the perspective of history.

The question is whether we can stand the test against one of the most efficient examples of the old order—a dictatorship with modern refinements—a dictatorship that has the singleness of purpose, the discipline to over-ride the agony and frustration of the masses, and a straight-line of command that can direct the resources, human and material, of a whole and powerful nation toward a single objective.

Both the economic and political structures of this country face the greatest challenge in our history in the short years ahead.

I think we can do it. But we must recognize the challenge. And we must be willing—in sacrifice, in diligence, and in the intelligent application of our talent—to meet the challenge. How we organize to do the job can be the difference between winning and losing the cold war.

## David J. McDonald, of the United Steelworkers

EXTENSION OF REMARKS

OF

## HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. MOSS. Mr. President, in recent times so much publicity and governmental attention has been given, and very properly given, to the criminal elements in some of our major labor unions and to some illegal activities on the part of certain labor leaders that I am afraid that too often we tend to forget that the vast majority of our organized workers and their respective leaders are totally loyal, hard-working, exemplary American citizens.

As a case in point, I refer to Mr. David J. McDonald, president of the United Steelworkers of America, who recently returned from a trip to Australia, Singapore and Hong Kong. Part of Mr. McDonald's mission during his trip was to declare the American ideas of free enterprise and to help enlighten our friends in the Far East on the vast improvements that have been made in labor-manage-

ment relations in the United States in recent years.

In one of his speaking engagements, Mr. McDonald spoke before the Australian Institute of Political Science in Canberra, and it seems to me that the substance of his remarks on that occasion are of value to all of us. I ask unanimous consent that a report of that speech which appeared in the Canberra Daily Telegraph on January 22, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

NO ANTI-BOSS HATRED FOR THIS TOP U.S. UNIONIST—HE PREFERS TO COOPERATE, BUT DOES NOT SHIRK A FIGHT

(By Zelie McLeod)

David John McDonald, president of the 1,250,000-member United Steelworkers, third largest labor organization in the United States, certainly has a fresh, dynamic point of view about management-labor relations.

Mr. McDonald is in Australia to address the Australian Institute of Political Science summer school at Canberra on Saturday, to study our long-service leave legislattion, and as guest of the Ironworkers's Union.

His expansive approach to the eternal differences between capital and labor makes the mental processes of some of our leading labor men appear a hundred years out of date.

I would wager that he doesn't possess an ounce of the stubborn (almost neurotic) "antiboss" hatred that so bedevils our own labor movement.

He believes capitalists are necessary, and that private enterprise, coupled with a strong trade union movement, is the only way to run any economy.

He doesn't want to see capitalists deprived of their financial power to make way for a Socialist economy.

"Socialism doesn't work. That's been proved in a number of countries," he said crisply.

"The drive for profit is the factor that has brought technical improvement. Socialism stifles this urge. Why should trade unionists want to stop progress?

"My union has no sympathy with companies that do not keep up with technical progress. We don't care if they close down, even if this means putting men out of jobs. We teach them something else and get them working again."

He quickly dispelled any idea that American big businessmen bend over backwards to give workers a bigger slice of the national pie.

"Employers invariably resist progress in working conditions," he said.

"They've never handed us anything on a silver platter. I've never improved a labor contract without a struggle."

He described how his union draws up a labor contract with the employers, usually for a period of 2 years, and when it terminates employer and trade union representatives get together and hammer out new conditions.

"If a dispute occurs during the contracted period, the facts are laid before a private arbitrator paid jointly by the employers and the union. His decision is binding on both parties," he explained.

"Sometimes it is necessary to strike at the end of a contract period," he added dryly.

He has the reputation of regarding strikes as a last-resort weapon not because he loves employers, but because men out of work mean a general loss of prosperity.

This 56-year-old tall, distinguished, well-dressed son of an Irish migrant family earns £22,300 a year.

He is built like a steel mill, has the manners and poise of a diplomat, pilots his own plane, and is clearly mentally and physically tough enough to take on all comers.

He was apprenticed in a Pittsburgh steel mill when he was 15, graduated to machinist's helper before leaving the mills to operate a switchboard, and study dramatic art.

By chance a few months later he became secretary to Philip Murray, leader of the United Steelworkers, and one of America's greatest and "cleanest" labor leaders.

For the next 30 years, until Murray's death in 1952, the two men worked closely together. David McDonald succeeded Murray unopposed as president of United Steelworkers of America.

His aim is simple 100-percent employment that will bring peace and contentment to everyone.

I asked him if he had met any of our militant trade union leaders.

"I haven't met any Communists, if that's what you mean," he replied.

"I don't regard Communists as militants. I regard them as centers of reaction. The whole Marxian idea is bunk. It doesn't work. It is a retrogressive force."

I asked him how he reconciled that with the fact that Russians had clear technical advantages over the United States in the outer space missile field.

He gave me a slow, good-humored smile.

"The Russians have given special privileges and resources to some scientists working on purely military projects. * * *

"Our aim is to take the burden off man's back and put it on his mind," he said.

"Humanity has been doing that ever since it discovered the wheel."

He leaned toward me, blue eyes alight.

"Before the wheel, men had to use four women to drag one tree trunk about," he said in mock seriousness, then laughed delightedly as if at some unimaginably freakish jape.

I doubt whether any woman would drag anything about while Mr. McDonald was around. He's that sort of man.

We got back to the serious business of automation.

"Wholesale automation is no good if it puts men out of jobs," he said.

"Machines don't buy goods. We will deal with automation in a way that won't put men out of work. They may work fewer hours. There's nothing sacred about the 8-hour day, you know.

"However, I estimate that industry will find it cheaper, and more efficient, to give employees several weeks' paid leave, say every 5 years, rather than reduce the number of weekly working hours.

"People who think differently just haven't got their mathematics straight. Employees will also learn to do other jobs, probably working with their brain instead of their hands."

I suggested that automation would call for a higher standard of education for workers' children.

"Surely," replied Mr. McDonald, "automation will raise the general standard of the people.

"However, there is no such thing as a working class in America. Everyone is middle class.

"A man's job is not his whole life. Among his friends he is known more for his prowess in sport or hobbies than because of what his job is."

This week Mr. McDonald visited the B.H.P. steel mill at Port Kembla, and was delighted.

"Wonderful expansion, very stimulating," he said.

Expansion, jobs, prosperity—those are his watchwords. To gain his ends he prefers to cooperate with those who own wealth, but if need be he will declare war, a ruthless war at that.

## 1970–80: A Decade of Reckoning?

EXTENSION OF REMARKS

OF

### HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an address recently delivered by President Clark Kerr, of the University of California, at a convocation at Pomona College. President Kerr reviews imaginatively and perceptively the economic challenge for the United States in the developing nations of the world.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

1970–80: A DECADE OF RECKONING?

(Address by Clark Kerr, Pomona College, Feb. 12, 1959)

It is with particular pleasure that I join you at this convocation today. Speaking as an institutional representative, I can note with pride the close ties which have existed between the University of California and Pomona throughout your long and distinguished history. Many of our best graduate students have received their undergraduate training at Pomona. Some of our faculty members have studied or taught at Pomona, and many others enjoy warm friendships and academic associations with your faculty. One of your trustees, Mr. Arthur J. McFadden, served for many years as a member of our board of regents. The University of California cannot claim a share in the formal education of President Lyon. Misguidedly or otherwise, depending upon one's point of view, he chose to attend other institutions, including Oxford. But we have done our best to appropriate a belated line in his academic biography by awarding him, this last September, the degree of doctor of laws.

Speaking more personally, I can express my own interest in and appreciation of Pomona. As a Swarthmore graduate, I have an abiding respect for the small liberal arts college with high intellectual standards and a well-rounded community life. In fct, I have always considered Pomona as the "Swarthmore of the West"—and I think that compliment might justifiably be returned by referring to Swarthmore as the "Pomona of the East."

Certainly Pomona has greatly enriched the educational resources of California and the Nation, which is the best of reasons to wish you continued growth and success in the years ahead.

It has become a popular cliche to characterize today's college students, whether at small private institutions like yours or large public universities like ours, as apathetic at best and beat at worst. The generalization usually runs to the effect that the present student has limited his goals to an early marriage, a secure job in a large corporation, a gracious home in a gracious suburb, a car in make and model just above that of his immediate subordinate and just below that of his immediate superior, and so forth. The standard characterization of the beat student limits his horizons even more sharply: He is supposed to be concerned only about expresso coffee, sandals, and the fact that life in general; and apparently washing or shaving in particular, is a lousy drag.

Like most generalizations, these are true only of a small segment of the group described. And I believe this minority is very much smaller than is popularly supposed. By far the greater number of the students I know are earnest and sincere and seriously interested in the world they are inheriting. Judging by what I think are the most indicative measures—the courses they take, the reading they do, the interest groups they follow—today's students as a group are far from apathetic and even farther from beat.

And so I should like to talk soberly to you today about an aspect of the world of the near future which will certainly affect the students of today—an aspect about which I know quite a few students here, and far more abroad, are concerned. Indeed, for many students abroad it is the central issue.

Just 8 days ago I returned home from a 6-week trip with four colleagues throughout the Middle and Far East. We participated in conferences and seminars and gave lectures in Athens, Istanbul, Beirut, Damascus, Teheran, Karachi, Delhi, Calcutta, Singapore, Djakarta, Hong Kong, Tokyo, and Osaka. The trip was obviously brief but extremely intensive. Except for actual travel time, we spent almost all of our working hours with professors and students, industry and labor representatives, government and military leaders. The purpose of the trip was to gather current data for part of the final report on a 6-year study of "Labor and Management Problems in Economic Development."

This is the first opportunity I have had to comment formally on some of the impressions we gained on this trip. In doing so, I should like to direct particular attention to their implications for the decade 1970–80, a decade about as far ahead of us today as World War II is now behind us; a 10-year span which may well become a decade of reckoning around the world.

To provide a meaningful framework for my comments, I should point out three important and self-evident facts about the 20th century:

First, it is a century of great transformation. Nation after nation is taking the road from an agricultural or commercial form of society to that of an industrial society. Some nations, including ours, have come far along this road since the turn of the century. Others, particularly in the areas which we have just visited, have scarcely begun. But there are almost no countries in the world today which do not view industrialization as a logical and desirable direction to follow. Certainly it is accurate to say that this is the century of the greatest worldwide transformation in history.

Second, the world at mid-20th century has witnessed the emergence of two great powers, the strongest nations industrially and the most influential politically—the United States and Russia. And these two great world powers hold sharply conflicting theories about how best to organize industrial society. The Soviet approach concentrates all authority in the state as the logical means to assure maximum efficiency and productivity. The American approach relies upon many centers of authority—Federal and local government, corporations, unions, trade associations, and the like—and upon the open labor market and the open consumer market. It obviously provides great freedom for the individual, though perhaps at some potential sacrifice of maximum economic development.

Third, an important segment of the world is observing the differing policies and actions of these two powers with intense interest, watching and still making up its mind about the course of industrialization which will best serve its own purposes.

I do not intend to discuss in any detail the direct competition of the United States and Russia. But I should like to note Russia's potential impact on the world situation by the 1970's if that nation continues its present high rate of investment and of expenditures for education. Comparative figures are difficult to obtain, but the best current estimates indicate that Soviet commitments may be twice as high as ours for both investment and education—and these are two prime sources of progress in modern industrial society.

However, I am more concerned today with the immediate impacts which Russia and particularly our own Nation are making upon the peoples of those nations which are for a little while longer reserving judgment about the course they will follow.

In Calcutta it is common to see a refugee family literally living on a 3-by-5-foot mat spread out on a public sidewalk. This mat, this small rectangle of space, is home. The babies, often unclothed, crawl on the sidewalk beside the destitute mother. The small brothers or sisters beg. Flies settle on the sacred cow standing nearby or on a vendor's cart.

Travelers returning from Peking report that there are no babies living on the sidewalks of that city and almost no flies anywhere in China. These travelers also report that, in a land that has known starvation for centuries, agricultural production has risen quite significantly. India also has known starvation—and still knows it. As yet India's agricultural production is rising very slowly.

This, of course, is only part of the story. Perhaps 2 or even 20 million people have been killed in China by the new regime; in India, none. China knows the rigid discipline of the anthill—blue-clad ants toiling ceaselessly at their allotted tasks. India is a free country.

Millions of people in southeastern Asia are watching and evaluating developments in these two countries. These people prize freedom, but they may consider freedom too great a luxury if the cost is continued destitution and the constant specter of starvation. Should China maintain anything like its present pace of development, and should India make no greater economic progress in the next decade than it has during the 10 years just past, how will the situation look to these millions of deeply interested observers by 1970?

The really largest university in the world today is the University of Calcutta, whose present enrollment numbers well over 100,000 students. Already in 1959, the Communists control large segments of that student body. A recent study revealed 40 percent of the student body to be undernourished. These two facts are not unrelated.

India and China, because of their vast size, population, potential industrial might, and present political orientations, may turn out to be the test cases for the course of industrialization and political organization throughout the still underdeveloped areas of the world. But they are not the only testing grounds. Japan, for example, is currently faced with serious underemployment and is eying the China market as a partial solution to its economic difficulties. Indonesia, struggling with the problems of recent independence, is now living off the capital accumulated under Dutch management—and this capital won't last forever. The Middle East generally is in the throes of political and economic change.

Last year I visited the countries of sub-Sahara Africa. Much of this vast continent is undergoing intensely dramatic change, often from primitive tribal life to modern industrialization in less than one generation, with racial conflict as an added source of tension.

But this is California and the United States in the year 1959, and we enjoy the highest per capita consumption of goods and services any people has ever known; and India and Africa and 1970 seem a long way off. A long way off—and yet increasingly we realize we cannot ignore the years ahead nor those countries even on the other side of the world.

And so I should like to add some suggestions to the many being made today as we continue as a people to explore our new position in the newly emerging world of science and of industry.

To begin with, we should assume that peoples everywhere want desperately to have the better health, the better education, the more material goods, the greater national prestige that industrialization ultimately brings. We should assume that industrialization will be accomplished, under either Communist or non-Communist auspices, and that the latter course is far safer for us and far better for the peoples directly involved. We should also assume that these people themselves prefer industrialization under non-Communist auspices, particularly because they believe the Western approach will enable them to preserve their national independence and culture whereas the Communist approach would destroy both.

Next, we should act on these assumptions and set resolutely about assisting the non-Communist industrialization of the underdeveloped areas of the world. This will require that we devote some real thought and imagination to the development of a long-range program, rather than relying upon the stock answers of the past and the patched-up expediencies of the moment. This program need not be the exclusive responsibility of our Nation acting alone. Sometimes, and for some purposes, we can operate most effectively in concert with other nations, as witness the excellent work of the World Bank in undertaking crucially-important investments which individual nations are not in a position to make. In any case, we urgently need to shape our day-to-day decisions according to a creative overall plan of assistance to underdeveloped nations. You may be sure that Russia has such a long-range plan, and has had for some time now. I would hope that we might develop our program not only as a part of our military strategy but for its own sake and the sake of common humanity.

Such a program should, I believe, include at least the four following parts:

First, we need to adopt a realistic attitude. All the world is not going to be just like the United States, and we should not be too morally indignant about it. There may in fact be instances when it is better for a country to have a temporary military dictator who is honest and progressive, as in Pakistan today, than a democracy which is run by corrupt and bungling politicians. May it not be enough to warrant our support that a regime be peaceful, honest, progressive, and independent?

A country may not have free trade unions in our sense of the word, or free enterprise either. But free trade unions under existing local conditions might well be Communist, and might for their own purposes sabotage all efforts at economic development. And free enterprise in the absence of effective competition can engage in the most outrageous exploitation.

Though we cherish self-government, we should be realistic about both time and place. Degrees of guidance from above may be inevitable in some situations today, and should be both expected and accepted.

Second, we need to make substantial sums of money available for new investments in underdeveloped countries. Many of these nations lack the large amounts of savings or other internal financial resources necessary

to give the process of industrialization its initial momentum. Without external assistance, they may drag along for years at a very low level of industrialization with no hope of achieving the sort of escape velocity necessary to put their economy on a self-expanding basis. Our investments must be extensive enough to help these countries get over that difficult industrialization hump; half a loaf, in this case, is not better than none at all.

Third, we need to accompany these funds with a policy. And I should like to suggest that such a policy might include at least these points:

(a) That a country seeking aid be prepared to accept from the outside or to train from the inside professional management to direct the effective use of the new investments.

(b) That new plants or facilities aided by such outside funds be operated efficiently and and not loaded with excess labor as a method of solving the country's unemployment problems.

(c) That the country itself match outside funds with its own savings—for people must learn that heavy saving and investment are the keys to continued and successful industrialization.

If these points are not met, the chances for successful economic development of a country are negligible despite the willingness of outsiders to make substantial initial investments there.

I might add parenthetically that efficiency, hard work, and some austerity were among the sources of America's prosperity—but that this is seldom apparent to the average citizen abroad. We announce to the world the results rather than the causes of our successful industrialization. The Voice of America too often features the high income and the great leisure in the United States. But what the underdeveloped countries need to launch their economic progress are austerity and long hours. The result is that much of our present American message abroad leaves no residue except frustration. We should be selling less the American way of consuming and more the American way of working. There has never been an easy road to modern industrial society, and we should say so.

Fourth and finally, we need to accompany our policy with personnel. We can do without so many persons oriented toward a social life and a standard of living which would be beyond their reach at home, and moving from country to country at 2-year intervals. What we do need are many more technicians oriented toward accomplishing specific tasks, willing to learn the language and to accept the local standard of living for people of their level of training. And of course we should encourage the training, in their own countries or abroad if necessary, of native technicians for service in their home countries.

The world's pressing need for experts in a host of technical and professional fields presents unusual opportunities for qualified young people today. Those persons who are anxious to combine their regular work with the challenge of pioneering or with the satisfactions of broader service to humanity may find abroad the prospects which are less likely to arise in this country today. Students who plan to devote at least a part of their careers to constructive work abroad will certainly not be motivated by such goals as a gracious house in a gracious suburb. But they will find other rewards, including the knowledge that their individual contributions have counted significantly toward the achievement of a better world.

May I briefly summarize my suggestions: We must assume that all countries desire the benefits which come with modern economic development, that industrialization is inevitable, whether under Communist or non-Communist auspices, and that the latter alternative is obviously to be preferred. Accordingly, we should develop a long-range program, independently or, when appropriate, in concert with other nations, to assist the non-Communist industrialization of underdeveloped countries. Such a program might include four principal points: a realistic attitude about degrees of self-government in these countries, substantial amounts of money for investment, a policy to assure the most productive use of such investments, and the technical personnel to help effectuate this policy.

As I said earlier, millions of people throughout the world are still reserving their commitment to a particular course of industrialization. They are still watching—watching particularly the United States, and generally in a very friendly way. I can assure you of that. They still visualize the United States as the land of opportunity. They would like eventually to emulate our society, and they would much rather accomplish the modernization of their countries with our aid than with the assistance of Russia. They want to know whether our way is applicable to their problems and whether we are prepared to help in a significant way. The eagerness with which they turn to us is sometimes almost overwhelming.

Fortunately for us, we are not quite yet at the point of crisis. There is still some time for the discussion which is going on at many levels of American society, the discussion about how we can best meet this great challenge. But we should be aware that there will not always be time, that many nations during the next few years will be nearing the crossroads where decisions must be made—that we are approaching what may be a decade of momentous reckoning throughout the world.

Our Nation has met many serious challenges well in the past. The problem which confronts us today will require our searching study, our ingenuity, and our most clear-sighted judgment. But I am confident that we will find the means to meet this new challenge in a way which will extend freedom and the meaningful pursuit of happiness to new areas of the world.

## Commendation of Senator McClellan

EXTENSION OF REMARKS
OF
### HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. ERVIN. Mr. President, on March 9, 1959, Miss Chloe Gifford, the president of the General Federation of Women's Clubs, wrote a letter commending the able and distinguished senior Senator from Arkansas [Mr. MCCLELLAN] for his outstanding public services as chairman of the Senate Rackets Committee. I ask unanimous consent that a copy of this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 9, 1959.

Hon. JOHN L. MCCLELLAN,
*U.S. Senate, Washington, D.C.*

DEAR SENATOR MCCLELLAN: I have followed the proceedings of MCCLELLAN'S select committee with great interest and am sure you know that women generally are opposed to corruption in any quarters.

The General Federation of Women's Clubs has through the years supported resolutions urging higher levels of national morality and integrity, and has urged bipartisan action to curb corrupt practices.

I wish to commend you for the thorough and tireless work of this committee and wish you every continued success.

Sincerely yours,

Miss CHLOE GIFFORD,
*President.*

## Resolution of Americans of Lithuanian Descent Opposing Communism

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. WILEY. Mr. President, we recognize that the spread of communism today has imprisoned the lives of about 1 billion people. The hopes—the ideals—the aspirations of these people—indeed, their right to respect as human beings—has been subjugated to, and in far too many cases crushed beneath, the iron hand of Communist dictatorship.

Among our American citizens there are, unfortunately, a great many who have families or friends still behind the Iron Curtain. As loyal, patriotic Americans they abhor—as do all freedom-loving people—the continued enslavement of vast throngs of people under communism.

Today I received a resolution adopted at a meeting of Americans of Lithuanian descent of Kenosha. The words—and the spirit—of the resolution cry out for the liberation of Lithuania and other countries too long under communism. To give my colleagues the benefit of the thinking of the people who met recently at Kenosha to commemorate the 41st anniversary of the Declaration of Independence of Lithuania, I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

The following resolutions are for adoption at a mass meeting of Americans of Lithuanian descent of the city of Kenosha, sponsored by the Lithuanian American Council and held February 22, 1959, in the hall of St. Peter's Parish to commemorate the 41st anniversary of the Declaration of Independence of Lithuania:

"Whereas Lithuania, motherland of millions of American citizens, since 1940 is under the occupation of the Russian Army; and

"Whereas the resistance of the Lithuanian people against the Russian oppressors is continuing constantly; and

"Whereas no peace and stability in the world is possible until the Red army is withdrawn from Eastern Europe: Therefore be it

"*Resolved*, That this meeting of Lithuanian Americans of the city of Kenosha, Wis., calls upon the President and the Government of the United States, urging them to use all the available means for the liberation of Lithuania and other Communist-enslaved countries; and be it further

"*Resolved*, That the U.S. Government, for this purpose work through the United Na-

tions by raising the problem of enslavement of Lithuania and by demanding the withdrawal of Soviet troops from Lithuania as well as from other subjugated European countries."

Rev. M. URBONAVICIUS, M.I.C.,
*President, Kenosha Chapter, American Lithuanian Council.*

## A New Farm Proposal

EXTENSION OF REMARKS
OF
## HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. ENGLE. Mr. President, there is one subject on which almost everybody in and out of Congress is agreed, to wit: We need a new farm program. The distinguished junior Senator from Georgia [Mr. TALMADGE] has introduced a bill, S. 306, to reduce Federal controls on agriculture. A clear and thoughtful memorandum on the subject has been sent to me by a prominent California farm executive, Mr. Fred G. Sherrill, of the J. G. Boswell Co. I ask unanimous consent to have Mr. Sherrill's statement printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

After going over the President's agricultural message of January 29, 1959, Senator Talmadge's bill (S. 306) together with his remarks, and the article, "New Farm Bill," in the Wall Street Journal of February 2, 1959, I have reached the conclusion that no one likes the present farm program. From this it is but a step to the conclusion that a substitute program will in time be worked out and put in effect.

The Wall Street Journal article leads one to feel that such a program may be along the lines of the Talmadge bill. The urgency for something new in this field and the possible nature of it presents us with a most serious challenge. I feel that we must take a hand to influence as far as we can the shaping of this program into a sound course and one under which we can continue to operate and live. I urge your consideration and approval of this action and, in keeping with it, working toward the ideas suggested herein.

Considered from the point of view of cotton alone, there are several things in the Talmadge proposal which I feel should be given further thought and consideration.

A. DOMESTIC PRODUCTION QUOTAS

This seems to follow the farm alone, and I think it should be on the basis of State and from State to county and from county to farm, with a sufficient flexibility so that what is not used on one farm may be available for another within the same county or back within the same State and then from State to State. For a domestic production quota to be effective on a sound basis, there must be a domestic market for each farmer's share of the domestic production quota. The origin of present loan stocks, or possibly the qualities therein, make quite plausible the thought that there is a large amount of cotton being grown in the United States which no one will buy at current support levels, at least, and may not, in fact, be willing to buy at all. Should this be the case, some farmers might be called on to supply for the domestic market a quantity greater than their quotas. Inasmuch as no compensatory payment would be available on such overplus, if any, would we not automatically be tending toward a two-price system in the domestic market? It occurs to me that this could be overcome by continuing the acreage allotment program for a few seasons and making a diminished compensatory payment available on presentation of receipts of sales on any and all cotton. Doing away with the domestic production quota would have other advantages, not the least of which would be savings in administrative expenses. To determine each farmer's share of the domestic consumption and process the papers thereon would, I think, force an enormous increase in the administrative staff of the Department and in the various county agent offices throughout the country.

B. COMPENSATORY PAYMENT TO BE THE AMOUNT BY WHICH PARITY PRICE EXCEEDS MARKET PRICE

To pay this full difference would, I am sure, tend to destroy the farmer's incentive to get the most he could when making a sale. It seems to me if the Department is going to pay this full difference, the farmer would concern himself little as to the sale's price—so little, in fact, almost to the point of giving his cotton away. This difficulty could be overcome in part, at least, by using the average spot market prices for like qualities on the day of sale. A further incentive, I believe, would be to pay only a part of the difference. Under such circumstances, the farmer's revitalized zeal to do his best for himself would come clearer to giving him a 100-percent return on his own efforts and to that extent would lighten the load on the taxpayer.

C. NO PAYMENT IN EXCESS OF $25,000 TO ANY PRODUCER

Somehow, I consider this part of the proposal as a recognition of the two aspects of the problem—sociological, on the one hand, economic on the other. Of course, I could hardly be expected to do other than try to justify large-scale farming if for no other reason than as a livelihood for myself.

Even in a broader field, I think it can be justified as a matter of necessity for the livelihood of the country. Secretary Benson, I am sure uninfluenced by me, has stated recently that less than half the farms of the country produce 90 percent of the salable farm produce. Stated another way, possibly more graphically, maybe even tragically, more than half of the farms of the country produce only 10 percent of the salable food and fiber. I think this raises a very grave question: How safe is it through this means or otherwise to discourage the operations which really feed and clothe us? Certainly, the more than half of the farms against which the limits would not apply are not going to provide food and clothing for this Nation, to say nothing of the rest of the world dependent upon us.

This is a dangerous doctrine and cannot be characterized as anything else. As a matter of fact, we already have handicaps on size imposed and accepted in the income tax laws. Under this proposal a large farm will be further handicapped in the market place, if for not other reason than that its dollar limit may be reached before its domestic production quota has been sold, whereupon such an operator will be competing in the domestic market against cotton produced by farmers who may be utterly uninterested in sales price. Under such a situation it hardly seems equitable to the producer and to the consumer to have an operator whose necessity cannot be gainsaid handicapped just because he is large and for no other reason.

These circumstances add further to the necessity of stimulating every producer's interest in price through some such proposal as "B" above and through some arrangement whereby the compensatory payment would apply to all cotton, as suggested in "A" above or through a combination of the two.

In this respect I would suggest the adjustment or compensatory payment be on the historical production in pounds from the allotted acres, provided the cotton is sold, payment to be limited to 80 percent of the difference between sales price and parity, but not in excess of 6 cents a pound. This would give us a single competitive price at home and abroad. I would anticipate that this would increase quickly the consumption of American cotton and to the extent that it did, I would suggest that the acreage allotment might be increased to cover one-quarter of the increased consumption and CCC stocks used to cover three-quarters of the increased consumption. Should the point be reached when CCC stocks are inadequate, allotments would be increased accordingly and, to that extent, the percentage payment and the limit in cents per pound would be decreased year by year until extinguished entirely.

## The Senior Class From the University High School of Baton Rouge, La.

EXTENSION OF REMARKS
OF
## HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. LONG. Mr. President, it was my pleasure on March 10 to have as my guests in the Senate Chamber the senior class from University High School of Baton Rouge, La. Every year the senior class of this fine institution visits our Nation's Capitol as part of their general educational program.

I am particularly glad to see this group because University High School is my alma mater, and my two daughters are presently students there. The chaperons and my two girls have informed me that the academic standards are even higher now then they were when I was a student. Let me say that I was under the impression that the standards were very high at that time.

This is the largest senior class in the history of this school. University High is part of the Louisiana State University College of Education and these students have the benefit of studying under some of the finest teachers in the State of Louisiana.

It was a real privilege for me to meet with this group.

I ask unanimous consent to have printed in the Appendix of the RECORD the names of the 51 students and 5 chaperons from University High School in Baton Rouge.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Chaperons: Mr. R. F. Crawford, Mrs. Wiley A. Dial, Mrs. M. E. Kopfler, Mrs. Charles Parker, Mr. G. B. Thomas.

Students: W. D. Atkins, Karen Berg, Jingle Cook, Marilyn Cowart, Robert Crawford, Wiley Dial, Lilliam Dicks, Millard Dixon, Hilary Duchein, Sally Dupree, Judy Fuller, Brenda Frazar, Peggy Godfrey, Conway Gaston, Kay Griffon, Judy Guy, Dolores Hackett,

Eddie Hanchey, Linda Harris, Nancy Harris, Carmelite Hebert, Ann Hickman, Dian Hitt, Laura Holloway, John Hoppe, Arthur Keller, Albert Kirby, Mike Kopfler, Frances McGuffey, Anne Menville, Terry Miller, Mary Ellen Monroe, Tonsie Moreau, Lynda Moss, Lee Nettles, Cary Frank Owen, Charlotte Parham, Peggy Perkins, Jerry Perrine, Clint Pierson, Jim Pisa, Robert Russell, Malcolm Shuman, Margaret Stamples, Sarah Tessier, John Thomas, Linda Vennard, Tommy Watts, Jayne Whitley, Horace Wilkinson, Jack Shortess.

## Marion H. Hedges

EXTENSION OF REMARKS
OF
### HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. MURRAY. Mr. President, in January, Mr. Marion H. Hedges, who was known to many of us in Congress as an outstanding spokesman for labor, passed away at his home in Takoma Park, Md. Mr. Hedges was best known as the father of the Tennessee Valley Authority's contract with organized labor—the first contract ever negotiated between a Federal agency and labor unions. The contract has brought about not only harmonious, but extremely cooperative relationships, between the agency and its workers.

Mr. Hedges' passing is also mourned in the field of journalism. He was a founder of the professional journalism fraternity, Sigma Delta Chi. I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the SDX News for March 1959, and an editorial published in the Quill for March 1959, relating to Mr. Hedges.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the SDX News, March 1959]

FOUNDER MARION HEDGES AND PAST PRESIDENT BOB TARR DIE

Sigma Delta Chi lost a true friend and willing worker as Past National President Robert B. Tarr died in his sleep November 15 while attending an Associated Press managing editors convention at French Lick, Ind.

Journalism was an early love for Bob Tarr and he joined the staff of the Greensburg Review while attending high school near his birthplace in Tarrs Station, Pa. The Michican Daily carried his byline while he worked toward his degree in journalism from the University of Michigan. Following his graduation in 1924, he served with the Burroughs Corp. and the Detroit News before joining the Pontiac Press as a reporter in 1925. Here he rose to suburban editor and then city editor before being named managing editor in 1951.

The silver-haired, soft-spoken newsman truly typified the ideals of SDX and was a source of constant aid and inspiration to scores of young reporters.

Prior to serving as national SDX president in 1929, Mr. Tarr was a member of the executive council and SDX secretary. He also served as president of the Detroit Professional Chapter and was believed to have attended more national conventions than any other member.

He was a member of the National Press Club, a past president of both the Pontiac Lions Club and the Oakland County Torch Club, and a member of the first city editor's seminar of the American Press Institute at Columbia University in 1947.

The 57-year-old newsman is survived by his wife, Florence; and two sons, David, a journalism senior at the University of Michigan, and James L., of Champaign, Ill.

Marion H. Hedges, retired labor consultant and a founder of Sigma Delta Chi, professional journalism fraternity, died January 6 of a heart attack in Takoma Park, Md. He was 70 years old.

Before his retirement in 1954, Mr. Hedges had served as labor adviser to various Government agencies and as research director of the International Brotherhood of Electrical Workers.

Mr. Hedges was professor of English at Beloit College from 1913 to 1920 and a reporter for the old Minneapolis Star from 1920 to 1924. He participated in the founding of Sigma Delta Chi in 1909 while a student at DePauw University.

Mr. Hedges, who graduated from DePauw in 1910 and later received a master's degree from Harvard, began his association with the International Brotherhood of Electrical Workers in 1924.

He had served as secretary of the council on industrial relations for the electrical construction industry and also of its national joint committee on apprenticeship standards.

Formerly a special consultant on labor relations to the Tennessee Valley Authority, Mr. Hedges was a U.S. delegate to several international labor conferences in Geneva and a technical adviser to the World Textile Conference held in Washington in 1937.

In World War I Mr. Hedges was a member of the Planning Committee of the War Production Board. He had been a consultant to the Federal Social Security Board, chairman of the Federal Committee on Apprenticeship for the Construction Industry, and vice chairman and a founder of the National Economic and Social Planning Association.

Mr. Hedges was the author of several books, including "Iron City," "Dan Minturn," and "A Strikeless Industry."

Honorary pallbearers for Sigma Delta Chi were Luther Huston, Sol Taishoff, Herbert Little, Edward L. Keenan, John Herling, and G. Douglas Stengel.

[From the Quill, March 1959]

MARION H. HEDGES

With the death in January of Marion Hawthorne Hedges, only five of the founders of Sigma Delta Chi remain to help celebrate the fraternity's golden anniversary. There have been many tributes to Mr. Hedges' long and dedicated service to the ideals of Sigma Delta Chi. The following excerpts from the labor column of John Herling, of the Scripps-Howard Newspapers, express the respect and affection he held in his profession:

"Marion Hawthorne Hedges lived the life of a triumphant egghead. He died last week at 70, a man of vast talent and intense dedication to social justice who gave a good part of his creative life to the labor movement.

"As a writing craftsman, he helped organize the Sigma Delta Chi fraternity to remind newspapermen that their calling demanded the faithful marriage of the search for truth and the exercise of skill. He aimed to raise the standards of labor-management relations in labor, business, and the public press.

"In recent years Mr. Hedges devoted considerable time to international labor relations. He was a U.S. labor adviser to the International Labor Organization, the ECA, and other predecessor agencies of the International Cooperation Administration. Since his retirement, he had been busily engaged in mulling over the lessons of his career. If his work is in any shape to be published, perhaps his NPA associates might take the initiative. A quarter of a century ago, Mr. Hedges was already known as the author of two novels, 'Iron City' and 'Dan Minturn.'"

## Labor-Management Reform Legislation

EXTENSION OF REMARKS
OF
### HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials dealing with pending labor-management reform legislation.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Lynchburg (Va.) News, Jan. 26, 1959]

THE LABOR BILL

Senator JOHN F. KENNEDY is losing no time in offering Congress his bill to prevent labor racketeering of the kind that has been revealed in abundance in the Senate investigations. This is, with a few modifications, the same bill that Senators KENNEDY and IVES introduced at the end of the last session of Congress, which was passed by a practically unanimous vote of the Senate, but then died in the House. Senator KENNEDY, as a member of the investigating committee, is in a good position to know the conditions he is trying to regulate in the proposed legislation.

He is quite frank about it. He says the bill, if enacted, will virtually put Mr. Hoffa and his associates out of business. Few who have followed the proceedings of the committee even partially would regret the removal of the arrogant and self-assured Mr. Hoffa from the management of the Teamsters Union. But it is more than Mr. Hoffa that is at stake. The very integrity of American labor is threatened by the machinations of a few powerful men who assure themselves of the support of the union by posing as martyrs persecuted by the law. The present bill undertakes to correct that misrepresentation and the conditions that make it possible to restore to labor the control of its own business.

As to some of the particulars, the provisions of the bill are directed against false financial reports, the misuse of union funds, the rigging of elections to keep the officers in power, against shakedown picketing, and the solicitation or payment of extortionate fees for unloading cargo from interstate carriers. The bill will also make it impossible for union management to employ or sanction the employment of former convicts in responsible positions, a practice which has shed ill repute on some of our most powerful unions, such as the Teamsters and the Longshoremen. It is utterly unjustiable and inconsistent with honest leadership.

Whom the gods will destroy they first make mad. Mr. Hoffa has not only resisted the measure intended to bring his feet back on the paths of right and justice, he has reached out to incorporate in his unregenerated domain other vast segments of the Nation's honest working force. It is about time that he is spoken to by a superior and authoritative voice.

[From the Christian Science Monitor, Jan. 31, 1959]

PANEL ON TAFT-HARTLEY

The Kennedy labor bill and the one to be introduced on behalf of the administration are both weighted heavily toward protecting union welfare funds and eliminating racketeers and racketeering. Both measures include, however, some revisions of the Taft-Hartley Act. Which means that both lap over into the more delicate balances of labor-management relations.

It is said that Senator JOHN F. KENNEDY added these few items in his bill to win organized labor's support for some of its less palatable provisions. It can be reasonably deduced that the administration also broadened the scope of its bill to appeal to organized industry. Both additions have been made in apparent disregard of the existence of an extragovernmental, nonpartisan panel named to study and evaluate Taft-Hartley in the light of its 12 years of operation.

Who are these men? All have legal backgrounds. Five have been chosen to represent the public, and two each labor and management. A number have had especial experience in labor-management relations. For instance: David L. Cole, former director of the Federal Mediation and Conciliation Service; Archibald Cox, former chairman of the Wage Stabilization Board; W. Willard Wirtz, twice head of other wage stabilization boards; Russell Smith, member of atomic energy labor-management panel; Guy Farmer and Gerard Reilly, both former members of the National Labor Relations Board; Arthur J. Goldberg, special counsel of the AFL–CIO; and Louis Sherman, general counsel of the Electrical Workers.

Unhappily, though perhaps inescapably, these labor bills promise to be drawn deep into partisan controversy. The report of such an experienced panel—expected by spring—should help the public see through the dust clouds. And perhaps Congress will pay some heed.

---

[From the Birmingham (Ala.) News, Jan. 21, 1959]

LET'S HAVE ACTION ON RACKETEERING

Senator JOHN KENNEDY has another labor-management reform bill promptly ready for this session of Congress. The Nation earnestly hopes that strong and effective action will be forthcoming in this field.

"This is primarily a labor-management reform bill, dealing with problems of dishonest racketeering," Senator KENNEDY says. "It is not a bill on industrial relations, dealing with the problems of collective bargaining and economic power."

He urges that the issue on reform not be confused by efforts on the part of Senators to attach to his measure proposals for changing the Taft-Hartley law.

Last year the Senate passed, 88 to 1, a bill similar to the new legislation Senator KENNEDY is proposing. KENNEDY and former Senator Irvin Ives of New York sponsored the measure. The legislation died in the House.

Senator KENNEDY says his new bill is aimed specifically at practices of such figures as Teamster President James R. Hoffa. It would provide for setting up an election democracy code for all unions, public financial accounting by unions, criminal penalties for mishandling union funds or books and changes in Taft-Hartley sections, objected to by both labor and management.

A prompt start should be vigorously pushed to get results in this field. The Nation as a whole, the vast majority both in unions and in management, we are confident, strongly call for adequate measures against evils that deeply assail the public interest and the best interest of employers and employees.

Legislative proposals in this field also are expected from the administration and Senator JOHN L. MCCLELLAN of Arkansas, chairman of the Rackets Committee.

Let's not fail to get thorough and effective action this time.

---

[From the Akron (Ohio) Beacon Journal, Jan. 23, 1959]

GOLDWATER DISSATISFIED—LET'S NOT SEE ANOTHER LABOR REFORM FIASCO

It is a well-known fact of legislative life that bills usually are greatly changed between the time of their introduction and final passage.

Sometimes, only the original title remains. Extensive alterations most often occur in committee, although amendments sometimes are adopted on the floor. In Congress, this happens more often in the Senate than in the House.

Thus, anything can happen to the labor reform bill which Senator KENNEDY introduced this week.

The criticisms immediately leveled at it by Senator GOLDWATER forecast a legislative battle which may center more around strategy than substance.

The Arizona Senator pooh-poohed the Kennedy proposal and asked for something a lot tougher.

Certain of the proposals made by GOLDWATER—especially a tightening of the Taft-Hartley boycott restrictions—certainly are desirable.

But it would be a great mistake, in our opinion, to insist on wrapping up all the 1959 labor legislation in one package and to say: "All or nothing."

The net result probably would be nothing as was the case last year when those who wanted a tougher law succeeded in defeating the Kennedy-Ives bill in the House. It had been passed 88–1 in the Senate.

As a result, there have been months of unnecessary delay in imposing curbs on labor racketeers of the type of Jimmy Hoffa.

KENNEDY's new bill is much like last year's. Perhaps it should be made stronger and more comprehensive. If such is the will of Congress, this can be done in the legislative process.

The aim, of course, is to correct the glaring exploitation of union members and the public which has been revealed by the McClellan Committee. Most responsible union leaders agree on the need for such legislation.

Whether called the Kennedy bill or something else, a law to stamp out labor racketeering would be assured of overwhelming support in both Houses.

Some of the proposed revisions of the Taft-Hartley law, as desired by GOLDWATER and others, are much more controversial. Frankly, their chances of passage are not as good.

It would be a disservice to the public, we believe, to repeat last year's fiasco when the Kennedy-Ives bill was defeated because certain people wanted something more.

Let each phase of labor legislation stand on its own feet.

---

[From the Waterbury (Conn.) Republican, Jan. 24, 1959]

TRY, TRY AGAIN

There is a new labor-management reform bill in the legislative mill at Washington, D.C.—the Kennedy-Ervin bill. It appears to be a clearer and stronger version of the Kennedy-Ives bill, which unfortunately died a year ago after passing the Senate 88–1.

Senator JOHN F. KENNEDY, Democrat, of Massachusetts, was the author, in cooperation with former Senator Irving Ives, Republican, of New York, of the bill which received such solid Senate support last year. Unfortunately, despite the overwhelming backing of the upper House of Congress, the measure was the subject of what might well be considered fantastic distortion by extremists on both sides. Despite its excellent start, it died on the vine under the barrage of propaganda.

In presenting the new measure to the Senate on January 20, Senator KENNEDY called it a bipartisan measure on a nonpartisan subject. A reading of the measure seems to support that thesis.

What the gentleman from Massachusetts hopes to accomplish by this legislation is to protect workers, employers, honest unions, and the general public from the unscrupulous or dictatorial tactics of the labor racketeers.

Senator KENNEDY makes an excellent point when he cites the fact that this new measure is "primarily a labor-management reform bill, dealing with the problems of dishonest labor racketeering—it is not a bill on industrial relations, dealing with the problems of collective bargaining and economic power."

There can hardly be any question that these are two different fields—and certainly no question that something must be done to eliminate labor racketeering for the general economic welfare of the country.

The Kennedy-Ervin bill contains 19 specifically and carefully outlined key provisions, which should provide the basic weapons against labor racketeering of the kind typified by some of the operations of the Teamsters Union.

Without going into detail, it is readily apparent that the new legislation is strong legislation which is sadly needed. It will, we are sure, be subject to all sorts of emotional arguments, political perils, and outside pressures. Senator KENNEDY seems convinced, however, that the measure, without any great alterations, can and will be passed this session. We hope he is not overly optimistic, and we especially hope that Connecticut's Senators and Representatives will get behind the gentleman from the Bay State.

---

[From the Washington Evening Star, Jan. 27, 1959]

OPENING THE LABOR BATTLE

A legislative battle that probably will be fought on many fronts and through much of the present session of Congress has been touched off by introduction of a new labor-management reform bill by Senator KENNEDY, Massachusetts Democrat. The measure is dsignated by its author as a successor to the Kennedy-Ives bill that was passed, 88 to 1, by the Senate last year, but was rejected by the House.

In brief, the new bill would require disclosure of union financial data and conflict-of-interest transactions involving union officials, prohibit loans by employers or unions to union officers, require secret ballot elections at specified intervals and with provisions for rank-and-file nominations, and provide criminal penalties for a wide range of violations. It drops from last year's version a provision for non-Communist oaths by both union officers and employers, and modifies an employer-opposed section covering company communications—newsletters and educational programs, for example—with employees. Many of the provisions coincide with recommendations of the McClellan rackets committee, and Mr. KENNEDY has contended that enactment of his measure would virtually put Mr. Hoffa (Teamster president) and his associates out of business.

Mr. KENNEDY has attempted in several ways to anticipate criticism of his legislation. He has appealed, first of all, for passage of this measure as only a first step—directed at dishonest racketeering, not at such controversial issues as boycotts, blackmail picketing and right-to-work laws which become involved in amendment of the Taft-Hartley Act. All of these, he says, "should definitely be considered by the Congress this year"—but in separate legislation. It is this separation, however, which may amount to a boobytrap in the Kennedy bill—with the administration expected to press for a more inclusive package measure. In addition, there have been indications that Chairman MCCLELLAN, who supported the Kennedy-Ives version last year, may introduce a stronger antiracketeering bill of his own this winter.

There may indeed be honest differences of opinion about the most effective strategy in improving labor-management legislation. Mr. KENNEDY has made his own opinion

clear and has offered a starting point, at least. The administration should send its own proposals along as soon as possible. Others should do likewise and let the labor committees get down to the essential business of hearings and drafting something for action. There can be little difference of opinion about the need for action.

---

[From the Nashville (Tenn.) Tennessean, Jan. 23, 1959]

HOFFA FIRST TARGET, THEN FIELD IS OPEN

First things first is the motto of Senator JOHN F. KENNEDY in reintroducing last year's labor reform bill which is chiefly designed to get rid of Teamster boss James R. Hoffa.

This is the same measure that passed the Senate last year, only to bog down in the House in the face of charges that it was a device to avoid passing adequate labor-reform legislation. Republicans and Southern Democrats who set up this roadblock are now told that they will have a chance later on to deal with the added reforms. Hoffaism is only the starting place.

The beauty about this new legislation is that it not only would virtually put Mr. Hoffa and his associates out of business, as Mr. KENNEDY reminds, but would do the same to any others who trod the same path.

On this occasion the issue is not one of industrial relations, but an attack on the outstanding evils as revealed before the McClellan committee—evils dealing with abuse of union finances, destruction of the secret ballot among members, and relief from worker domination by ex-convicts and thugs. Criminal penalties would be set up for stealing union funds, making false reports, keeping crooked books, or destroying records.

By concentrating his initial effort on these ends, Mr. KENNEDY has simplified the situation and at the same time made it difficult for others to complain that the measure does not go far enough.

---

[From the Atlanta (Ga.) Journal, Jan. 21, 1959]

BETWEEN THE EXTREMES

Senator JOHN F. KENNEDY has introduced a labor reform bill which he says would virtually put Teamster President James R. Hoffa out of business.

The fair-haired lad from Massachusetts thus jumped the gun on the administration, which is expected to offer a somewhat stiffer proposal in the near future.

The Kennedy bill sets up safeguards for union funds, requires democratic procedures in union affairs and bars convicted criminals from holding union office.

The measure probably will have the blessing of the great majority of organized labor, which for some time has supported remedial legislation to rid itself of the stigma imposed by Hoffa-type operations.

Last year a down-the-middle labor reform bill succumbed to a weird combination of administration backtracking and pressure from business interests and some labor groups.

The prospect for labor legislation is pretty good this year. For one thing, some of the emotional issues which had clouded the scene, such as the right-to-work controversy, have simmered down.

The country doesn't need punitive labor legislation. Neither is there any call for a do-nothing bill. The Kennedy proposal may be the basis for action between these extremes.

---

[From the St. Louis (Mo.) Post-Dispatch, Jan. 18, 1959]

CONGRESS TURNS TO EXPERTS

The Senate Labor Committee is undertaking a promising new approach to revision of the Taft-Hartley labor law. It will create a commission of nine experts outside of government to recommend alterations in the law which has not been altered, despite repeated efforts, since it was passed in 1947.

A panel of nine lawyers—five representing the public and four divided between labor and management representatives—should be able to take a more objective look at Taft-Hartley than Congress or labor-management partisans have been able to do. That is the hope of Senator KENNEDY of Massachusetts, who sponsored this new approach. In the last session, Senator KENNEDY introduced Taft-Hartley amendments which the Senate accepted but the House rejected.

That is the closest anyone, including the late Senator Taft himself, has come to changing Taft-Hartley, but it was not close enough. The Kennedy-Ives bill was grounded in a partisan dispute.

To avoid politics, and to avoid the usual fixed and opposed positions of labor and industry lobbies, Congress needs expert and outside advice. The new commission will be asked to report by spring. If it does, and can agree, this session could become the first to improve the Nation's basic labor code.

---

## Forest Service's Fine California Record

EXTENSION OF REMARKS

OF

### HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Report of Work and Progress," which appeared in the Bakersfield Californian on Monday, February 23, 1959.

This editorial is very complimentary to the U.S. Forest Service and to its regional forester, Mr. C. A. Connaughton. This type of public relations to the service of the Federal agency is a welcomed relief from the usual complaints about Federal agencies which come to a Senator's office. As a civil servant, Mr. Connaughton is to be commended for his capable administration of the Forest Service in California. He has shown outstanding leadership.

In addition, I should like to call to the Senate's attention that Mr. Walter Kane, publisher of the Bakersfield Californian, has pursued a progressive and laudatory policy regarding the conservation of the State's resources. He has been alert and vigilant in the protection of the resources needed for the future growth of the State and the Nation. The force of his editorial opinion has helped bring about better understanding of the need for true conservation of the State's natural resources.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REPORT OF WORK AND PROGRESS

Comprising practically all of the natural resource areas of California and most of the recreation lands, region 5 of the U.S. Forest Service is an organization that is important in the conservation and development of our resources, the preservation and development of the increasingly needed recreation areas and the progress of our entire State economy. A report on its year's work is a document of vast interest to those who are aware of the part played by the Forest Service in the life of Californians, a part that is not generally recognized.

Regional Forester Charles A. Connaughton, who heads this division of the U.S. Forest Service is a man of keen perception, wide experience in forest management and exceptionally aware of the problems of California. His leadership has resulted in a definite increase in the accomplishments of the Service in California; his influence is felt in all areas of the Forest Service units in the State.

In his annual report for 1958, just submitted, Mr. Connaughton notes several achievements of particular interest that indicates the tremendous strides being made by the Service in its work on behalf of the people of the West. Good progress is being made on Operation Outdoors, a comprehensive program of the development of more recreation sites and facilities on the national forests and the rehabilitation of those suffering from overuse. An indication of the use given California national forests may be found in the fact that exclusive of campers and weekend outdoor recreation seekers, the forests were hosts to more than 770,000 hunters and 1,860,000 fishermen during 1958. The number increases each year.

Mr. Connaughton notes that a complete inventory and study of the recreational resources of the national forests were begun in 1958 and the information will be used to integrate properly the development of land for recreation use with the development and use of other forest resources in the multiple use program.

This study will prove of benefit to the new State project calling for a wide study of outdoor recreation resources. Significant progress has been made in both new construction and rehabilitation of recreation sites in spite of vastly increased use and a heavier burden of maintenance, cleanup, and caretaker services.

An improvement in timber stand and cutting operations is reported by Regional Forester Connaughton, who notes that timber stand improvement work was done on 50,000 acres in timber sale areas which betters the rate of growth and quality of lumber being grown. Timber management plans for eight areas involving more than 1 million acres have been prepared. The timber cut for the fiscal year was 946,067,000 board feet valued at $11,811,879.

Range management came in for considerable attention also with new range analysis plans being completed in many areas and improving the operation of allotment capacities and other phases of the work. More range improvement, reseeding and other methods to increase livestock use have been undertaken successfully.

Wildlife management, important in connection with the heavy use of the national forests in California by hunters and fishermen, made good progress during the year with excellent cooperation reported by Regional Forester Connaughton from the State department of fish and game and the U.S. Fish and Wildlife Service.

Many awards for superior service were won by Forest Service personnel during 1958, which indicates an exceptionally high degree of morale in the ranks of region 5. Improvement in efficiency and economy of operation result from this development.

Good progress is reported in cooperation with State and private forestry during the year, and improved fire control, pest control and other work has been noted, with the utilization of new methods and equipment.

Altogether the report indicates that region 5 of the Forest Service, the California region, is alert and active in fulfilling its assignments and developing new ways to serve the public better.

## H.R. 4001, Townsend Plan Amendments to the Social Security Act

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. GUBSER. Mr. Speaker, I have wholeheartedly joined with Representative BLATNIK, of Minnesota, in sponsoring legislation embodying the Townsend plan. My bill, H.R. 4001, is identical with H.R. 4000, introduced by Representative BLATNIK. It has been my pleasure to sponsor this legislation in past Congresses.

My reason for promoting this legislation is that, in my view, it is conservative legislation. It is conservative, in the first place, because it involves the smallest possible cost of administration while it expends the greatest possible proportion of the revenue it raises for the purposes of paying social security benefits to the American people. This principle of the Townsend plan—holding to a minimum the part of the money the Government spends and uses, while expending the maximum amount on the purposes of the legislation itself—is of the essence of conservatism.

It embodies the philosophy of government expressed by our great President when he said:

> In all those things which deal with the people be liberal, be human. In all those things which deal with the people's money or their economy, or their form of government, be conservative.

In the second place, this legislation will amend title II of the Social Security Act so that the program under that title will be on a solid and reliably pay-as-you-go financial basis. Pay-as-you-go governmental operation lies at the very roots of conservatism. It is absolutely essential to balanced budgets. The Townsend plan amendments to title II will permanently balance the budget to the extent of the part of the budget concerned with the greatest part of our national social security system.

Furthermore, the amendments to title II proposed in this legislation will contribute tremendously to balancing the budgets of our State and local governments. It recognizes that the problem of old-age retirement, disability insurance, and the protection of widows having the care of minor children—the great areas to which title II is addressed—is an out-and-out national problem. My bill is calculated effectively to solve the problem of these needs without the aid of State programs, such as the present program under title II requires to supplement its inadequate benefits. These State programs, under the public-assistance titles of our Social Security Act, dealing with what is properly a national problem, result in ridiculous disparities, discriminations, and injustices. The result of my legislation will be to end this impractical situation, relieving State and local governments of the financial burden of carrying such misplaced and unworkable programs, thereby offsetting greatly improved opportunities to balance their respective budgets.

In respect to these foregoing points, the present system under title II—namely, old-age and survivors and disability insurance—with its collection of generally far more money from the current economy than benefits currently require—and the use by Government for purposes other than social security benefits much of the money collected in the name of that purpose—this present program violates every principle of sound governmental finance and of just apportionment of the taxload.

The Townsend program for social security provides for the perpetual gearing of benefits to changes in the cost of living and in prevailing standards of living. When changes in either standards or costs occur, this program provides for automatic matching of benefits to such changes, up or down, as the case may be. This feature of the program I hold to be preeminently conservative, because it results from careful analysis of the real problem of social security and the evolving of provisions permanently and effectively to meet it—rather than purely expedient makeshifts, patchwork, temporary provisions which are out of date almost before they can be put into effect.

Mr. Speaker, as coauthor of the Townsend bill, I do not contend that it can never be improved upon. However, I am certainly sure that the Committee on Ways and Means, upon full and objective study of it, will find that it affords them the ways and means for giving the American people and our national economy an incomparably more efficient, effective and beneficial system under title II of the Social Security Act than is afforded by the present program. I am equally certain that, after thorough committee studies and hearing and after full and conscientious debate in the House, it will become obvious to all that these amendments to title II will provide not only benefits affording our aged and other proper groups of people benefits reflecting up to date, just standards of living—but, also, an effective, permanent and, in the true sense, a conservative solution of our national social security problem.

Mr. Speaker, under leave to extend my remarks, I include in the RECORD, with this statement, two statistical compilations of great significance. The first shows the rank discriminations, disparities and almost unbelievable violation of anything remotely resembling standards which the present programs of public assistance—supplementing title II—display. The second item sets forth the facts as to the utter failure of our efforts to date to make any progress towards solution of the social security problem under the means afforded by the present system of old age, survivors, and disability insurance:

*Comparative statistics—Old-age and survivors insurance, old-age assistance, for the United States, by States and Territories; and per capita income by States, 1957*

| Area | 1957 per capita income | OAA average monthly benefits, December 1957 | | OASI average monthly benefits to aged beneficiaries, December 1957 | | | | |
|---|---|---|---|---|---|---|---|---|
| | | Average benefit | Number per thousand 65 years and over | Primary benefit | Wife and husband | Widow and widower | Parents | Number per thousand 65 years and over |
| United States | $2,027 | $60.68 | 165 | $64.58 | $34.37 | $51.08 | $51.87 | 550 |

Our elderly population is increasing over three times as rapidly as the rest of our adult population. The income-share of the aged group remains static. Since the whole group receives the same total share of income, the economic position of the average member of the group continuously declines.

The part of the income of the aged which is made up of social security benefits increased from 13.9 percent in 1947 to 36.8 percent in 1957. Conversely, the part of their income made up from other resources declined from about 86 percent in 1947 to about 63 percent in 1957.[1] The ability of most Americans to finance their old age through other means than our Federal social security law is shrinking fast and steadily. Our present social security program has failed, not only to better the economic position of our people in old age, but it has even failed to compensate for the constantly shrinking ability of the people otherwise to provide for their old age. These are the facts.

Drastic action on social security legislation must be taken.

## Antibombing Legislation

### EXTENSION OF REMARKS OF HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a series of editorials which comment on the antibombing bill, which the Senator from North Carolina [Mr. ERVIN] and I have introduced.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

ERVIN'S SPONSORSHIP OF ANTIBOMBING BILL

[From the Durham (N.C.) Herald, Dec. 22, 1958]

North Carolinians should strongly endorse the decision of Senator ERVIN to cosponsor, with Senator KENNEDY of Massachusetts, an antibombing bill. On the part of Senator ERVIN, it is a demonstration of the kind of leadership the South needs in these troubled times. For the South abroad is all too often regarded as a region of lawlessness and violence, a section where respect for law and human values is lightly held. The conduct and the speech of extremists tend to confirm this unfavorable impression.

For one of the sponsors of a Federal antibombing bill to be a southerner speaks for the inherent and the predominant decency of this section; for him to be representative of the State in which more than 2 dozen reports of bombs planted in schools have been received in recent weeks is evidence that the body of public opinion condemns such irresponsible and reckless conduct.

The bombing of schools and synagogues shows the need of stringent legislation against this form of violence. The numer-

ous reports of bombs in schools reveal how lightly a few regard it, and how they have made a joke of what is in reality most serious. The safety of human lives is involved; that is something about which there ought to be no horseplay.

Governor Hodges has spoken out firmly against this sort of conduct and has promised to use the power of the State to prevent it. North Carolina courts have in the penalties they have imposed on those perpetrating bomb hoaxes shown that they will not wink at this threat to public safety. Senator ERVIN'S role as cosponsor of a Federal antibombing measure fits into the picture. It is one more expression from responsible leadership that bombing and false report of bombing will not be lightly regarded here.

There is another aspect to Senator ERVIN'S decision. It is a move to help bridge the widening gap in the Democratic Party in Congress. Just as his endorsement of the right of every citizen to vote helped him defeat the dangerous feature of the civil rights bill which would have denied jury trial to those accused of violating laws in this field, so his sponsorship of an antibombing bill may contribute to the defeat of bills which will be punitive and vindictive toward the South. Not only, then, is he sponsoring needed legislation; he is playing a conciliatory part in a drama of division.

---

[From the Sayre (Pa.) Times, Dec. 29, 1958]

OTHER EDITOR'S VIEWS: BOMB LAW PLAN

Senators KENNEDY and ERVIN are obviously appropriate as the sponsors of a proposed Federal antibombing bill. KENNEDY, of Massachusetts, is one of the northern liberals, though he has not pressed hard in the civil-rights area. ERVIN, a North Carolinian, has southern race views, but is also a former judge and a man of solid responsibility. Both men understand that the present wave of bombings in the wake of the desegregation decisions represents something not previously experienced. Their proposal of Federal legislation is quite natural.

But some careful factual study will be needed before Congress makes up its mind to go along with the proposal. Is a new Federal law in fact needed to enhance the activities of the Federal Bureau of Investigation in this kind of crime? It goes without saying that wide scope for FBI entry into the bombing investigations already exists. Soon after the first incidents were reported, the Justice Department began field meetings between FBI agents and State and city police throughout the country. Well-laid plans for collaboration doubtless emerge from these meetings.

The Kennedy-Ervin proposal is careful to reserve full power to the local agencies in any new intervention of the Federal police. But it is when the term "Federal police" is used that thoughtful Congressmen will prick up their ears. We have gone a long way already toward expanding FBI powers in the country at large. So long as those powers are exerted in Federal matters, the pattern of our dual federalism is intact. It begins to cloud up a little whenever the Federal officers move into matters primarily for the local police.

Obviously mere jurisdictional and theoretical considerations cannot be allowed to slow the drive against the bombers. But Congress will be expected to assure itself that the bombings take on Federal aspects not covered by present statutes before it widens the intervention of the Federal security officers.

BALTIMORE SUN.

---

[From the Winston-Salem (N.C.) Journal, Dec. 17, 1958]

FEDERAL TEETH

The cosponsorship by Senators ERVIN and KENNEDY of a Federal antibombing bill reflects the growing concern of national legislators over the bombings and bombing threats which have struck at homes, schools, and churches in the South and elsewhere. The proposed law would not encroach upon the law enforcement rights of the States, but would assure prompt investigation by the FBI in many actual bombing cases.

The Ervin-Kennedy measure is a modification of a similiar bill introduced by Senator KENNEDY in the last Congress which outlawed bombings of churches, schools, synagogues, and community centers. The new bill broadens the coverage to include the bombing of business establishments. It adds a section making it a Federal offense for one who uses explosives within a State to flee that State for the purpose of avoiding arrest or prosecution. It also provides that local authorities shall not be deprived of any jurisdiction by virtue of this legislation. The measure makes dynamiting a school, church, business, or community building a Federal crime. The dynamite must be brought over State lines. But the bill brings the FBI into such cases by making a presumption that the explosives used in any bombing have been transported in interstate commerce.

This bill, or perhaps one providing even stiffer penalties, should be enacted by the next Congress. In the meanwhile, State legislatures should enact laws providing severe punishment for bombers and the perpetrators of false bomb reports. Merely enacting new laws will not in itself end the bombings and the scares. But some would-be bombers and hoaxers would be impressed by the penalties.

Close local and State cooperation with the FBI in handling these cases undoubtedly would expedite the detection and arrest of many of the bomb criminals. The chief virtue of the Ervin-Kennedy bill is that it would throw the expert investigative resources of the FBI into these cases at the beginning. The value of this has been well demonstrated in the Atlanta bombing case, and in kidnapings and other offenses involving the violation of Federal statutes.

---

[From the Hartford (Conn.) Courant, Jan. 16, 1959]

FEDERAL CURBS ARE NEEDED ON BOMBING OUTRAGES

In December, a mistrial was declared in the case of George Allen Bright, one of five men indicated in connection with the bombing of a Jewish temple in Atlanta, Ga. The foreman of the jury reported his colleagues hopelessly deadlocked after 22 hours of deliberation. Reindicated, Bright is scheduled for a retrial due to begin this week.

Whatever the outcome of the case, Congress can anticipate a number of proposals in this session aimed at making the bombing of schools, churches, and synagogues punishable by Federal law. JACOB K. JAVITS and KENNETH B. KEATING, both Republican Senators from New York, have already introduced a seven-bill package making such crimes a Federal offense and banning hate literature from the mails as well. A similar bill, broader in some respects but confined to bombings, is being introduced by two Democrats, Senators JOHN F. KENNEDY of Massachusetts and SAM J. ERVIN, Jr., of North Carolina.

This measure is expected to carry the endorsement of 30 to 40 other Senators. And in the House, EMANUEL CELLER, chairman of the Judiciary Committee, is sponsoring other bills as he did at the previous session. A key provision in Mr. CELLER'S earlier bill would make it a Federal crime to transport or ship explosives across a State line for terroristic purposes.

This would have justified immediate entry by the Federal Bureau of Investigation in bombing cases by setting up a presumption that the explosives had been carried in interstate transportation. Up to now, the Department of Justice has held that crimes of violence, including bombing of religious buildings, are subject to exclusive State jurisdiction, even if they are a conspiracy and even if the conspiracy is operative in several States.

Nevertheless, the FBI has been active in recent bombing cases, though J. Edgar Hoover, its director, said there had been no Federal law violations in the Atlanta case. Agents and technical experts were sent to the Georgia city at the express orders of President Eisenhower, laboratory facilities were made available, and the FBI cooperated in covering out-of-State leads of interest to Atlanta and Georgia law enforcement agencies.

Mr. Hoover has said that bomb outrages can be materially curbed by an aroused public opinion, a cordinated effort on the part of Federal, State, and local agencies, and stern punishment of the perpetrators. He can be assured of the first. Congress is in a position to do the rest by passing measures that are thorough, comprehensive, and that especially do not niggle over niceties of law enforcement jurisdiction.

---

[From the Rockford (Ill.) Register-Republic, Dec. 30, 1958]

ANTIBOMB LAW SUPPORTED

Strong support is developing among Members of Congress for a Federal law aimed at giving the Federal Bureau of Investigation authority to enter all cases involving the bombing of schools, churches, and business buildings.

Patterned after the Federal Lindbergh Antikidnapping Act, the proposed law would make a U.S. crime of interstate transportation of explosives intended or used for bombings. The FBI would have authority to enter these cases immediately, on the presumption that the explosives were carried across State lines.

In the Senate, some 20 supporters of such a law have been lined up by Senators JOHN KENNEDY of Massachusetts and SAMUEL ERVIN of North Carolina. The House Judiciary Committee, which last summer favorably reported a similar antibombing bill, is expected to approve the legislation again in 1959.

A Federal prohibition against bombing would be of valuable assistance to local and State authorities. The FBI's facilities in both manpower and scientific investigation would probably help solve many bombings which have baffled local law-enforcement agencies.

Moreover, the wave of church and school bombings across the country indicates that bombings is a national problem, spurred on by fanatics and hate groups. With the combined forces of the law bearing down on the responsible persons, a particularly vicious offense against society should be curbed.

---

[From the Seattle (Wash.) Times, Dec. 16, 1958]

A FEDERAL LAW TO CURB BOMBINGS

It is entirely possible that the least controversial major piece of legislation to come before the new Congress will be a bill to give Federal law-enforcement agencies increased powers to act in bombing cases.

There are, roughly, two categories of criminals who engage in bombings. In one category are the lunatic elements, including racial or religious hatemongers. In the other are professional gangsters, who use bombs to enforce demands or to eliminate or terrorize rivals.

Indignation against both categories of bombers (the latter type have been spotlighted in regard to labor disputes by the Senate Rackets Investigating Committee) runs high throughout the country.

The public wants Federal action, and is well aware that local enforcement agencies not always are able to cope with either haters or racketeers—particularly when groups of either type are organized to operate on an interstate basis.

Last month, Senator JAVITS, of New York—after an on-the-spot investigation of bombings in the South—suggested that Federal agencies be given concurrent jurisdiction with local agencies in hate bombings where interstate conspiracy or action is indicated.

Two other Senators now have called for legislation going even further than that urged by JAVITS. Senators KENNEDY of Massachusetts and ERVIN of North Carolina would make the bombing of schools, places of worship, community centers, and business buildings a Federal crime, and would provide the death penalty in cases where someone is killed by such a bombing.

The Senators, representing a happy combination of northern and southern viewpoints, said the Federal Bureau of Investigation, while assisting local police in investigating bombings, "has been handicapped by lack of authority to initite its own investigation."

To our mind, the need for legislation of the type envisaged by JAVITS, KENNEDY, and ERVIN is clearly apparent. The Congress, with overwhelming public support, should take prompt action to insure that bombers—no less than kidnapers—will risk quick Federal apprehension and prosecution.

---

[From the Middletown (Conn.) Press, Jan. 15, 1959]

CURBING DYNAMITING

Congress can anticipate more than a few proposals at this session aimed at making bombings of schools, churches, and synagogues punishable by Federal law. The two Republican Senators from New York, JACOB K. JAVITS and KENNETH B. KEATING, on January 9 introduced a seven-bill package making such bombings a Federal offense and banning hate literature from the mails as well.

A similar bill, broader in some respects but confined to bombings, was to be introduced January 12 by two Democrats, Senators JOHN F. KENNEDY, of Massachusetts, and Senator SAM J. ERVIN, JR., of North Carolina. This measure was expected to carry the endorsement of 30 to 40 Senators. Chairman EMANUEL CELLER of the House Judiciary Committee is sponsoring similar bills in the other Chamber, as he did at the 1958 session.

Shipping explosives across state lines for terroristic purposes was to be made a federal crime by a key provision of a bill advanced last year by CELLER and Representative KEATING, then the ranking minority member of Celler's committee. The specific ban was against such interstate transportation "with the knowledge or intent that it will be used to damage or destroy any building for the purpose of interfering with its use for educational, religious, charitable, or civic objectives or of intimidating any person pursuing such objectives."

The bill would have justified immediate entry by the Federal Bureau of Investigation in bombing cases by setting up a presumption that explosives used in bombings had been brought across State lines. The Department of Justice takes the position that ordinarily crimes of violence, including bombings of religious buildings, are subject to exclusive State jurisdiction, even if they are a conspiracy and even if the conspiracy is operative in several States.

Nevertheless, the FBI has been active in recent bombing cases, though Director J. Edgar Hoover on October 23 said that here had been no indication of federal law violations. Agents and technical experts were sent to Atlanta, Ga., scene of the October 12 bombing of the Reform Jewish Temple, at the express orders of President Eisenhower.

## Leandro Lombardia, Jr., Florida State Winner of Voice of Democracy Contest

EXTENSION OF REMARKS
OF
## HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. HOLLAND. Mr. President, the 12th annual Voice of Democracy Contest, a broadcast script-writing and voicing competition which enable more than one million high school students to think and speak positively in behalf of our democratic processes each year, was completed recently. The Florida State winner was Leandro Lombardia, Jr., of Jesuit High School, Tampa, Fla. He and the other State and Territorial winners assembled in Washington recently to receive national honors and recognition from the sponsors of the contest, the National Association of Broadcasters, Electronic Industries Associations, Veterans of Foreign Wars, and the several State associations of broadcasters. I have read young Lombardia's script with keen interest and recommend its reading to the Senate membership. I ask unanimous consent that this winning script be printed in the Appendix of the RECORD.

There being no objection, the script was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Leandro Lombardia)

My name is unimportant. What I have lived through, and what I now regard and hold close to my heart is.

Previous to the Hungarian revolution, I was a well-to-do radio-disc jockey, enjoying a respectable amount of popularity. In peacetime Hungary, I lived comfortably but not lavishly.

When the revolution was in its initial stages, I began taking a casual interest in it, not realizing that this event was the first of a series of occurrences that were to cause profound changes in my way of thinking that were in fact to change my entire attitude toward life, toward the world, toward the people who live in it.

One thing led to another, and at length I found myself one of the thousands of Hungarian refugees who came to America to seek something missing in our souls and our lives. In America, I found that something.

I found, in America, a new world. I was not only moved by the fact that I was seeing and experiencing new people and places and circumstances. I was even looking at the old familiar sun and stars and trees in a new light; what I found in America made me see reality itself with new eyes and I was astounded by the vision.

I looked before me and saw a great giant, striding mighty steps in this, the 20th century. America was to me a giant, a giant taking matter into its hands and mastering it; conquering, subduing nature, taking the world that it found and making it productive of great fruit and using all its new findings to its advantage, to make its life better, richer, more worthwhile.

Of course, this huge giant is my symbol for the American people, the people whose American way of life has amazed me, the people whose great President recently said of them: "Achievement and progress cannot be created for our people; they can only be created by our people; Americans would have it no other way."

And what is it that encourages these people to keep going on their victorious road of achievement and progress? It cannot be anything other than their sense of freedom and justice and equality, which is the natural consequence of their way of life. In this atmosphere, they feel they can live as becomes a human being, that they can advance in knowledge, and culture and human endeavor.

The freedom that Americans live in and enjoy is in fact, the atmosphere, the setting which makes it possible for them to improve their lot, to advance mightily in human attainment, to live a more successful life. A man reaches his full human stature only if his natural rights and privileges and opportunities are respected by the State and by his fellow citizens. A man cannot improve himself to the utmost unless he has the freedom to do so. If a man is free to search for the truth; if he is free to invent; if he is free to try out new ideas and new methods; if he is free to speak and publish as he sees fit (within the bonds of reason); if he is free to live by a faith he himself prefers. Then he will be producing at his best and consequently living at his best.

These, then, are the people of whom I am now one. Last month, I was naturalized an American citizen. In all my entire life I have never felt as much pride as when I call myself an American. I now work for a radio station as a diskjockey. But when I speak, I don't speak for rock and roll, or for progressive jazz, or for modern art, or for culture, I speak for democracy.

---

## Gov. David L. Lawrence of Pennsylvania Emphasizes Commonwealth's Needs in Flood Control Programs

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Honorable David L. Lawrence, Governor of Pennsylvania, made before the Pennsylvania congressional delegation in the Senate Office Building in Washington on Thursday, February 26, 1959. Also submitted at that time are listings of corps of engineers' projects in Pennsylvania which include authorized studies and investigations:

I think all of you are aware of the serious damages suffered by our Commonwealth in the recent floods. The tragedy at Pittston, in which we lost 12 men, and the severe damages sustained in Meadville and Sharon, are only several incidents in a general picture of devastation.

A few weeks ago, I toured the areas in western Pennsylvania stricken by these floods. I saw what water and ice can do to Pennsylvania homes, businesses, and factories. I have with me some photographs of the floods. You are welcome to look at them.

The department of forests and waters estimates that damages in western Pennsylvania from the January floods in cities and towns alone is approximately $13,500,000.

In my frank opinion, we must do more to cut the losses from floods in our State. I am

convinced that new industry will not come into a community constantly vulnerable to flooding. It is equally evident that established industries are not going to subject themselves indefinitely to heavy losses from recurring floods.

We have no choice. We must get all the flood protection we can afford and we must get it now.

You all know that floods like those in January are not rare in Pennsylvania. The city of Sharon, for instance, has suffered from three serious floods in the space of 1 year. Pennsylvania sadly remembers the destruction wrought by Hurricane Diane in August 1955.

We have brought along with us some very interesting charts showing the magnitude of our problems. If you study the maps, you will note that the dots on the map of the United States representing cities with flood problems come to a focus in Pennsylvania. Another map shows the dominant storm patterns in the Eastern United States—most of them pass over Pennsylvania.

I am here to urge that you do everything in your power to make the Federal Government aware of what we need in Pennsylvania in the way of flood control. In his budget the President proposes expenditures of $13,565,000 for construction and $659,000 for planning of navigation and flood control projects in Pennsylvania. In addition, $13,500,000 has been programed for dredging the Delaware River.

This is the minimum amount needed in order to continue work on projects already underway and for planning of already authorized projects. In view of the floods of 1955, 1956, 1958, and 1959, we can ill afford deferring any of this construction.

I ask your help in seeing that at least the amount requested by the President is appropriated.

In my frank opinion, however, the President has not asked for enough. The proposed Allegheny Reservoir near Kinzua and the planned reservoir on the Shenango River near Sharpsville would have reduced flood damages in Western Pennsylvania to a far, far low figure. The Shenango Reservoir would have minimized damages to Sharon, Sharpsville, Farrell, Wheatland, New Castle, Ellwood City, not only in this past flood, but in the two floods which struck the same area in 1958.

The President asks for only $150,000 in planning money for the Shenango Dam. I believe that in view of the heavy flood damages sustained by this heavily industrialized region in recent years, construction money for this dam must be appropriated for fiscal 1960 so that the construction of the dam can begin as soon as preconstruction planning is completed.

We cannot afford a lag between planning and building the dam.

Prior appropriations have been made for the construction of the Allegheny River Reservoir. However, construction has not been started because of the right-of-way dispute with the Seneca tribe which lives nearby in New York. It is not anticipated that this litigation will remain in the courts much longer and, I therefore, urge that you press to have construction funds for the reservoir included in the 1960 appropriations. As soon as the case is clear of the courts, the Corps of Engineers would have ample funds to get a good start on the reservoir's construction.

As you know, the city of Meadville suffered heavily from the January floods. The Flood Control Act of June 22, 1936, provides for the construction of a reservoir on French Creek above Meadville just a few miles downstream from Cambridge Springs. The project was delayed by local opposition to a large dam, however, and the Corps of Engineers has been considering the construction of five smaller dams.

I understand that the Pittsburgh district of the Corps of Engineers is currently making this study. I believe that it should be expedited and additional funds provided to complete the study and to get into construction as fast as humanly possible.

The department of forests and waters is currently completing a Commonwealth flood control project on Turtle Creek in Allegheny County at a cost of $500,000. This work was planned only to provide emergency relief and it will not provide for the stream discharges for which a Corps of Engineers' project on the same stream is designed. We have had two instances of flooding on Turtle Creek Valley in the past year. Had the Commonwealth's project not been underway, damages suffered would have been high.

The cost of the State project was paid in just the damages it prevented in these two floods. Turtle Creek Valley is heavily industrialized. We can afford neither the heavy damages to industry, nor the resulting loss of employment.

The Federal project on Turtle Creek was authorized in the last session of Congress. I urge you to press for an appropriation of planning money for fiscal 1960.

I understand that a flood control project on Connequenessing Creek in Butler has been approved by the Chief of Engineers and is awaiting authorization by Congress. The Commonwealth is vitally interested in this project and has recommended Federal authorization and construction at the earliest possible date.

The department of forests and waters currently has under contract a $115,160 maintenance dredging project there in order to minimize flood damages in Butler. Again, the area on this creek is highly industrialized and the permanent flood control project proposed by the Corps of Engineers is necessary to adequately protect the area against future heavy losses.

In the Flood Control Act of 1938, three projects were authorized on the Allegheny River that have been held up because of local opposition. The damage wrought by the recent floods in the three communities to be protected—Freeport, Kittanning, and New Kensington—seem to indicate that the Corps of Engineers should reevaluate these projects to determine whether they should not be constructed after all. We have photographs here showing the damages in these communities.

I do not want to give you the impression that the Commonwealth has come begging to the Federal Government unwilling to do its own work. We have for distribution, tables showing how much the Commonwealth has invested in flood control over the last 8 years.

Since 1950 the Commonwealth has completed $16,729,300 worth of flood control projects. In addition, we have another $13,904,878 in projects proposed, under contract, or under construction. Included in the flood control budget for the 1959–1961 biennium, I am requesting from the general assembly, appropriations of $6,076,200 in general fund and capital budget allocations.

Surely this is clear-cut evidence of the importance the Commonwealth attaches to flood-control projects.

It is a vital activity, to relieve human suffering, to reduce heavy property losses, and to encourage economic development which is of such paramount concern in every area of the State.

I need not tell you that the need is urgent.

Pennsylvania is prepared to do its share—as it always has been.

With concentrated and determined effort, we must make certain that the Federal program is speeded up and enlarged for the safety and well-being of Pennsylvania and for hundreds of thousands of its citizens.

*Corps of Engineers' projects in Pennsylvania*

AUTHORIZED STUDIES AND INVESTIGATIONS

| Project and location | Estimated total Federal cost | Allocated through June 30, 1958 | Fiscal year 1959 allocation | Fiscal year 1960 budget request | Balance to complete after fiscal year 1960 | Status |
|---|---|---|---|---|---|---|
| Navigation studies: | | | | | | |
| Lake Erie coast, Pennsylvania, Ohio, and New York. | $300,000 | $89,400 | 0 | 0 | $210,600 | Inactive. |
| Delaware River channel dimensions, Pennsylvania, Delaware, and New Jersey. | 147,000 | 52,000 | 0 | 0 | 95,000 | Do. |

FLOOD-CONTROL CONSTRUCTION CONTRACTS IN PROGRESS

Scranton, unit No. 2, streambed paving, Roaring Brook, $1,047,232.

Repairs to Toby Creek pressure conduit, Kingston, Luzerne County, $38,400.

Glendale Dam, Cambria County, $1,474,697.

Galeton flood-protection project, Galeton, Potter County, $63,320.

Weissport flood-control project, Weissport, Carbon County, $50,584.

Hawley flood-protection project, Hawley, Wayne County, $492,757.

Brown and Wedham Creek flood-protection project, Plymouth, Luzerne County, unit No. 1, $108,298; unit No. 2, $477,522.

Channel dredging Connequenessing Creek and Sullivan Run, Butler County, $50,060.

Four Mile Creek bank stabilization, Wesleyville, Erie County, $29,991.

Greensburg flood-protection unit No. 2, Greensburg, Westmoreland County, $817,088.

Lackawanna River dredging, Scranton, Lackawanna County, $544,108.

Brockway Channel rectification project (riprap protection), Brockway, Jefferson County, $34,970.

Slope installation, Newfoundland stream-clearance project, $96,586.

Installation of peizometers and relief wells, Windber, Somerset County, $14,643.

ENGINEERING CONTRACTS IN FORCE

Plymouth area, $28,000.

Scranton, $60,000.

Turtle Creek, Allegheny County and Four Mile Run bank protection, Erie County, $9,000.

Stroudsburg area, $55,000.

Engineering services, redesign project, Greensburg, $5,000.

## Senator Kennedy Favorably Received and Hailed in State of Oregon

EXTENSION OF REMARKS
OF
**HON. RICHARD L. NEUBERGER**
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. NEUBERGER. Mr. President, my native State recently was honored by a visit from the distinguished junior Senator from Massachusetts [Mr. KENNEDY], who spoke at the annual Democratic Party dinner in Jackson County which is always dedicated to the shining memory of Franklin Delano Roosevelt.

Senator KENNEDY and his attractive wife made a highly favorable impression in Medford, if we are to credit an article written for the Oregonian of Portland by one of the State's most able journalists, Albert L. McCready, associate editor of that daily newspaper which is published in Portland.

One particular portion of Mr. McCready's article deserves emphasis. He has called attention to a rather sorry chapter in Oregon's past, when the Ku Klux Klan was hysterically active in 1922. Mr. McCready notes that Jackson County was a citadel of such bigotry. Now, however, Mr. McCready has written:

Perhaps of some significance to the question of religion in politics is the fact that the same Jackson County which turned out to give warm greetings to a Catholic Senator in 1959, was a hotbed of Ku Klux Klanism when the forces of bigotry reached the zenith of their influence in Oregon politics in 1922.

And Albert McCready concluded his article on the hopeful and enlightened note that perhaps we have entered the age of reason when candidates for high office, like the Senator from Massachusetts, can be evaluated on their ability, intelligence, and character rather than on the basis of religion.

I know that many of Senator KENNEDY's friends and colleagues will be pleased to read the article from the Oregonian of March 9, 1959, by Albert McCready, and I ask unanimous consent, Mr. President, that it appear in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THEY LIKED KENNEDY IN JACKSON COUNTY
(By Albert McCready)

MEDFORD.—Since Al Smith's defeat in 1928, there has been a political axiom that a Catholic can't be elected President of the United States. But that was 30 years ago, and the United States and the attitudes of its citizens in the meantime have undergone a considerable change. Has religious bigotry diminished to the extent that a political party may safely ignore it in choosing a presidential nominee? If the professional pulsetakers are right in tabbing Senator JOHN F. KENNEDY as the front runner in the field of Democratic presidential aspirants, this question may be put to a new test in 1960.

Last Friday evening the tousle-haired Senator from Massachusetts flew into Medford from Washington, D.C., to address this city's ninth annual Franklin Delano Roosevelt memorial dinner. The enthusiasm of his reception was convincing proof of his remarkable public appeal.

A crowd of several hundred was on hand when the Senator and his handsome wife, the former Jacqueline Bouvier, stepped out of their chartered United Air Lines Convair. Later, some 700 southern Oregon Democrats paid $5 apiece to eat a ham dinner and size up KENNEDY'S qualifications for the White House. Judging from the tumultous applause that followed his remarks, they liked what they saw and heard.

Apart from the unknown quantity of church affiliation, Senator KENNEDY has almost every asset a successful politician could want. He is young, personable, well-educated and well-to-do. He is an outstanding writer and speaker, and a much-decorated skipper of a Navy PT boat in World War II. Like F.D.R., he has political sex appeal as a country squire with a Harvard background who feels a common bond with the common man.

"My, doesn't he look young," was a comment frequently heard among the onlookers wherever Kennedy appeared in Medford. His boyish grin and his unruly mop of hair do give the 41-year-old Senator a deceptively youthful appearance, from a distance. But maturity shows in the lines of his face, the firmness of his handshake, and the solemnity of his words when he discusses the dangers facing the country he hopes to lead in 1961.

KENNEDY obviously is a man of energy and positive ideas. Unlike some administration critics who carp at the President's policies but offer no constructive suggestions for their improvement, he expresses definite views on what should be done in such fields as foreign aid and national defense.

His solutions would be expensive, and hence not very popular with tax-conscious Americans. But the outspoken Bostonian does not let this deter him from saying bluntly that America needs to spend much more money building up the economy of the undeveloped, uncommitted countries of the world, and strengthening our armed forces along the lines suggested in the Rockefeller report. To him, Mr. Eisenhower's emphasis on a balanced budget is not basic, not significant, not important.

Perhaps of some significance in the question of religion in politics is the fact that the same Jackson County which turned out to give warm greetings to a Catholic senator in 1959, was a hotbed of Ku Klux Klanism when the forces of bigotry reached the zenith of their influence on Oregon politics in 1922. That was a long time ago. It would be good to think that we are now much farther along the road to complete racial and religious tolerance, when political candidates such as the Senator from Massachusetts can be evaluated by the voters solely on their abilities.

## Construction of Timber Access Roads

EXTENSION OF REMARKS
OF
**HON. FRANK CHURCH**
OF IDAHO
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. CHURCH. Mr. President, this year, as every year, Members of the Congress are conscious of the heavy responsibility which falls upon us in appropriating the public funds required for the defense of our country, and for the essential services which the people can provide for themselves only through their Government.

No political party has a copyright on the maxim, "A penny saved is a penny earned." There may be some differences, however, in our abilities to perceive that an apparent saving is not always a real saving.

I recently received an editorial from the Emmett, Idaho, Messenger-Index, commenting on a budget reduction of $6 million in funds for the construction of timber access roads. The editorial points out, I think correctly, that the saving here proposed is illusory: It will

be more than offset by decreased revenues to the Public Treasury from timber sales, and it will lead directly to increased taxes for roads and schools in the affected areas.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FALSE ECONOMY

The declining Federal budget (and we mean declining in ratio to gross national product) plays queer tricks on us Idaho hicks from the sticks who parrot the N.A.M. clamor for further reductions.

Sometimes we wouldn't praise the economics and assail the free spenders quite so vigorously if we knew the whole score.

Look at one example of the hundreds that could be cited:

Plaudits to the fiscal 1960 budget now before Congress. The U.S. Forest Service estimates show a further $6 million cutback in timber access road funds.

Hooray for the administration. Cheers for conservationism. If that burgeoning monster named Federal spending ever is to be corseted, we must hack, hack away at the fat rolls. Six millions on access roads, millions in a thousand other places.

That's the way to trim the monster down to size.

Well, let's look at this economy a little further.

Idaho is a timber State. A great portion of its timber is in national forests owned by the Federal Government. Everyone knows the Federal Government doesn't pay taxes.

It so happens, however, that 25 percent of national forest timber sales goes to county road and school funds—in lieu of taxes.

When the Federal Government curtails access road funds, two things happen:

1. Overage and diseased stands rot for want of harvest.

2. Bidding competition on other stands becomes restricted to the huge concern which has sufficient capital to build its own access roads—not public roads—and the bid price goes down to offset the road cost.

The result is that valuable natural resources are allowed to waste, the public pays for but does not get better forest roads, and the proper cost of developing Federal timber resources is not evaded but only shifted to local government.

According to figures compiled by Senator FRANK CHURCH, last year's cut in the Federal access road program cost Idaho counties $1,110,000 in revenues they otherwise would have received for their road and school funds from timber sales.

The fiscal 1960 cuts will reduce county revenues further.

Revenue to the Federal Treasury from timber sales will be reduced proportionately.

Even if it could be argued that non-Federal access road construction is cheaper (it can't be successfully), or that it is better long-range economy to exclude the small timber bidder, the U.S. Chamber of Commerce adherents still miss the main point.

The amount saved in the Federal timber access road program was not saved at all; it was lost in Federal timber sale revenues.

Moreover, the $1,110,000 lost to Idaho county governments represents just one tiny facet of the unrelenting NAM-U.S. Chamber pressure to alter the tax structure away from corporate and high personal income tax brackets.

Every Idaho farmer, home owner, and small business man knows exactly how that loss in county school and road fund revenue is paid—by ad valorem tax levies made by the counties on their farms, homes, and small businesses right here in Idaho.

The big bracket corporate schemers have dumped $1,110,000 of the Federal income tax load onto local county taxpayers in Idaho, and an economy-minded administration gets the cheers.

Too often we climb on the big business bandwagon for Federal economies, and are such dupes that we fail to see that the economies are false, that in reality we witlessly join a disguised crusade to tighten the purse strings on the big pocket and loosen up the small one.

Big business is still looking after big business, and former Secretary of the Treasury Humphrey still has the most potent voice in the administration.

## Commodity Price Support Program

EXTENSION OF REMARKS
OF
### HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial commenting upon the price support program, which was published in the Wall Street Journal of Tuesday, March 3, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

We suppose many readers were struck, as we were, by the irony pointed out by Senator WILLIAMS of Delaware in his recent criticism of the farm subsidies.

Of this costly program we are told helps the poor farmer, Senator WILLIAMS had this to say:

"The high rigid support program is little more than a Government guarantee on the operations of corporate-type farming and actually encourages and underwrites absentee ownership to the detriment of the small farmer."

The Senator named two such corporate-type farmers in a long list of other 1957 payments of up to $1 million or more. He singles out Producers Rice Mills, Inc., of Stuttgart, Ark., and the Delta and Pine Land Co. of Scott, Miss., because they received more than a million. Producers Rice Mills got $1.4 million in price supports for rice and Delta and Pine Land $1.1 million for price supports on cotton.

Mr. WILLIAMS could have named some farm-type corporations, too, that benefited in 1957 because of the insanity of some of the farm program. Fortunately, the acreage reserve phase of the soil bank is no longer with us, but when it was, it paid both farmers and corporations for not planting commodities.

Ford Motor Co., for example, received $13,649.40 for not planting corn and wheat in 1957. Libby, McNeill, Libby got $19,654 for not planting cotton.

Nor did Uncle Sam overlook some others in his lavish handouts to all the poor farmers. The American Christian Institute of Phoenix, Ariz., benefited to the extent of $73,088.40 for not planting cotton, and the Mississippi State Penitentiary at Parchman was paid $71,000 for not doing ditto. The Arkansas State Penal Institute proved it can also not plant things. Its bill to Uncle Sam for not planting rice came to $22,800. And the Kansas State University Endowment Association shows that at least one institution of higher education knows what's going on besides sputnik. For resisting the impulse to sow wheat, the association was endowed by Uncle Sam with $17,125.14.

No wonder the price of farm land is sky-high. With such goings-on as this sort of agricultural foolishness, Uncle Sam's problem is becoming one of not how to keep the farmer on the farm but of how ya gonna keep everybody else off the farm.

## Why the Dollar Price of Gold Must Stay Fixed

EXTENSION OF REMARKS
OF
### HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. HIESTAND. Mr. Speaker, the heavy outflow of monetary gold from this country over the past year and longer has been the subject of much comment and in certain quarters has been cited as foreshadowing the eventual raising of the official price of gold by the U.S. Government. While, undoubtedly, much of this comment is inspired by the gold producers themselves, there are indications that some of it can be traced to a deliberate effort to discredit the standing of the U.S. dollar in the minds of United States and foreign investors as part of the economic cold war.

From time to time, rumors affecting the price of gold are being circulated around the world and the U.S. Treasury Department has felt it necessary periodically to restate its firm intention not to depart from the present price of $35 an ounce. As recently as January 19 it felt itself under the necessity to issue such a statement to the press.

An able article by an authoritative voice, Mr. Herbert Bratter, appeared in the December issue of Optima, a quarterly published in Johannesburg, South Africa.

Under leave to extend my remarks, the indicated article is included.

AMERICA STILL FIRMLY REJECTS A RISE IN THE PRICE OF GOLD

(By Herbert Bratter)

Six years ago in Optima the writer gave an American view of the official price of gold, concluding: "In sum, there is no present prospect of a change in the U.S. attitude toward the present price and status of gold. Whether $35 is or is not the right price, there is no disposition to change it."

Since 1952 various developments have occurred. The United States has experienced two considerable business recessions. International trade has grown. Important British spokesmen have carried to America the argument, well buttressed with statistics, that the value of the world's monetary gold reserves is no longer commensurate with the need for reserves as measured by the volume of international trade. Sizeable international flows of gold, now in one direction and now in another, have taken place in response to military and economic occurrences. And there has been during the past year or so probably more discussion of gold in the United States than in a number of years, although less in respect of the price of gold than with reference to the U.S. gold outflow and the deflationary potentialities of foreign-owned dollar balances; and also the alleged

possibility of a Russian gold war. Nonetheless, the official and general public attitude toward the fixed $35 price of gold appears to be exactly what it was in 1952.

Our purpose now is to review U.S. official gold policy under the Eisenhower administration which assumed office after publication of the previous article—bearing in mind especially the price of gold; and to recount various other official and unofficial developments in the United States bearing on our subject.

On money questions the quadrennial platforms of the two leading American political parties have been unreliable keys to performance. In this respect the Eisenhower administration has run true to form. The 1952 Republican platform looked toward a dollar on a fully convertible basis, which, to advocates of a return to domestic convertibility, spelled the intention to make some change in the position of gold inherited from the Democratic administrations of 1933–52. However, in practice the Eisenhower administration has clung closely to the lines of gold policy followed by its predecessors, both in respect of the domestic inconvertibility of the dollar and the fixed $35 price of gold. The official attitude of the Treasury Department—the Government spokesman on gold matters—has been, with reference to convertibility, the price of gold and a free gold market, the same under Mr. Robert B. Anderson, Secretary of the Treasury, as under his Republican predecessor Mr. George M. Humphrey and the earlier Democratic fiscal chief, Mr. John W. Snyder. Throughout recent years the gold views of the Treasury's career staff have remained consistent with official policy and vice versa; and the composition of the staff itself has been relatively little affected by the change in administrations. The unchanged official attitude toward gold undoubtedly mirrors the viewpoint of the Congress and the country.

For the record it may be useful to note here some of the occasions on which the Eisenhower regime has expressed views on gold. Thus, on March 11, 1953, the Treasury wrote to Delegate BARTLETT of Alaska:

"The Treasury remains opposed to any such legislation (to raise the price of gold) primarily because of the inflationary effect such a program would have on the domestic economy of the United States. Careful study has been given by the Treasury Department to both the Canadian subsidy and free market programs for marketing newly mined gold. Although the Department is sympathetic to the problems of the gold miners, it does not favor the adoption of either plan by the United States."

On the McCarran bill (S. 13) for a free gold market, the Treasury sent the Senate Banking Committee an adverse report.

In May 1953, Congressman CLAIR ENGLE, of California, published the negative results of a visit by himself and a prominent gold mine officer to the Treasury—very much along the lines of the above quotation.

The following month this writer sought the Treasury's views on gold. In its reply the Treasury stated:

"Our sound money program does not contemplate an increase in the price of gold. We believe that raising or lowering the price of gold to compensate for price rises or declines is inconsistent with the principles of sound money and the gold standard, and tends to have a disrupting effect upon the economy."

After rejecting a free gold market, a subsidy to gold mines and authorization of exports of American newly mined gold for sale on free markets abroad the letter continued:

"The Treasury Department believes that present conditions at home and abroad are not favorable for a return to a convertible gold coin standard. Until the budget is balanced and world conditions are more stable, internal gold convertibility is likely to exert dangerous pressure at critical times. What we are saying is that the return to sound money must proceed by steps. The first step to take is to balance the Nation's budget, and the second step is to get the national debt in better order."

At the 1953 annual meeting of the International Monetary Fund Mr. W. Randolph Burgess, representing the United States, expressed disagreement with the South African position, on the grounds that the inflation danger was not wholly past and that a change in the price of gold would undermine the stability of our program. Stating "our firm belief is that a change in the price of gold would disrupt the efforts being made in other countries to restore stable currencies," Mr. Burgess added: "In our judgment, tampering with the price of gold would be a step backward. * * * It does not, gentlemen, go to the root of our problem, which is much deeper."

In a magazine interview later in 1953 Mr. Burgess answered in similar vein several questions on gold policy, and made an interesting comment in reply to the question, "Do you think a mistake was made in letting the price of gold go up to $35?"

He said, "That's a very debatable question. I did think so at the time. A great many people in the world have suffered from it. I think we could have gone along on the lower price of gold with much less inflation. On the whole, I think we would have been much better off."[1]

In March 1954 Mr. Burgess testified for the administration before a Senate committee in opposition to four bills which would have removed restraints on gold. Through the years the present administration has unyieldingly clung to the status quo. This stand was reiterated by Mr. Burgess during the 1956 annual meetings of the International Monetary Fund and by Secretary Humphrey before the Senate Finance Committee during hearings held in July 1957. To an inquiry from Mr. Merrill E. Shoup, president of a Colorado organization called Committee for the Golden Road to Security, the Treasury replied on May 5, 1958:

"We do not believe that an increase in the price of gold would be in the best interest of the United States and the free world. The value of the dollar is firmly linked to gold; the official value of $35 per fine troy ounce was established in 1934. This relationship has contributed to the maintenance of a stable and strong financial structure in this country, and thus to the soundness of our domestic economy. Foreign countries have also come to rely on the dollar as a strong and secure currency, firmly fixed in value in terms of gold. We believe that flexible credit and monetary policies on the part of the Federal Reserve System, which can be readily adapted to changing economic conditions, are far preferable to increasing the price of gold."

The Secretary of the Treasury (Mr. Anderson) on May 6, 1958, reaffirmed this long-standing position in a letter saying:

"The administration has made clear on many occasions, most recently at the September 1957 meeting of the International Monetary Fund, that the United States has no intention of increasing the price of gold or devaluing the dollar. I must say, without qualification, that this continues to be the position of the Government."

An incident of the Eisenhower administration's gold policy has been the use—on two occasions—of so-called free gold in an inflationary manner, a paradoxical development under a Government committed to sound money. Free gold is gold owned by the Treasury but not held as security for gold certificates which constitute the credit base of the Federal Reserve System. Most of the free gold held by the Treasury at the start of the Eisenhower administration represented the unused part of the profits of the 1934 devaluation of the dollar.

In November 1953 the public debt then being close to the statutory limit set by law, the Treasury used $500 million of free gold; and again in February 1958 it similarly used another $100 million of free gold. This gold did not physically leave the Treasury's possession, but gold certificates were issued against it and deposited with the Federal Reserve to create a balance against which the Treasury could write checks. The certificates, of course, remain outstanding. Since the Federal Reserve's required reserve ratio is 25 percent, the Treasury's two actions, totaling $600 million, make it possible for the Federal Reserve System to issue $2,400 million of notes of deposits; and these, in turn, potentially could support an increase in commercial bank credit of several times as much.

Thus the Republican administration, although it came into office on the promise of a balanced budget, has had to ask the Congress to raise the debt limit on more than one occasion, and on two other occasions avoided making such request by carrying to its inevitable conclusion an inflationary process begun by the New Deal a generation earlier. (The $600 million, of course, constituted only a fraction of the $2,800 million profit produced out of thin air by the 1934 devaluation.)

For some years various prominent persons have advocated that the Congress create a monetary commission such as the Aldrich Commission of 1908, whose 1912 report gave rise to the inauguration of the Federal Reserve System. Many Members of the Congress also have favored the creation of another National Monetary Commission. President Eisenhower last year formally asked the Congress to authorize a monetary and credit commission. But because of clashing preconceptions as to the nature of the problem and how to handle it, and particularly how such a congressionally authorized commission should be composed and directed, the proposal has not been able to get through the Congress. Meanwhile, in 1958 a private research and educational group supported by progressive businessmen and called the Committee for Economic Development (CED) has sponsored a national commission on money and credit. A 10-man selection committee drawn from universities and research bodies selected the 25 members of the new commission, which will be equipped with a research staff.

This CED-appointed commission is under the chairmanship of a CED trustee, Mr. Frazar B. Wilde, president of a large life insurance company. The vice chairman is another businessman, Mr. H. Christian Sonne, who is active in the work of the liberal National Planning Association. Among the commission's remaining members are Mr. Marriner S. Eccles, former Chairman of the Federal Reserve Board, Mr. David Rockefeller, vice chairman of the Chase Manhattan Bank, Mr. Allan Sproul, former president of the Federal Reserve Bank of New York, Mr. Robert R. Nathan, who heads Americans for Democratic Action, and Mr. Stanley H. Ruttenberg, AFL–CIO[2] research director. The commission's work is expected to take 3 years. Of eight studies assigned to it, none relates to gold.

Excepting for the mining industry, few of those who have been advocating the creation

[1] U.S. News & World Report, Dec. 4, 1953, p. 63.

[2] American Federation of Labor and Congress of Industrial Organizations.

of a national monetary commission have been particularly interested in the role of gold in the American monetary system. Their interest rather has centered on how the American monetary and credit system should be managed. The conduct of Federal Reserve policies and the fiscal and debt-management policies of the Treasury have been controversial political topics in and out of the Congress during the postwar years. Part of the picture is the continuing concern of the American public with inflation; the seemingly perpetual depreciation of the dollar in terms of its buying power. Many Americans are seriously worried about the wage-price spiral, and increasing attention is being given in business and political circles to the question: Is inflation inevitable if we are to pursue the apparent goals of the Employment Act of 1946?

Under the law governing it, the Federal Reserve Board, responsible only to the Congress, operates with a wide degree of freedom. It cooperates with the Treasury, particularly during periods of Treasury financing operations, but on a voluntary and independent basis. In recent months, under President Eisenhower, the Chairman of the Federal Reserve Board has participated in periodic meetings at the White House along with the Secretary of the Treasury and the Chairman of the President's Council of Economic Advisers. Despite this innovation, the Board takes no orders from the administration. This summer a subcommittee of the House of Representatives has held hearings on a bill to amend the 1956 Employment Act by a provision under which the administration would give the Board recommendations on monetary and credit policies. This proposal is so controversial that its adoption in the visible future is not predictable. None of the public debate on this question even touches on the proper price of gold or the internal convertibility of the dollar.

The American Mining Congress, reflecting the views of gold miners, for several years has advocated the appointment by the Government of a commission to make recommendations as to the price of gold and restoration of the gold standard. This year mining-State Senators on the Senate Committee on Interior and Insular Affairs supported a Senate joint resolution to establish a joint committee to investigate the gold mining industry. After reporting out the resolution (S.J. Res. 16) the Senators realized that it would, under Senate rules, require the President's signature, whereupon a substitute was hurriedly issued, Senate Concurrent Resolution 91, for which White House assent would not be necessary. This resolution called for a commission instead of a committee.

This special gold committee would have consisted of 10 Members of the Congress and 6 private individuals familiar with the gold mining industry who will help to write the final report to the Congress, the Committee on Interior and Insular Affairs reported. The latter report also expressed the view that: "The gold mining industry has become more and more frustrated as the years have rolled on and the Interior and Insular Affairs Committee believes it is time that there was created a sympathetic sounding board such as this special committee would furnish."

For reasons connected with Senate procedures, Senate Concurrent Resolution 91, instead of being referred to the favorably inclined Committee on Interior and Insular Affairs, was referred to the Committee on Rules and Administration. There considerable differences of opinion developed as to various points involved. Amendments were discussed, but, in the end, the sentiments of a substantial majority were reflected in the decision not to report out the resolution. The latter accordingly died with the adjournment of the Congress in August. Possibly next year an attempt will be made to reintroduce the measure and to include Alaskan representation on the Commission's membership. How effective such a Commission would be in changing U.S. policies on gold is a question.

Within the Congress the most persistent effort to have U.S. monetary policy reviewed has been that of Congressman WRIGHT PATMAN, Texas Democrat, who, in terms of seniority, is third ranking member of his party on the House Banking and Currency Committee. An outstanding advocate of cheap money, Mr. PATMAN has been for many years a sharp critic of Federal Reserve Board policies as also of the Eisenhower administration's allegedly tight money fiscal policies. Last year, when it appeared that the Congress would endorse President Eisenhower's recommendation to set up an official National Monetary Commission similar to that of 1908–12 but consisting of able and qualified citizens rather than Members of Senate and House, PATMAN blocked the effort. The chairman and vice chairman would have been Presidential appointees.

Congressman PATMAN, recommended instead first a joint congressional monetary committee assisted by outside experts; then an alternative study to be conducted by the House Banking and Currency Committee alone. Although for a while it appeared that Mr. PATMAN would have his way, he was, in the end, defeated by his more conservative colleagues. His influence, however, blocked the Eisenhower proposal for good. On two subsequent occasions Mr. PATMAN made renewed efforts to obtain House endorsement of his own suggested "investigation of the Nation's money and credit systems," each time unsuccessfully. Were his plan to be adopted, Mr. PATMAN would expect to be named chairman of the study, but because he is himself a rather controversial character in the House, his efforts in this matter have as yet come to naught. The course of the 1958 congressional elections is still in the future as we write. A strong Democratic victory could improve the chances of the Texan's project in the Congress which convenes in 1959.

On September 10, 1958, Mr. PATMAN announced that the economic stabilization subcommitte of the Joint Economic Committee was sending to about 1,500 economists in 150 selected universities a questionnaire on stabilization problems and policies. The questionnaire contained a number of questions under seven main headings. One question dealt with gold, namely: "Do you favor restoration of free domestic exchange of dollars for gold: Soon? Ultimately?"

In recent years there have been several Congressional inquiries into monetary and credit policy, one of them headed by Congressman PATMAN himself as then chairman of a subcommittee of the Joint Economic Committee—a House-Senate body. In the present Congress, 1957 and 1958, Mr. PATMAN has been chairman of the full Joint Economic Committee, a subcommittee of which has held discussions of monetary and fiscal policies. The chief result of the defeat of the Eisenhower request for a National Monetary Commission, however, was the study of the financial condition of the United States launched in 1957 by the Senate Finance Committee. Its hearings and replies to questionnaires published to date fill several volumes. The subject of gold received slight attention during the Finance Committee's sessions, chiefly in the questioning of witnesses by Senator George W. Malone of Nevada, a Republican but nonetheless a caustic commentator on the policies of the Treasury and Federal Reserve Board. Mining-State newspapers may have noted Mr. Malone's inquiries, but they received almost no attention elsewhere.

Indicative of the place of the price of gold in public consideration of monetary questions in the United States nowadays is the questionnaire sent out in connection with the above-mentioned study by the Senate Finance Committee chairman, Senator HARRY F. BYRD, of Virginia, a conservative Democrat, to the presidents of the 12 Federal Reserve banks, economists, professors, corporation executives and others early in 1958. In the questionnaire the word gold appears not even once. The 17 questions deal with inflation and deflation, Federal Reserve monetary policies, Treasury fiscal policies and stable currency and full employment as national goals.

Of two major congressional postwar studies of money, credit and fiscal policies, the first was that of the Joint Economic Subcommittee headed by Senator PAUL DOUGLAS, Illinois Democrat. Its report in 1950 opposed a return of the United States to gold coinage and recommended the repel of any existing laws that might be construed as permitting a change in the price of gold. The second comprehensive study made by a subcommittee headed by Congressman PATMAN in 1951 and 1952 dealt with monetary policy and debt management, their role in achieving price stability and high-level employment. It examined Treasury-Federal Reserve relations, interest rates and other credit-rationing devices, etc.

Mr. PATMAN's personal views on gold were reflected in a speech he delivered on the floor of the House on July 6, 1951, in which he declared that going back to the gold (coin) standard would be the quickest way entirely to wreck the country. He added "Going back on the gold standard would also lead to a worldwide depression. You would be putting your money behind something that is scarce and, it being scarce, a few international racketeers could do as they have done in the past—cornered the gold and cause a worldwide depression."

The summary of the PATMAN subcommittee's report, published in June 1952, with reference to gold addressed itself to only two propositions. The report endorsed the continuance of the United States on the gold bullion standard at the $35 price: and it rejected the restoration of domestic convertibility of the dollar into gold coin. At the time the price of gold was not an issue in the United States. In the intervening years no change has occurred in the overwhelmingly predominant sentiment in the Congress for keeping the status quo as to gold.

Gold mining interests and others in the United States who, during recent years, have advocated a higher price of gold have continued to do so during 1958. The early months of the year having been marked by an outflow of considerable dimensions, much of the recent discussion has centered on the meaning and effects of the loss of the yellow metal and the threat to financial stability allegedly arising from the magnitude of foreign short-term claims aganst the dollar. The 1957–58 gold outflow, while large, has not disturbed the Treasury or Federal Reserve Board, as was made clear in a letter from the Chairman, Mr. William McChesney Martin, answering an inquiry of Senator A. WILLIS ROBERTSON, of Virginia, in April. Mr. Martin pointed out that the Board's recent policy of expansion was in part designed to offset the contracting effect of the decline in the United States gold stock. Gold certificates held by the Federal Reserve System, he noted, were in mid-April 64½ percent of deposit and note liabilities, as compared with the statutory minimum of 25 percent, and there was no danger that in the foreseeable future they would be brought down to the neighborhood of the statutory level.

The influential monthly letter of the First National City Bank of New York in June discussed the price of gold at some length. It

addressed itself particularly to the British advocacy of a higher price. The 1958 gold outflow was not the first of such magnitude since World War II, but the third one. Despite the outflow, the United States still held $9,000 million of gold over and above the $11,400 million needed to satisfy legal requirements. "With beyond $9,000 million of surplus gold reserves, there is obviously no question of any practical need to consider either raising the gold price or suspending U.S. Treasury sales at $35 an ounce and permitting the price to rise in free markets," the bank said.

Continuing, the letter noted that foreign holdings of deposits and short-term investments in the United States totaled some $13,800 million, the existence of which does not imply that any large-scale conversion into gold is either likely or practicable. Because foreigners need many thousands of millions to finance essential commerce, the bank concluded that "while the outside world theoretically could force a change in United States gold policy, it would be at the cost of upsetting world trade and finance." Even if conditions required the United States to place an embargo on gold exports, there would be no necessary assurance that an embargo would be followed by a rise in the U.S. price. The article discounted the suspicion voiced in some circles that the heavy 1958 gold outflow reflected British and other pressure to bring about an increase in the United States official price of gold. Britain, the chief destination of the outflowing gold, was merely restoring the proportion of gold in its total gold and dollar reserves. The fall in short-term money rates in the United States, moreover, weakened the incentive of foreign authorities to hold dollar balances. Balance of payments trends, including over-generosity in foreign aid, sufficed to explain the gold outflow.

The theory hopefully circulated abroad that perhaps the recession would lead the United States to raise the price of gold was also rejected by the bank. Unlike the early 1930's, today gold is not a limiting factor in the Federal Reserve System, what with a stock of $9,700 million over and above the legal requirement. Furthermore, the letter continued, increasing the price of gold—devaluing the dollar—would be a measure of dubious merit, with implications far beyond the bonanza to gold miners. It went on:

"An increase in the dollar price would penalize foreign governments, banks, and individuals who have trusted the dollar; it would hand out windfall profits to those who have not. The intricate world-wide machinery of industry and trade needs credit and trust as lubricants. The very talk of a rise in the dollar price of gold is a threat to prosperity. The sooner the question ceases to disturb men's minds the better."

Finally, the First National City Bank addressed itself to the most imposing argument for an increase in the gold price: that the growth of world trade plus inflation creates a need for more gold reserves, which can be provided by marking up the price of gold worldwide.

"This is getting the cart before the horse: the inflation of the past 20 years got its gold base out of the excessive rise in gold price and enormous stimulation to good production. If the gold price were to be related to commodity prices and marked up every time commodity prices rose, it would cease to have use or meaning as an official currency standard. The use of any fixed gold price is to check excessive credit expansion and rising commodity prices. * * * But to raise the price of gold dramatically at this juncture would be to destroy faith in all the currencies of the Western World. * * * Inflation today is barely mastered. We have no wish to give it a longer lease on life."

Another New York bank letter published in June by the Hanover Bank dealt with the U.S. gold outflow and the gold price rumors in similar vein. The gold outflow it termed nothing ominous and a wholesome development. Suggestions that the price of gold be raised had elicited absolutely no favorable response in congressional or business and banking circles. To raise the price of gold to increase international liquidity the bank letter regarded as a questionable proposition. "It might easily cause inflationary fears and a flight from the dollar, which could drive up prices of commodities and services. This would wipe out the advantage of the dollar price of gold. Increasing the price of gold would be the more dangerous undercurrent conditions because, despite the recession and the widespread unemployment in manufacturing, both wages and prices are still rising," the letter observed.

A still different reaction to London gold suggestions is found in the Federal Reserve Bank of New York. Monetary technicians there are quoted as stating that the liquidity argument for a gold price hike ignores the considerable growth of dollars as part of the world's reserves; i.e., the short-term balances and investments held in the United States. Secondly, the liquidity argument glosses over the fundamental cause of international economic imbalance; i.e., the tendency of countries still suffering from shortages of monetary reserves to live beyond their means. Thirdly, in tending to undermine confidence in the dollar, the talk about a higher price of gold tends to promote a decline in reserves, insofar as thereby inflation in the deficit countries is excused, the need for reserves is enlarged.

Foreign short-term assets in the United States increased from less than $5 billion at the end of 1947 to more than $15 billion at the end of 1957. Mr. Fred H. Klopstock, an economist of the Federal Reserve Bank of New York, terms these balances an economizer of gold, stating:

"Had foreign central banks as a group chosen to utilize all their net dollar acquisitions since 1948 for purchasing gold from the U.S. Treasury, our own gold reserve would have fallen considerably and the increase in aggregate monetary reserves of the world would have been substantially less."

Apart from the American objection to raising the price of gold on the grounds already referred to, the proposal cannot be discussed in U.S. financial circles without raising the additional objection that to adopt it would be to confer a major benefit upon the U.S.S.R., a country described in London bullion circles as the world's second largest gold producer. If we are going to increase the world's supply of dollars, Americans reason, why do it in such a way as to reward our cold war enemies; why not rather do so through the International Monetary Fund, which cannot only apportion the new purchasing power among the most deserving member countries, but, at the same time, exert its influence toward discontinuance of unsound monetary and credit policies? Needless to say, International Monetary Fund economists go along with this reasoning. Enlargements of the Fund's resources, when the step seems necessary, is much more likely to enlist U.S. Government support than an increase in the price of gold.

Articles by American newspaper columnists and others dealing with Russia and gold in recent months have tended to create public confusion on the subject. A few specimen quotations may be cited as illustrations:

Senator Malone, of Nevada: "It is my opinion that gold may be Russia's secret weapon. They have gold. If they put the ruble on the gold standard, with $30 billion or $40 billion in gold behind it on the world market, the ruble could well soon replace the dollar as the criterion of exchange."

Wiesenberger Investment Report: "Another rumor is that a trade deal of important dimensions might be worked out between the United States and Russia, involving United States acceptance of gold. If Russia succeeded in making the ruble convertible, we could be forced to take rubles."

Donald H. McLaughlin, president of Homestake Mining Co. and chairman of the gold producers' committee of the American Mining Congress: "A sudden announcement of a ruble convertible into gold at a fixed rate for use in international trade could bring Russia as much new prestige as their success in sending up the first satellite * * *. The rest of the world would be in a most disadvantageous position if earlier steps had not been taken to put the dollar and European monetary systems in better order."

George E. Sokolsky, syndicated columnist: "How soon will it be before Soviet Russia issues a gold export ruble: If the world turns to gold, as it is likely to do in an effort to save itself from economic strangulation, the country with the most gold will be the center of the universe, as England was for centuries."

Franz Pick, foreign exchange consultant: "The nonresident gold ruble which the Russians are planning to create within about a year will be nothing but a copy of registered sterling * * * and lead to the listing of Soviet currency in all large capitalistic trading centers. * * * After the creation of this unit the Russians would not have to ship gold abroad, but the central banks of other countries would have to take delivery of the gold in Russia, which is the procedure of the Bank of England and the Federal Reserve."

Doubtless such comments may raise uneasy and vague forebodings in the minds of casual readers. But persons with any familiarity with foreign exchange are unlikely to be so easily frightened. "Do you seriously believe what you say?" they might ask Mr. Malone. "Why," they might ask Mr. Wiesenberger, "would the world be forced to take rubles if the rubles were made convertible?" (The writer asked by letter but received no reply.) Just what steps is Mr. McLaughlin recommending, and just why? Just what is Mr. Sokolsky saying? "And just what," Mr. Pick might be asked, "is there so embarrasing in using a convertible ruble for which foreign countries would have to take delivery of the gold in Russia and not abroad?"

One American attempt to arouse interest in a higher price of gold during 1958 merits special mention here because of its origin. What appeared to be the beginning of a campaign emanated from the offices of the Committee for Constitutional Government, Inc., in New York, one of the many public educational groups of varied viewpoints that dot the U.S. scene. What lends special interest to its 1958 gold efforts is their signature by Edward A. Rumely, 76-year-old public relations veteran. No organized force played a greater role in the increase of the price of gold a generation ago in the United States than Mr. Rumely and the self-styled Committee for the Nation which he guided and directed. In the late 1930's Mr. Rumely was executive secretary of both the Committee for the Nation and the National Committee to Uphold Constitutional Government (now called Committee for Constitutional Government), both operating at the same address, with the same public relations personnel. The latter committee appears to be a lineal descendant of the former committee, now defunct.

In March 1958, Mr. Rumely's former interest in devaluation of the dollar unexpectedly revived. Brushing off the old techniques and arguments of the depression days of the early New Deal, Mr. Rume-

ly addressed telegrams to President Eisenhower, his aid, Mr. Sherman Adams, and the Secretary of the Treasury, and mailed copies thereof addressed to all editors. The latter were also supplied with copies of telegrams Mr. Rumely sent to the Committee for Economic Development and to administration leaders and Members of the Congress. These were supplemented by reprints of articles apeparing in the committee's occasional bulletin, "Spotlight," and other material, including a recent endorsement of a rise in gold price by the Australian economist, Douglas Copland, who, in 1934, was brought to the United States by the Committee for the Nation in support of its devaluation campaign of that period.

Among other 1958 activities of Mr. Rumely has been the distribution of a 400-page book, "Prices," by George F. Warren and Frank A. Pearson, published in 1933 and bearing the imprint of the Committee for the Nation. The authors were Cornell University professors who advocated an increase in the price of gold. Warren was a close adviser of Franklin D. Roosevelt and Henry Morgenthau, Jr., when he was Secretary of the Treasury. Warren is no longer alive. Pearson survives. Mr. Rumely this year called for a conference of informed monetary experts, adding: "Prof. F. A. Pearson should be present, among others." He has also invited public encouragement in the revival of another Warren and Pearson book of the 1930's "Gold and Prices," now completely out of print.

Just what revived Mr. Rumley's interest in devaluation in 1958 can only be conjectured. His revived interest may have been temporary. In recent months he has been quiet on this topic. His above-mentioned efforts appeared early in the year, when all published economic indicators were pointing downward and there was concern about the seriousness of the recession. Thus, the Rumley appeals were addressed to all interested in quick recovery from the spreading depression. To President Eisenhower he wired in March: "This recession, now growing into a serious depression, has the same cause as the great depression of 1929–33. Its origin lies in worldwide forces and shortage of gold for its increased workload." The telegram mentioned the fact that Rumley had organized the Committee for the Nation in 1932 and its reliance on the Cornell monetary experts (i.e., the two above-mentioned professors of agricultural economics) who, according to Mr. Rumley, "guided the thinking that led, in the spring of 1934, to the release of our dollar from the depression price of $20.67 per ounce for gold."

Mr. Rumley's gloomy appraisal of the economic outlook in March this year has not been borne out by events, and public dissatisfaction with $35 price of gold has not been aroused.

Apart from the Senate Joint Resolution 16 and its replacement, the Senate Concurrent Resolution 91, already mentioned, and three equivalent resolutions introduced in the House of Representatives, only a few other bills on gold were introduced in the Congress during 1957 and 1958, and on none of them was any action taken. This year, Senator BIBLE, of Nevada, was the author of a bill to allow private trading in gold, simliar to a bill introduced in 1957 by Congressman ENGLE, of California. Other bills with the same purpose were introduced in 1957 by Congressmen PFOST, of Idaho; BARING, of Nevada; Berry, of South Dakota; GUBSER, of California; and Delegate BARTLETT, of Alaska, and Senator MURRAY, of Montana.

The only four other gold bills were those of Congressen HIESTAND of California, Reed of New York, Hale of Maine and KEARNS of Pennsylvania, all providing for a resumption of gold coinage without a change in the price of the metal. Some of these bills have been reintroduced year after year without any result. These bills have the support of the Economists National Committee on Monetary Policy, 58 members of which in May 1958, issued a public statement entitled, "The United States must not devalue her dollar."

We have seen nothing during the past 6 years to suggest any change in the firm adherence of the U.S. Government and public to the established price of $35 per ounce of gold. The country's majority support of foreign aid as a continuing proposition suggests that, in the not very distant future, it may be prevailed upon to contribute another major transfusion of dollars to the monetary resources of the rest of the free world; but, if this comes about, it is far more likely to take the form of an increase in the U.S. quota in the International Monetary Fund, plus contributions of dollars to other international and national agencies engaged in world finance, rather than an increase in the price of gold, either unilateral or multilateral.

The enlargement of World Fund and Bank quotas, which has been advocated for some time in Britain as one of the several alternatives to a replenishment of world reserves through a gold price increase and which was discussed by British Treasury representatives in Washington early in 1958, has been formally accepted by the U.S. administration. A published exchange of letters in August between the Secretary of the Treasury, Mr. Anderson, and President Eisenhower disclosed that the United States would sponsor an increase in members' quotas in the International Monetary Fund and the World Bank at their annual meeting in New Delhi in October as well as open discussions looking toward the creation of an International Development Association as an adjunct of the World Bank.

Further helping to crystallize U.S. views on the so-called international liquidity question was an article in the September 1958, letter of the First National City Bank of New York. The bank rejected the thesis that inadequacy of reserves is demonstrated by comparing 1957 and 1937 gold and trade data. The bank, instead, compared 1957 with 1928, and found total official gold reserves as a percentage of world imports to be 36 percent in 1957, compared with only 32 percent in prosperous 1928. In physical terms, the bank noted, world trade has increased by less than 80 percent since 1937; the quadrupling of its value being a result of inflation—i.e., "overswollen monetary reserves created by the radical mark-up in the price of gold in 1934." The bank adds: "The thought emerges that a big rise in the price of gold today would have the practical result of giving inflation another 25 years' lease of life."

As 1958 draws to a close, nothing on the American scene suggests the slightest change in U.S. opposition to a change in the official price of gold.

## The Danger From Within

EXTENSION OF REMARKS
OF
### HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. MASON. Mr. Speaker, 15 years have gone by since F.D.R. ordered "Clear it with Sidney," meaning the approval of Candidate Truman for Vice President rested with Sidney Hillman. Today the requirement for every Congressman, Democrat or Republican, is he must clear his candidacy with COPE. Times have changed.

Willard Edwards, a political writer, has an article in the April issue of the magazine American Mercury that everyone interested in preserving our American form of government and our American way of life should read.

Under leave to extend my remarks, I include a part of that article only. The article is entitled "Is a Labor Government in 1960 Inevitable?"

The freshman Congressman remarked, despairingly, "I never knew what I let myself in for when I accepted labor's support. I don't know whether I can take it for 2 years. If they don't get off my neck, I'll never run for Congress again."

The speaker was young, intelligent, ambitious. In his first venture into politics last November, as Democratic candidate for the House of Representatives in a populous Eastern State, he had scored an upset in defeating a veteran Republican incumbent.

His district, a suburban area adjacent to a large city, contained no large industries. But organized labor had contributed heavily to his candidacy because his Republican opponent had publicly espoused right-to-work laws and had otherwise shown an antilabor attitude. There was general agreement that the money, propaganda, and paid workers thrown into the district by the Committee on Political Education (COPE), electioneering arm of the AFL–CIO, had been responsible for the results on election day. Scores of similar surprises were registered from coast to coast.

The victor had paid graceful tribute to this support in his post-election statement, promising to lend a sympathetic ear to labor's problems. Sublimely ignorant that something more practical and substantial might be expected, he turned his attention happily to organizing an office force equipped to deal with the special problems of his constituency.

Shortly thereafter, an affable representative of COPE presented himself and offered to assist the Congressman-elect in his hiring problems.

"Your administrative assistant will be the most important man in your office, next to yourself," he was informed, truthfully. "Your future career will depend to a great degree on his skill and efficiency. We are interested in your future and can help you to select the proper man, with the proper attitude, who will organize a smooth-working staff."

The new Congressman already had picked his number one assistant, a friend, a young lawyer, with a sound political background. The labor representative shook his head sadly when informed of this selection.

"This man of yours said, only 6 months ago, that the wage spiral was contributing to inflation," he remarked. "He does not recognize that inflation is a Republican bugaboo, that it is inevitable in this Nation's dynamic economy, and that rising costs hurt no one as long as personal income rises at a greater rate. Anyone with his views would be a pernicious influence on your whole staff. Don't you agree?"

The young Congressman protested feebly but eventually agreed to discard his original choice and appoint a former union organizer as his chief assistant. This individual took over the hiring of the office staff, carefully examining each job applicant, including clerks and typists, on his labor attitude.

"I've lost control of my own office force," the freshman legislator remarked, bitterly, to an intimate. "I've kicked myself for permitting it, but I couldn't forget that I'd never have got to Congress without labor's money and organization. Now, I'm beginning to wonder how far the pay-off will extend and whether it's worth it."

This incident is not an isolated one. All over Capitol Hill, in the months since election of the 86th Congress with its overwhelming Democratic-Socialist-labor majorities, new Members of Congress in both Senate and House are discovering the price they must pay for labor's support.

Reports of labor's patronage takeover came first from a group of career workers in congressional offices. These men and women, skilled in dealing with problems peculiar to the legislative branch, have never, in past years, been disturbed by election returns which frequently removed their employers from office. Equally valuable to Republican or Democratic legislator, they always found ready employment in each new Congress. Their party affiliation and political opinions had never previously been questioned when their qualifications were under consideration.

These workers reported a phenomenon. When they interviewed a Congressman-elect, seeking employment, there was usually present a third party, silent but interested, who took notes and whispered suggestions to the employing legislator. Word quickly spread that this was the labor man and it was obvious that he inspired a number of questions new to congressional office workers.

"Your former employer, Congressman X, held antilabor views," a job applicant would be informed. "Did you endorse them? What is your position on the Taft-Hartley Act, on so-called right-to-work laws, on the Kennedy-Ives amendments?"

If the answers by bewildered applicants did not satisfy the labor man, the career workers discovered, letters of commendation for years of previous service, from either Democratic or Republican legislators, were valueless. A number of veteran staff workers, despite their high professional capacities, found themselves unable to survive the examination.

There were mutterings of discontent. The young Congressman, quoted above, threatened, darkly, to take the House floor some day and reveal his experiences. But it is a mournful duty to record that he is representative of an exceedingly small minority and the odds are high against this lone fighter staging a rebellion. The comforts of his office, with its $22,500 salary, its prestige, its junkets to foreign lands at public expense, its social prerogatives for wife and family, can be expected to soften his resentment. Like all of his colleagues, he will want more of the same and is acutely aware that a public attack on labor's dictatorship would almost certainly end his political career.

Some realists among the newcomers needed no coercion from labor to put their offices on a sound footing. Freshman Representative GERALD T. FLYNN, Wisconsin Democrat, delayed scarcely at all to pay off his principal election debt.

He appointed as his administrative assistant one Samuel Rizzo, international representative of the AFL–CIO United Auto Workers and chairman of the UAW midwestern foundry subcouncil. Rizzo took the job with a special dispensation from President Walter Reuther of the UAW who granted him a leave of office, obviously on the theory that Rizzo would be more useful calling signals in Washington than in Wisconsin. FLYNN installed another union man as secretary in his home office in Racine, Wis. He could do no less in return for the funds and organization which enabled him to take the seat long held by a veteran Republican of ultraconservative views.

At least one other newly elected Democratic Congressman made no secret of his gratitude to labor. Representative WALTER H. MOELLER, of Ohio, announced the employment of union staff assistants after COPE helped him unseat an antilabor Representative.

## Military Retired Pay

EXTENSION OF REMARKS
OF

## HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. KILDAY. Mr. Speaker, most Members are receiving a large number of letters with reference to the disparity of retired pay of military men retired before and those retired after the military pay bill, effective June 1, 1958—Public Law 85–422.

Because I was chairman of the subcommittee of the Committee on Armed Services which wrote the bill, Members are inquiring of me as to what is involved in this issue. In an effort to be helpful to my colleagues, I have formulated a number of questions and answers which reflect answers to most of the inquiries made of me.

The information given below is intended to be factual. No effort has been made to evaluate the merits of the issue nor to debate the same.

The questions and answers follow:

Question 1: Is there a material difference in the retired pay of members of the military, in the same rank and same length of service who retired before June 1, 1958, and those retiring after June 1, 1958?

Answer: In the higher ranks there is a very material difference in retired pay. The difference diminishes in the lower officer ranks and enlisted grades.

The following table contains full information as to officer ranks and enlisted grades of those retired with average years of service related to retired grade:

*Examples of military retired pay under the Career Compensation Act—Nondisability retirements*

| Grade | Pay grade | Years of service | Paid prior to June 1, 1958 | Paid after June 1, 1958 | | Increase over old rate | | |
|---|---|---|---|---|---|---|---|---|
| | | | | Retired before June 1, 1958 | Retired after June 1, 1958 [1] | Retired before June 1, 1958 | Retired after June 1, 1958 [1] | Difference [1] |
| | | (1) | (2) | (3) | (4) | (5) | (6) | (7) |
| Chief of Staff | O–10 | 30 | $807 | $1,015 | $1,406 | $208 | $599 | $391 |
| General | O–10 | 30 | 807 | 1,015 | 1,275 | 208 | 468 | 260 |
| Lieutenant general | O–9 | 30 | 807 | 935 | 1,125 | 128 | 318 | 190 |
| Major general | O–8 | 30 | 807 | 856 | 1,013 | 49 | 206 | 157 |
| Brigadier general | O–7 | 30 | 725 | 769 | 881 | 44 | 156 | 112 |
| Colonel | O–6 | 30 | 608 | 645 | 739 | 37 | 131 | 94 |
| Lieutenant colonel | O–5 | 27 | 453 | 480 | 523 | 27 | 70 | 43 |
| Major | O–4 | 26 | 385 | 408 | 410 | 23 | 25 | 2 |
| Captain | O–3 | 25 | 322 | 341 | 328 | 19 | 6 | −13 |
| 1st lieutenant | O–2 | 25 | 258 | 274 | 238 | 16 | −20 | −36 |
| 2d lieutenant | O–1 | 27 | 253 | 268 | 212 | 15 | −41 | −56 |
| Master sergeant | E–7 | 23 | 184 | 195 | 201 | 11 | 17 | 6 |
| Technical sergeant | E–6 | 23 | 166 | 176 | 167 | 10 | 1 | −9 |
| Staff sergeant | E–5 | 24 | 155 | 164 | 144 | 9 | −11 | −20 |
| Sergeant | E–4 | 25 | 137 | 145 | 119 | 8 | −18 | −26 |
| Corporal | E–3 | 25 | 102 | 109 | 88 | 7 | −14 | −21 |
| Private 1st class | E–2 | 24 | 80 | 84 | 65 | 4 | −15 | −19 |
| Private | E–1 | 23 | 61 | 65 | 60 | 4 | −1 | −5 |

[1] Not applicable to persons on saved pay at time of retirement.

NOTE.—For brevity, tables concerning commissioned officers with over 4 years of active enlisted service and warrant officers have not been included.

Question 2: Under the 1958 pay bill did persons retired before June 1, 1958, receive any increase in the retired pay previously received by them?

Answer: Yes. Those persons retired before the effective date of that pay bill received an increase of 6 percent of the pay previously received. The dollar amount in each grade and rank is given in the above table.

Question 3: Why was 6 percent increase granted rather than some other percentage?

Answer: The Department of Defense had recommended a formula granting a cost-of-living increase of 6 percent for all those active-duty members not receiving a 6 percent increase under the recommendation submitted by it. The subcommittee did not recommend the formula submitted by the Department of Defense. However, the pay scales recommended by the committee, and adopted by the Congress, reflected with but very few exceptions a 6 percent increase. Therefore, the committee recommended an increase of 6 percent for persons previously retired as approaching the increase in the cost of living.

Question 4: What was the annual cost of the increased retired pay of 6 percent?

Answer: Approximately $36 million per year.

Question 5: What increase for persons previously retired was recommended by the Department of Defense?

Answer: The Department of Defense recommended that the retired pay of those retired before the effective date of the bill not be computed on the new rates. Therefore the Department recommended no increase for these officers.

Question 6: What would be the increased cost if those retired before the effective date of the pay bill were permitted to recompute their retired pay on the new pay rates?

Answer: It is estimated the increased cost for the first year would be between $25 million and $26 million, in addition to the $36 million previously granted.

This cost would recur annually, but would be reduced by approximately 2 percent per year due to attrition of personnel on the retired rolls.

Question 7: Did the granting of an increase of 6 percent depart from the previous custom as to retired pay?

Answer: Yes. In the past, persons retired prior to the effective date of any pay act have had their retired pay recomputed upon the new rather than the old pay rates.

Question 8: What is the cost of military retired pay, and what has it been in the past?

Answer: The current and past cost of military retired pay is as follows:

*Appropriations or expenditures for military retired pay, fiscal year 1950–60*

| Fiscal year | Million |
|---|---|
| 1950 appropriation | $219 |
| 1951 appropriation | 322 |
| 1952 appropriation | 329 |
| 1953 appropriation | 356 |
| 1954 expenditure | 386 |
| 1955 expenditure | 419 |
| 1956 expenditure | 477 |
| 1957 expenditure | 509 |
| 1958 expenditure | 561 |
| 1959 budget | 640 |
| 1960 budget | 715 |

## Federal Student Loan Program Booms

EXTENSION OF REMARKS
OF
## HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 2, 1959*

Mr. MULTER. Mr. Speaker, on August 2. 1955, I introduced a bill to increase the educational opportunities of needy students through a Federal loan fund. In the 85th Congress I reintroduced the bill and its provisions were included in the National Defense Education Act of that Congress.

I am pleased to note that the program has proved highly successful. In that connection, I commend to the attention of our colleagues the following article which appeared in the February 20, 1959, issue of Congressional Quarterly:

FEDERAL STUDENT LOAN PROGRAM BOOMS

Figures within the U.S. Office of Education show the Federal program to loan money to college students is booming. Items:

Colleges requested 10 times as much money as they received for student loans. 1,221 colleges and universities, representing 80 percent of the Nation's collegiate enrollment, have entered the program.

Of the 883 colleges which had no student loan program whatever last year, 466 have joined the Federal program.

U.S. Commissioner of Education Lawrence G. Derthick February 6 said the program "has generated more genuine interest among the colleges and universities than anyone had any reason to expect." Arthur S. Flemming, Secretary of Health, Education and Welfare, contended it was the biggest surprise of any of the programs authorized by the National Defense Education Act of 1958 (Public Law 864). Flemming said it represented a "revolution" in thinking about college loans.

BACKGROUND

The National Defense Education Act was signed into law September 2, 1958, after passing the Senate August 22, 1958, on a 66–15 rollcall vote and the House August 23, 1958, on a 212–85 rollcall vote (1958 Almanac, p. 213).

The act authorized for the student loan program $47.5 million for fiscal 1959; $75 million for fiscal 1960; $62.5 million for fiscal 1961; $90 million for fiscal 1962. But Congress in 1958 appropriated only $6 million to start the loan program. The $6 million already has been allocated to applicants who requested Federal money before January 1, 1959. More money is certain to be appropriated in 1959 for the program.

The colleges themselves award the loans. They must put one dollar of their own into the student loan fund for every nine Federal dollars received. To fulfill this matching obligation, colleges can borrow money at 4 percent interest from the Federal Government.

The more students enrolled in colleges within a State the bigger slice of loan money that State gets, since the distribution is in proportion to how the State's college population compares with the national college population. The State's share is divided among individual colleges in proportion to how much they ask for. Therefore, the more money a college requests, the more it receives.

A college student can borrow up to $1,000 a year as long as he is a full-time student, but he cannot borrow more than $5,000 all told. He pays the money back over 10 years starting 1 year after he stops being a full-time student. The interest rate is 3 percent on the unpaid balance. If he teaches in high school or elementary school, 10 percent of his loan is canceled every year he teaches. But no more than 50 percent of the loan, or 5 years worth of teaching, can be forgiven.

The loan program is scheduled to expire June 30, 1966.

COLLEGE LOAN MONEY ALLOCATION

This chart shows how much Federal loan money the colleges requested and how much they received under the first appropriation:

| | Money requested | Money received | Recipient colleges |
|---|---|---|---|
| Alabama | $793,702 | $88,625 | 19 |
| Alaska | 7,500 | 1,347 | 1 |
| Arizona | 500,435 | 39,705 | 6 |
| Arkansas | 452,115 | 47,553 | 17 |
| California | 3,499,927 | 571,499 | 81 |
| Colorado | 1,067,756 | 81,116 | 17 |
| Connecticut | 490,285 | 83,011 | 15 |
| Delaware | 32,500 | 11,657 | 2 |
| District of Columbia | 653,097 | 71,276 | 9 |
| Florida | 1,328,755 | 106,476 | 17 |
| Georgia | 1,203,120 | 98,290 | 29 |
| Idaho | 219,675 | 22,810 | 8 |
| Illinois | 2,858,957 | 305,718 | 52 |
| Indiana | 2,395,294 | 174,357 | 27 |
| Iowa | 1,326,511 | 113,971 | 36 |
| Kansas | 1,244,229 | 97,508 | 30 |
| Kentucky | 965,548 | 77,472 | 25 |
| Louisiana | 1,200,868 | 105,125 | 15 |
| Maine | 282,600 | 22,858 | 7 |
| Maryland | 882,955 | 81,525 | 22 |
| Massachusetts | 2,328,488 | 249,680 | 52 |
| Michigan | 2,645,905 | 255,618 | 35 |
| Minnesota | 1,692,000 | 135,107 | 27 |
| Mississippi | 572,700 | 65,719 | 22 |
| Missouri | 1,990,508 | 142,128 | 37 |
| Montana | 146,230 | 23,549 | 8 |
| Nebraska | 457,815 | 57,263 | 14 |
| Nevada | 42,223 | 4,363 | 1 |
| New Hampshire | 257,000 | 24,655 | 6 |
| New Jersey | 919,600 | 108,448 | 19 |
| New Mexico | 324,142 | 24,987 | 9 |
| New York | 6,977,377 | 623,442 | 92 |
| North Carolina | 1,498,878 | 138,216 | 46 |
| North Dakota | 185,940 | 25,249 | 9 |
| Ohio | 2,840,170 | 274,124 | 47 |
| Oklahoma | 1,634,631 | 105,097 | 27 |
| Oregon | 788,839 | 73,393 | 17 |

## Trade Unions in Oregon Support Educational Opportunities

EXTENSION OF REMARKS
OF
## HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. NEUBERGER. Mr. President, organized labor is on the receiving end of a great deal of criticism these days. Therefore, I think it is only fair that the record should be balanced when it is possible to do so with accuracy. In my native city of Portland, Oreg., members of trade unions are voluntarily denying themselves such pleasure as a glass of beer so that they may contribute financially to a scholarship fund, which will help deserving Oregon boys and girls obtain a college education.

The moving spirit behind this project is Miss May Darling, a retired Portland high schoolteacher, who is chairman of the AFL–CIO committee on education in our State. Miss Darling has organized what she describes as the "one-less-beer-a-week" club. Although Miss Darling is not necessarily crusading against beer, she certainly is crusading affirmatively in behalf of education. She pointed out that if members of trade unions would deny themselves one glass of beer weekly, the $5.20 a year thus saved could be donated for college scholarships. This is helping to make possible educations for deserving high school seniors, who are being awarded scholarships by the Oregon AFL–CIO.

This entire worthy project has been described by Stan Weber, labor editor, in the Oregon Journal for Sunday, February 22, 1959. I ask unanimous consent that Mr. Weber's informative article be printed, Mr. President, in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR REPORT

(By Stan Weber)

May Darling, chairman of the Oregon AFL–CIO's standing committee on education, is welcoming recruits to a new organization called—of all things—the "one-less-beer-a-week" club.

Not that Miss Darling is necessarily opposed to anyone having a glass now and then of Blitz, Lucky Lager, or Olympia.

But the OLBW club has as its primary goal the financial betterment of the Oregon AFL–CIO's scholarship fund, a worthy cause near and dear to the heart of Miss Darling.

So far, the new organization hasn't brought in a tremendous amount of money, and it has only two members. But it has interesting possibilities.

The idea for the OLBW was hatched in the basement of the Labor Temple, where a barroom is located.

It seems a couple of patrons of the place were discussing labor's scholarship program and agreeing that, of all the worthwhile endeavors being undertaken, this is one of the most commendable. But, they told each other, as much as they'd like to, they couldn't afford to contribute to the fund which finances the program.

Then, one of them got the bright idea that if he drank only one less glass of beer a week (the 10-cent variety) he would save $5.20 in a year, which he could donate scholarships. In less time than it takes to quaff a glass of the Bright Cascades, he had plunked out on the bar $5.20 for his companion to take up to Miss Darling's office.

The other man felt it his duty to also consume one less beer a week and put in his $5.20, too. And that's how the OLBW club was started.

Miss Darling is aware that the Bartenders Union cannot be expected to give unqualified support to movements such as this one. But, Fred Gee, secretary of the Portland bartenders local, has given his stamp of approval to the idea. Provided, of course, "it doesn't go too far," he adds, laughingly.

Miss Darling, in reporting on this new trend in fundraising, adds a reminder that examinations for this year's contests will be held April 8 in each school where there are students wishing to try for a scholarship. Principals must notify the Oregon AFL–CIO not later than March 23 of the number of students in their respective schools who wish to take the examination.

Miss Darling points out that the purpose of the contest is not to instill propaganda for organized labor or for any particular union. "The aim," she says, "is to encourage high school studets to study the American industrial system with special emphasis upon the role of management and labor."

This year the Oregon AFL–CIO will give three $600 scholarships and three $150 to high school seniors.

## Farm Cooperative and the Record

EXTENSION OF REMARKS

OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. WILEY. Mr. President, today the Wisconsin electric cooperatives begin a 3-day meeting in Madison, Wis.

The convention is expected to attract about 500 delegates from rural electric and telephone cooperatives in Wisconsin and affiliated groups in 9 Midwestern States.

During the meetings, it is expected that, among other discussions, the question of whether REA-financed cooperatives should or could absorb higher interest rates will be considered.

I am hopeful that out of this meeting, and similar conventions throughout the country, will come a greater understanding of the significant role of the REA and other co-ops play in the overall economy now, and in the future; as well as the problems that may be created by drastic changes in policy toward co-ops.

To illustrate the improvement in farm life throughout the availability of electricity—a most significant proportion of which has been provided through the REA—the numbers of farms in Wisconsin serviced by electrical service have jumped from 19.6 percent in 1935 to 97.4 percent in 1958.

Overall, this program has been vital to agricultural progress and to improvement of rural living.

As Congress considers legislation affecting the future of the cooperative movement, I believe it must take a look at the overall record.

Today I received from Mr. Homer Brinkley, executive secretary of the National Council of Farm Cooperatives, a brochure entitled "Farm Cooperatives and the Record." The brochure gives a fine resume of the role of cooperatives in the farm econmy.

In view of the attention now being given cooperatives—particularly from the tax angle—I believe this brief look at the record of cooperatives is most pertinent.

I ask unanimous consent to have the material printed in the Appendix of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FARMER COOPERATIVES AND THE RECORD

Farmer cooperatives have grown and developed under the stimulus of many wise legislative acts and the support of farmers and a thoughtful public. Yet they have remained perhaps the least understood of all farm organizations.

This brochure has been prepared to help you better understand farmer cooperatives, their objectives, and their place in the national economy. It attempts, too, to show how the aids and benefits provided farmers through the years by State and Federal legislatures, and approved by a thinking public, have resulted from recognition that this Nation cannot afford a permanent "underdog" agricultural economy.

A careful study of the facts presented here will show that farmer cooperatives represent one sound way to correct the unbalances which have plagued agriculture for two generations.

THEY'RE FARMERS' OWN BUSINESS

Farmer cooperatives are organizations set up by producers to provide better business services for themselves in terms of efficiency, quality, and cost. Their objective is to increase their individual profit from farming through greater returns from products marketed, better quality farm supplies and services, and savings effected through mass purchasing. They give meaning and purpose to our private enterprise system as it relates to farmers.

THEY'RE DEMOCRATIC AND ECONOMICAL

Democratic control and operation at cost through distribution of financial benefits in proportion to patronage are basic principles of farmer cooperatives. Common characteristics are voluntary membership, member contributions to capital and member use of association services. They are off-the-farm extensions or integrations of their members' operations in production, marketing and purchasing.

THEY HELP FARMERS HELP THEMSELVES

Cooperatives provide farmers an effective form of organization through which they can develop economic strength to deal with other economic groups. They afford the means by which each farmer can continue to control his own farming operations rather than transfer vital management decisions to others. They help to develop more balanced competition in our economic system. They are innovators of new ideas and stimulators of new practices. They perform valuable services to producers through their efforts to spread economic understanding of methods and costs in marketing and purchasing, and in stimulating farm people to take constructive action in business and civic affairs.

The growing concentration of strength in nonagricultural groups brings farmers face to face with many complex problems. Their cooperatives, which they themselves own and control, offer the means through which farmers can gain for themselves a position of equality with other groups in the market place.

THEY'RE PART OF OUR FREE ENTERPRISE SYSTEM

Cooperatives are a vital part of our country's free enterprise system. In addition to their economic functions, they have a constructive role to play in our society through their emphasis on the development of joint strength and responsibilities of farmers. In an increasingly organized and mechanized world, cooperatives serve to protect the functions of individual producers in an economy of mass production, mass distribution and mass communications—all springing from the growing force and consolidation of economic power.

THEY'RE AS OLD AS AMERICAN AGRICULTURE

Farmer cooperation is as old as American agriculture itself. Over the years, cooperatives have earned a place of importance in the agricultural economy. In recognition of this, they have received bipartisan support and statutory sanction from the Congress of the United States and from the legislatures of every State in the Union, encouragement from both political parties, and words of approval and support from national leaders—including Presidents of the United States.

CONGRESS AND THE STATES HAVE ENCOURAGED THEM

For some 60 years now, the Congress repeatedly has enacted legislation designed to encourage farmers to establish and operate their own marketing, purchasing, and service cooperatives. In this legislation, the Congress has continued to recognize the distinct character of farmer cooperatives and to demonstrate its desire to foster these mutual, self-help agricultural institutions.

There actually is no Federal statute providing for the incorporation of agricultural cooperatives, however. They are set up and operate under State laws, and all States have statutes adapted to incorporation of such associations.

It is believed the first Federal statute to refer to farmer cooperatives was the War Revenue Act of 1898, which carried exemption for farmers' cooperatives and other types of organizations from payment of the stamp taxes.

The Clayton Antitrust Act became law in 1914, and section 6 of that act gives agricultural organizations meeting specified conditions certain types of limited immunity under the antitrust laws.

The Capper-Volstead Act became law in 1922. Its objectives were to permit associations of farmers, corporate or otherwise, and formed with or without capital stock, that met certain conditions prescribed in the act, to organize and operate without rendering

themselves liable under the antitrust statutes as combinations in restraint of trade.

The Robinson-Patman Act, pertaining to price discrimination between purchasers, which was enacted in 1936, provides that nothing in the act shall prevent a cooperative association from returning to its members, producers, or consumers, all or any part of net earnings or surplus resulting from its operations, in proportion to their business with the association.

The Agricultural Marketing Act of 1926 established in the U.S. Department of Agriculture a division to provide research, service, and educational assistance to farmer cooperatives, and contained provisions to enable farmers to set up joint business enterprises. Later, the Agricultural Marketing Act of 1929 created the Federal Farm Board and authorized it to make loans to associations of farmers. The 1929 act also authorized the Board to encourage "the organization, improvement in methods, and development of effective cooperative associations."

The Farm Credit Act of 1933 provided for 12 regional banks for cooperatives and the central bank for cooperatives, for the purpose of making loans to cooperatives meeting the definition of such association contained in the Agricultural Marketing Act.

The Motor Carrier Act, enacted in 1935, providing for the economic regulation of the trucking industry, specifically exempted trucks owned and operated by cooperative associations as defined in the Agricultural Marketing Act.

The Office of Price Stabilization during the war and postwar years wrote into its price ceiling regulations provisions for pricing which specifically allowed farmer cooperatives to adapt pricing methods to conform to their operating procedures.

Six times since adoption of the 16th amendment sanctioning income levies by the Federal Government, the Congress has written legislative provisions dealing specifically with farmer cooperatives. In each case, the distinct character of the cooperative form of doing business has been recognized, and the Congress has continued to demonstrate its desire to assist farmers in their cooperative enterprises.

SO HAVE BOTH MAJOR POLITICAL PARTIES

Encouragement and endorsement, likewise, have come from U.S. political parties. Framers of both Democratic and Republican Party platforms for many years have recognized the importance to agriculture of cooperatives which enable farmers to combine their economic resources to market their commodities and purchase their farm supplies to advantage through joint action.

*As a matter of record*

In 1956 the Democratic Party pledged to "encourage bona fide farm cooperatives which help farmers reduce the cost-price squeeze and protect such cooperatives from punitive taxation."

The Republican Party pledged "to give full support to farmer-owned and farmer-operated cooperatives."

In 1952 the Democratic platform said: "We will continue to support the sound development and growth of bona fide farm cooperatives and to protect them from punitive taxation."

The Republican platform declared: "We support the principle of bona fide farmer-owned, farmer-operated cooperatives."

In 1948 the Democratic Party said: "We will encourage farm cooperatives and oppose any revision of Federal law designed to curtail their most effective functioning as a means of achieving economy, stability, and security for American agriculture."

The Republican Party declared: "There must be a long-term program in the interest of agriculture and the consumer which should include * * * support of the principle of bona fide farmer-owned and farmer-operated cooperatives."

And so they go. In other convention years the story has been much the same, going back to 1924.

IT'S A STRONGER AMERICA BECAUSE OF FARMER COOPERATIVES

The purpose of the Congress and national leaders over the years with respect to farmer cooperatives has been clear. With proper concern for the comparative economic weakness of sellers in a buyers' market, and with prophetic vision as to the growing costs of production, they set about doing their part toward helping farmers to help each other. The net result has been to give farmers a stake in our economic system that can grow with their own desire and ability to cooperate with each other in a common purpose. Not only agriculture, but the Nation itself is stronger because of farmer cooperatives.

## Statement of Hon. Carl Vinson of Georgia on H.R. 3460

EXTENSION OF REMARKS

OF

## HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. BOYKIN. Mr. Speaker, under unanimous consent to extend my remarks, I include a short statement which I made before the Public Works Committee today, and also include a good and a great statement by a good and great statesman—one of the finest men I have ever known on earth, a man with whom I have served over a quarter of a century here in the Congress of the United States, where the men that are standing around me at this moment represent every human being in America and where, Mr. Speaker, they all love and respect the great CARL VINSON. It is a joy and a pleasure to place his statement in the CONGRESSIONAL RECORD, that will be read all over this land and in many foreign countries.

I consider it a good statement; I consider it a fair statement for private industry. All of us love the TVA and the REA and have voted and worked and pulled for them, but we do have to stand for private enterprise. However, I will say no more about this at the moment, but I do hope that many people everywhere will read the great statement made by this man from Georgia, who has been in the Congress about as long as any man that has ever lived.

This is the statement by the great Congressman, the chairman of the Armed Services Committee, the Honorable CARL VINSON, of Georgia:

STATEMENT OF CARL VINSON OF GEORGIA, ON H.R. 3460

Mr. Chairman, I appreciate this opportunity to appear before the committee today to offer an amendment to the bill H.R. 3460.

The basic law establishing TVA has no restrictions upon the area in which TVA may operate.

However, TVA has been operating within its present area for many years under a gentlemen's agreement between TVA and surrounding private utility companies.

I understand this gentlemen's agreement as to their respective areas of operation is on an entirely friendly and cooperative basis between TVA and the private utilities.

It is also my information that TVA takes pride in the fact that it is living up to this so-called gentlemen's agreement with private utilities, as to their respective areas of operation, and that TVA-private utility relations are uniformly congenial.

This bill proposes to give TVA its own legal financing and borrowing powers without congressional supervision or control. I propose through the amendment which I am submitting and advocating that if TVA is to be granted this tremendously broad financing power, Congress should now also write into the law the definite and specific area limitations under which TVA is now operating under its present gentlemen's agreement.

In other words, my amendment converts the gentlemen's agreement to law. That's all it does. If Congress is going to grant such exceedingly broad and unrestricted financing powers, to TVA, it should by all means write into the law definite territorial limitations, as to its operative power, to the area TVA now serves.

If, in the future, it is desirable for TVA to extend its area operation beyond its present territorial area, it should come back to Congress and then let Congress pass on the desirability of such an extension.

This is the sensible and sound way to go about this thing.

I understand that TVA itself is not asking for an enlarged or extended area of operation.

I am reliably informed that while TVA of course might like to have enlarged area of operation, they are primarily interested in being given power of self-financing in their own present area of operation.

If Congress is not going to give TVA further financial aid, TVA apparently needs some kind of self-financing powers if it is to meet expanding demands for power in its present operating area.

And that should be the primary aim of this legislation.

Why tack on to it a provision extending TVA territory 25,000 square miles into areas now being well and efficiently served by private utilities on all sides of the presently TVA-served area?

Why encroach so heavily upon areas now well served by present utilities?

Why upset the present gentlemen's agreement areas and the evidently pleasant relations now existing in these areas?

We should limit the area of TVA operation to that now covered by the existing gentlemen's agreement.

That is all I am asking in this amendment.

It is the sensible thing to do, if we are to grant TVA these wide financing powers.

It is fair to all parties.

My amendment does no harm to anybody or to any private or public utility or to any American citizen. It does not affect in any way the present operations of TVA. It closes no door to future congressional legislation which might be desired as to the area or any other feature of TVA.

And it places safeguards around both public and private utilities, which I believe it is our duty to do.

Mr. Chairman, the wording of the pending bill as to additional areas which TVA could serve is very uncertain and ambiguous.

It is estimated that this additional area of TVA operations as provided in the bill as it is now written is at least 25,000 square miles. This is in addition to the 80,000 square miles now served by TVA under its so-called gentlemen's agreement.

This is an increase of over 30 percent into areas now known as private utility served areas; and there are those who are of the strong opinion that the bill as written even covers a far greater area.

Now, Mr. Chairman, throughout the years, from the very inception of Muscle Shoals, I have always supported TVA legislation. But I've always known the area it could cover.

In considering this vitally important legislation, let us use discretion. Let us limit the area of TVA in this bill to its present area of operation if Congress is going to give TVA these huge self-financing powers. I hope this committee will see fit to adopt such an amendment. That is the intent and purpose of my amendment.

Last year in the report which accompanied S. 1868, this committee stated:

"The committee is convinced that this bill provides a workable solution of the problem of supplying the future power needs of the area served by TVA on a basis which will adequately protect the Federal Government, purchasers of TVA power, and investors in TVA bonds."

I appear this morning in support of an amendment to this bill which will permit TVA to supply adequate power needs in its present area, will adequately protect the Federal Government, will adequately protect purchasers of TVA power and investors in TVA bonds; and will also protect the municipalities of Georgia, the taxpayers of Georgia, the stockholders of the Georgia Power Co., the employees of the Georgia Power Co., as well as thousands of individuals who have investments in private utility companies.

Last July when the president of the Georgia Power Co. appeared before the House Committee on Public Works, he advised this committee that the Georgia Power Co. had 5,008 employees operating its properties which served 95 percent of the State of Georgia in an area of 57,000 square miles.

As of June, 1958, the Georgia Power Co. directly served electrical energy requirements of 662,385 customers. In addition, approximately 300,000 Georgians receive electric service from 39 rural electric membership corporations and 50 municipal electric distribution systems who in turn receive electric power on a wholesale basis from the Georgia Power Co. The power company also carries on retail operations with 631 municipalities.

Now let me call this to your attention.

In 1957, the Southern Co., with its affiliates, including the Georgia Power Co., paid a total of $55,946,000 in local, State, and Federal taxes.

I am advised that this was considerably larger than the dividends paid to the stockholders. The affiliates of the Southern Co., including the Georgia Power Co., have over $1 billion invested in their facilities.

The Southern Co. have 21,000 preferred stockholders and 124,000 common stockholders in every State of the Union.

The Georgia Power Co. has over 8,910 stockholders, 6,600 of whom are citizens of Georgia.

Therefore, I am appearing this morning in the interests of the State of Georgia, the municipalities of the State of Georgia, the taxpayers of the State of Georgia, as well as thousands of other citizens of this country who have a vital interest in the preservation of free enterprise.

Now, just to give you an example of what the Georgia Power Co. does for the State of Georgia, and the municipalities of Georgia, let me read to you a newspaper clipping from the Union Recorder of Milledgeville, Ga., my hometown, dated Thursday, February 26, 1959:

"POWER COMPANY DELIVERS CHECK TO CITY OVER $10,000

"A check for $10,276.14 was delivered to the city of Milledgeville, February 19, 1959, by H. M. Woodard, district manager of the Georgia Power Co.

"This payment represent 3 percent of the gross receipts in 1958 from the sale of electric power to commercial and residential customers of the company under the municipal partnership plan. The 3 percent tax is paid by the company in place of occupation and franchise taxes and is in addition to the company's property taxes, which totaled $5,270,000 last year.

"More than $2,135,000 is being paid to the communities of Georgia for 1958 under the municipal partnership plan. This is an increase of more than $117,000 over 1957.

"The company's total tax bill for 1958 was $26,600,000. This does not include the sales tax which the company collects from its customers for the State of Georgia nor the sales tax which the company pays on materials used in its operations."

I want to make mighty sure that Milledgeville, my hometown, and 630 other municipalities in Georgia continue to receive these annual payments. That's the main reason I'm here today with a suggested amendment.

Now, the amendment I propose strikes out the last four words on line 13, and all of lines 14 through 25 on page 2, as well as all of lines 1 through 11 on page 3, and substitutes the following in lieu thereof:

AMENDMENT

"Unless otherwise specifically authorized by act of Congress existing and subsequently built, leased, or acquired power facilities of the Corporation shall not be used for the sale or delivery of power for use outside the service area of the Corporation as it existed on July 1, 1957, except, when economically feasible for exchange power arrangements with other utility systems with which the Corporation had such arrangements on said date."

Now let's see what the amendment does:

1. Unless specifically authorized by an act of Congress, present power facilities and those subsequently built, leased, or acquired by TVA shall not be used for the sale or delivery of power for use outside the service area of TVA as it existed on July 1, 1957. This carries out the existing gentlemen's agreement.

2. The exception to this prohibition, however, is that when economically feasible it will be permissible for TVA to provide service for interconnection with other utility systems for exchange power arrangements, if such arrangements were in effect on July 1, 1957. Such a plan is now in operation.

Now, Mr. Chairman, this permits the expansion of TVA facilities within the present service area of TVA.

It is my understanding that the sole purpose of this bill is to allow TVA to finance its future expansions through a bond issue but that that expansion is to be limited to the expansion required to meet the needs of the communities and users of electricity within the present boundaries of TVA.

My amendment permits this; it merely prohibits TVA from going beyond its present service area.

The bill as written provides that power facilities financed with bond proceeds or power revenues shall not be used for the sale or delivery of power by TVA outside the counties which lie in whole or in part within the Tennessee River drainage basin or the service area in which power generated by the Corporation is being used on July 1, 1957. (Lines 13–21, p. 2.)

Although the proponents of the bill represent the intention of the bill to be to confine TVA to its existing service area, with some minor flexibility, the truth is that the provision: (1) Contains a number of loopholes, ambiguities and exceptions which could be used to expand TVA's existing service area virtually without limit; and (2) in addition, in express terms, permits expansion of TVA's existing service area into an additional area of some 25,000 square miles (or approximately 31 percent of TVA's existing service area) which is not now serviced by TVA.

The loopholes, ambiguities and exceptions, which could be used to permit unlimited expansion, are:

1. The provision does not deal directly with the scope of TVA's operations but is drafted in terms of the use of power facilities financed with the proceeds of bonds or power revenues. But existing facilities or new facilities financed in any other way could be used to expand TVA's service area without any limitations whatever.

2. The provision is phrased in terms of "sale or delivery" (rather than use) of power in the defined areas and, except for the proviso which refers only to a "distributor", does not prohibit the purchase of power within the service area for use outside. There is, for example, nothing in the provision to prevent an industrial customer from taking delivery of power within the defined area and using it outside such area.

3. Power may be sold or delivered to a Federal agency wherever located. It is not clear whether the proviso against resale by a "distributor" would apply to a Federal agency. If not, such an agency as Southeastern Power Administration could qualify as a purchaser for resale, and then, obviously, that would permit it almost unlimited expansion of the area in which TVA power could be used so as to include the entire State of Georgia.

4. The bill authorizes a bond issue of $750 million to be outstanding at any one time to assist TVA in financing its power program. What appears to be words of limitation requiring approval by Congress with regard to the use of these bonds for the expansion of TVA service areas, actually constitute an authorization for expansion over and above the areas now served by TVA. This comes about as a result of the language on lines 17 through 19 which says that it is the intent of this act that the facilities constructed with the proceeds of these bonds or power revenues can't be used without prior approval by Congress, "for the sale or delivery of power by the corporation outside the counties which lie in whole or in part within the Tennessee River drainage basin."

But the geographical studies show that there are about 8,500 square miles within this drainage basin which are not now served by TVA. Thus what appears at first to be a limitation in the bill is actually an open invitation to expansion.

5. The words of limitation with regard to prior approval by Congress apply only to the power facilities built or acquired with the proceeds of the bond issue or power revenues derived from construction resulting from the bond issue. However, there is no limitation with regard to the utilization of revenues derived from existing facilities. Revenue from these facilities therefore could be used for unlimited expansion because there are no words of limitation applicable to these facilities.

6. In other words, the bill contains no limitation whatsoever with regard to new facilities that may be constructed on the basis of revenues produced by existing facilities.

There are some words of limitation with regard to new facilities constructed on the basis of the new bond issue authorized by this bill or on the basis of revenues produced from the new facilities constructed under the bond issue, but even this part of the bill authorizes an expansion of 8,500 square miles in the counties which lie in whole or in part within the Tennessee River drainage basin.

Now, Mr. Chairman, it seems to me that this bill, H.R. 3460, is so cleverly drafted that hereafter TVA is going to keep two sets

of books—one set of books will be known as the limited expansion set of books, and the other, the unlimited expansion set of books.

Now, why do I say that?

Well, it is perfectly obvious from the way this bill is drafted, that any facilities built from the $750 million bond issue can't be used for expansion without congressional approval other than the 8,500 square miles of expansion which will result from the language with regard to the counties lying partially or wholly within the Tennessee River drainage area.

Now, any revenues that are derived from any of these new facilities can't be used for expansion other than that I have just mentioned, so they will be kept under the limited expansion set of books.

But if TVA wants to expand without congressional approval, all they have to do is to take the revenues from existing facilities which were not built from the proceeds of the proposed bond issue, and use those revenues for new facilities without any limitation whatsoever and without ever coming back to the Congress to even say, "how do you do."

This is true because there is no limitation in this bill on the utilization of revenues derived from existing facilities.

Now I don't know how TVA plans to operate in the future, but certainly there is nothing in this bill to prevent them from using two sets of books and every time they want to expand into a new area, all they have to do is point to the set of books marked "unlimited expansion" and say, "Congress knew exactly what it was doing. They only restricted us from expanding with the proceeds or revenues derived from the bond issue. They didn't restrict us with regard to the proceeds from existing facilities built before the bond issue was authorized."

It is difficult to understand why the language "the counties which lie in whole or in part within the Tennessee River drainage basin" is used unless the proponents are demanding that the present service areas of TVA be expanded.

Geographical studies and maps show unquestionably that there are some 8,500 square miles in this drainage basin which are not now served by TVA.

Furthermore, the bill refers to the whole of counties which are only partially within TVA's existing service area or the drainage basin. This would permit expansion into some 16,500 square miles which are not now served by TVA. By far, the major part of this 8,500-square mile area and the 16,500-square mile area are now served by investor-owned power companies.

The TVA problem faced by Congress arises from the fact that TVA and its supporters have stated that they would need $1.5 billion in the next 10 years to provide for the expansion of the electric power requirements of its existing service area.

TVA and its supporters profess to have no desire to expand its service area geographically. But its supporters have not been willing to accept an unambiguous direction that the existing service area is not to be extended without further congressional authorization.

Congress may have to face the problem of finding some way to provide for the increased power requirements of the area now served by TVA. But Congress can and should insist that this problem be at least confined to that area and that effective limits be placed on further geographical expansion without express congressional approval. No good reason has been advanced to justify the expansion permitted by the bill or, indeed, to justify any geographical expansion at all.

There should be a direct and unequivocal provision confining TVA's power operations to its existing service area. Further geographical expansion should be permitted only after a showing of the need therefor and express congressional approval.

From the standpoint of the Georgia Power Co., this service area expansion problem is indeed a grave one. If not amended so as to fully protect this company, the adoption of the bill in its present form would have a most immediate and direct adverse effect on the company, which, as of June 1958, directly served the electric energy requirements of 662,385 customers.

I say that the language on page 2 of the bill (lines 13–25) provides the expansion of TVA directly or by its power distributors throughout counties in the Tennessee River drainage basin, and other counties in northwest Georgia now receiving TVA power through the North Georgia Electric Membership Corp., to an extent that was never dreamed of, even during the 1930's.

I interpret this language to not only permit, but also to encourage TVA to service directly some of the municipalities which the Georgia Power Co., now serves in northwest Georgia and, in addition, authorizes North Georgia Electric Membership Corp., a distributor of TVA, to extend its sales of TVA power throughout the whole of all of those counties in northwest Georgia in which it operated as of July 1, 1957. Necessarily, a very uneconomic and destructive duplication of already adequate electrical facilities would eventuate. Such an expansion would involve the largest cities in northwest Georgia.

It is for these reasons that I am proposing this amendment, so that the bill will be confined to what the stated need is, and not permit action to be taken which would adversely affect the municipalities of Georgia, the taxpayers of Georgia, the employees of the Georgia Power Co., and the stockholders of this and other private utility companies.

Mr. Chairman, I offer no apology for appearing here today on behalf of the municipalities of Georgia, as well as the Georgia Power Co. The Georgia Power Co. is a private utility system owned by private citizens. It has 8,910 stockholders, 6,600 of whom are citizens of Georgia.

My amendment very clearly protects my constituents who are stockholders in the Georgia Power Co., and most importantly, the municipalities of my district, who do business with this company.

If TVA facilities must be expanded to provide for increased power demands within its present area, then let's confine the bill to only that purpose.

Let's not use a steamroller where a simple sledge hammer will do the job.

---

STATEMENT OF HON. FRANK W. BOYKIN, OF ALABAMA, ON H.R. 3460

Mr. Chairman, I am appearing before your committee on behalf of myself and the other members of the Alabama House delegation who have the services of the Alabama Power Co. in their respective congressional districts. We are proud of the Alabama Power Co. and feel that it has done much for the betterment of our district and our State. We are also proud that we have the great TVA in our State. We are for both Alabama Power Co. and TVA and want to help both.

We are all aware of the gentlemen's agreement between TVA and Alabama Power Co., which has been so carefully kept by both parties for so many years. We feel that anything that can be done to continue this peaceful coexistence is all to the good and that it is to the best interest of all concerned that this gentlemen's agreement be preserved by making it the law, as CARL VINSON has suggested.

## Congressman (and BRTer) Kirwan Is Praised by Commentator Coffin

---

EXTENSION OF REMARKS
OF
## HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. VANIK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to call to the attention of my colleagues an article in the March 9, 1959, issue of the Trainmen News. The title of the article is "Congressman (and BRTer) Kirwan Is Praised by Commentator Coffin."

The Congressional Distinguished Service Award, sponsored by the American Political Science Association, will be made for the first time in September 1959. This award will be given to four outstanding Members of Congress for the first time this year; two Senators and two Members of the House of Representatives, one from each political party.

I would like to fully endorse this article and personally express my devotion and high regards for the gentleman from Ohio who has been nominated for this award. He is a living symbol of our American way of life and I feel eminently qualified to receive recognition of the highest order for his dedication to duty:

CONGRESSMAN (AND BRTER) KIRWAN IS PRAISED BY COMMENTATOR COFFIN

WASHINGTON.—His nominee for the Congressional Distinguished Service Award by the American Political Science Association is Congressman MICHAEL J. KIRWAN, Democrat of Ohio, who is a BRTer and a member of Lodge 952, Youngstown, Ohio.

So said Tris Coffin on his recent broadcast, sponsored by Chesapeake & Ohio Railway, in which he paid lofty tribute to the Ohio Democrat who is chairman of an important House Appropriation Subcommittee.

Commentator Coffin declared that in this key spot as chairman of the subcommittee, "MIKE is a combination of romantic Irishman with a taste for the idealistic, a shrewd and hardheaded bargainer, a scrapper and a wit. He gets the money for those huge concrete dams that store water for irrigation and power."

Coffin recalled that the Western States water and power conference had this to say of BRTER KIRWAN: "There is no Member of Congress, either in the House or Senate, who has done more to bring about regional development of natural resources than Congressman KIRWAN. Despite the fact that the Congressman does not live in the West, and therefore has no direct interest in reclamation projects, he has worked hard and long to bring water to arid areas and electric power to the people of the West. He is one of those who believe that the development in one State is of indirect benefit to the others. He is a great exponent of investing in the West as a sound policy for all the country." Asserted Coffin: "MIKE's own life is the kind of story we used to read about in those little books with poor type and entitled, 'Sink or Swim,' 'Do or Die.' He was one of the brood of a poor Irish miner, and his learning was mostly in the school of hard knocks. There are, the Irish poets say, two kinds of Irishmen, the

gloomy ones and the happy ones. MIKE is one of the happy romantic kind. He wanted to see the world, and so, like a bold kid who sees this as the best of all possible worlds, he set out to explore it. Not in any gilded carriage mind you.

"He 'hitched' rides on freight trains and went West. He worked in the wheatfields and the lumber camps, and on the ranches until his wild heart was tamed, and he came back home to work as a miner and later, on the railroad. The people of Youngstown, Ohio, sent him to Congress in 1936, and he has been elected every term with the kind of lopsided majority that shows the voters must love the 'guy'."

Coffin said that Congressman KIRWAN once told the House: "I was raised in the foothills of the Pocono Mountains, and I remember the warnings in the early 1890's against the waste of our resources. 'It is wrong. You will live to regret it,' they said. We were going into the forest and burning trees that it took God 200 years to grow. What was the result? Today, we have to go to Canada for lumber and wood products and pay three times the price. We have wasted land and water just because we were afraid to spend a dime. We are wasting our resources now, and the payoff, when it comes, will be terrific, and all because we have not had the courage to spend money to save our resources.

"From Maine to California, there is a waste and destruction of our natural resources, yet every time we try to appropriate some money to correct it, the cry is that we must economize. The national income last year was over $200 billion, and all of it came from the good earth, from the air and sky, by rain on the earth. If our economy produced $200 billion, surely it is worth half a billion dollars to protect it, and that is what I am asking for."

Pointing out that each year Congressman KIRWAN travels thousands of miles to check on reclamation projects he must OK, Coffin added: "The story is told of MIKE KIRWAN on a pilgrimage to the Far West to investigate a proposed new project. He was in Boise, Idaho. A curious reporter asked him, 'Why is it, that you, a Congressman from Ohio, are so interested in western conservation?' MIKE KIRWAN, a stocky man with friendly eyes, did not speak for a moment. He watched the flow of automobiles back and forth along the busy street. Then he said in his brogue, 'My friend, water development brings prosperity. Prosperity means people will buy cars, and every car moving along this street has steel in it made in my hometown of Youngstown, Ohio.'"

## Flood Control in the State of Kansas

EXTENSION OF REMARKS
OF
### HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, February 9, 1959*

Mr. GEORGE. Mr. Speaker, in 1951, a devastating flood occurred which inundated many of the business and residential sections of a number of cities in the State of Kansas. The loss ran into billions of dollars.

A plan of flood control has been adopted and includes a number of large dams and reservoirs. Construction has been started on a number, and Tuttle Creek, one of the major units, has 60 percent of the dam structure proper complete.

The overall plan for the Kansas basin includes reservoirs for flood control, irrigation, water conservation and recreation, and other purposes. Local protection works, including levees and channel improvements, are to supplement the flood control provided by the huge reservoirs.

Four important authorized projects have not yet been started: Lawrence, Melvern, Hillsdale, and Fort Scott. Detailed studies of the 1951 flood, and those occurring to a lesser extent every year since that date, by the U.S. Army engineers, demonstrated the need for additional reservoirs and some modification of local projects at critical locations for the protection against floods. Eight additional reservoirs of moderate size have been recommended and none of these, of course, has been started, and are not in the budget submitted by the President. Neither were any funds included in the administration's budget for Fort Scott and the other three important projects heretofore mentioned.

On a long-range projection, if the rate of construction is not stepped up, this overall flood protection project will not be completed until the last quarter of the 20th century. The frequency of floods, such as the one which occurred in 1951, cannot be determined, and such a flood may reoccur at any time. Should this happen with its tremendous loss of property and revenue to the Government, the shortsightedness of the administration and of the Congress would be pronounced, and there would be no satisfactory explanation of our failure to take affirmative action in making funds available. In the meantime, the industrial growth of cities such as Lawrence and Fort Scott is at a standstill because water is not available for industrial use, and a tremendous loss of tax revenue to the Federal Government results. The shortsightedness of the Bureau of the Budget by failing to include ample funds for flood control and water conservation is injurious to the economic growth of eastern Kansas and our national economy as a whole.

Realizing these facts, a concurrent resolution has been adopted by both houses of the Kansas Legislature, which has heretofore appeared in the RECORD.

## Hon. Abba Eban, Ambassador of Israel to the United States

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I enclose a very fine editorial, which appeared in the Washington Evening Star on Monday, March 9, 1959, on the Honorable Abba Eban, Ambassador of Israel to the United States.

Ambassador Eban ranks high among the statesmen of the world. The State of Israel has been extremely fortunate in having such a man as Ambassador Eban among its diplomatic representatives. The Ambassador is a man of great ability; his astuteness and acumen have served him well in espousing the cause of his country as well as the cause of world peace. Ambassador Eban is deserving of every high praise for his services in the cause of democracy. As Ambassador of Israel to the United Nations, he has been a beacon of light on behalf of his country and world peace. His service as Ambassador of Israel to the United States has been outstanding, and I take this opportunity to wish him every success and happiness when he returns to Israel.

MR. EBAN INTO POLITICS

Abba Eban has spent almost a decade among us as Israel's Ambassador to the United States and permanent representative to the United Nations. The posts have been exacting ones, but through all his years of activity in them—intense years, including more than a few moments of crisis—he has served his young and often embattled country with great distinction. Personable, energetic and highly articulate, he has labored hard and effectively for the Israeli cause. And he has done so not only in his formal diplomatic capacity, but also in many hundreds of meetings with nongovernmental groups of Americans, to whom he has spoken eloquently about his land and its aspirations.

But now Mr. Eban has reached a point where he has decided to resign (effective at the end of May) from his arduous ambassadorial role in order to run for office back in Israel. Still in his 40s, he is a relatively young man, and he is endowed with all the makings of a formidable campaigner. In that respect, Prime Minister Ben-Gurion does not seem to have exaggerated in writing to him that "your integration into the political life of our country heralds many achievements no less great than those which you have accomplished as our representative abroad. I am certain that the strength which has sustained you in your foreign service will be with you in even greater measure at home."

This accolade has been well earned by Mr. Eban. Just as he has starred in his work as Ambassador to the United States and as his country's voice in the U.N., he is likely to shine more and more, in the years ahead, in the domestic political life of Israel. As far as that goes, he can be sure that he has the best wishes of all his friends in America. Whoever is named to succeed him here will have big shoes to fill.

## Foreign Fallacy

EXTENSION OF REMARKS
OF
### HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. DORN of South Carolina. Mr. Speaker, here is more proof, if needed. The foreign aid and mutual security

programs are not only bankrupting America, they are the worst thing under the sun to build up loyalty, cooperation, courage, self-reliance, respect, and determination among our allies.

The following is from the highly respected Wall Street Journal:

BOLIVIA BLOWUP—IT PROVES ONCE AGAIN THAT DOLLARS CANNOT ASSURE AMITY AND THAT AID OFTEN DULLS THE EDGE OF RESPONSIBILITY

(By William Henry Chamberlin)

The anti-American riots in Bolivia, a nation rich in tin and poor in just about everything else, underscore the fact that lavish handouts are no passport to friendship.

The demonstrations were ignited by a story in the Latin-American edition of Time magazine which reported some of the less favorable aspects of Bolivian social and economic life. The magazine also quoted an unidentified American diplomat who allegedly suggested that Bolivia be broken up and its territory distributed among its neighbors.

Local reaction to the story was immediate and intense. Mobs stoned the U.S. Embassy at La Paz, burned diplomatic cars, and oddly enough, the Bolivian Government lent dignity to the demonstrations by filing formal protests with the State Department.

In a country with a 68-percent adult illiteracy rate it is not surprising that the incensed masses do not realize that the U.S. Government has little to do with what a publication prints about any country, including the United States. But the Bolivian officials should have known better. Nevertheless, it is not too difficult to understand the sensitiveness of a welfare state that has received $129 million in U.S. aid ($43 per Bolivian, the highest per capita figure in the whole foreign-aid setup) and has only economic chaos to show for it.

LEFTIST REVOLUTION

Some years ago Bolivia, always prone to violent shifts of power, experienced a leftist revolution and has been in economic hot water ever since. Two measures of the new regime were nationalization of the tin mines, formerly owned by foreign capitalists, and so-called land reform, splitting up large estates among the primitive Indians of the countryside.

On paper a good theoretical case could be made for these changes; but the practical results have been considerably short of satisfactory. The tin miners would apparently rather strike than eat and show little inclination to work even when they are not striking. The Indian peasants, accustomed to a very low standard of living, knock off work as soon as they have satisfied their simple needs—with bad results for agricultural output. A social security system that is out of proportion to the country's means has added to financial and economic difficulties.

It would be a rash man who would pretend to know the answers to Bolivia's social and economic problems. It does seem reasonable, however, to suggest that the solution of these problems is up to the Bolivians and that economic mismanagement in a remote land is not a proper charge on the American taxpayer.

It would also not be surprising as some old-fashioned Americans were becoming more than a little tired of having their country villified, its flag desecrated, its public buildings sacked and damaged, its official representatives insulted and attacked by lawless mobs. It is only a year since Vice President NIXON was stoned in Peru and nearly assassinated in Venezuela. More recently a high State Department official, William M. Rountree, was outrageously abused and attacked by the rabble in the streets of Baghdad.

Perhaps we take these things too lightly. Indeed, there is a most unfortunate tendency in some circles to consider an outburst of hostile mob violence as a signal and an admonition to think up new giveaway schemes to the country in which it takes place.

The time has passed, to be sure, when landing of American Marines would have been considered a normal reaction to an insult to the American flag.

But we should not go to the other extreme of seeming to take our national dignity and prestige lightly. If we do not respect ourselves, no one is likely to respect us. A suspension of diplomatic relations and a prompt cutoff of largesse to countries whose governments are so hostile that they will not or so weak that they cannot give proper protection to American official representatives and American citizens would have a very salutary effect.

The Bolivian experience is only the latest of many proofs that government-to-government subsidies are often the wrong road in economic cooperation. This is far from the only case where such subsidies seem to have produced enmity rather than friendship and served the recipients badly by preventing them from pulling themselves together and taking a hard look at economic realities.

A recent news item that attracted little attention outside the financial pages points up the right road to healthy cooperation. This was the floating of the American private capital market of the first Japanese Government bond issue since the end of the war, to the amount of $30 million, half in short-term 4½-percent bonds, the rest in a longer term 15-year issue at 5½ percent. Tied in with this private loan is an agreement of the International Bank for Reconstruction and Development to advance $10 million to the Japan Development Bank.

The proceeds of both these loans will be made available in yen to the Electric Power Development Company of Japan, a corporation engaged in the construction and operation of large-scale hydroelectric power enterprises and the disposal of the electricity produced to electric utility companies. Power is one of Japan's few natural assets, because of the number of mountain torrents in the country which can be harnessed to generate electricity.

The floating of these loans is calculated to serve as a reminder that the economic comeback of Japan in Asia is comparable with that of Germany in Europe, making due allowances for differences in the economic structures of the two countries. Japan was flat on its back at the end of the war, most of its merchant marine at the bottom of the ocean, its industries and large cities shattered by bombing.

But the Japanese gift for cooperative hard work served the people well in the task of reconstruction. Japan now leads the world in shipbuilding. Its industrial output is 2½ times the prewar figure. Especially impressive have been the gains in chemicals (more than 3 times the prewar figure), and in machine building (more than 4 times).

POPULATION PROBLEMS

Japan still faces difficulties, to be sure, such as the explosive pressure of some 90 million people living in an area smaller than California and poor in natural resources. Japan has lost its overseas investments and its preferred condition of trade with China, Korea, and Manchuria. Its progress, partly because of shortage of capital, has been on a zigzag basis, periods of rapid boom and heavy imports of foreign raw materials being interspersed with pauses for consolidation.

But the successful floating of the Japanese loan at reasonable rates of interest shows that there is almost always credit for a credit-worthy nation. It is a serious question whether nations which lack the will to work and the willingness to accept internal financial discipline are a good investment, either for loans or for the new-fashioned grants which often seem to accomplish little except irritating the recipients.

And that is one of the lessons of Bolivia.

## The Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
## HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. WALLHAUSER. Mr. Speaker, in these troubled times the bulwark against subversion that we all should be thankful for is the Federal Bureau of Investigation.

The Essex and West Hudson Federation of Holy Name Societies, through its president, Mr. Walter L. Joyce, has sent to me a copy of the resolution adopted by the federation, in which they resolved to properly thank the Federal Bureau of Investigation, its Director, J. Edgar Hoover, the special agent in charge of the Newark office, William O. Eimon, and all the personnel of the Bureau, for their successful and dignified efforts in the protection of our country against its enemies, domestic and foreign.

It is a privilege for me to include a copy of the resolution in the RECORD.

Whereas the Federal Bureau of Investigation has performed exemplary service over many years in the safe-guarding of our country against criminals of all degrees of viciousness and against subversives of all species of cunning and mendacity; and

Whereas the Federal Bureau of Investigation has performed its work with a keen regard for the constitutional rights of individuals, and in doing so, has added dignity and respect for our system of Government; and

Whereas a great part of the record of achievement of the Bureau is due to its highly efficient, self-sacrificing Director, J. Edgar Hoover, who has given the Bureau a leadership of preeminence based on morality and patriotism; and

Whereas in our own area of Newark, N.J., men such as the present special agent in charge of the Newark office, William G. Simon, and his predecessors in that office, and the personnel serving under them, have always impressed us with their efficiency, dignity, and conduct; be it

*Resolved by the Essex-West Hudson Federation of Holy Name Societies of the Archdiocese, of Newark, N.J., in regular meeting assembled, on this 4th day of March 1959,* That this organization publicly thank the Federal Bureau of Investigation, its Director J. Edgar Hoover, the special agent in charge of the Newark office, William G. Simon, and all the personnel of the Bureau, for their successful and dignified efforts in the protection of our country against its enemies, domestic and foreign; and be it further

*Resolved,* That a copy of this resolution be transmitted to Director J. Edgar Hoover, to special agent William G. Simon, to our U.S. Senators and to our Congressmen, and to the newspapers in the Newark area.

WALTER L. JOYCE,
*President.*
FRANK DE GEORGE,
*Secretary.*

## The Plot To Move Baltimore

EXTENSION OF REMARKS
OF
**HON. SAMUEL N. FRIEDEL**
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks, I would like to invite the attention of the Members of the House to an editorial aired by the general manager of Station WJZ–TV in Baltimore, relative to a proposal pending before the Interstate Commerce Commission. If this proposal is approved it will have drastic effects upon the city of Baltimore and the State of Maryland.

The Port of Baltimore is the second largest port in the country and it is vital to the economy of our city and State. The New York railroads have asked the commission to remove the 82-year-old freight rate differential granted to Baltimore. If this request is approved the jobs of some 80,000 Baltimoreans will be directly affected. The resulting economic loss to the city and State would be staggering.

The following article exemplifies the manner in which Mr. McClay and station WJZ–TV have contributed to the public understanding and betterment by presenting full information and constructive suggestions on issues of local and national importance.

I would like to take this opportunity to commend Mr. McClay and station WJZ–TV for their consistent efforts in the public interest.

This is the thriving port of Baltimore on the eve of the most serious threat to its prosperity in more than 80 years.

Hello. I'm John McClay, general manager of WJZ–TV. We intentionally chose a provocative title for this editorial. By calling it "The Plot to Move Baltimore," we hope that we have jarred you into realizing the seriousness of a problem that has attracted very little public attention.

If the threat we are about to discuss with you becomes a reality, the jobs of some 80,000 Baltimoreans will be directly affected. Indirectly, every wage earner in the Baltimore area might suffer to some extent. And all this might come about by the mere stroke of a pen in Washington.

Here is the story:

Baltimore, like most great cities, has grown and flourished through a combination of natural advantages and human perseverance. As a seaport, it has had to compete with other cities along the North Atlantic coast—Portland, Boston, New York, Philadelphia, and Norfolk. Despite the competition, Baltimore has managed in most years to hold onto its position as the second ranking foreign trade port in the Nation, exceeded only by New York.

New York has remained supreme because of its exceptional natural assets that no other seaport can match. Its magnificent harbor is close to the open sea. The Hudson River has provided a navigable waterway to the inland markets. Railroads, especially the New York Central and the New Haven, brought additional markets within reach of the world's greatest port.

In contrast to New York, the port of Baltimore has thrived for entirely different reasons. It is 150 miles up the Chesapeake Bay and therefore farther west than any of the other east coast ports. This inland location is Baltimore's principal asset. When a vessel arrives here, it is much closer to the markets of the Middle West than it would be in any of Baltimore's rival ports. Since moving cargo by sea is far cheaper than by land, Baltimore benefits by its short overland distance to the Middle West.

For 82 years, the railroads serving Baltimore, Philadelphia, and New York have honored a rate agreement that recognizes the facts of geography. Since Baltimore is closer to the Middle West, the agreement provides that its railroads may charge 3 cents less per hundred pounds than New York when shipping freight into the area west of Pittsburgh to the Mississippi. Philadelphia is allowed to charge 2 cents less than New York.

This so-called freight rate differential has survived many attempts to break it down. But it has thus far been maintained and continues to assure Baltimore a fair chance to enjoy its geographical advantage.

But over the years this advantage would have meant little had it not been combined with human resourcefulness and determination. To attract import and export cargo to Baltimore, railroads have spent more than a quarter of a billion dollars on dockside loading facilities. No port in the Nation can match this railroad investment in Baltimore. The city now handles more than a billion dollars worth of import and export cargo annually and more than half of this moves by rail to and from the Middle West. It is truly a free enterprise success story.

In recent years, as Baltimore's port business has improved, New York's relative importance as a port has declinled slightly. New York interests are inclined to blame this on Baltimore's more favorable freight rates.

Baltimore interests maintain that New York's slight decline as a port is a result of the tremendous growth of the Middle West and Far West. We believe the evidence shows this to be the correct analysis of the ssituation. The shifting of the Nation's center of gravity westward has placed Baltimore in a better relative position than New York.

The railroads serving New York have, in recent years, come upon hard times. This is not a unique situation. Railroads everywhere, including those serving Baltimore, are hard pressed because of rising costs and competition from other forms of transportation.

Gazing longingly at Baltimore, the New York railroads see a glimmer of hope. If they can capture some of the Baltimore traffic, their financial troubles may be lessened.

Consequently, the New York railroads have come before the Interstate Commerce Commission to ask that the 82-year-old freight rate agreement be ended. They want Baltimore, Philadelphia, and New York railroads to equalize the charges for shipping to the Middle West. In other words, the New York railroads want the right to charge the same rate for shipping a hundred pounds of freight between New York and Chicago as between Baltimore and Chicago, even though Baltimore is 123 miles closer.

If this request is granted, it would mean that the Interstate Commerce Commission had, by decree, nullified geography. It would mean, in effect, that Baltimore is no longer here, but there, 123 miles east of its present location. That is why it is scarcely an exaggeration to say this is "The Plot to Move Baltimore."

Baltimoreans have a special reason to be incensed about this effort by the New York railroads. For even with Baltimore's freight rate advantage, most of the cards are still stacked in favor of New York. Let's review the situation.

First. Time and inflation have improved New York's rate position. The agreement back in 1877 set the rate differences in absolute terms—of dollars and cents—instead of in terms of percentage. In 1877, when it cost 20 cents per hundred pounds to ship a certain commodity from New York to Chicago, it cost 17 cents from Baltimore to Chicago, or 15 percent less than the New York rate. Today rates have increased fivefold and where New York railroads charge a dollar, Baltimore must charge 97 cents, or only 3 percent less. In short, the increase in rates has steadily enhanced New York's position. But the differential today, small as it is, is still a critical advantage for Baltimore.

Second. Steamship rates from any foreign port to any North Atlantic port have been equalized by the steamship lines. If rail rates were also equalized, Baltimore's chief reason for existence would be abolished. There would be little reason for a shipper to choose Baltimore when he could ship through New York, with all its advantages, for the same price.

Third. Equalization of the rates would have a far more ruinous effect on Baltimore's economy than maintenance of the differential rates is having on New York's economy. New York's port, in addition to serving a large part of the United States, is also serving 13 million people in the New York area. Baltimore's comparatively small metropolitan area, one-eighth the size of New York, is not a large enough market to keep the port busy. Baltimore depends on its middle western trade, which comprises nearly half of its import-export volume.

Fourth. The approaching completion of the St. Lawrence Seaway, opening much of the Middle West to deep-water ships, is a critical threat to Baltimore. This city cannot maintain its competitive position if its natural advantages are wiped out by decree. The seaway is a far less serious threat to New York.

The Interstate Commerce Commission is now considering this rate case and therefore holds the future of Baltimore's port in its hands. Our battle is being fought for us by the railroads serving Baltimore and by the Maryland Port Authority. The authority is the public agency charged with the promotion and development of the Port of Baltimore.

At the present time there is no direct action that we as citizens can take. But since it involves all of us in the Baltimore area, it must be watched closely. If the time comes when Baltimore wage earners and businessmen can help, we will do our part to encourage such help. There may be a long battle before "The Plot to Move Baltimore" has been halted in its tracks. Meanwhile, we at WJZ intend to keep you informed. And we suggest you keep yourself informed by learning everything you can about "The Plot to Move Baltimore."

## Uncle Sam's Milk

EXTENSION OF REMARKS
OF
**HON. ANCHER NELSEN**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. NELSEN. Mr. Speaker, on Monday, March 9, the problem relative to uniform milk-marketing procedure was discussed at length on the floor by several Midwest Members of Congress. As further testimony in support of this

much-needed legislation, I wish to insert in the RECORD an editorial from the St. Paul Pioneer Press of March 9.

UNCLE SAM'S MILK

In formidable and bipartisan strength, Midwest House Members in Washington this afternoon will raise for later decision a key issue. This is the question of abolishing Federal, State, and municipal barriers against freedom of interstate commerce in milk of established wholesomeness and quality. Their abolition would be achieved by enactment of the Lester Johnson bill.

Special target will be the new Federal milk order now being proposed for the Washington area by the U.S. Department of Agriculture. This amazing 15,000-word Government edict would regulate milk supplies for the District of Columbia and nine surrounding counties in Virginia and Maryland. The order is in itself a summation of types of milk barriers being used to wall out milk that can compete with local dairy monopolies.

The order starts by complaining against increasing competition from such outside milk. It proceeds to impose the usual Federal restrictions plus some more. Then it gives special Federal sanction to milk regulations of surrounding municipalities. Thus it authorizes them to bar any outside milk they choose by simple refusals to inspect, as Washington already does.

From that point, the proposed order applies itself to sales of milk to all government agencies, whether Federal, State, or local. This includes all defense agencies and military posts, docks, wharves, piers, and ships in the Nation's key defense area. And it applies specifically to fresh or frozen concentrated milk that can be and often has been sold to Government defense agencies at economical costs to them.

Finally, an order omission opens the way for Washington area milk prices and Government milk costs to rise as high as the artificial restriction of supply helps push them. The order regulates supplies but not prices. Its stipulated prices are merely minimums. Right now actual Washington area milk prices are much above the order's show-window figures.

Of course, the 2,000 or so dairy farmers supplying that market have a natural advantage due to location and hauling costs that cannot be taken from them. But why deliberately erect artificial barriers on top of the natural one? Our Government claims to be founded on principles of freedom of competition and enterprise. These principles can be applied in ways that treat Government suppliers fairly. Or, in the face of severe budget problems, they can be flouted to discriminate between citizens and inflate Government costs.

Midwest dairying asks that these principles be reaffirmed by enactment of the Johnson bill. Our farmers, cooperatives, and milk handlers are Americans, too. They pay taxes to the Government. Their sons help man its defenses. They ask Congress by enacting the Johnson bill to get rid of such harmful and costly discriminations as the proposed Washington order exemplifies.

## Draft Law Complacency

EXTENSION OF REMARKS
OF
### HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Middlebury Campus, the student weekly newspaper of Middlebury College, from the edition of Thursday, February 26, 1959:

DRAFT LAW COMPLACENCY

On June 30, 1959, the Universal Military Training and Service Act will lapse. Lt. Gen. Lewis B. Hershey, Director of Selective Service, has asked Congress for a 4-year extension of the law—to June 30, 1963. If public complacency and congressional opinion do not change radically in the next few weeks and months, Hershey's request will be granted.

College students are fully acquainted with this act, for it places on all physically and mentally qualified men between the ages of 18½ and 26 a legal obligation to perform at least 6 years of military service. This obligation may be fulfilled by various combinations of active and Reserve duty—the Armed Forces currently offer 34 alternative enlistment programs. Theoretically, any qualified youth who fails to sign up for one of these programs will be drafted for 2 years of active duty.

The present administration in Washington has carefully chosen to avoid controversy over the extension of the existing law. President Eisenhower did not mention it in his state of the Union message. Yet Adlai Stevenson, in the 1956 presidential campaign, advocated an end to the draft in the foreseeable future. Current governmental strategy favors a kid glove, no publicity treatment of the extension of the law. As one commentator put it, the administration wishes to avoid opening up a whole can of worms.

Worms, political expediency, and congressional fatigue over a law which affects much of this Nation's youth are objectionable and unrealistic.

As students interested in world affairs, we read about the advances in new weapons, including missiles with nuclear warheads and other basic units of mass destruction. We realize that, in the event of war, the fighting, if one can call it that, will actually take place in a limited number of days. Unfortunately, military strategy and service manpower requirements appear uncoordinated. We realize the need for a small, highly trained, professional army, yet the Government by extending the present draft law throws 450,000 civilians a year into military positions which offer limited incentives for professionalism.

Anyone who has actively participated in the peacetime Armed Forces knows the waste and meaningless, obsolescent activity forced on the draftee. Anyone who has watched a draftee with a Ph. D. degree in economics picking up small pieces of paper in front of a barracks building has seen this ridiculous use of manpower. An Amherst student disgusted with his meaningless Reserve meetings described the content of these sessions as listening to a "halting personal account of supply operations in the Panama Canal Zone, a lecture on military administration, or a talk on Pentagon organization." Is this type of training likely to produce efficient personnel for nuclear warfare?

If the University Military Service and Training Act slips quietly through Congress, and is extended, college students everywhere will continue to be plagued by its provisions. The uncertainties of the draft often discourage students from entering into specialized graduate training. The force of the draft may mean the postponing or interruption of college or marriage plans or the first job.

One may argue that the college student faced with conscription may elect ROTC as an alternative. But ROTC, especially Middlebury's 2-year compulsory plan, represents time taken away from subjects that are of greater intellectual value. Certainly, it is difficult for any college administrator to explain the existence of an ROTC unit in peacetime as part of an educational curriculum. In general, training of this sort converts most of those trained to placing undue importance on the role of the military. The emphasis subsequently appears in foreign and domestic policies. From such training the student receives a magnified view of the role of military force. Unfortunately, few students are alienated by this type of propaganda.

Everyday we are told that the only language the Communists will understand is force. In this way conscription and nuclear weapons symbolize our strength and inability to negotiate for worldwide disarmament. In 1960 Great Britain will discontinue conscription—but as a part of an increasing reliance upon nuclear weapons.

It is time the United States took a firm stand for world peace. A clear cut affirmative act could bring about such a stand. The elimination of the peacetime draft could achieve such results.

It is also time for the United States to lift the burden of conscription from this Nation's youth. This can be accomplished only by providing the Armed Forces with attractive pay scales and other professional incentives.

It is not yet fashionable to be unpatriotic, but the college student cannot hold out forever if congressional complacency overshadows consideration and reform.

## Statement by Gov. Harold W. Handley, of Indiana, Regarding Right-to-Work Legislation

EXTENSION OF REMARKS
OF
### HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
*Wednesday, March 11, 1959*

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Gov. Harold W. Handley, of Indiana, on the occasion of the refusal of the Indiana Senate to enact senate bill 100, which would have repealed the right-to-work law in that State.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY GOV. HAROLD W. HANDLEY

I believe that the freedom of the individual—the dignity of a person, regardless of his power, wealth, or influence—transcends that of any well-knit group or organization.

The price of this freedom is measured in terms of hundreds of years and millions of lives. Principles of justice thus arrived at cannot be taken lightly, nor may they be disregarded for reasons of expediency.

It may be argued that before the right-to-work law was passed, industry on the one hand and organized labor on the other were free to negotiate and to compel membership in a given union as a condition of employment. However, I question the right of any group, either business or labor, to force its will upon the individual, regardless of how desirable membership in either group might be.

To act voluntarily and according to the dictates of ones' own conscience and will

is a principle too often overlooked, but it is a principle still worth pursuing.

The time has not yet come when the State of Indiana should say to its citizens: join a church—join a specific fraternal order—join a given business group or organization.

To join or not to join is an individual freedom just as important as the right to speak, write, and worship freely.

I recognize the tremendous contributions of both business groups and labor unions to the welfare of Indiana. But at the same time I know that the right of these groups cannot rise above the freedom of the individual.

In making this statement, I have tried to entirely disregard the so-called political implications. Popularity and principle sometimes do not travel the same road.

I entertain no feelings of bitterness for—nor do I criticize—those who in their secret hearts have arrived at a decision different from mine. But I must express my convictions in the same spirit of sincerity with which those disagreeing with me have acted.

Because of these reasons, I congratulate the Indiana Senate for its decision to refuse to enact senate bill 100.

## Need for Assistance in Economically Distressed Areas

EXTENSION OF REMARKS
OF
### HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a copy of my newsletter "Keenotes":

KEENOTES

(By Representative ELIZABETH KEE, of West Virginia)

Recently I filed with a Senate Banking and Currency Subcommittee a statement in support of legislation introduced by myself and other Members of Congress to assist economically distressed areas.

This legislation is similar to that passed by the Congress last year but vetoed by the President. There seems to be even more support for the proposal this year and I am confident the bill can be passed by such a large majority that it will not be vetoed.

The bill would establish a Federal loan program under which States and local communities would act to create new job opportunities. The need for such a program is urgent in areas where unemployment has existed for a number of years. In the case of West Virginia, workers have lost their jobs in the coal mines and there is little chance they can ever go back to work there.

The answer is to attract new industries. States and local communities cannot do the job alone. They need the type of financial and technical assistance from the Federal Government which this bill would make possible.

The main financial burden would be borne by the States and local communities over a long period. Local resources simply are not available now with which to do the job. That is why Federal funds would be made available on a loan basis. Cities in the Fifth Congressional District have attacked the problem of lack of job opportunities with vigor and intelligence. Yet, a larger and better financed program is called for.

Some people have criticized the proposed programs as too costly. These people fail to take into consideration the fact that States are paying out hundreds of millions of dollars in unemployment benefits. In West Virginia, these benefits amounted to $50 million in 1958. Is it not more sensible to invest in new job-producing enterprises that will do away with the need for unemployment benefits? No cost tag can be attached to the misery and heartache of a family which is forced to subsist upon handouts because jobs simply do not exist.

The Federal Government is spending billions of dollars abroad to assist underdeveloped countries to build up their economies. Much of the activity financed abroad with tax money from the United States is similar to the type of activity envisioned in the area redevelopment program. Why is it right to do these things abroad and wrong to do them at home?

West Virginia has suffered grievously during the last 5 or 6 years. Coal mines have cut back on production as imported residual fuel oil has taken over more and more of the market. Technological improvements in the coal industry have reduced the number of jobs.

We can go on paying out unemployment benefits and welfare payments and distributing surplus agricultural commodities indefinitely without getting at the root of the problem. The men of West Virginia want jobs. If they cannot find them in the mines and plants for which they once worked, let us start a determined effort to bring in new industries. In the interim, we can build community facilities to provide jobs while the program is getting underway.

No doubt it will be charged that the area redevelopment legislation is a part of the program of the spenders. I insist it is an economically sound program, one that is absolutely essential to many areas all over the country. Soon the House must act upon an administration request for $235 million additional for loans to foreign countries for overseas redevelopment projects. The program we are trying to get for the unfortunate people in this country would not cost as much altogether as this one supplemental foreign aid program.

## Republican Problems

EXTENSION OF REMARKS
OF
### HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD two articles written by George Todt and published in the San Fernando Valley Times. The first is entitled "GOP Problem as NIXON Sees It." The second is entitled "What Future for Republicans?" These articles were published, respectively, in the February 26 and 27, 1959, issues of the San Fernando Valley Times.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the San Fernando Valley Times, Feb. 26, 1959]

GOP PROBLEM AS NIXON SEES IT

"They never taste who always drink;
"They always talk who never think."
—*Prior.*

The question I put to Vice President RICHARD NIXON at the Greater Los Angeles Press Club's dinner in the Embassy Room of the Ambassador Hotel on February 17, which was the subject of a half-hour national radio broadcast by the American Broadcasting Co. emanating from Hollywood, was as follows:

"What can the Republicans do to step up their old-fashioned horse-and-buggy 'Madison Avenue' public relations approach in order to match the more effective Democrat 'grassroots' approach?"

Both the crowd and Mr. NIXON got a chuckle out of that one, and he replied with a good-natured grin:

"I suppose that's one of these questions, 'When did you stop beating your wife?'"

Then he sank his teeth into the question and answered it in these words:

"The Republican Party has a very real problem looking toward 1960 and the years ahead.

"I, personally, am not one of those who have been particularly impressed by all the talk about the necessity for the Republican Party to change its image.

"I think this creates, frankly, an impression among the people that the Republican Party stands for nothing and that all we are intersted in is to find out what the people may want at a particular time—and then be that way.

"Now if both parties follow this kind of a line, there is no use to have a Republican Party; we might as well have one party.

"I think that what we ought to do, on the contrary, is to emphasize the principles for which the Republican Party stands—and find ways and means to present those principles in an articulate and effective way to the American people."

I am indebted to Milt Fishman, head of ABC's radio news bureau, for the above verbatim transcript of Mr. NIXON's words, which were sent to me on a playback recording.

The Vice President spoke for another 5 or 6 minutes on this matter of correct and adequate public relations for the GOP in the future. He spent, altogether, more time on this question than any of the many others that were put to him during the evening—which indicates to some extent the gravity with which he regards the issue for himself.

Actually, he hit the nail on the head with his simple but eloquent words which I have capitalized in a preceding paragraph. Let's analyze what he has said there.

In essence, Mr. NIXON has indicated that there is nothing wrong with the moral issues and bedrock principles with which the Republican Party has been identified over the years. In other words, its basic character. It doesn't need a new image if that means to change the solid fundamentals of the GOP insofar as sound principles are concerned.

According to the Vice President, this is not where the trouble lies for the hard-pressed elephant in these modern times we live in today. His problem is to find new and better ways of getting his responsible story over to the people of the United States.

This story, emphasizes Mr. NIXON, must be told in an articulate and effective way. All of which implies that it has not been told either articulately or effectively, therefore, in times past. Nothing could be closer to the truth, incidentally.

The stand which the intelligent young man from Whittier has taken is simple, to the point, and eminently correct.

The Republican Party needs to remind itself again and again and again that it can forever purchase millions of words in print or on the air, if it wants to do so. But all to no avail unless those who construct such words have enough intelligence, principle, and character of their own that they can create ideologically the kind of moving terms which are on the level, understandable, and reach the hearts of the public.

Publicity and "flak" men are far cries indeed from the ideological experts the GOP

requires so much today in its so-called public-relations division of responsibility. It is in this area of second-rate accomplishment (there are only two parties running, by the way) that the Republicans need to stress an effective new image, and soon.

Otherwise, the infinitesimal chances of the proverbial snowball will greatly exceed those of Mr. NIXON and by far the greater balance of the Republican hopefuls, come 1960.

That was why I asked the admirable Mr. NIXON the question I did at the Los Angeles Press Club the other day.

Shall we hope that he puts it to good use in the months ahead of us? Can the elephant recoup his losses at this late date? Anything is possible in love or war—so why not politics, too?

---

[From the San Fernando Valley Times, Feb. 27, 1959]

WHAT FUTURE FOR REPUBLICANS?

"The great hope of society is individual character." Channing.

Instead of pussyfooting and making self-serving excuses for its failures in the past 6 years, the Republican Party needs to take a good look at itself in the mirror of accomplishment and ask itself this serious question:

"How was it possible for us to win the Presidency of the United States by pluralities of 7 million in 1952 and 9 million in 1956—and gain nothing except a Pyrrhic victory in the end?"

It was old Pyrrhus, King of ancient Epirus (now tiny Albania), who won some early victories over the tough Roman legions of his day which cost him much too dearly. So much so, in fact, that he was heard to exclaim: "One more victory such as these, and I am undone."

So the GOP has won the Presidency by millions of votes in the last two outings—but has lost the Congress. Another costly victory similar to these and, like Pyrrhus, it will also be undone.

What has happened to the Republicans and their hopes? When former President Franklin Delano Roosevelt had identical margins of Presidential victory in the days of the Democratic Party's triumphant New Deal, he carried Congress on one occasion by a margin of four to one.

When Mr. Eisenhower obtained his biggest plurality in 1956, the GOP went under by 21 seats in Congress. How come?

Why is it that only 46 percent of eligible voters went to the polls to vote? What happened to the other 54 percent? What caused them to stay at home instead of performing their civic duty?

Isn't it time to face up to the facts? The real reason why citizens stayed at home was not apathy—it was disgust.

Disgust because the Republicans have been so busy imitating the Democrats' New Deal that the liberal wing of the party has been able to produce a veritable carbon copy which it has called by the disconcerting name of "Modern Republicanism." But others, less charitable, call it "The Republican New Deal."

Failure to give the American people a better pick than largely a high-spending choice between New Dealish tweedle dees and tweedle dums accounts for the reason why "they'd rather have stood in bed" when election day has come around in November of late years.

Yes, 54 percent of them stood in bed. How do we like them apples? Who can alibi away such forlorn and pitiful statistics as these?

Let's go to the heart of the problem for the Republicans. The only way they can win in 1960 is to convince the people of the United States that they are a genuine American party.

The GOP must persuade the electorate that it stands for the continued independence and solvency of the constitutional Republic of the United States.

America must be led away from world socialism and back to the fundamental traditions of the Founding Fathers.

Today, the Democratic Party is under the control of the Americans for Democratic Action (ADA) and the AFL–CIO Committee on Political Education (COPE). The Republican Party has already yielded too much to these influences. The American people don't want any cheap carbon copy of the Democratic political formula to reside in the GOP—we want a difference and a very recognizable distinction, at that.

Until we get a clear-cut philosophical difference between the two parties it is only insulting the intelligence of the 64 percent of stayaway, uncommitted American voters to ask them to come to the Nation's polling places and vote.

But it is in this most potent area of the electorate—the uncommitted 54 percent who did not vote in previous elections—that the Republican Party can recoup its tragically inept losses of the past 6 years. It can win again, but only with a new ideology based on compelling principles of 100 percent Americanism.

Recently I heard one of the greatest political editors in our country tell the Republican Associates of Los Angeles County this simple and eloquent truth:

"You're not going to win elections until you impress voters that the Republican Party stands for the finest things that exist in this freedom-loving Nation. Republicans will start winning again when they have won the confidence of the people and not before."

I subscribe to this statement and suggest that the GOP, in addition to its new predilection with grassroots organization, must also emphasize principles of rugged Americanism—not the effete standards of the socialistic New Deal, mind you—and must tell its story in the most honest terminology which an inspired public-relations program based on character and integrity can get over to Joe Doakes and the public.

Typical of such principles to be emphasized are the separation of powers, the rights of the individual, and the sovereignty of the States, subject only to the powers ceded to the Federal Government as set forth in the Constitution. A new stand against Communist-inspired race turmoil is in the books. And a courageous stand against undue usurpation of power by either big labor, big business, or big government is also in the cards as well. Most important of all, a really militant stand against domestic and international communism, with no holds barred.

The people of our Nation admire intestinal fortitude; and if the Republican Party will abandon its modern timidity in favor of crusading principles of honest Americanism forthwith, there will be no keeping at home the 54 percent of uncommitted voters we have previously mentioned, come 1960.

Isn't this worth a try by the beleaguered GOP?

---

## Area Development

EXTENSION OF REMARKS

OF

## HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. RANDOLPH. Mr. President, while we are according much attention to the subject of redevelopment of depressed areas, perhaps we are too little inclined to think and plan sufficiently on other aspects of area development, particularly those relating to the orderly utilization of recreational resources.

At my invitation, Theodore C. (Ted) Fearnow, of Berkeley Springs, W. Va., and Philadelphia, Pa., a well-known conservationist and assistant regional forester for the eastern region of the U.S. Forest Serivce, recently addressed an assembly of some 200 persons at Wardensville, Hardy County, W. Va., on February 11, 1959. The occasion was a dinner meeting sponsored jointly by the Lions Clubs of that county.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a part of the press account of Mr. Fearnow's splendid address on the subject "Area Development."

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

FEARNOW OUTLINES AREA DEVELOPMENT PLANS BEFORE LIONS GROUP

WARDENSVILLE, W. Va.—Theodore C. Fearnow, of Berkeley Springs, W. Va., well-known West Virginia conservationist and Assistant Regional Forester for the Eastern Region of the U.S. Forest Service, speaking before an assembly of Lions from Moorefield and Wardensville, and other sections of Hardy County, Wednesday evening, February 11, stated that orderly development of recreational resources in the Cacapon Valley and surrounding counties could materially augment personal incomes and, at the same time, preserve the area as a wonderful place in which to live.

"Under this type of development you can literally have your cake and eat it, too," Fearnow said.

Listing the numerous practical advantages this area holds for recreational development, Mr. Fearnow pointed out that "the entire eastern Panhandle of West Virginia is ideally situated to serve nearby growing metropolitan centers. East coast cities are expanding until we have almost continuous urban development from Norfolk, Va., to Portland, Maine. The natural outlet for many of these recreation seekers is the Appalachian foothills, and this area is destined to serve as a playground for millions in the future. In addition, many West Virginians from the industrial and mining centers of the State are being attracted to the eastern Panhandle for outdoor recreation in increasing numbers. The success attained in developing and maintaining prized recreational resources of this area will be directly related to the skill and foresight we apply now in charting a course for the future."

Fearnow spoke before the assembled Lions at a dinner meeting in the well-filled War Memorial Auditorium at Wardensville on the subject "Area Development," at the invitation of the Honorable JENNINGS RANDOLPH, senior U.S. Senator from West Virginia.

"The importance of the publicly owned George Washington and Monongahela National Forests as recreation centers and for permanent watershed protection here in West Virginia is very great," Fearnow said. "The beautiful Cacapon River, one of the largest and best clean streams remaining in the East, is a priceless asset of this area. People are naturally attracted to streams of this type for sport and recreation," he added.

National forest hunting is bringing thousands of people into this section of the State every year. Ten years ago, Mr. Fearnow, then regional wildlife biologist for the U.S.Forest Service, was active in developing a cooperative wildlife program under which the West Virginia Conservation Commission

and the U.S. Forest Service are now jointly developing nearly a million acres of national forest for public hunting and fishing.

Mr. Fearnow continued: "Our expanding population will create many problems, and these will be particularly acute in the matter of outdoor recreation, where remoteness, scenic beauty, and unspoiled natural surroundings are important considerations. The U.S. Forest Service approaches this problem on the basis of multiple-use management. Timber production, watershed protection, game and fish production, and recreational use are conducted on the same areas through careful long-range planning and coordination. As pressure on the land increases, we must turn more and more to this type of management if we are to meet expanding public needs.

"The cooperation and assistance of private landowners are essential if we are to meet this country's growing needs for forest products and services. Public meetings were recently held in Boston, Philadelphia, and Charlottesville to solicit recommendations from small woodland owners seeking means for meeting goals calculated for 1975 and 2000. We must gear up to meet these goals without delay. Much of Cacapon Valley and the surrounding area is well suited to timber production under good multiple-use management. Hardy County has witnessed the mounting pressure of recreational use on adjacent national forest lands during the past decade. This can be taken as an indication of what is to come."

An important step toward facing recreation needs on a countrywide basis was taken when the National Outdoor Recreation Resources Review Commission was set up by the last session of Congress. This Commission is directed to make a nationwide inventory and evaluation of outdoor recreation resources—to determine the amount, kind, quality, and location of such outdoor resources—required by the year 1975 and 2000. This congressional action follows on the heels of programs already underway, including the well-known Forest Service program, Operation Outdoors. At last, outdoor recreation needs are receiving serious attention.

"The importance of interested and informed citizen groups in shaping plans for the future cannot be overestimated," Fearnow said. "Under our democracy, it is difficult to advance faster than public opinion and support. We have made great strides in protecting our forests from fire because we have had public support. The next few years will see other events of far-reaching importance. Our dynamic population growth and increasing amounts of leisure time, as the workweek grows shorter, hold tremendous possibilities.

"Forty-one thousand miles of new superhighways are to be built, making it easier than ever for city dwellers to reach rural areas. Additional roads will be needed in forest areas as management is intensified. But we must remember that people seeking relaxation and enjoyment of scenic, historic, and recreational wonders don't want to vacation where the noise and fumes of heavy traffic are oppressive. Streamside highways, with disturbed soil eroding into streams, can seriously damage fish habitat. Sixty million cubic feet of silt is being carried past Washington, D.C., by the Potomac River each year. Much of it comes from West Virginia. Research is under way by the Forest Service to determine means by which soil losses from forest roads can be held to a minimum. The eventual solution will surely involve careful advance planning. An informed and active citizenry is essential to obtaining and carrying through this type of coordination."

Fearnow, who supervises the rural-development program for the eastern region of the U.S. Forest Service, pointed out to this audience that areas which protect their scenic and recreational resources often find that they have a strong selling point for attracting desirable industries. Burned-over forests and polluted streams offer very little inducement for the investment of new capital. Industrial leaders have learned that it is far easier to attract and hold skilled labor and professional management people at plants located in attractive surroundings where wholesome outdoor recreation is available.

Offering as a slogan "Conserve what we have while we build for the future," Mr. Fearnow stressed the importance of conservation as a part of our national philosophy. He quoted the words generally attributed to the late Gifford Pinchot, first Chief of the U.S. Forest Service: "A nation that loses its liberty may regain it, a nation divided may be reunited, but a nation deprived of its natural resources is doomed to a future of poverty and degradation."

## Radio Liberation—Our Strong Voice of Truth and Freedom in the Soviet Union

EXTENSION OF REMARKS

OF

### HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. KEATING. Mr. President, one of the great challenges facing the free world today is to assure the people behind the Iron Curtain that they are not forgotten and to do all possible to see that they receive all the news and truth we can get to them.

An outstanding organization which is doing fine work in this field is the American Committee for Liberation. By means of regular, effective broadcasts beamed to the people of the Soviet Union, the committee's Radio Liberation strives to get news and facts behind the Iron Curtain. Radio Liberation attempts to let the people of the Soviet Union make up their own minds—but with the other side of the story known to them, as well as the Kremlin line.

The effectiveness of Radio Liberation's efforts is attested to by the hysterical jamming tactics engaged in by the Russians, as well as the covert messages of response and encouragement which have been smuggled out through the Iron Curtain.

It has been my pleasure and privilege to work with the American Committee for Liberation on several occasions. They deserve the commendation of all of us for the effective manner in which they are carrying out their important work.

A recent article in the Scholastic Teacher edition of World Week outlined well Radio Liberation's tactics and mission. I ask unanimous consent to have this piece printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Scholastic Teacher edition of World Week, Jan. 16, 1959]

MESSAGES OF FREEDOM—FROM THE FREE WORLD, FOR 24 HOURS A DAY, RADIO LIBERATION BROADCASTS A "NEWSPAPER OF THE AIR" TO LISTENERS IN THE SOVIET UNION

(By Oliver Bell)

How can the people of the Soviet Union get news that is not heavily dosed with Communist propaganda? One organization that aims at this goal is Radio Liberation. For 24 hours a day it broadcasts to the Soviet Union from this side of the Iron Curtain.

Among Radio Liberation's main efforts is a drive to get the people of the Soviet Union to form their own opinions based on accurate information. It is felt at Radio Liberation that when enough people in the Soviet Union do so the iron dictatorship of the Communists will be forced to yield increasingly to popular demands—demands for a government more responsible to the peoples themselves and for a system of political liberty.

Today there is only one official "truth" in the land of the Soviets. That is the version of events put out by the Soviet dictatorship. But a large number of the Soviet people know they are being subjected to a flood of propaganda, and, consequently, there is a real hunger for other sources of information. Radio Liberation gives its listeners news. For example, it reports what Western proposals for disarmament are. Listeners can compare what Radio Liberation says with what the Soviet Government tells them, and draw their own conclusions.

"It goes further than that," an official at Radio Liberation explained. "Reviews of recent books that were best sellers in the United States, Britain, and France; talks on Danish cooperatives, or on poultry farming in the United States—we broadcast on subjects like these. Why? Because our listeners are isolated—their minds are isolated. We open the doors of the minds of our audience to what people in the West are thinking.

"You, in the United States, can hardly imagine the hunger among intelligent Soviet citizens for cultural talks. When they hear them they feel that they are—in their minds—citizens of the world. For a few minutes they have broken out of the closed Soviet system. Besides, Radio Liberation builds up its reputation for truthfulness by reporting soberly on cultural subjects."

To return to the Danish cooperatives, Radio Liberation tells its listeners how the Danish farmers manage to live well with the help of their cooperatives. This strikes deep in the Soviet Union. For the Soviets have regimented their farmers, while the Danes have not. Furthermore, the Soviets have never been able to produce an abundance of food, while the Danes have. Radio Liberation just gives facts and lets its Soviet listeners judge for themselves.

Again, Radio Liberation gives a talk on how chickens are raised in the United States. It drives home how farmers and consumers benefit from private ownership of farms. But Radio Liberation does not directly compare inefficient Soviet farming with efficient U.S. farming. It leaves that to whoever is listening.

Radio Liberation's work is necessarily a slow process of education. But it is sure that the words that it sends vaulting through the air are having a mounting effect.

The American Committee for Liberation is the head office of Radio Liberation. Heading this committee is Howland H. Sargeant, its president. He is a former U.S. Assistant Secretary of State. One of the committee's trustees is Dr. John W. Studebaker, vice president and chairman of the editorial board of Scholastic magazines, and formerly U.S. Commissioner of Education (1934–48).

To run Radio Liberation is expensive. The millions of dollars a year that it costs come from private contributions—overwhelmingly from the United States. In this it differs from other organizations broadcasting to the Soviet Union, such as the Voice of America. The Voice is a branch of the U.S. Government, and its policy is set by the U.S. Government.

Furthermore, Radio Liberation is not the same as Radio Free Europe. This last organization is also financed by private contributions, but it broadcasts to the Soviet satellites in Eastern Europe—Poland, Czecholsovakia, and others.

ON THE AIR

Nearly 6 years ago, on March 1, 1953, Radio Liberation went on the air. A staff had been assembled that included a large number of former Soviet citizens. These defectors as they are called, have all escaped from the Soviet Union. When they broadcast to the Soviet people, the defectors know what the interests of their audience are. They are not foreigners talking to the Soviet people, they are fellow countrymen.

In Russian and 17 other languages spoken in the Soviet Union, Radio Liberation broadcasts its messages. To the people of the Ukraine, it speaks in Ukrainian; to the Turkic peoples in their own tongues. Programs are specially tailored to these different audiences. For instance, the head of the Turkestani broadcasts is Veli Zunnun. Formerly he edited a newspaper for the people of Turkestan. But it was a newspaper controlled by the Soviet Government. During World War II, Zunnun was captured by the Germans. Having suffered under the Soviet system, he refused to return home after the war. Now, employed by Radio Liberation, Veli Zunnun is—in the opinion of the Kremlin—a capitalist scoundrel.

For the rulers of the Soviet Union attack Radio Liberation fiercely. "It is an organ," said the Moscow newspaper, Izvestia, "for spreading vile falsifications and black slanders fabricated by the American intelligence." Other attacks on Radio Liberation frequently appear. Radio Liberation feels that this proves that it is accomplishing its purpose.

The Soviet rulers make desparate efforts to prevent Radio Liberation from being heard. Ten minutes after it went on the air, the Soviets began to jam it. Jamming is the broadcasting of radio signals on the same wave length as another station to drown out that station. To avoid jamming, Radio Liberation switches from one wave length to another—and manages to get through to its listeners.

LISTENERS RESPOND

This is known through many reports brought out by visitors to the Soviet Union. Furthermore, Radio Liberation regularly asks listeners to write to innocent sounding addresses—continually altered—in the free world. Letters arrive. Some are written in a sort of code. "Your relatives will be very grateful that you are young and strong enough to do intensive work for the betterment of others," one postcard said. It meant, "I approve of Radio Liberation broadcasts. Keep them up." Fear of the consequences of writing what they think makes Soviet citizens use such a roundabout way of expressing themselves. Some brave writers speak out directly. One wrote that the Communists "are as scared of your words as the devil is scared of incense. Many people listen to you but they are afraid to write letters."

To do the job of broadcasting constantly interesting material to the Soviet Union, Radio Liberation has a large staff in Munich, West Germany. They must keep informed on events in the Soviet Union. Therefore monitors listen to 88 Soviet radio stations. Piles of Soviet newspapers, magazines, and books are studied. Persons who have escaped from the Soviet Union are interviewed. This makes it possible for Radio Liberation to analyze events in the Soviet Union for its listeners. Again and again, Radio Liberation details how the rulers of the Soviet Union oppress the Soviet people.

Extracts from books that carry a message of freedom, and which are forbidden in the Soviet Union, are put on the air. Discussion of these books is also broadcast. "Dr. Zhivago," now a best seller in the United States, was banned in the Soviet Union. This Nobel Prize-winning novel by a Soviet author, Boris Pasternak, has recently been featured prominently by Radio Liberation.

Mesages from outstanding figures in the free world are also sent over Radio Liberation. And the anniversary of the famous uprising in one of the Soviet Union's slave-labor camps—the Vorkuta uprising in 1953—is marked each year by a special program.

Some broadcasts originate in Radio Liberation's studios in New York, some in Munich. Transmitters are located in West Germany and Taiwan (Formosa). Recordings are flown to Taiwan and thus Radio Liberation pours its words into the Soviet Union from the West and from the East.

If you were in the Soviet Union today, you could listen to these words of hope:

"This is Radio Liberation, the voice of your fellow countrymen abroad. We are for freedom from arbitrary rule, for a government of freely elected representatives of the people, and for peace throughout the world."

## Widespread Caribbean War Is Seen up to Castro

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Frank H. Bartholomew, president of United Press International, which appeared in the Washington Post and Times Herald on Tuesday, March 10, 1959:

WIDESPREAD CARIBBEAN WAR IS SEEN UP TO CASTRO

(By Frank H. Bartholomew)

SAN JUAN, P.R., March 9.—The Caribbean area today presents all three Americas—North, South, and Central—with another Balkans on their doorstep that could erupt in warfare.

Tensions appear to be mounting steadily in the potentially explosive military-political situations involving the island republics. If the first gun is fired in invasion attempts against the probably initial targets of the Dominican Republic or Haiti, it seems equally probable a whole series of wars may start in chain reaction around the Spainish Main.

The decision appears to rest on the dramatic person of Fidel Castro, who ousted dictor Fulgencio Batista from Cuba and who is committed to supporting revolutions in the Dominican Republic, Haiti, and Nicaragua in the Caribbean and Paraguay in South America. His argument is that their Presidents are as dictatorial as Batista was.

REVOLUTIONARIES BUSY

Catching his zeal, revolutionaries from these target nations have been holding meetings in Cuba, many of them public and well advertised, to formulate their own plans.

A typical incident was observed by this correspondent in a crowded Rancho Luna suburban restaurant outside Havana. Multicolored handbills distributed at the tables called for "liberation of Santo Domingo (the Dominican Republic)" and concluded "down with the tyranny of Trujillo."

To Castro and his supporters, Dominican strongman Gen. Rafael Trujillo is the prime symbol of remaining dictatorship.

An excited Dominican leaped on a table, called for silence and addressed himself to the Cubans present:

"As you fought in the jungles of Oriente (Province), so will we soon fight in the forests of the Dominican Republic."

A public address system in the restaurant played the Cuban revolutionary song, "Day of Freedom," ending in a simulated burst of machinegun fire.

SEEM READY FOR ACTION

Some of these revolutionary groups in Cuba appear ready for immediate action.

Haiti, under President Francois Duvalier, seems to be regarded as the ripest target at the moment with an invasion unit under former Haitian Senator Louis de Joie announcing itself ready to take off this month.

The overthrow of Duvalier in Port au Prince would not only place a man friendly to Castro in control but would give the Cuban leader an operating base against Trujillo—his primary target—since Haiti and the Dominican Republic share the same island.

Responding to the mounting pressure, Trujillo has announced formation of an anti-Communist legion of 25,000 men armed with new machineguns to supplement his regular army.

PLANS LAID IN CUBA

The probability at the moment is that Castro himself would not directly participate in any military moves against the target nations. But he is believed to have given so much direct encouragement and the promise of arms to revolutionaries from these lands that they may launch offensives on their own, unless he orders them to stop. But, so far, offensive plans continue to be made in Cuba, while defense measures are taken in Haiti, the Dominican Republic, Nicaragua and Paraguay.

There seems a good chance that the warlike talk in all the countries visited by this correspondent may subside, exhausted by its very violence.

Despite all threats, no trigger has been pulled yet. And each day without gunfire is one more day of stability.

At the same time, it is evident that the emotional level of exiles is so high and arms are so plentiful that an international military adventure may start anywhere in the Caribbean unless the man of the hour in Cuba takes specific steps to halt it.

## How To Write Your Congressman

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the National News, Veterans of World War I, Washington, D.C., in the March issue.

The article follows:

HOW TO WRITE YOUR CONGRESSMAN

(By Merle E. Hopper)

On one of my first trips to Washington, I dropped into the office of a Congressman, now retired after many years of service in the Congress of the United States. Sitting in the balcony of the House, I could not help but admire him and wonder how he consistently returned to Washington. I asked later, "What is the secret of staying in Congress so long?" Without hesitation he replied, "I read every letter that I receive from my constituents and my office endeavors to answer them within 24 hours."

YOUR LETTERS DO COUNT

Another Congressman, no longer a Member of the Congress, while a Congressman was making a speech on the floor said, "What a man says down there can very well defeat him, but what he does in his office can reelect him. After you have been around here a while you will discover that some of the most influential men in Congress, seldom speak on the floor, but they are most conscientious in their committee work, and I've never known them to neglect their mail."

These two instances are cited because the statement is often made, "It doesn't do any good to write any Congressman." But it does. It is found that our Congressmen spend more time reading and replying to our correspondence than on any other part of their work. In fact they are at it early and late.

Letters to Congress average 120,000 a day, rising to a half million when we really get "riled up" and "mad" about something.

LETTERS WIN SUPPORT

In my 35 years of experience in visiting Members of the Congress, I find most Congressmen depend upon our letters for support and guidance. They do pay attention to what we have to say. For instance when our charter bill, H.R. 11077, was up for consideration, there was a flood of letters received by Members of the Congress. They were just flabbergasted. The pressure was so great that this piece of legislation passed by nearly a unanimous vote.

Hardly a day goes by without bringing a deluge of mail to Members of the Congress from their constituents. These persons are deeply stirred and want to do something. Now it isn't the long drawn-out letter that does the most good. It's the brief, to-the-point note or letter which lets the Congressman know what we really think, that does the trick.

When we pick up a stub of a pencil and write on a postcard our message, we have started something. I have seen such a card pass from one Member of the Congress to another and on it was the name and address of the sender. This kind of a contact causes your Congressman to think.

A Member of the Congress once said, "We depend upon the letters from our constituents for advice on many things. For instance, over 11,000 bills were introduced in the House in the first session of the last Congress and over 6,500 in the Senate.

"Now, I depend upon the interest of the constituents back home on a particular bill. If he is interested enough I dig into the bill and study it, but if I don't hear from anyone on the bill I don't do anything about it except to vote against it.

"During the last 28 years, letters from my constituents have increased 1,000 percent, and I have been able to vote more intelligently because of them."

LOGIC IS EFFECTIVE

We are most effective when we ask our Congressman to vote yes or no on any matter which we are intersted in.

We should accompany our requests with enough logic to show that we have a reason for wanting him to vote yes or no. We should never let it appear that we are doing this as a favor for some organization or a friend. Congressmen know that the voter who sits down and expresses his feelings in his own language will remember him on election day.

Now if we really want to make a botch of things—spell the Congressman's name wrong or confuse Federal with State issues.

We must make up our minds what we want done and why. Then write and tell him about it. Don't send him clippings from newspapers on legislation. Our Congressmen want to know what we think.

NEVER THREATEN

Never threaten a Congressman. It is the old story of the vinegar and the honey. We can catch plenty of flies with the honey. We should never say, "A lot of my neighbors feel as I do and unless you vote so and so we will take care of you at the next election."

In all my contacts with Members of the Congress, I have found them to be human and when we threaten them they become resentful. It is a safe rule that if our neighbors, buddies, and sisters feel as we do our Congressman will hear from them, too. I've never heard of a Member of Congress who was fooled by a mimeographed release from a department or by letters from auxiliary secretaries and barracks adjutants implying that a proposed resolution represented the thinking of all of the barracks or the auxiliary.

PETITIONS HARMFUL

A Member of the Congress said to me, "Merle, I thought you told me you were representing the World War I vets? I just returned from home and they tell me they don't want your type of pension; that the Legion is their spokesman and that they want the pension program passed at the last Legion convention.

"And those petitions we have been receiving, anyone can sign them, in fact I mailed out some letters to signers of the petitions you gave me a couple of weeks ago and do you know that 23 letters came back from the Post Office Department marked 'Deceased'."

A word to the wise. Don't ever sign a petition and send it in—write that letter or postcard.

A U.S. Senator now decreased once said to me, "Got a flock of telegrams from some of your people the other day and I question them for the reason that I doubt the senders ever sent them."

Don't send telegrams unless asked to and then mention specifically the matter we ask you to. These telegrams were effective during the charter bill fight for they were specific, and asked the Member of the Congress to support our proposed bill and the bill number was in the telegram.

Former Senator Arthur Vandenburg, in a letter written a few years ago, on the World War I soldiers' bonus issue said, "When people take enough interest to write us and feel free to speak their minds and when we scrupulously reply—faith in democratic government is established."

## Secretary of the Navy Thomas S. Gates, Jr.

EXTENSION OF REMARKS

OF

## HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. WILSON. Mr. Speaker, soon to be leaving the post in which he has served with great distinction is Secretary of the Navy Thomas S. Gates, Jr. Since I represent a community which has a great variety of naval interests, I have had more than an ordinary opportunity to observe the Secretary at work. I am sure there has been no period in history when the Navy has been faced with more problems and more tough decisions. The commendable manner in which Secretary Gates went about his work deserves the attention and commendation of the entire country. The Navy and our country have greatly benefited because of his leadership.

Mr. Gates served for nearly 4 years as Under Secretary of the Navy. He was the good right hand of another distinguished Navy Secretary, the Honorable Charles S. Thomas. Following that same tradition, the present Under Secretary William B. Franke will take over when Secretary Gates returns to private life in Philadelphia. This smooth transition in the leadership of the Navy from the period of Secretary Thomas through to the new Secretary Franke is an excellent example for the other agencies of the Government. Service as Under Secretary ideally prepares a man to serve in the highest spot in the Department. Obviously, Secretary Franke will have big shoes to fill, but his background and training and devotion to the Navy should help him to carry on in the Gates tradition. Under unanimous consent, I include as a portion of my remarks a recent letter to the editor which appeared in the Washington Post on February 14, 1959:

MR. GATES' RECORD

It is a pleasure to congratulate you on your February 5 editorial on Navy Secretary Thomas S. Gates, Jr., summing up his accomplishments as he relinquishes his duties in June.

You have shown keen discernment and understanding of naval matters in the Pentagon and you have pointed out Mr. Gates' interest, competence and balance on defense needs in the Pentagon.

Mr. Gates has accomplished much in the Navy Department. He will be remembered as a great Secretary of the Navy, ranking with the late James V. Forrestal and President Taft's Navy Secretary, George von L. Meyer.

He has done his work efficiently, silently, and with the least quarterdeck manner. He has had the public interest constantly in mind and he has had the wholehearted support of the Navy.

We wish the new Secretary of the Navy, William Franke, a fair breeze and good luck.

DONALD H. DALTON,
*Public Relations, Forty and Eight, District of Columbia Voiture 174.*

## Mania for Growth Obscures Victory

EXTENSION OF REMARKS

OF

## HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, February 11, 1959*

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by economic reporter J. A. Livingston, writ-

ing in the Washington Post and Times Herald Sunday, March 8, 1959.

This article is timely, and ably written by a highly respected observer of the economic scene:

In the pastwar cold war, one of America's greatest vistories was won right here at home. This victory ranks with the Marshall plan in propping up the ailing economies of Italy, France, and other Western European countries against the political assaults of Communist leaders. It ranks with the successful defense of Korea and the hold-fast policy of Quemoy.

This strategic victory is the respulse of recessions in 1948–49, in 1953–54, and just recently. It is proof to the world that the American system works, that it is not inherently unstable.

The other day, perchance and unexpectedly, I ran into one of the leaders of the American Communist Party. As soon as he learned that I was a writer on economics and business, he said portentously: "This country is heading into a great bust—a grand depression."

THE DOOM TOM-TOMS

I pointed out that that has been a Soviet theme song since the end of the war. I noted that Eugene Varga, Stalin's pet economist, had predicted an American catastrophe at the end of World War II. I noted that each time we've had a business decline, Soviet economists beat the doom tom-toms.

Yet, never did the dire doom come. The last decline though deeper than the two previous ones, lasted only 8 months, as against 13 months for the 1953–54 contraction and 11 months for the 1948–49 drop.

Compared with recessions in the past, the postwar recessions have been mild, averaging 10 months. From 1899 to 1945, the declines averaged 19 months. Even more discomfiting to Soviet propagandists is that the periods of expansion, of prosperity, have lengthened. The postwar average is 39 months as against 31 months from 1899 to 1945.

But now that we have established that our system works, the Marxists have another propaganda point. Premier Khrushchev boasts that my 1970 Soviet output will "advance to first place in the world, both in absolute volume of industrial output and in per capita production. This will mark the history-making victory of socialism in peaceful competition with capitalism in the world arena." This is his refined way of saying: "We will bury you."

YES, WE HAVE SLACK

Result: At a hearing before the Joint Economic Committee, Richard V. Gilbert, chief OPA economist during World War II, deflected an entire session from the question of growth and stability to fear of Soviet expansion by declaring that "Russian rates of overall economic growth and of industrial production are more than double our own and in the key areas on which warmaking depends are three or four times our own." America-isn't-growing-fast-enough has become a common phobia.

Yet, a nation's economy can't always run at top-speed any more than does a mile runner. Economics is an eternity, not a 60-yard dash.

Sure, we could produce more. The Government could order 500,000 automobiles it doesn't need from the Detroit factories. It could buy textiles, stockpile lead, and issue orders to the machine tool industry. It could fill freight cars with sand and shunt them back and forth across the country to create activity. It could force companies to work overtime. But would that be growth?

Or we could build schools, highways, low-cost housing—projects which appeal to commonsense, which fill an obvious social need. But would additional schools and roads help Detroit? Would they generate a demand for machine tools? Moreover, how would they be paid for?

WHO WOULD DECIDE?

We talk of this as a free-choice economy. People—consumers—buy what they want. The Government doesn't dictate how much of what shall be made and at what price, as in the Soviet Union.

When the Federal Government runs in the red, it means that we, the people, are buying things that we, the taxpayers, aren't paying for. In New York State, Governor Rockefeller is having a hard time selling his new tax program. The State of Michigan ran out of money and had to ask corporations to pay taxes in advance. These are evidences of inability or unwillingness to pay.

Certainly, we could use more schools, roads, hospitals, etc. Plenty of teenagers would welcome more automobiles. Plenty of families would welcome second cars. Our problem is to decide what we want, what we are willing to pay for.

We've won one victory in the postwar period—preventing deep depressions. We can't speed our growth, reduce hours of work, raise wages, expand defense outlays, and maintain stable prices, all at once. In the Soviet Union Khrushchev would decide what's what; but, here, we don't want to win one victory only to lose a greater one—our system.

## Herb Zandler—Good Citizen Day

EXTENSION OF REMARKS

OF

### HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. GLENN. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to join in honoring one of my constituents, Herbert S. Zandler, who has won a national good citizenship award from the National Association of Food Chains for his outstanding record of service to his community. The Honorable Thomas C. Clark, Associate Justice of the Supreme Court, will make the presentation to him at a banquet at the Mayflower Hotel in Washington on March 16.

Mr. Zandler, manager of a supermarket in Bridgeton, N.J., is one of nine national winners and the only winner east of Illinois. They were selected from among 10,000 supermarket managers who entered the nationwide competition.

Mr. Zandler has done outstanding work with the Bridge Baseball Little League and was instrumental in making that group one of the largest in the United States. He is also Scoutmaster of Boy Scout Troop No. 30. He is a member of the Exchange Club and conducts a Christmas tree sale at his store each year, the proceeds of which go to the maintenance of the club's summer day camp. On top of this full schedule, Mr. Zandler is a tireless worker for the United Fund and is president of the Bridgeton Table Tennis League.

Mr. Zandler, a veteran of World War II, married the former Lucinne Hoyet in Cherbourg, France in 1945. They have three children. Mrs. Zandler now tutors students going to France under a student exchange program.

Mr. Zandler has been recognized by his community in setting a day to do him honor. Mayor John Spoltore has issued a proclamation for "Herb Zandler—Good Citizen Day" as follows:

Whereas the welfare of our community is the basic responsibility of our citizens; and

Whereas such welfare is best served by the voluntary cooperative efforts of all with a common pride and interest in their community; and

Whereas the duties and responsibilities of good citizenship must continually be brought to the public's mind and recognition accorded those who have played an important part in the furtherance of community achievements; and

Whereas Herb Zandler, manager of the Food Fair supermarket in Bridgeton, has been selected as the winner of a national good citizenship award in competititon with 10,000 store managers throughout the country; and

Whereas Herb Zandler's contributions to our community through his practice of the rights and duties of citizenship at the local level have been singularly outstanding, gaining for him and our community this national recognition.

Now, therefore, I, mayor of Bridgeton, do hereby proclaim Thursday, March 19, 1959, "Herb Zandler—Good Citizenship Day" in honor of our friend and neighbor for the honor he has brought to himself, his family, and his community.

Herb Zandler is, indeed, a fine American, with a fine American family.

## A Valiant Lady

EXTENSION OF REMARKS

OF

### HON. DANIEL B. BREWSTER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert a press release which I recently issued. The story of the U.S.S. *Maryland* should be of interest to all those who remember how valiantly she served our country during World War II.

This is a story of a valiant lady of days gone by.

The Department of the Navy recently advised the Armed Services Committee that it intended to scrap 43 warships.

The U.S.S *Maryland* is one of the ships destined for the ironpile. I thought it might be appropriate to review her illustrious career.

This ship is the third to carry the name of *Maryland*. The first was a 380-ton vessel carrying 20 guns and 180 men. Commissioned in 1799, she served in the West Indies during the naval war with France in 1800. The second *Maryland* was an armored cruiser commissioned in 1905. She saw duty in the Atlantic in World War I. The present *Maryland* or "Old Mary," or "Fighting Mary," as she was known to her crew, was commissioned in 1921. She saw heavy action in World War II, and was under attack over a hundred times in the Pacific. The Japanese reported her sunk on three occasions.

On December 7, 1941, the *Maryland* and six of her sister battlewagons were moored along Ford Island at Pearl Harbor. The *Maryland* was severely damaged in the sur-

prise Japanese attack of that morning, but 23 days later she pulled into Puget Sound for repairs. She shortly thereafter rejoined the fleet in the Pacific.

The *Maryland* saw further action at the battle of Midway and in the Solomon Islands. She supported the Marine assaults on Tarawa, Kwajalein, and Saipan. At the last of these engagements, a torpedo ripped a gaping hole in her port bow. After repairs, the *Maryland* again joined the fleet and participated in many engagements. The five old battleships which the Japanese thought they had sunk at Pearl Harbor, the *California*, the *Tennessee*, the *West Virginia*, the *Pennsylvania*, and the *Maryland*, met the Japanese fleet at Leyte Gulf. The thundering guns of these old battleships decimated the enemy's forces.

Shortly thereafter, the "Fighting Mary" was hit by a suicide dive bomber and severely damaged. Ground repairs were quickly made. On April 1, 1945, the *Maryland* was given the job of providing close support for the Marine invasion of Okinawa. I personally well remember the part she there played. I was in the first wave of the invasion, and I will always carry the picture in my mind of the *Maryland's* 16-inch guns shelling the coast as we Marines moved in.

The *Maryland* was again hit by a kamikaze, and again dreadfully damaged. In spite of the heavy casualties, dead and wounded, the *Maryland* continued to support the Okinawan invasion. Having been battle damaged three times in the course of 10 months, she was on her way back to strike again, when the Japanese finally surrendered.

Modern warfare has now rendered this grand lady obsolete. She and her sisters are destined for the scrap heap. I do think, however, that it is only proper to recount her gallant service as she is about to go on her last voyage.

---

## A Look at West Virginia

EXTENSION OF REMARKS

OF

## HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, March 11, 1959*

Mr. RANDOLPH. Mr. President, there is nothing more refreshing, nothing more hopeful for the future, than the sobering fact that our youth can and does take the time to indulge in the purposeful activity of a searching analysis of where we have been, where we stand as a society today, and where our course may be in the tomorrows if we but will it.

There is no state in our Union of States where it is more appropirate and necessary that the citizenry awaken to face realities than in my home State of West Virginia. The evolution of change has brought upon the people, their State and local governments and, indeed, upon their economic and social way of life, the pressing problems of serious portent.

Our educators, our journalists, our economic researchers, and our men and women in public affairs have struggled to plumb the depths of West Virginia's difficulties and to find solutions for them. The written and spoken word of the veterans in these specialized fields would fill volumes.

But, Mr. President, I repeat the observation that it is as comforting as it is hopeful when we find our youth ready, willing, and able not only to participate in the search for truth but, indeed, to state the truth in positive terms. They come forth with challenging willingness to join the campaign for progress.

I was especially impressed when I read some weeks ago in a leading West Virginia newspaper a few quotations from an address delivered by a second-year student in the College of Law of West Virginia University before the Civitan Club of Charleston on the subject: "A Look at West Virginia."

The young man who took a searching look at his home State and related it to an audience. Frank Lile Taylor, Jr., son of the Honorable and Mrs. Frank L. Taylor of Charleston, W. Va., was the speaker. His father is the distinguished judge of the 13th Circuit Court of the State's judiciary system.

I requested the young man to supply a text of his "A Look at West Virginia" address. It was necessary for him to place his notes in manuscript form after he had completed his final semester examinations.

When Mr. Taylor's manuscript was received, and after I had the opportunity to read and study its content, I was all the more impressed with the fact that here was the manifestation of West Virginia and American youth in purposeful and thoughtful endeavor, which augers well for the future of the State and the Nation.

Mr. President, even though the picture of West Virginia as painted in the factual and descriptive words may contain drab coloring in certain areas relating to our economic and social status, I believe it is a thoroughly objective picture which would bear careful scrutiny and study.

Accordingly, I ask unanimous consent to have printed in the Appendix of the RECORD this address, "A Look at West Virginia," by Frank Lile Taylor, Jr., of Charleston, W. Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A LOOK AT WEST VIRGINIA

Mr. President, guests, members of the Civitan Club of Charleston, I am grateful for the kind words of introduction. I fear he has, however, overstated his case. And though such things are always pleasing to the ear and exhilarating for the ego, at the same time they can be worrisome for the speaker, who already finds himself beset with numerous problems.

For instance, the subject is ambitious and difficult for anyone. It is increasingly more so for a young law student who is attempting to discuss it with many of the business and professional leaders of this community. Therefore, I feel compelled to make clear several points at the outset.

First, I recognize that it would be presumptuous, yea, ludicrous, for me to represent to you that I know as much about this State and its problems as any or all of you. Yet I feel it fair to say that I am as aware of them as any or all of you. Awareness is not enough. Hence, I am here to ask a favor, not just for me, but for every boy and girl in West Virginia. We need your active participation in the furtherance of our cause. What is this cause? It is to spotlight the problems which confront our State, thus creating here a dynamic and forward-looking populace, dedicated to the development of this State's potential in every way.

Again, I come to you without the benefit of experience, without much knowledge of the practical approach to life. I offer simply the exuberance and enthusiasm of youth, a keen interest in the subject, and a sincere belief in what I am about to say.

Bearing in mind, then, that my mission is to crystallize, not criticize, to ask a favor rather than rap a wrist, join me, if you will, for a look at West Virginia.

It is recorded that, "They must upward still and onward who would keep abreast of truth." Appropriate to the subject this day is an attempt at paraphrase, the result being: They must upward still and onward who would keep abreast of changing times. West Virginia has reached a crucial point in its history. Its citizens must now decide whether to go forward to meet the uncertainties of the space age, or to go backward, thus hurtling headlong down the late Fred Allen's treadmill to oblivion. West Virginians must choose between action and inaction, between accepting the challenges of the future or resting on the accomplishments of the past.

Determining the direction we want to go is easy. The answer is forward. Nor does the choice between action and inaction present a problem. How do we start? Ah, that is the rub.

It occurs to me that we must begin by looking to the charts at hand and scrutinizing the courses available. This scrutiny must, of necessity, be a critical and piercing one. We must look, not solely to our laurels, but also at our liabilities. In short, there must be a determination of the problems which confront us. Then, having determined them, we must search for solutions.

Of course, any analysis will indicate that we in West Virginia are confronted with more than one problem. However, one stands alone above the others. I refer, in a word, to population. This is the key. All other causes for concern are related to or connected with it. Specifically, the problem is to check emigration from our State, to retain those of us who have elected to stay and to attract others to compensate for our recent losses. You ask whether the problem is extensive. I answer that it is perilous. Herein is why:

The population of the United States increased between 1950 and 1954 from 151 million to 158 million, or by 5 percent. It decreased in West Virginia in this same period from 2 million to 1.9 million, or by 3 percent. The decrease is greater now because of the recent recession. These figures, of and by themselves, are of little value. However, the decrease means several things.

First, West Virginia will lose one Congressman after the 1960 census. Further, should the decrease continue at its present rate, we could lose stil another of our Washington Representatives after 1970.

Second, the population decrease means that one of West Virginia's greatest assets, an able and eager labor force, is being tapped at an alarming rate. We know this because the statistics indicate that most of our emigrants are in the 20–40 age group. This second effect is directly related to the third and last one, which I shall mention—namely, that a decreasing labor force makes more difficult the attraction of new industry, that ingredient so vitally essential to the alleviation of the economic slack caused by mechanization in the coal mines.

The foregoing figures and observations represent some effects of the problem. Attend now to several of its causes.

There is authority for the proposition that imbalance in the industrial structure in our State contributes to the population problem. This is borne out by the fact that 17 percent of the income payments in West Virginia in 1953 was derived from the mining

of coal, whereas coal mining provided but 1.4 percent of the income payments in the United States, .6 percent in Ohio, and only 2.9 percent in Pennsylvania. The Pennsylvania figure, 2.9 percent, takes on added significance when we recall that the Quaker State is second only to West Virginia in the production of coal in this country. Moreover, the West Virginia figure, 17 percent, is more frightening when we consider the number of men employed in the mines in 1953 as opposed to the number employed in 1945. At the end of the war, West Virginia's pits and strips provided gainful employment for 152,000 men. Slightly more than one-half that many, or 81,000, were so employed in 1953. The figure is smaller today.

The same imbalance which affects the coal business hampers effective manufacturing development. True it is that West Virginia has made remarkable manufacturing strides since 1939. In fact, it can be said that we are a manufacturing State today, not primarily a coal State. You see, 22 percent of our income payments in 1953 was derived from manufacturing. But—and this is important—we have capitalized on this economic boom in only three areas. They are in the iron and steel, chemicals, and stone-clay-glass fields. This is illustrated by the fact that 86,000 of the 136,000 residents who derive their incomes from manufacturing depend on the just mentioned three areas of endeavor.

Hence, it is fair to conclude that any disturbance in the coal industry, or in the manufacture of iron and steel products, chemical products, or ceramics, will throw the entire economic scale in the State out of balance. To put it another way, gentlemen, we have put our economic eggs in one basket, possibly two.

Some say that a lack of job opportunities has driven many people from the West Virginia hills. You and I have noticed this in the last 18 months, especially. In addition, I see it each June at graduation when our prospective business and professional leaders, whom we sorely need, look elsewhere because there is no opportunity to work here. Those who stay do so at considerable personal sacrifice. This is particularly true of those who seek employment in our public schools.

This brings us to a third cause of our population problem, a lack of proper educational facilities. Although my next remarks are inapplicable in Kanawha County, the following facts are worthy of notice: West Virginia stands 42d in the Nation in public per pupil spending. The I.Q. of the average student in school in West Virginia is five points below that of the average pupil in school in the United States. Education officials are constantly plagued and hampered by a lack of physical facilities and study aids. For instance, biology, a required course for graduation from a secondary school in West Virginia, is taught in several counties without the aid of microscopes. History and geography are taught without maps. I could go on and on, but this is another story.

Fourth, it is said that people leave because West Virginia is a cultural void. Whether this is entirely true I do not know. Whether there is a proper cause and effect relation between decreasing population and decreasing culture I do not know. But I do know that our population has dwindled and is dwindling. Further, I know that symphony orchestras are dying on the vine in West Virginia. I know that West Virginia can boast of but one major art gallery, that being in Huntington. I know that we rank last in public expenditures for public libraries. The Kanawha County Public Library knows this only too well.

No doubt there are other reasons why we have a population problem. Nevertheless, I submit that the four facets discussed this afternoon are primary causes of it.

What, then, is the answer? There are as many "solutions" to the problem as there are people who know of it. I'll enumerate some.

The Arthur D. Little Co. suggests, among other things, the development of four industries—chemical, woodworking, apparel, and metal fabricating. This organization has devised several modes of advertising West Virginia to others. Its attractive brochure has been and will be invaluable in helping us sell our State.

Dean E. K. Feaster declares that the remedy lies in more money for the school system, in a tightening of the educational requirements, in the provision of more adequate facilities and better qualified instructors.

The Charleston Gazette opines that there is need for cooperation between government, management, and labor in the establishment of a long-range, orderly tax program. This would take the place of the hand-to-mouth, crisis-to-crisis plan under which we operate today.

There are many other suggested solutions, all of which are meritorious. But I submit to you that we have overlooked the first step. Before we can formulate a plan of attack, we, and I mean all, must be acutely aware of the problems which confront us. I submit that the ultimate solution rests with you and me, and with our desire to learn of the problems before attempting to prescribe some wonder cure.

The welfare of this State, like the welfare of the Civitan Club or any other organization to which you belong, will be no better and no worse than you want it to be. West Virginia will prosper only in direct proportion to the degree you desire it should prosper. This being so, I bring you back to the outset of my remarks. I remind you that I said that I am here to ask a favor. The favor I ask is this: When you make your resolutions for 1959, promise yourselves to discharge more fully your responsibilities as interested citizens of West Virginia. Then, having made the promise, keep it.

Now this can't be done merely by promising to vote in the forthcoming city election, or in any election, for that matter. Nor can it be done simply by pledging not to ask to be excused when next you are summoned for jury duty. Your responsibility will be discharged if, but only if, you dedicate yourselves collectively and individually, to learning more about your State and its problems. Then, once aware of the situation, motivate your neighbors and public officials. Let your legislator and all other public officials know that you know as much about our government and our problems as they do. Keep them on their toes. Make them more cognizant of the fact that you care what happens.

This burden is yours more than mine. The reason is that your contemporaries will be quicker to react to these suggestions when they come from men of stature and experience than they will should similar suggestions emanate from us whose feet are not yet wet.

Therefore, I reiterate that the first step in the solution lies with each resident of West Virginia. The Arthur D. Little Co. almost had it with the inclusion in its brochure on the State a section entitled, "What Industrialists Are Saying About West Virginia." The essence of the comments there set out was what great benefits were derived from their decision to come to West Virginia. Conspicuously absent, however, was a section entitled, "What West Virginians Are Saying About West Virginia." Such a section will remain conspicuously absent until West Virginians know what can be said for West Virginia. Meeting the challenge of the future depends on finding many contributors to such a section. Will you be one of them?

## Individuation Versus Integration

EXTENSION OF REMARKS
OF
## HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. ROBERTS. Mr. Speaker, occasionally there is printed by an outstanding newspaper an editorial which goes directly to the heart of a problem and succinctly sums up the conflict involved.

Such an editorial appeared in the Anniston Star on Sunday, March 8, 1959. I am proud to say that this newspaper is located in the Fourth Alabama District, and that its editor and publisher, the distinguished Col. Harry M. Ayers, is a personal friend of mine. I commend the following editorial to the reading of every Member of Congress:

INDIVIDUATION VERSUS INTEGRATION

There was an element of bitter irony in the fact that on the same day last week there appeared in this office a well-known Negro citizen who has given the larger part of his life toward the betterment of his race, while almost simultaneously on the floor of Congress a Representative from the State of New York was opening a campaign further to divide and to embitter the white and colored peoples of the Nation.

The Negro man was Sidney J. Phillips, president of the Booker T. Washington Birthplace Memorial, who got the State of Virginia to help him buy the lot on which Washington was born and got the U.S. Government to erect there a monument that would serve to perpetuate the life and deeds of that great American.

The other gentleman was EMANUEL CELLER, Member of the House of Representatives from the 11th District of New York, who is head of a committee whose efforts will have the effect of widening the breach between the white and the Negro races and of stirring up a spirit of racial hatred.

Sidney Phillips is conscious of the need for racial unity in this crucial moment in our history and, not satisfied with having erected monuments to the memory of Booker T. Washington, the founder of Tuskegee Institute, he now wants to bring about a moratorium with respect to the so-called civil rights legislation and to have us get back to the fundamental principles of Americanism.

WASHINGTON'S SOUND ADVICE

Booker Washington gave sound advice to his own people. In one memorable address, he said: "We want to get a reputation for doing things without having to be told to do them every time. If you have work to do, think about it constantly, investigate and read about it so thoroughly that you will always be finding ways and means of improving that work.

"The average person going to work," he said, "becomes a regular machine, never giving the matter of improving his work a thought. He is never at his work before the appointed time, and is sure to stop the minute the hour is up. The world is looking for the person who is thoughtful, who will say at the close of work hours: 'Is there not something else I can do for you?'"

Better advice was never given to any people, white or black, and that is just one quotation from the lips of that eminent American, whom Alabamians were proud to vote a place in the Hall of Fame from this State.

TUSKEGEE'S GREAT TRIUMVIRATE

He also gave to Americans, through Tuskegee Institute, the world renowned Dr. George Washington Carver and William L. Dawson, a native of this city, whose "Negro Symphony" and other compositions, as well as his skill as a conductor and his interpretation of music indigenous to his own people from the depth of Africa, likewise have made him internationally famous.

At the Atlanta exposition back in 1895, Dr. Washington said, after having been publicly introduced by Henry Grady, the noted editor of the Atlanta Constitution: "In all things that are purely social we can be as separate as the fingers, yet one as the hand in all things essential to mutual progress. • • •

"The wisest among my race understand that the agitation of questions of social equality is the extremist folly, and that progress in the enjoyment of all the privileges that will come to us must be the result of severe and constant struggle, rather than of artificial forcing."

PROUD OF HIS HERITAGE

"I am a Negro and am proud of my heritage," said Washington. But the ideals and practical lessons that were taught by the sage of Tuskegee are no longer taught in the Negro schools and colleges today. They want to take over the Government, State and local, if not national, without disciplines, mental and moral, that have been required of white voters from the days of Magna Carta on down.

Scholars like Phillips and editors like Davis Lee of South Carolina and Newark, N.J., understand this to be true and are trying to bring about a renaissance of that spirit of fellowship and cooperation that existed between the races here in the South before the NAACP and politicians like EMANUEL CELLER came upon the scene to plant seeds of discord.

WHAT WARREN COURT'S DONE

And what have been some of the results of that "law" that was "enacted" (sic) by the Supreme Court and enunciated by Chief Justice Warren on May 17, 1954?

It has threatened to destroy the mores of the South, which today has the honor of enjoying that last "distinctive heritage" of America, if we may believe Historians Pierson of Yale and Woodward of Johns Hopkins.

It has brought about dissension and division in our churches, Protestant and Catholic.

It has destroyed a great social experiment: whether two races of different culture and background could live together in harmony and cooperation?

It has given rise to a new era of demagoggery throughout the Nation and has turned friends of yesterday into enemies of today.

It has brought about chaos in the public schools of all of our big cities, which have been turned into virtual concentration camps, with police in every corridor.

Hence, one principal in New York committed suicide and another in Nashville died of nervous prostration.

It has brought about sexual laxity among whites and colored students in the schools of New York, Milwaukee, Washington, D.C., Little Rock, Ark., and elsewhere.

ALARMING INCREASE IN CRIME

It has brought about an alarming increase in crime, especially in our big cities. Forcible rapes, as opposed to statutory rapes, increased 31 percent last year, 725 rapes having been reported in New York.

It has made it unsafe for white women to walk the streets alone at night in any city where the Negroes congregate.

It has made homeowners, or neighbors, feel insecure from "blockbusters" in all of our big cities, having caused race riots in Chicago, Philadelphia, New York, Louisville, Detroit, Wilmington, Del., Levittown, Pa., and elsewhere as a result of this sort of confiscation of property.

It has caused the public to lose confidence in a free press, because so many papers refuse to name offenders against the law by the race to which they belong.

Two of our great dailies, the Washington Post and the Los Angeles Times, have even rejected paid advertisements from the South, the Putnam letter to President Eisenhower being a case in point because the letter, written by a northern author, conflicts with their editorial views.

Attacks on the Southern States have become so vicious and continuous that the new president of the National Conference of Christians and Jews, Dr. Lewis Webster Jones, has said that this region has become "the Nation's whipping boy."

REGARDING THE NEGRO BALLOT

These attacks by CELLER and other northern politicians say the South will not allow the Negro to vote. However, when and where the cumulative poll tax prevails or has prevailed, Negro and white persons, rich and poor, were penalized alike.

Also, it might be observed, the manager of Bob Taft in this State was able to deliver Alabama's Negro vote time after time. And Negro politicians like Perry Howard and S. D. Redmond of Mississippi got rich by delivering the Negro vote to the GOP convention candidates.

It might be said further that the poll tax also was conceived for the purpose of limiting the vote, whereby corporation lawyers would have a better chance of looking out for the interests of their clients.

That condition no longer prevails in most of the Southern States, but the South still seeks to maintain an intelligent vote. And to that end the white people of this region have been willing to tax themselves so as to educate the Negroes, few of whom pay any considerable taxes.

But as a result of this effort in recent years some of the best school buildings in the South have been built for Negroes. And on a per capita basis Negro teachers are paid better salaries than are white teachers.

NEGRO COLLEGES SUPPORTED

It is a fact, too, that Alabama supports the largest Nego college in the world at Montgomery and an outstanding technical college near Huntsville. The presidents of both schools have Ph. D. degrees.

Moreover, Alabama and other Southern States finance Negro graduate students for study anywhere in the United States in courses not available in their home States. And a majority of those awarded these scholarships in Alabama have elected to enter exclusively Negro schools, proving thereby that they are happier among their own people.

Lynching, which was a hangover from Reconstruction and scalawag mischief, has been outlawed in the South for a considerable period; the Negro is given equality before the law and has equal access to public health. White people, too, help to support their churches and their charities.

Most southern cities support parks, playgrounds, swimming pools, and other sources of recreation that come from the taxes of the white people almost exclusively.

NEGRO TOWN IS AIDED

Anniston and county officials also help materially to support Hobson City, the exclusively Negro town between Anniston and Oxford, which gets little help from the better-positioned Negroes.

Cultivated Negroes like Sidney Phillips understand these facts and they are doing all in their power to maintain the pleasant relations that have prevailed between the two races.

But rulings such as have emanated from the Supreme Court under its present personnel in the last few years, plus Reconstruction-minded officials in the office of the Attorney General, would like to put the whole South in hairy shirts again as of yore.

But, in the final analysis, it still is true that no region of the United States, any more than any individual, can live to itself alone. Hence, if other regions succeed in retarding the South in its social and economic relations, the entire United States will have to help shoulder the penalty.

---

## Science and Books

EXTENSION OF REMARKS

OF

## HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following thought-provoking editorial entitled "Science and Books," which appeared in the March 9 issue of the Newark Evening News:

SCIENCE AND BOOKS

It is something of a modern paradox that as men everywhere are being brought into closer communication their ability to communicate seems to have been weakened rather than improved. The physical boundaries of the world shrink steadily, but unfortunately the new familiarity tends to breed distrust and fear. And competition, of course. Whether men of science have replaced men of good will is a question that must increasingly trouble the thoughtful. To the layman the scientific mind is committed to worship of the intellect as opposed to things of the spirit and heart.

This is, apparently, a fallacy since no less an authority than a Nobel Prize winner, speaking for the scientists, declares that he believes in miracles. In an address at the 10th annual national book awards ceremony recently, Dr. Arthur M. Compton said that he and his fellows "have lived miracles and know how they work."

Seemingly with terrible power in their hands, with the knowledge of how to destroy men in the mass, the realization of the value of life to the individual has come to be sharply accented. If the new power is to be used for good, the burden of responsibility accepted, then intellectual concepts are not enough.

Channels of communication are urgently needed and Dr. Compton would have American writers create the needed vision. Miracles must be interpreted for those who have not witnessed them. Miracle-makers cannot serve a public they fail to understand, or see dimly as lower creatures with inferior brains. Scientists today want to know what effect their work is having upon mankind and how much human nature has changed, if it has changed at all.

The American writer has not been deaf or blind to the challenge which he may variously regard as responsibility or opportunity. We have had a flood of books by authors, established and new, whose business it has been to examine the minds and hearts of fellow men at home and abroad. Sometimes disguised as fiction, more frequenly openly set forth in a travelog, our writers have approached the man-in-the-car who has succeeded the man-in-the-street, and in humility and compassion have tried to speak for him.

It would be better, perhaps, if he would speak for himself, but failing that, the

writers must do the best they can. A larger and better man for a larger and better world is the scientist's dream. He may be only waiting for the writer to discover him.

## Textile Outlook

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article that appeared in the publication of the American Stock Exchange in their issue of March 1959:

TEXTILE OUTLOOK—INDUSTRY DEPENDING MORE AND MORE ON RESEARCH INTO FIBERS AND DEVELOPMENT OF NEW LINES

Belief that the textile industry may emerge from its own depression is gaining strength. Said William I. Kent, president of the National Association of Wool Manufacturers, "Though the outlook for the immediate future in the wool textile industry continues somewhat cloudy there may be room for a sensible portion of guarded optimism. At the same time, even with cautious assessment, the prospects for the more distant future seem considerably brighter." Halbert M. Jones, president of the American Cotton Manufacturers Institute, surveyed his industry and reported production and demand are closer together than they have been since World War I. The most glowing claim of all came from the industry's best known trade paper Daily News Record which simply recorded: "Textiles are entering a new era of growth, a period attuned to dynamic developments in a space age."

That there is any hope for a turnaround in the immediate future is regarded by some as preposterous. They point out that consumption is continuing to decline. They admit that production is too, but argue that this is not generally regarded as a good sign in an expanding economy. Competition stiffens constantly from both inside and outside the industry. Currently about 35 man-made fibers are in commercial production and use. New discoveries and new blendings are sure to increase well before the year is out. And new developments in other fields are certain to produce products to compete with textiles for the consumer's dollar.

But the reasons for hope are many and they are largely signs that the industry has grown up. Research, for instance, has finally been recognized by the industry as a factor needed to stimulate progress. Obsolete machinery and methods have been or are being replaced. Perhaps of greatest importance is the liquidation of submarginal mills which often dumped goods on the market at cutrate prices. With many such mills closed and other textile makers using self-restraint, prices have shown a tendency to stabilize.

Textiles are claimed by the industry to be the consumer's best buy valuewise. With 1947–49 as a base period of 100, the wholesale index price for textiles in August 1958 was at 93.3, compared with 126.1 for all industrial commodities. Thus it is figured that a fractional increase would hardly be noticed by the consumer but would mean a flourishing business for the textile industry. To make this possible, the industry has begun to promote itself as never before. That this can be successful is aptly shown by the wash-and-wear fabrics which have done so well in the apparel field. Increased interest in new styling can also help.

But, quipped one tradesman, "the biggest reason for hope is that things are so bad they can't get worse." Chances are that most of the companies able to survive this long can make the rest of the way, too. The industry shows promising signs of ability to work out its problems.

## Nixon's Progress by Service

EXTENSION OF REMARKS
OF
### HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Fernando Valley Times of Monday, February 16, 1959:

GEORGE TODT'S OPINION

NIXON'S PROGRESS BY SERVICE

"Example sheds a genial ray
Of light which men are apt to borrow;
So first improve yourself today
And then improve your friends tomorrow."
—*Herber J. Grant.*

Three little Indians—and then there was one.

That's the present reading on the California Republican Party's erstwhile Big Three in State and national politics which loomed so large in just about everybody's calculations up to 3 or 4 months ago.

The Big Three, as you may remember, were Vice President Richard M. Nixon, Senator William F. Knowland, and Gov. Goodwin J. Knight. The last two names have been scratched from the Presidential Sweepstakes for 1960 and are no longer in the running.

But DICK NIXON is very much alive and kicking—and is an odds-on favorite to capture the GOP nomination for President 2 years hence. He deserves it, too.

The constantly improving young man from Whittier is in the Southland today and tomorrow, and many of us will have a chance to observe him at close range. How will he measure up?

In this reporter's opinion, the United States has never seen the equal of a man who started from scratch, with one exception, and so consistently improved himself with the passage of time as has Mr. NIXON.

The one exception I mentioned was Abraham Lincoln, who also commenced at ground zero and went to the top.

Both men are similar in their thirst for improvement and progress—not only of their personal characters but in behalf of the Nation. Although 100 years apart in the political spectrum of the United States, I have seen of late years a rising young Lincoln in DICK NIXON of Whittier.

If he has the opportunity to continue to serve his country and his party with the same degree of consistency and improvement in the years ahead of us—I think the comparison with Lincoln will become more obvious to everyone.

This is all predicated, of course, upon the assumption that he will continue to improve himself with every passing opportunity, as he seems to have done so capably in the past. Let's hope so.

Frankly, it is this capacity for eternal progression which has gained my respect for the Vice President over a period of years. When he first appeared on the political horizon, he was just another guy named Joe to me. Up to and including the time he became holder of the second highest office in the land, I was hardly impressed. Com ze, com za. So what?

But the last 6 years have seen Mr. NIXON take hold of a job that had never been considered as anything except a fifth wheel in our Government and turn it into something approaching the nature of an assistant President, in reality.

He might have just sat back on his haunches, as the others pretty much did before him, and taken his chances. About 15 or 20 percent of our Chief Executives made the grade that way. But not DICK NIXON. This young man, with the boundless enthusiasm of youth, preferred to earn his pay as a useful worker in the Government and, as a result, he expanded his usefulness to the President so much that he has worked harder in his present office than any other occupant ever did before him.

Today, the Californian is perhaps the best man—by dint of on-the-job training for the office—the Republican Party has ever qualified to head its ticket. But whether he is to be nominated in 1960 is, as yet, no foregone conclusion.

I have no crystal ball for forthcoming events, but there is at least some handwriting already appearing on the wall for all of us to see and ponder upon. Let's take a solid look at some of it in my next column. Who will be the GOP's choice next year?

## Mismanagement of Military Supplies

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. McCORMACK. Mr. Speaker, on January 19, 1959, I received from the Comptroller General of the United States a copy of a report on the U.S. Army Signal Supply Center at Yokohama, Japan. The report indicated beyond doubt the lack of adequate supply management at the base in Yokohama.

Because of my long interest in this subject I wrote to the Comptroller General on January 30, 1959, and asked him, among other things, if it were not possible for the excellent staff of the Comptroller General to make some systems studies going into all facets of supply management with regard to electronic supplies and equipment and other related fields consistent with the intent of the so-called McCormack amendment to the Military Reorganization Act of 1958 which authorizes the Secretary of Defense to "carry out any supply or service activity common to more than one military department by a single agency or such other organizational entities as he deems appropriate."

On March 9, 1959, I received a splendid letter from the Comptroller General wherein he states that during the year ending June 30, 1958, over 200 reports were issued by his agency to the Congress and military departments, the majority of which dealt with various aspects of the supply operations of the military services and involved deficiencies in requirements determination, procurement

practices, and supply control management.

The Comptroller General makes this significant statement:

Our previous reviews have disclosed the unreliability of stock records at major supply centers and the consequent lack of sound data on which to base supply decisions; requirement determinations have been improper; inadequate coordination existed for supply matters among the military services; contracting procedures in awarding and administering procurements required improvements; and stocks were being disposed of as surplus when valid requirements existed within the military department.

Mr. Speaker, there is widespread interest in the subject matter involved in this exchange of correspondence with the Comptroller General of the United States which, without objection, I am inserting in the CONGRESSIONAL RECORD at this point:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
OFFICE OF THE MAJORITY LEADER,
*Washington, D.C. January 30, 1959.*

Hon. JOSEPH CAMPBELL,
*Comptroller General of the United States, Washington, D.C.*

DEAR MR. CAMPBELL: I am in receipt of your report (B–133036) relating to examination of the U.S. Army Signal Supply Center, Yokohama, Japan. This and the other reports which you have furnished to me are of great value and, as you know, relate directly to the so-called McCormack amendment (Sec. 3.(6)) (Public Law 85–599).

I note from your letter of transmittal and from the report itself that this one Signal Supply Center has failed to properly discharge its supply-control responsibility in regard to determining requirements. As a result of this failure the Government was placed in a position of buying millions of dollars worth of unneeded stocks.

I also note on page 1 of the report itself: "We did not make an overall appraisal of the activity or its administration. Our work and the related report devote major attention to the identification of deficient areas and the corrective actions taken by the Agency in those areas."

It occurs to me that the findings and conclusions of your excellent report at one supply center indicate a deficiency in the supply system itself in the Signal Corps with respect to requirements determination, procurement, overall inspection and review, and inventory control methods and procedures.

Nor can I help but wonder as to the adequacy of the overall Department of Defense supply demand control system. For example, your report indicates a failure at the one Signal Supply Center in the supply management function involving one item—dry batteries. What is the situation with respect to dry batteries within the Department of Defense? Does anyone relate overall inventory with requirements before procurements are made? Is there concurrent buying and selling?.

I am enclosing for your use a copy of the Federal Real and Personal Property Inventory Report issued by the House Government Operations Committee. In analyzing the inventories in the supply systems of the Department of Defense it is noted that communications and signal equipment total hundreds of millions of dollars. It is to be noted also from the distribution of the reported stocks that a large percentage falls into categories that are either designated as being excessive or could reasonably be so considered. Also that each of the major services carries similar categories of stocks which undoubtedly include identical items.

The McCormack amendment to which I referred earlier reads as follows:

"(6) Whenever the Secretary of Defense determines it will be advantageous to the Government in terms of effectiveness, economy, or efficiency, he shall provide for the carrying out of any supply or service activity common to more than one military department by a single agency or such other organizational entities as he deems appropriate. For the purposes of this paragraph, any supply or service activity common to more than one military department shall not be considered a 'major combatant function' within the meaning of paragraph (1) hereof."

Would it be possible for your Agency to extend the scope of its investigation to all facets of supply management of electronic supplies and equipment within the Department of Defense? This would mean a study as to the adequacy of the requirements determination, procurement, inventory control, utilization of all available assets before procurement, distribution of stock and disposal of excess or surplus property.

I should also appreciate recommendations which you may be able to make for improvement of supply management across the board in the Department of Defense as contemplated by the legislation to which I refer.

Sincerely yours,
/s/ JOHN W. MCCORMACK,
*Majority Leader.*

---

COMPTROLLER GENERAL
OF THE UNITED STATES,
*Washington, D.C., March 9, 1959.*

Hon. JOHN W. MCCORMACK,
*Majority Leader,*
*House of Representatives.*

DEAR MR. MCCORMACK: Reference is made to your letter of January 30, 1959, acknowledging receipt of our report on examination of the U.S. Army Signal Supply Center, Yokohama, Japan. We are particularly appreciative of your comment that this and other reports which we have furnished you are of great value.

A substantial portion of our adult efforts in the Department of Defense is directed toward the delineation of significant areas of deficiencies in the supply and logistics system, and examination and analysis of these deficiencies in terms of shortcomings in management controls including basic policies and procedures, and recommending to management, and to the Congress when appropriate, such action as will, in our opinion, correct or improve the logistical inadequacies. During the year ended June 30, 1958, over 200 reports were issued to the Congress and the military departments, the majority of which dealt with various aspects of the supply operations of the military services and involved deficiencies in requirements determinations, procurement practices, and supply control management. Our reviews have covered signal supply control agencies and depots of the Army, requirements determinations for ground communication-electronic equipment in the Air Force and various supply installations of the Navy. In addition, we have reviewed selected aspects of the supply operations of the military services in Europe, north Africa, and the Far East.

Our previous reviews have disclosed the unreliability of stock records at major supply centers and the consequent lack of sound data on to base supply decisions; requirement determinations have been improper; inadequate coordination existed for supply matters among the military services; contracting procedures in awarding and administering procurements required improvements; and stocks were being disposed of as surplus when valid requirements existed within the military departments.

The results of our previous reviews can now be applied to a study of all facets of supply management of electronic supplies and equipment within the Department of Defense, as you suggested in your letter of January 30, 1959, including a review of the inadequacy of requirements determination, procurement, inventory control, utilization of all available assets before procurement, distribution of stock and disposal of excess or surplus property. The broad nature of such a study, which must encompass evaluation of basic policies and procedures of the Army, Navy, and Air Force, as well as the Office of the Secretary of Defense, will also include a review of the operations of the major electronic supply agencies of the military services in the United States and abroad. As significant matters are disclosed during the course of our review, management and the Congress will be apprised of our findings.

We anticipate that as a result of this Defense-wide study we will be in a position to make appropriate recommendations for improvement of supply management applicable to all three military services. In this report we will, of course, consider the objectives of the McCormack amendment to which you referred.

As a matter of collateral interest, we have today advised the chairman, Military Operations Subcommittee, House Committee on Government Operations, that as a result of the deficiencies disclosed by our reviews of military supply operations, this area may be of interest to that subcommittee in determining the adequacy of action undertaken by the military departments to correct the matters brought to their attention.

We would be pleased to discuss the proposed study in more detail with you or your staff if you should desire.

Sincerely yours,
JOSEPH CAMPBELL,
*Comptroller General of the United States.*

---

## The National Debt

EXTENSION OF REMARKS
OF
## HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. WRIGHT. Mr. Speaker, as further evidence of the growing body of approving editorial comment concerning the plan suggested by several of us in this body to create an orderly and systematic method for reducing the national debt, I am enclosing an editorial which appeared on March 4 in the Telegraph Herald of Dubuque, Iowa.

COULD THEY?

Representative JIM WRIGHT, a studious Congressman from Texas, has come up with figures indicating that in the next 28 years interest will be paid equal to the amount of the present national debt, but Uncle Sam will still owe the whole principal.

That, says Representative WRIGHT, is neither nice nor necessary—in view of which he holds up the bright promise of retiring the national debt over the next 100 years at an end saving of more than $485 billion.

Wright would do this simply by paying on the $283 billion principal each year an amount equal to not less than 1 percent of the present debt. By keeping everlastingly at the program, he goes on, year by year both the principal and the interest decrease.

And at the end of a round century the Government is out of the red, and there's plenty of money available for highways, soil projects, water resources and whatever fine things Congressmen may have in mind 100 years from now.

Representative WRIGHT'S exciting prospectus makes passing mention of the fact that during the last 4 years the temporary debt ceiling has been extended three times and once raised permanently.

This would have to stop, of course, along with increased spending, more Government services and a lot of the other fiscal business that has been in progress for some time. They are details, however, that could doubtless be worked out.

Or could they?

## Gateways to Profits

EXTENSION OF REMARKS
OF
### HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. BYRNES of Wisconsin. Mr. Speaker, the Wisconsin Division of Industrial and Port Development recently published a most informative booklet, entitled "Wisconsin Ports—Gateway to the Upper Midwest."

I commend this publication to shippers and manufacturers who are looking ahead to the completion of the St. Lawrence Seaway and the connecting channels. As the Governor of our State says in the foreword of the booklet:

Completion of the St. Lawrence Seaway project will make Wisconsin's coasts frontiers once more, as they were in the days of the French voyagers and later, when the pioneer settlers arrived from Europe by ship. This time the frontiers are industrial, created by the opening of Wisconsin's 14 port cities to ocean ships. Men of vision are planning for the industrial developments that the seaway will make possible and profitable in Wisconsin and the entire upper Midwest.

The booklet points out that—

Wisconsin's 14 ports and harbors are important and promising new gateways to the heartland of North America. They lie at the western end of the Great Lakes Waterway system, now being opened to deep-draft world shipping by the St. Lawrence Seaway project. Oceangoing ships, carrying cargo to and from all parts of the world, bring all the advantages of water transportation to Wisconsin ports, 2,000 miles inland from the Atlantic Ocean. These ports serve as convenient transfer points for a vast and rapidly developing region extending a thousand miles to the west. This region includes all or part of 15 of the United States and 3 Provinces of Canada.

Of the 14 ports described in detail in the booklet, 6 are located in the congressional district I am honored to represent. These ports are Marinette, Green Bay, Sturgeon Bay, Kewaunee, Two Rivers, and Manitowoc.

These six ports connect with railroads which serve the West and with a well engineered and maintained arterial highway system which joins a network of truck routes serving the upper Midwest. Two of the ports have regularly scheduled airline passenger service; the others are less than an hour's drive from such service. All have harbors already deep enough to accommodate moderate size ocean-going ships, together with the necessary harbor installations, including protective breakwaters, navigation aids, movable bridges, bulkheads, and open storage spaces, bunkering facilities and marine repair facilities. Many have dockside warehouses, grain storage elevators, heavy lift cranes, shipyards and drydocks, customs offices, and Coast Guard stations.

Each of these harbors is actively promoting its future development, and Wisconsin, in 1955, created a division of industrial development, and in 1957, added port development to the division's responsibilities. Assistance to shippers and manufacturers interested in the potential of Wisconsin harbors as new gateways to profits is readily available.

Copies of the booklet describing Wisconsin port facilities may be obtained from the State of Wisconsin Division of Industrial and Port Development. More detailed information concerning the harbors in my congressional district can be obtained from the following sources:

Marinette: Manager, Marinette Chamber of Commerce.

Green Bay: Secretary, City of Green Bay Industrial Development Authority, or chairman, committee on industrial development, Green Bay Association of Commerce.

Sturgeon Bay: Sturgeon Bay Development Corp.

Kewaunee: Office of mayor.

Two Rivers: President, Two Rivers Industrial Development Corp.

Manitowoc: Office of mayor, or harbor commission, city of Manitowoc.

## Protest to Awarding Government Contracts to Foreign Business Firms

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter received from Mr. Robert H. Acker, Jr., general manager of the radio station WLYN of the Puritan Broadcast Service in Lynn, Mass.:

PURITAN BROADCAST SERVICE, INC.,
*Lynn, Mass., March 6, 1959.*

Congressman THOMAS J. LANE,
*House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN, LANE: I, and many others feel it to be our duty to protest the award of U.S. Government-financed contracts to firms in business in foreign nations. We feel that this practice, if continued to be allowed to develop, can only serve to undermine our current U.S. high standards of living.

I refer specifically to the recent award to the Swiss firm of Brown-Boveri Co. The money for this award was loaned by the Rural Electrification Agency (a branch of our Government) to the group which awarded this contract to a competitive foreign firm, rather than to a U.S. firm. This does not make sense. We should not, and cannot, afford to loan money to firms that use our own money to underbid our business firms.

If U.S. money is to be used, then we must insist that U.S. firms be employed to carry out the projects.

Your efforts to obtain this objective are respectfully requested. Please do everything in your power to enact legislation which will make it mandatory to use U.S. business firms when U.S. Government finances are involved.

Kindest regards.

Respectfully,

ROBERT H. ACKER, Jr.,
*General Manager.*

## Raw Greed Menaces Westchester

EXTENSION OF REMARKS
OF
### HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. DOOLEY. Mr. Speaker, the county of Westchester in New York State, one of the foremost and finest counties in the country, is being menaced by the threat of New York bank expansion which would enable the New York City banks' branches to operate in that county.

The Daily Times and other Westchester papers on March 7 carried an editorial which exposes the dangers of the David Rockefeller bill.

The editorial from the Mamaroneck Daily Times is as follows:

RAW GREED MENACES WESTCHESTER

An unholy alliance of Wall Street bankers and Tammany Hall politicians, seemingly being quarterbacked by a wily upstate Republican politician, is getting set to crucify Westchester County and upstate Republicanism on what can only be described as a "cross of gold."

This the schemers would accomplish by jamming through the legislature next week a so-called "comprehensive bill" to "modernize" the New York State banking law.

And they are so sure their strange amalgamation of political forces will be able to do the trick they have made it known there will be no public hearing on the bill—they don't have to care, so they don't care, what the people of the State may think.

When one of these men was asked if there would be hearings before the banking committees of the senate and assembly before the bill was acted upon, he is reported to have sneered: "Hearings? What the ——— do we want hearings for? We had all the hearings we needed last year."

The fact is, of course, that bad banking bills have been killed in the past by angry outcries at public hearings—so this crowd is taking no chance on having that happen again.

This is a "comprehensive bill," all right. It includes everything the big bankers and their politician friends want to "modernize" New York State banking in the interest of big banks that want to become bigger. It thus sacrifices every consideration of the welfare of Westchester and other suburban counties on an altar of raw greed erected by the high priests of finance in downtown Manhattan.

Specifically, what will this bill do to Westchester County? It will permit New York City banks to invade Westchester communities either by creating their own branches or by gobbling up small independent Westchester banks whose stockholders will be beaten into line by competitive pressures.

But that isn't all it will do to us. If and when we have storefront branches of New York City banks scattered over our countryside, particularly in new shopping centers or business districts, we shall have lost the distinctive identity which always has been the vital element in Westchester's development and prosperity. Then we shall be on the way to becoming another Bronx or Queens, compelled to crawl to lower New York for the capital and credit essential to our growth.

And in such economic dependence are, only too obviously, the seeds of economic control. If the New York banks decide that it will be more to their advantage to sink their money in the building up of Long Island, they will be free to do so—and Westchester can go hang.

All of this, of course, will be deprecated, and maybe violently denounced, by the men behind this scheme. None other than the chairman of the senate banking committee already has talked condescendingly about provincial objections to the bill.

Such deprecations, such denunciations, such holier-than-thou talk will be designed, of course, not only to offset protests such as those already being heard from Westchester and Long Island but to prevent any general awakening to what is in store for upstate communities that, up to this point, are asleep or heedlessly apathetic.

The hope is that, perhaps by the end of next week, the whole thing will be in the bag—a big money bag for the whole State, with the drawstrings firmly in the hands of a single chain of upstate banks and a New York City bloc pretty clearly dominated by the Chase Manhattan Bank, the David Rockefeller bank, in other words.

Indeed, this is beyond doubt a David Rockefeller bill, even though David Rockefeller, who gave birth to its basic ideas a year ago—to be exact on February 18, 1958—is presently and conveniently abroad—in Africa, we are told.

Here are the things Mr. Rockefeller wanted written into the banking law of this State a year ago:

First, a provision that the State be divided into two bank holding company districts, one embracing the metropolitan area of New York City and the other the rest of the State.

Second, that the New York metropolitan area be redistricted so as to include in one district New York City proper, Westchester, Nassau, Suffolk, and Rockland Counties.

And those are exactly the things the David Rockefeller bill, which they want us to know as the omnibus bill, intends to do this year.

The only new wrinkle is political—the scheme has been refined to obtain key upstate Republican support and the solid backing of the Tammany Democrats at Albany.

What do we mean by key upstate Republican support? We mean that the Senate majority leader, Senator WALTER MAHONEY of Buffalo, is calling the upstate shots—for reasons which aren't readily apparent.

This whole mess may, of course, wind up in the lap of Gov. Nelson Rockefeller, David's brother. We hope it doesn't, because we respect and like and admire the Governor.

But, so far as Westchester and other similarly situated communities throughout the State are concerned, this is a matter which transcends confidence in or friendliness toward any one official or group of officials, or any one group of politicians or political party.

Nor, we might add, do we care whose bank stock is worth what, or which bank gets control of what rich territory. We're concerned only that this and other areas of the State of New York shall not be made pawns in a battle of greed by financial giants.

We don't need New York banks' branches in Westchester—even Westchester banker-advocates of this bill admit they've never had to turn away a customer. And the people of Westchester certainly don't want New York banks here. No more will upstate communities want to be invaded and taken over, we are convinced, once they become aware of the big banks specter hanging over them.

## Dr. Cloyd Heck Marvin

EXTENSION OF REMARKS
OF
### HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. BETTS. Mr. Speaker, the retirement of Dr. Cloyd Heck Marvin as president of George Washington University, a few weeks ago calls to mind the outstanding contributions of this great educator and administrator, not only to the university, but to the city of Washington and the whole field of higher education.

Dr. Marvin was made president of the school 31 years ago and raised it from obscurity to an institution of recognized national prominence. Over a half dozen new and imposing buildings have been erected, including the George Washington University Hospital. Under his administration the enrollment doubled to 18,000 and the number of faculty members tripled to 1,000. An example of its influence in government is the fact that over 350 of the listings in the Congressional Directory and over 822 in the Biographic Register of the Department of State are graduates of George Washington University.

Dr. Marvin's activities also extended into the life of the whole community, where he participated in many lasting achievements. His labors deserve the commendation of all who admire accomplishment to the fullest. In commenting on his retirement, the Washington Post, in an editorial of December 13, 1958, said in part:

Dr. Marvin's role has been that of an educational builder. If he sometimes seemed to yield to conformist pressures and to shun the controversy that is inevitable in an educational environment, his successful efforts to weld a university merit warm appreciation. Every university needs such a builder at some stage in its development. Dr. Marvin's success is the more remarkable because he started with great disadvantages when he set out to achieve for a rundown institution with little prestige the position envisaged in its charter as a university worthy of the Capital of the United States.

The esteem in which he was held at the university was expressed in an editorial in the Hatchet, the campus paper, as follows:

We could never express fully the appreciation we have for the many things Dr. Marvin has provided us. It has been President Marvin's spirit that has given our university the best in faculty, equipment, and classroom teaching, which gives us loyal and generous alumni, a devoted faculty and student body, and the inspiration to grasp the ideas which are put before us and make them our own academic standards.

## Poison in Your Water—No. 33

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the San Diego (Calif.) Tribune, August 25, 1958, entitled, "Solution of Sewer Problems Must Be Found Without Delay."

This article merely tells how San Diego families must face up to the problem of cleaning up its municipal waste or face some rather dire consequences.

SOLUTION OF SEWER PROBLEMS MUST BE FOUND WITHOUT DELAY

Time has run out for San Diego in its search for a solution to its sewage problem.

The city is now confronted with an emergency situation in Mission Bay calling for the expenditure of $50,000 for a stopgap measure.

Meanwhile, permanent—or at least long-range—solutions must be sought and pushed with all speed.

The temporary 70-acre oxidation pond in the mud flats northeast of Crown Point and west of De Anza Cove probably is the best answer at the moment. Something had to be done fast to eliminate the unpleasant and potentially menacing condition caused by the overflow of a sewer mainline along Highway 101 northward from the San Diego River.

It may be necessary to provide another oxidation pool in the south end of Mission Bay.

The northwest section of the city will have to make the best of this sewer expedient for quite some time—perhaps as long as 2 years—until a new million-dollar trunk line is ready.

This is not the happiest of prospects. But any workable temporary solution is preferable to the dangers of pollution that have been accumulating over the past several months.

City officials say that a properly designed and operated oxidation pond should be free of odor. There is no chemical treatment. Purification is supposed to take place over a period of 30 to 60 days through natural reactions. However, deodorizing agents can be used, if there is an odor problem.

It is essential that this emergency treatment not become a nuisance. It is fairly close to a high density residential section; Mission Bay High School, and one of the city's most popular recreation areas, at De Anza Cove.

While this localized problem is of particular concern to the residents of Bay Park, Clairemont, and Pacific Beach, it also carries a warning for all San Diegans, regardless of where they live.

As City Manager George Bean told the city council:

"The city is oversized for the present sewer system. We are in deep trouble, not only in this area, but elsewhere."

We have arrived at this deep trouble by stages.

As long ago as 1952, we had a warning in the fact that San Diego Bay was becoming

contaminated by the overloading of the present disposal plant on Harbor Drive.

But voters failed to approve a bond issue 2 years later for a new trunk system with a treatment plant on Point Loma.

In 1956, the State health department declared the polluted bay a health hazard, and quarantine signs went up.

Then the voters approved a method of financing the necessary sewer system through revenue bonds. Costly chlorination of the discharge into the bay eased the pollution problem.

It will be at least another year and a half before detailed plans for a new system can be completed. A revenue bond election is contemplated for June 1960.

We have spent our time freely in the past. There is now none to waste. There is no need for panic. But complacency is also out.

## The Common Market in Europe

EXTENSION OF REMARKS
OF
**HON. JAMES G. FULTON**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. FULTON. Mr. Speaker, a startling new discovery is taking place among six of our friendly allies in Europe: France, West Germany, Italy, Belgium, Holland, and Luxembourg.

These six nations through a Common Market treaty arrangement are setting up a free trade area which will have a Common Market of 170 million people, about the size of the United States as a trading area.

We in America must know of this development and its effect upon the United States and its world policies.

An excellent article in Réalités magazine discusses these problems, and I commend it to my colleagues:

HOW WILL THE REST OF THE WORLD GET ALONG WITH THE COMMON MARKET NOW THAT IT IS HERE?

National reactions to the Common Market have been predictable. Tass condemned it as a warmongering trick by German militarists to get Western Europe into war with Russia.

John Foster Dulles said: "We believe the Common Market is going to create a situation where that part of Western Europe, though being more closely united, will have larger markets, will be stronger and less dependent on the United States. We have been very eager to get Western Europe into a strong position to carry an even larger percentage of the load of mutual security. * * * We believe this will be a development in that direction."

Britain, declaring itself spokesman for all West European countries not in the Common Market, redoubled its efforts to set up a free trade area, through which 11 other nations would share some of the advantages of the "6" without incurring all their responsibilities. Failure, the British said, might weaken the Western alliance.

The six themselves—France, West Germany, Italy, Belgium, Holland, and Luxembourg—took the general excitement as proof that they had opened the door to a profitable future. They renewed their resolution to stick to the Market-treaty schedule, which will wipe out internal tariffs among the Six at the rate of roughly 10 percent a year until they are one great unified trading area of 170 million people.

The Market will also eliminate trade quotas, allow free interchange of labor and capital, and coordinate the Six's economic policies. In the long run it may lead to a common currency. Even with necessary escape clauses, permitting delay in some phases of the program if any member finds it necessary, the Common Market, now that the first step has been taken, should be completely achieved in 15 years at the outside.

Britain is not the only country that finds it necessary to come to terms with the new economic giant, which will rank fourth in the world for total output, after the United States, Russia, and the Commonwealth. In the United States, President Eisenhower, late in 1958, prevailed on Congress to renew his power to make reciprocal trade treaties for 4 years instead of the customary 2, so that his Government may deal more advantageously with the Market. He also got the right to cut American tariffs up to 20 percent in striking bargains with the "Six," who will henceforth set their own collective tariffs against the rest of the world.

Meanwhile, foreign business firms, particularly American, scrambled to take advantage of the new European situation—or to cut their losses.

The treaty calls, with some exceptions, for setting the Market tariff on any commodity at the arithmetical average of the six separate tariffs previously imposed by the members. Some present exporters to parts of the Market will benefit in the immediate future—but most will lose. For example: Suppose an outside exporter has been selling electric motors to Holland. In 1958 he had to add a 31-percent tariff to the price of his motors. So did his principal competitor, a German. This year, after the 10-percent tariff cut, the German incurs only a 28-percent tariff in Holland while the outside exporter still has to figure 31 percent. So the German will probably take over some of the outside exporter's Dutch customers.

By 1968 the outside exporter will find the tariff he pays to get into the Common Market down to 21 percent—but the German's, for Holland, will be down to 10 percent, and in a few more years will disappear entirely. The outside exporter must look forward right now to the day when he will sell few outside-made motors to the Dutch.

Not all Market imports will be so strongly affected, at least not at the beginning. Cotton is on the free list: Europe doesn't grow it and needs lots of it. Coffee, cocoa, and bananas will be partly excepted for awhile, but in the long run will come almost exclusively from the French and Belgian territories in Africa. Raw materials, such as steel and nonferrous metals, are likely to find a booming market as European factories expand. So will machine tools for awhile. Chemicals will find harder going. Consumer goods, notably cars, electrical equipment, and pharmaceuticals, may in the long run be frozen out.

For the foreign firms now selling the "Six" an item likely to be adversely affected, there is a solution: make it inside the Market. The outsider's existing sales organization, production experience and goodwill put him in on the ground floor as a producer in a market that will soon be nearly as big as that of the United States.

Foreign capital, principally American, has been staking out new claims in the six nations for the last year. Hundreds of American enterprises had already been established there, through branch plants and subsidiaries or through patent-licensing and royalty arrangements with European firms. At the beginning of 1957, direct private U.S. investment in Common Market countries stood at $1,400 million or £500 million. This was mainly in manufacturing companies. Some observers expect this figure to double by 1962.

The big question for new capital coming in is where to settle. Even firms that already have subsidiaries in one of the six countries may find that a better location is possible under the changed situation created by the Market. Each of the "Six" has its own special characteristics as a manufacturing and trading base. From the standpoint of a potential American investor, they present the following characteristics:

Germany: The Federal Republic has a third of the Market's population, its biggest pool of skilled labor, relatively low wages and social-security charges, and a stable government. The high reputation of some of its products, such as chemical and optical goods, attracts foreign business. It has made a spectacular recovery since the war, shows the fastest rate of industrial expansion and has the most favorable balance of trade of all the partners, with receipts exceeding payments by a considerable margin.

On the other hand, Germany's very industrial success means there is less opportunity for American technology to come in and make a profit. The payments situation may compel other Market nations to invoke escape clauses and perpetuate import quotas within the Market to protect their own financial stability. Wages and social charges will in the long run be equalized throughout the Market. Though Germany needs capital, the Bonn government has not especially encouraged foreign investment.

France. The most centrally located partner has a gross national product almost as big as Germany's. Since its population is smaller, that means the overall efficiency of its production is higher. Its industry shows a fast rate of expansion. Its balance of payments is unfavorable—which means better export opportunities to the rest of the Market. Its high wages and social charges go with a highly skilled and educated labor force. Its best industrial plants, such as the Renault car works and the Alsthom electric locomotive works, compare with the world's most modern. France also has probably the greatest number of small, progressive, efficient companies now eager to expand but hampered by lack of capital. These offer a notable opportunity to foreign investment.

On the other hand, France has suffered in the past from unstable governments and unstable currency. The first problem appears to have been solved by General de Gaulle. An improved balance of trade can provide a remedy for the second.

Italy. The second largest member in population is the Market's biggest reservoir of cheap, unskilled labor. Its relatively retarded industry has some highly efficient sectors and is developing fast—the index was 138 in 1958 compared to 100 for 1953 (comparable figures, Germany 147, France 140). It has a big, recently developed supply of natural gas. Under the freedom-of-labor clause of the treaty, Italian unskilled workers are to become available in all six member countries.

Holland. Suffering from a limited local market, the Dutch have nevertheless created major export industries—notably the Philips electrical firm. They started early on an allout drive to exploit their new opportunities as part of the Common Market. Their Government offers inducements to foreign firms bringing in capital. As a result, Holland was able to point on January 1, 1958, to figures showing that 69 American firms had set up affiliates in the Netherlands and 36 had established capital participation in Dutch firms. These figures compared with 17 and 95 for Belgium and an overall figure of 20 for France. No comparable figures are available for Germany, but they would probably be higher, though not in proportion to the size of the various countries involved.

Dutch skilled workers earn about 50 cents

or 3 shillings and six pence an hour, the lowest rate in the Market except for Italy. The working week, at 49 hours, is the longest in Europe, and yet there have been few strikes. English is very widely spoken.

Belgium. This country has for years been a favorite European base for United States business. All three major American car firms have assembly plants at Antwerp. Standard Oil, International Business Machines, Colgate, Armco, Proctor & Gamble, and Johns Manville, among other American concerns, operate in Belgium. The Government encourages American investment, and there are no restrictions on reexport of capital or profits. Wages are high, but so is the rate of productivity.

Luxembourg. The smallest member is the most heavily industrialized. Its specialization in heavy industry and metallurgy give it a bigger role than its size—population 315,000—might indicate. Its foreign trade is handled through economic union with Belgium.

Which country is best for a foreign investor depends on his specific needs. Foreign firms are warned to start small and expand in the light of experience. This rule applies particularly to American companies for several reasons.

First. European governments are sometimes wary of large foreign corporations, especially from large, powerful countries, which set up highly capitalized subsidiaries and try to gain a dominant position in one sector or another of the local economy. The Europeans often prefer, or even require, that foreign capital collaborate, perferably in a minority position, with an existing national firm.

Second. American and European business practices differ. Europeans tend to take more of the profits out of a company. Americans tend to plough more back in for expansion. Clashes of personality are more frequent than inside an organization where there is no difference of language and customs. American executives chosen for jobs in Europe need some familiarity with the local tongue and social customs as well as with business practices.

Third. Operations subject to American antitrust laws have to be reconciled with European inclinations in favor of cartels, marketing agreements and production quotas.

The nature of the world's business with Western Europe is going to change. American Secretary of Commerce Sinclair Weeks forecast: "With this economic unification should come faster economic growth and, consequently, enlarged opportunities in the European market for our traders and investors."

The "Six" collectively have been the United States third best customer (after Latin America and Canada). In 1957 they bought $3,200 million, or £1,100 million, worth of American exports. According to a study by the General Agreement on Tariffs and Trade, by 1975 the Common Market's raw-material imports should have gone up 50 percent, its fuel imports two and a half times. It should be buying more food. Even its imports of capital and consumer goods should have gone up with rising prosperity, despite a vast increase in internal production.

At the same time, Common Market exports will be preempting a larger share of world markets. In particular, a larger volume of goods, turned out cheaply and efficiently for the new European mass market, will be sold to the United States. Common Market internal consumption will go up with a rising standard of living, meaning profits for both local and foreign investors.

The net result should be more prosperity for everyone nimble enough to adjust to the new opportunities and a firmer Atlantic community based on a stronger and a more independent Western Europe.

## Resolution Advocates Installment Payment Annually on Public Debt

EXTENSION OF REMARKS
OF
## HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. WRIGHT. Mr. Speaker, as further evidence of the growing body of approving editorial comment concerning the plan several of us have advanced to create an orderly and systematic method for reducing the national debt, I am enclosing an editorial which appeared in the Austin Statesman, of Austin, Tex., under date of February 27.

RESOLUTION ADVOCATES INSTALLMENT PAYMENT ANNUALLY ON PUBLIC DEBT

Representative JIM WRIGHT has introduced a concurrent resolution in Congress whose effect, if acted upon, would be to authorize a reduction of the national debt by not less than one percent of the total of that debt annually.

It provides that the secretary of the Treasury should include that amount in any request for funds to pay any obligatory interest payments which become due and payable.

The resolution further states that the sense of Congress is that the plan should be implemented beginning with the fiscal year 1961, and continued annually without any interruption until the total national debt now outstanding is retired.

The national debt today stands at $281 billion. In the new fiscal year the taxpayers will be paying $8.1 billion in interest.

The trend toward higher interest in Representative WRIGHT'S view, which will find much support particularly among the people, indicates clearly that the Federal Government soon will be paying 3.5 percent on all its obligations, or a total annual interest of $9.8 billion of the total debt that remains unchanged.

This means that of every dollar paid in Federal taxes about 11 cents must go for serving the national debt. It means also that if they go along exactly as they have been going, with no change in the national debt as of now and with the Federal Government having to pay 3.5 percent interest on its borrowings, then in 28 years we will have paid in interest the total amount of the national debt without having a penny of the principal discharged.

Our national debt is gnawing like a rat at our substance. We are paying a high price for the privilege of owing our national debt. So long as it is owed, then it must entail heavy interest charges.

Payment of $2.81 billions on the principal the first year, at 3.5 and subsequent 1 percent payments on the balance would be an almost painless procedure. It would be far better to reduce the public debt by this amount than to go further in hock through a system of yearly deficits of equal or greater amounts..

The national debt clutches at the back of the American economic system like the proverbial old man of the sea. If we had in the past dozen years or so made progress in reducing the national debt we would be in a far better position to meet the crisis created by Russia than we are now.

Moreover debt reduction, even in that low amount annually, would be psychological encouragement to our system of free enterprise. It would help to remove the ponderous doubt existing that it is to be carried and added to forever.

Since the end of World War II there has been only one brief period, that in the Truman administration, when the Federal Government has made any reduction whatever in the national debt. Yet we have enjoyed some of the most prosperous years in our history.

Representative WRIGHT'S resolution has much to commend it. But it requires more than a resolution favorable to the action it supports to get the machinery moving.

Congress should translate the resolution into real meaning.

---

## Co-ops Lost a Stanch Defender: Representative Dan Reed

EXTENSION OF REMARKS
OF
## HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. WIER. Mr. Speaker, I ask unanimous consent to revise and extend my remarks on behalf of the many bonafide farm cooperative organizations that have been and are now engaged in the cooperative buying and selling for their respective members in my congressional district. These organizations share my views as well.

I, therefore, wish to add my own personal regards and respect for the efforts and interest of the late Honorable Dan Reed, Congressman of New York, who but recently passed to his just reward in the Great Beyond. I feel it well worth noting that the sentiment expressed in the March 2 edition of the Farmers Union Herald, published in St. Paul, Minn., fully covers those of myself and my constituent farmers.

Yes, indeed, Congressman Reed was a militant and vigorous battler for the cooperatives of this Nation.

CO-OPS LOSE A STANCH DEFENDER: REPRESENTATIVE DAN REED

Co-ops lost one of their best friends in Congress late last month.

He was Representative Daniel Reed, 83, of New York, who died February 19 of a heart attack in Walter Reed Army Hospital, in Washington, where he had gone 2 weeks previously to undergo treatment for an infected foot.

Reed, one time chairman of the powerful House Ways and Means Committee—which originates all Federal tax legislation—and at the time of his death its senior minority member, was a stanch defender of cooperatives in their fight against the National Tax Equality Association and other big business groups who have sought to inflict punitive taxes against co-ops.

It was at the 1951 congressional hearings that Representative Reed denounced the NTEA as an "unscrupulous racket."

The Congressman exposed NTEA's vicious propaganda against farm cooperatives on the House floor. "To get contributions from businessmen," Representative Reed declared, "this racketeering organization has propagandized businessmen with false statements that if farm co-ops were taxed and not exempted, tax revenues would increase $800 million annually."

"This is absolutely false," Reed continued. "It is nothing more nor less than getting money under false pretenses. To spread such falsehood through the U.S. mails to get con-

tributions for this racketeering outfit is fraudulent use of the mails."

In his exposé of the NTEA, Reed covered nearly five pages of small type in the CONGRESSIONAL RECORD with names of NTEA contributors. NTEA later admitted that many of those listed thereupon quit, apparently not willing to have the general public know of their affiliation with that organization.

## Where the Arab Refugees Should Be Settled

EXTENSION OF REMARKS
OF
## HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Eliezer Livneh which appeared in the American Zionist, February 1959 issue. Mr. Livneh is one of the foremost independent writers in Israel on social, economic, and political themes:

WHERE THE ARAB REFUGEES SHOULD BE SETTLED

(By Eliezer Livneh)

There is again some well-meant talk about the Arab refugees who would like "to return home." Every detached person feels of course a deep sympathy with people who persevere in their wish to go back home; there are however very few who try to clarify for themselves what this "home" may mean. It is worth while therefore to inquire into the meaning of this sweet word which appears to be quite simple and self-explanatory.

According to official statistics there were in 1957 some 934,000 Arab refugees outside Israel. "Refugees" mean people who succeded in entering the lists of UNRWA (United Nations Relief and Work Agency) and benefiting from rations and other philanthropic help. It is generally acknowledged that many thousands of them are neither refugees nor Palestinians, but local Arabs who "infiltrated" into the roster in order to obtain free rations. But this question is irrelevant to our discussion. Much more important is another question: Where do these refugees dwell? Almost 60 percent of them, 518,000, are in the Kingdom of Jordan, which annexed large areas of western Palestine. Some 20 percent, 221,000, in the Gaza strip. The remainder, 195,000, in Lebanon, Syria, and Iraq. These figures are essential for any further analysis.

Now we can proceed to the second point: What does "home" mean in the context? If it means an Arab country—which one is immaterial from an Arab Nationalist point of view—then all the refugees are at home. Surely they are entitled to full indemnity for any property they lost. There are very few people in Israel who would deny this right or the duty of Israel to shoulder its share. Even those refugees who had no property whatsoever in present Israel have a human right to be resettled with international help.

But this is not the debatable issue. The issue is where should they be resettled? In the Arab countries—where they live the last 10 years—or in Israel. Here, however, another definition of "home" may enter into the discussion. One may argue—and people do—that "home" means Mandatory Palestine of 1947, to which all the legitimate refugees belonged in some way or other. Well, in this case almost 80 percent of the refugees are already at home. The figure comprises the 518,000 in Jordan and 221,000 in the Gaza strip. The remaining 20 percent are mostly absorbed in their new countries of residence—few tens of thousands in Lebanon excepted—and they would not exchange their present status for a new beginning in former Palestine, whatever this geographical term may mean.

There may be a literal interpretation of the notion "home." "Home" may mean the physical former homes of refugees, that is their former houses in Jaffa and Haifa, their former villages and lands in Judea and Galilee. If this should be meant by "returning home" then such a suggestion, whatever its political implications, is nothing short of madness. Its practical consequence should have been the turning out of hundreds of thousands of Jewish immigrants and refugees—most of them probably from Arab and Moslem lands—and the creation of a new refugee problem quite unmanageable by any standards. Of course, such a cataclysm is unthinkable.

The only remaining interpretation of "returning home" may mean going back to Israel, although to quite different places than the former homes, towns, and villages of the refugees. There may be some cases where family members will join their respective families in Israel—a process going on since 1949. However an essential question has to be asked here. We cannot avoid it owing to its compelling commonsense: If Arab refugees have anyhow to change their place of residence inside former Mandatory Palestine, why should they prefer Israel—where they will form a minority community—to the Arab part of Palestine where they belong to the majority nation? This is not only a question of nationality and politics.

The old life to which the Palestinian refugees were accustomed in former Palestine and to which they presume to return no longer exists in present Israel. It is a vastly different country, with cultural and social standards quite foreign to the refugees. Resettling in Israel means for the mass of refugees a very unusual strain which they are spared in an Arab country, including the Arab parts of Palestine in which most of them dwell at present. On top of all this, owing to the much higher stand of wages and prices in Israel any definite resettlement scheme in Israel will require a much higher expenditure than a comparable scheme in any Arab country. Funds are limited. The preference of Israel to an Arab country means using public funds in the most ineffective way.

From whatever angle we approach the problem, the substitution of Israel for an Arab country as the place of final resettlement of Arab refugees does not make sense. The only weighty reason for demanding a mass resettlement of Arab refugees inside Israel is of course a political one: to install a powerful Arab minority within the Jewish State whatever the human, social, and economic inconveniences of such an artificial operation even to the refugees themselves. Is it really inconceivable that every Israeli—and for that matter any man concerned with peaceful relations between nations—should react to such a prospect with disfavor and dissent?

## Madame Ambassador

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very pointed and truthful statement that appeared in the Chelsea (Mass.) Record of March 4, 1959, concerning the nomination of our former colleague in the Congress, the able and capable Clare Boothe Luce to the highly responsible position as Ambassador to Brazil. There is no doubt in the minds of all of us that she will reflect credit to the United States in her new assignment in South America:

MADAME AMBASSADOR

There are two excellent reasons for welcoming the President's nomination of Clare Boothe Luce as Ambassador to Brazil. One of these is that the appointment will return to public service a woman of great capabilities. The other is that the naming of such a person to represent us in a Latin American country indicates a heightened recognition of that area's importance to the United States.

Mrs. Luce served well during 4 years as Ambassador to Italy, a post she resigned in 1957 because of ill health. Her background, intelligence and perceptive understanding give assurance that she will represent U.S. interests well in Brazil. That will be of particular importance during the trying period of Brazil's comeback from the ravages of the Peron dictatorship. It is to be hoped that the Senate will speedily confirm this wise appointment.

## Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
## HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 4, 1959*

Mr. METCALF. Mr. Speaker, Dr. Flemming, Secretary of Health, Education, and Welfare, has come up with a proposal which he says would solve the school classroom shortage. But application of the Flemming formula would require States to alter their constitutions, their statutory debt ceilings and their basic internal tax concepts. Dr. Flemming says these alterations would be a minor obstacle.

The Flemming formula has other applications.

According to Hoyle, the best possible 5-card poker hand is a royal flush. The relative value scales down through a straight flush, four of a kind, a full house, a flush, a straight, three of a kind, two pairs, one pair, to high card.

With individual application of the Flemming formula, a pair of deuces could take the pot over a royal flush. Now this would require a change in the rules—a revision of Hoyle's book—and there undoubtedly would be some constitutional, perhaps even internal, alterations of the players in the resulting disputes. But these would be a minor obstacle to Dr. Flemming.

Of course, it is difficult to see any possible benefit resulting from application of the Flemming formula to poker. It is just as difficult to see any possible benefit resulting from its application to the classroom shortage.

## Poison in Your Water—No. 32

EXTENSION OF REMARKS
OF
**HON. JOHN D. DINGELL**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the San Jose, Calif., Mercury, September 15, 1957, entitled "Pollution Problem Grows Acute."

The article follows:

POLLUTION PROBLEM GROWS ACUTE
(By Bill Feist)

There isn't much question but that one of the major problems confronting the department of fish and game is that of pollution, its disastrous effects on fishing and what can be accomplished to eliminate it.

The pollution problem isn't new. It has been under study by the department for years. It has been present both in streams and coastal waters for some time and in certain instances steps have successfully been taken to remedy the situation. However, with increased population and industry the problem is increasing.

Many lawmakers, assemblymen, and senators believe that pollution will be a very important item on the agenda of the legislature when it convenes in January.

Latest step in the study of pollution so far as this locality is concerned will take place Wednesday and Thursday when five agencies, including the department of fish and game, conduct tests in the bay area south of the Dumbarton Bridge, which includes the town of Alviso. Agencies in addition to the DFG are the San Francisco regional water pollution control board, the bay area air pollution control district, the State department of public health, and the Santa Clara County health department.

The purpose of the study is to secure figures on the effects of cannery wastes and other sewage discharges on the air, water, and aquatic life in the region. It will also determine to what degree the cities south of Dumbarton Bridge are meeting the requirements set for their waste disposal by the regional water pollution control board.

San Jose along with Sunnyvale and other nearby cities have constructed primary sewage treatment plants since the requirements were set. Some have gone into operation only recently though.

Floating laboratory during the 2-day test will be the DFG boat *Albacore*. It will also serve as a mother ship for several skiffs to be used in gathering actual test samples along the shallow shoreline. During the study samples of air and water and of bottom muds at various phases of the tide will be taken.

Several years ago a serious pollution problem was present in the east bay in the vicinity of Berkeley. Fish life was extinct. However, through chemical treatment the pollution was eliminated and today perch and striped bass can be found. Eventually there is hope that present polluted sections where the fish are no longer found can be cleared.

When most of the measures passed by the State legislature during its 1957 session became law Wednesday a new antipollution regulation came into existence.

Entered into the California fish and game code under section 5948 the law is designed to protect streams of California from damage by logging and other operations. It makes it unlawful to cause logjams or debris accumulation in streams which prevent the passing of fish or which is harmful to fish life.

The new regulation also provides that anyone convicted of unlawfully polluting, contaminating, or obstructing waters to the detriment of fish shall, in addition to any other penalty provided, either be required to remove the substance or to pay the costs of such removal to the DFG.

Previous laws allowed the DFG to take action against stream pollution violators in northern California, but not elsewhere. Now the department can move throughout the entire State.

Outstanding event of the Santa Cruz deep sea fishing season takes place Saturday when the 14th annual Cottardo (Babe) Stagnaro memorial oldtimers' fishing derby will be held off New Year's Island.

One hundred and thirty-six entrants, some who've fished in all 14 derbies, will seek the heaviest lingcod which brings the masculine winner the title of king and the feminine victor the honor of queen.

Prizes will be 14 in number ranging from $200 for first down to $15 for 14th. In addition the most fish of any species pays another $10, while the first 10 fishermen on each of the three boats landing a lingcod will receive $5 apiece. The person registering the smallest fish also will be given $5.

Rules of the derby require the use of only a single pole or line and obeyance to the commands of the skippers.

According to derby rules all contestants will draw for their fishing spots on the boat at 5 a.m. The boats will depart from the dock at 6 o'clock and start the inward journey about 2 p.m.

Boats scheduled for use and their skippers, *Stagnaro No. 1*, Paul Lybrand; *Stagnaro No. 2*, Maurica Krauser; and the *Cottardo Stagnaro*, Joe Stagnaro.

The annual oldtimers' dinner-dance follows at the Riverside Hotel.

## In Support of the Civil Rights Act of 1959

EXTENSION OF REMARKS
OF
**HON. JAMES ROOSEVELT**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the text of my statement in support of the proposed Civil Rights Act of 1959, which was presented to Subcommittee No. 5 of the House Committee on the Judiciary.

STATEMENT OF HON. JAMES ROOSEVELT, BEFORE SUBCOMMITTEE NO. 5 OF THE HOUSE COMMITTEE ON THE JUDICIARY ON MARCH 11, 1959, IN SUPPORT OF THE CIVIL RIGHTS ACT OF 1959, AND RELATED COMMENTS

Mr. Chairman, and members of the subcommittee, I appreciate the opportunity to appear before you to discuss my measure, H.R. 430, the Civil Rights Act of 1959, as well as to offer comment on other major civil rights proposals.

H.R. 430 is a companion measure to that introduced by the chairman of the House Committee on the Judiciary, the Honorable EMANUEL CELLER, and in the other body by Senators DOUGLAS and JAVITS, who were joined by members of both parties. It is gratifying to see bipartisan support of legislation in the civil rights field. Guaranteeing these constitutional rights does not belong exclusively to one party. It is my profound hope that this Congress will assure to the American people that these rights do apply to every citizen regardless of race, creed, color, or national ancestry.

I think that we are all very much aware that the challenge in this fast-moving 20th century is to bring social progress up to scientific, technological, and material progress. This has always been, down through the centuries, the real and overriding challenge to mankind. And the grave internal and external pressures that face this Nation today further emphasize the need for perfecting our democratic institutions through a recognition that social progress—and certainly implementation of civil rights is part and parcel of such progress—is an indigenous ingredient in democratic concepts and institutions.

Therefore, I resolutely affirm that Congress, in recognition of the challenge, must act affirmatively and expeditiously in the field of civil rights legislation.

Any discussion of my proposal would be lacking in depth and fairness if I only allude to its provisions without any reference to other major legislative proposals that have come before this Congress for its consideration and action. A discussion of the relative merit of various measures will, I believe, offer the best approach in determining the most effective civil rights legislation to implement the law of the land—the U.S. Constitution and the interpretation of it by the Supreme Court. I wish to emphasize that while I feel the measure which I am cosponsoring offers the most extensive and meaningful approach to the problem of school integration, as well as the protection of civil rights in general, I also know that no one has a monopoly of ideas on how best to accomplish this implementation nor does any one person have all the answers. Collective thinking is essential for a clear solution.

For the purposes of discussion, I propose to discuss (1) my measure, H.R. 430, which is the same version of the legislation popularly called the Douglas-Javits-Celler bill; (2) the administration proposals, introduced in the other body as seven separate bills, but introduced in the House as one measure, H.R. 4457, and (3) the Johnson proposal. Although Senator JOHNSON'S bill has not been offered in the House, I think it will be useful and helpful to include reference to it in any full discussion of pending civil rights legislation. Parenthetically, may I say that for purposes of my presentation, and for clarification, I shall not refer to my given measure, H.R. 430, but rather to the Douglas-Javits-Celler bill.

In recent days, a very useful and careful summary comparison of the main civil rights bills has been prepared and distributed by the executive committee of the Leadership Conference on Civil Rights, comprised of 53 national religious, civic, interracial, labor, welfare, veterans, and fraternal organizations. It should be noted that the organizations involved have more than a fleeting or passing interest in civil rights matters; they all have one common bond: their sincere, studious and enduring interest in and concern about the full implementation of the constitutional guarantees from which should flow first-class citizenship for all. Among the 53 organizations are the Unitarian Fellowship for Social Justice, the American Civil Liberties Union, the American Jewish Congress, the National Association for the Advancement of Colored People, the Improved Benevolent Order of Elks, the International Union of Electrical Workers, the United Automobile Workers, both AFL–CIO affiliates, and the American Council on Human Rights, to mention just a few.

I don't think anyone could properly quarrel with the contention that these groups have had a real and active interest in civil rights matters or that their summary

analysis of the proposed bill was done in a perfunctory or superficial manner.

In offering the summary comparison, this group prefaced it by the following statement:

"The summary comparison would appear to justify the following conclusions:

"1. The Douglas-Javits-Celler bill, providing support for the Supreme Court's desegregation decisions and technical and financial assistance to assist the process of school desegregation and including an improved version of the old part III stricken from the 1957 bill, is essential to the accomplishment of school desegregation within a reasonable period and to the maintenance of the equal protection of the laws in other fields; it is certainly the No. 1 civil rights bill. The Javits bill, S. 456 (see also Celler bill, H.R. 3148), which is not included in the summary comparison, also contains an improved version of the old part III of the 1957 bill, but the Javits bill does not contain the remainder of the Douglas-Javits-Celler bill. The old part III contained in both bills authorizes the Attorney General to bring injunction actions against those denying equal protection of the laws to anyone because of their race, color, religion, or national origin, and is the single most essential part of any civil rights legislation.

"2. The administration school bills omit part III completely and contain an inadequate version of the remainder of the Douglas-Javits-Celler bill. Other administration bills, and particularly S. 957 authorizing inspection of voting records, make advances in the area of civil rights which deserve the support of civil rights organizations, to the extent that support for the Douglas-Javits-Celler bill is in no way reduced.

"3. The Johnson bill, by failing to support the school desegregation decisions and by conciliation provisions that may result in civil rights being bargained away rather than enforced, appears to be a step backward. It seeks to relegate the assertion of rights to equal protection by citizens and defiance of the law by States to the status of a neighborhood quarrel to be resolved only by an ill-defined conciliation procedure. Its other provisions would seem to be better dealt with in the administration and other bills."

Mr. Chairman, may I say in reference to S. 957, mentioned in point two of the above quoted statement, that this proposal is also sponsored by the distinguished chairman of the Committee on the Judiciary and is contained in the House bill, H.R. 4457, which has incorporated all seven administration proposals. I heartily concur that legislation covering the objectives set forth should be part of a comprehensive civil rights program.

A COMPARATIVE APPROACH TO CIVIL RIGHTS LEGISLATION

As stated in my earlier remarks, I shall direct my comments to the three proposals already referred to, the details of which are known to the committee members. Therefore, I think the most logical approach to this matter is to offer what I believe highlights the similarities and/or differences in as concrete and brief a fashion as possible, without perverting the intent.

In broad, general terms, I believe the bills can be discussed under the following headings:

1. Support of the Supreme Court Decisions.
2. Federal technical and financial assistance to States.
3. Compliance and enforcement of Supreme Court Decisions.
4. Suits by Government.
5. Obstruction of justice.
6. Voting records.
7. Civil Rights Commission.
8. Antibombing.
9. Children of military personnel.
10. Equal job opportunity.
11. Conciliation service.

SUPPORT OF SUPREME COURT DECISIONS

I think it is significant to point out that the Douglas-Javits-Celler measure is the only one of the three approaches under discussion that expressly endorses the principle of the Supreme Court's antisegregation decisions in schools, transportation, and recreation. It likewise recognizes the responsibility and authority of Congress to uphold these decisions.

While the administration proposal recognizes that the Constitution as interpreted by the Supreme Court is the supreme law of the land, it does not include the findings of the Douglas-Javits-Celler bill approving the High Court's decisions, nor does it pledge Congress to support those decisions by all due and reasonable means.

The Johnson proposal does not refer to the Supreme Court's decisions. Indirect recognition is given by the feature of his proposal which notes there are constitutional requirements that give rise to disagreements which require conciliation of such disagreements forthcoming from legal decisions. The conciliation approach is, of course, less direct in assuring compliance and enforcement of the law of the land.

Mr. Chairman, I believe that this distinctive feature of the Douglas-Javits-Celler measure may, in some respects, be the most important provision contained in any measure because it is an expression of philosophical endorsement of our national ideals; it is one way that Congress does not leave exclusively to the courts the implementation, as well as the proclamation, of the abiding American belief and conviction that all Americans are equal in the eyes of God which, translated into our constitutional concepts of democratic government, means every human being is entitled to equal protection of the laws.

FEDERAL TECHNICAL AND FINANCIAL ASSISTANCE TO STATES

The Douglas-Javits-Celler proposal authorizes the Secretary of Health, Education, and Welfare to render technical assistance to States and local communities seeking to comply with the High Court's antisegregation decisions.

In addition, the measure which I am supporting makes provision for grants to States and local governmental units for additional school facilities and additional teachers, to mention just two provisions among several. It also provides for grants to local communities, eliminating segregation, when the State threatens to cut off school payments.

To carry out the intent of these sections, the Douglas-Javits-Celler legislation calls for appropriations up to $2½ million a year for a 5-year period for the technical assistance phases of the program; for the program of grants, appropriations up to $40 million a year for a 5-year period.

The administration's program covers the above approaches but is a limited version of the Douglas-Javits-Celler approach both as to extent of the program and the amount of aid to be given. The estimated expenditure has been set at $4½ million for 2 years.

COMPLIANCE AND ENFORCEMENT OF THE SUPREME COURT DECISIONS

The Douglas-Javits-Celler bill sets up the procedure by which the Secretary would be authorized, when other methods fail, to assume responsibility for initiating the development of desegregation plans, with fullest possible local consultation and participation. When the Secretary certifies that all efforts to secure compliance by persuasion and by technical and financial assistance have failed, the Attorney General, as authorized in the bill, would file compliance action.

Neither the administration nor Johnson proposal has provisions in this matter.

Mr. Chairman, I wish to bring to the attention of the committee members that there is another important section of the Douglas-Javits-Celler measure which calls for the injunction procedure which I shall discuss shortly. However, at this point I wish to bring to your attention that the measure has been criticized editorially in the Washington Post, February 2, 1959, as it pertains to the Federal desegregation plans and the injunction procedure if compliance fails. Indeed, the editorial opposes the injunction features as it applies in this matter and as it appears elsewhere in the bill for the purpose of ending denials of equal protection of the laws.

The editorial stated, and I quote only that portion of it concerned with the subject at hand:

"It sweeps on to authorize the HEW to draw up desegregation plans for communities failing to act on their own initiative. Such plans could then be imposed on the reluctant communities through court injunctions. This sort of carpetbaggery would produce more sectional hostility than desegregation. It looks in precisely the opposite direction from Senator JOHNSON'S proposed conciliation agency.

"Nor do we think the time has come to seek enforcement of all civil rights through use of the injunction. Recent events in Virginia indicate that the barriers to desegregation are beginning to crumble. The processes of peaceful adjustment might be gravely upset by undue haste in the application of force from Washington. The wisdom of moving a step at a time in this delicate situation and of converting instead of blundgeoning has been too well demonstrated to be seriously challenged."

The Attorney General of the United States is taking a similar position regarding the injunction provisions, although it should be recalled that the administration program of 1957 included such authority for the Attorney General.

I think this is healthy in our discussion to have such criticism because it offers an opportunity to join the issue and to clarify misconception, confusion, and hasty conclusions. In a letter to the Washington Post, Senator PAUL DOUGLAS has done just that. He logically, factually, and legally challenges, and certainly weakens, the argument of those opposed to the HEW desegregation plan authorization and of those opposed to the injunction features of compliance in connection with such plans and with respect to the injunction features elsewhere in the bill which are aimed at ending the denial of equal protection of the laws in other fields, not just in the field of school integration.

Mr. Chairman, because of the importance of the points made by the distinguished Senator from Illinois, I wish to submit the full text of his letter of February 2, since it covers the issue at hand in a comprehensive and clear manner.

LETTER OF SENATOR PAUL H. DOUGLAS TO THE WASHINGTON POST

FEBRUARY 2, 1959.

EDITOR, LETTERS TO THE EDITOR COLUMN,
*Washington Post and Times Herald,*
*Washington, D.C.*

DEAR SIR: Reasoned analysis and widespread public discussion are prime essentials in arriving at a workable approach to desegregation and full compliance with the Constitution and decrees of the Supreme Court. Your editorial on "Aid, Not Carpetbaggery" (Washington Post, Feb. 2, 1959), is a long step in this direction and is a welcome contrast to the more superficial treatment, vituperation, or indifference with which such proposals have been met in the past.

To clarify the issues, however, and to correct some misunderstandings about our proposal, may I be permitted to make a few comments on your analysis.

First, I am proud of the civil rights bill which I introduced last week, and I am glad that it bears my name. But it also bears the names of 16 other Senators as cosponsors, including many of the best known and most thoughtful and reasonable advocates of a sane approach to progress in the field of human relations. A number of these Senators gave important help in the drafting of this measure, and it is therefore truly a joint product. A dozen or more House Members, including Judge CELLER, chairman of the Judiciary Committee, have sponsored the same measure. The credit—or blame—for the proposal is therefore shared by these other Members as well.

We are naturally gratified that the Post recognizes the constructive character of that part of our bill which undergirds the desegregation decisions of the Supreme Court by a statement of supporting congressional policy. Your support is also welcome for our rather comprehensive authorizations of technical assistance and financial aid through the Secretary of Health, Education, and Welfare to the States and localities seeking to work out their desegregation problems.

Your criticisms of the proposed authorization to HEW to draw up and issue desegregation plans as being too hasty and sweeping, however, seem to us to reflect an inadequate understanding of what is proposed.

Title IV of our bill which sets up this administrative action first requires HEW to make every effort to persuade the States and local districts to make a start toward eliminating segregation in public education, utilizing the aids and financial assistance previously referred to. It thus first emphasizes the procedure of conciliation, which you endorse, but specifies that it shall be conciliation with the aim of bringing compliance with the Constitution.

Secondly, in preparing such tentative plans the Secretary is required to seek the advice and assistance of public officials, private organizations, and private citizens in the area and of any * * * advisory council.

In the third place, the proposal specifies that such tentative plans shall take into account the need of the particular area for time to make an orderly adjustment and transition from segregated to desegregated schools.

In the fourth place, if the plan thus formulated meets with the approval of the locality and is adopted by it, a beginning can be made, and the various other forms of assistance can be brought into play.

In the fifth place, however, if the tentative plan is not accepted, the Secretary must set up a public hearing upon the plan, and at this hearing, the local authorities, private organizations and private citizens shall be permitted to participate. Only after all of these steps have been taken is the Secretary authorized to prepare and issue an approved plan for desegregation. The detailed requirements for local participation in our opinion make it clear that your rather captious characterization of "carpetbagger" is wholly unwarranted.

But, finally, it is important to recall that these desegregation plans, if still resisted, cannot come into effect until the Attorney General files an injunction suit and the court, after listening to all of the evidence and hearing arguments, issues its decree in line with the underlying decisions of the Supreme Court requiring all deliberate speed. The trial court's determination is further subject to appeal and review right up to the Supreme Court.

The bill thus seeks to use the assistance and advice of executive and administrative agencies and the experience, recommendations and criticisms of the local community in affirmatively formulating desegregation plans. In similar circumstances of bitter-end resistance under the present law, such plans have to be developed solely by the courts in injunction suits brought by the aggrieved persons in behalf of their children. But the proposed plans under our bill would in no case have any legal effect until they had gone through the judicial processes of court hearings and decision, with full right of review. The procedure is not unlike that now provided to secure compliance with NLRB recommendations.

Surely this accepted, reasonable, and deliberate procedure cannot fairly be characterized as a force plan, as your news reports have described it, or bludgeoning as you editorially refer to it.

In opposing our proposal to authorize the Attorney General to seek injunctions to end denials of equal protection of the laws, you cite with favor the recent events in Virginia. But what has brought about—at long last—the crumbling of the barriers of segregation and the peaceful adjustment which you herald there? Clearly, it is a series of court decisions, in cases initiated by individuals. The patient, thoroughly argued, long drawn out legal proceedings and decrees have been the path to progress in that State.

But what is the ultimate sanction under our bill? The answer is again court actions. These could, however, be initiated by the Attorney General. But in this case they must be preceded either (a) by the lengthy HEW procedure I have outlined above, or (b) by the signed complaint of individuals and a determination by the Attorney General that those individuals are unable to seek the effective legal protections for themselves. The injunctive procedure authorized in our bill is thus basically the same as the procedure under which progress is being made in Virignia, except that under carefully specified conditions the Attorney General may file the suit.

Why is it necessary that the Attorney General be empowered to initiate these procedures which can now be initiated only by individuals? This is necessary because without it the weakest, the poorest, and those most subject to intimidation or coercion are required to fight their case with their own resources against all the legal talent, power, legislation, and economic resources which a State opposed to desegregation can throw into the breach. Because of the antibarratry laws, the anti-NAACP laws, school placement laws, and the multitude of other barriers thrown up to resist the law of the land, and the scales of justice can only be evenly matched if these legal and economic burdens of enforcement are borne in part by the Federal Government, whose duty it is to enforce the law of the land. To require—as is now the case—that this burden be placed solely on the backs of the fathers and mothers of Negro children in areas which are overwhelmingly hostile to them is to apply that concept of justice made famous by Anatole France's remark that the law in its majestic equality forbids the rich as well as the poor to sleep under bridges, to beg in the streets, and to steal bread.

This injunction procedure is not unique or extreme, for, as I have said in the Senate, it is now so commonplace that it is provided in 39 other laws to bring compliance with various Federal statutes, including the voting rights bill of 1957. This procedure is necessarily coupled with all the usual protections of the exercise of the equity powers of the courts and subject to all of the normal appeals in the higher courts. It has been twice approved in school cases by overwhelming votes in the House of Representatives, once in 1956 by a vote of 279 to 126, and again in 1957, by a vote of 286 to 126 in favor of the so-called part III of the civil rights bills of 1956 and 1957.

If the Attorney General sought to move faster than the Supreme Court decisions provide, the Federal judge would deny or modify his request. Thus, there are adequate safeguards through the Federal district courts and judges—almost all of whom in southern areas are southern born—against "undue haste in the application of force from Washington."

The inadequacy of the conciliation proposal by Senator JOHNSON, which you endorse, is that if the dominant forces of the community refuse to restore peaceful relations in accordance with the Constitution, the Federal Government would then lack the authority to initiate court cases to bring compliance. This failure could invite nullification and the ultimate breakdown of the Constitution.

The sponsors of our bill earnestly hope that the affirmative approaches which provide congressional backing for the Court's decrees, technical assistance, financial aid, etc., will be largely effective in getting the movement toward desegregation off deadcenter and demonstrating to the world that we intend to live by our principles of equal justice. But in the background, just as the historic decisions of the court have been the firm rock upon which we have now begun to break away in both the North and the South from our previous discriminatory practices, so do we believe that the ultimate possibility of an appeal to the courts, initiated by the Attorney General, will be helpful in winning acceptance for these constitutional principles all along the line.

Sincerely yours,

PAUL H. DOUGLAS.

SUITS BY GOVERNMENT

The outstanding difference between the Douglas-Javits-Celler bill and the administration program is found in the matter of suits by the Federal Government. The difference is this: The provision contained in the Douglas-Javits-Celler measure represents an improved version of part III of the 1957 bill. The significance of this provision lies in the fact that the objective is for preventive rather than punitive action. It would authorize the Attorney General to seek preventive relief to protect persons being deprived of, or threatened with deprivation of, equal protection of the laws, if the persons whose rights are invaded are unable to seek legal relief because of a lack of finances, economic pressures, or fear of physical harm.

The Attorney General would also be authorized to seek preventive relief to assist public officials in guaranteeing equal protection of the laws by enjoining anyone hindering or attempting to hinder such officials or hindering, attempting or conspiring to hinder the execution of any court order involving the equal protection of the laws.

Again, I bring your attention to the injunction features of the bill as explained and ably supported by Senator DOUGLAS.

The Attorney General would also be authorized to intervene in private civil rights suits, as well as to initiate action.

This singular approach is important in comparing this proposal with the other two under discussion because neither makes such provisions in any manner.

OBSTRUCTION OF JUSTICE

It is literally true that the Douglas-Javits-Celler bill does not have a provision contained in the administration proposal: that is, a provision making it a criminal offense to use force or threats to interfere with court orders in school desegregation cases. However, to accept this literally is also to be misled about the Douglas-Javits-Celler measure. The injunction procedure already discussed would come into play in such a situation, as well as in other civil rights areas. The proposal which I support thus emphasizes preventive rather than punitive action in the matter covered in the administration bill. Since injunctions can be enforced by contempt proceedings, I feel that

such an approach is far more effective than the limited usefulness of criminal action.

VOTING RECORDS

Both the administration and Johnson proposals, while differing in given respects, make provision for inspection of voting records.

I shall support an adequately written proposal and on the basis of the legislation at hand it is my belief that the administration bill offers a better approach in that there would be less delay in obtaining voting records where discrimination in voting has been charged, and it also contains the proviso that such records must be kept for 3 years; the Johnson proposal does not, thus not touching on the problem of the destruction of records. In addition, the latter proposal has a more limited application of the subpena power to obtain such records.

CIVIL RIGHTS COMMISSION

Here again, the administration and Johnson proposals contain a feature not incorporated in the Douglas-Javits-Celler proposal: That is, the continuation of the Civil Rights Commission for 2 years in the administration bill, and until 60 days after January 31, 1961, in the Johnson measure.

I think it is important that the work of the Commission continue, but that it would be a grave error to claim that such a combination makes additional legislation in the civil rights area unnecessary.

It is important to consider strengthening the Commission by authorizing it to investigate all denials of civil rights because of race, color, religion, or national origin.

ANTIBOMBING

While antibombing provisions are not contained in the Douglas-Javits-Celler bill, I think it should be noted that I and many supporters of this specific proposal have introduced separate legislation. The administration proposal and the Johnson measure both contain provisions in this matter.

Mr. Chairman, I shall not go into a comparison of how these measures differ, but I do wish to comment that I have introduced legislation which includes residential property in its provisions. This provision has not been incorporated in several of the measures that will be considered.

I am hopeful that effective antibombing legislation will be achieved in this Congress.

CHILDREN OF MILITARY PERSONNEL

The administration proposal authorizes the Commissioner of Education to operate schools for children of members of the armed services where local schools are not operating as a result of defiance of the Supreme Court's decisions. It also provides that a school constructed in the future, built in whole or in part with Federal funds, may be taken over by the Federal Government for operation with the latter paying the State rent in line with the State's investment.

The proposal has, in my opinion, certain defects: First, if the goal in administration thinking is only to take care of children of Federal personnel, why limit it to the children of members of the armed services? Why not include other Federal employees? Second the provision with respect to schools constructed under the impacted areas program would be of limited effect, since it would apply only to future construction; thus it would not apply to previously constructed schools. And, finally, the approach offers no provisions relating to desegregating impacted area schools.

I bring to the attention of the committee the fact that the Douglas-Javits-Celler measure has broader application in dealing with closed schools since Federal funds would be offered to local communities where the State has withdrawn school payments; in addition the stronger provisions relating to school desegregation also make the approach more effective.

EQUAL JOB OPPORTUNITY

The administration propose that Congress create a Commission on Equal Job Opportunity Under Government Contracts, similar to the present Committee established by executive order. The statutory duties and functions granted to the Commission would not differ greatly from those now exercised by the committee, except that it would be able to make its own investigations and conduct hearings.

While I think this approach could be strengthened, for example, by providing such a commission with subpena power, I would hope that creation of such a commission would be another factor in the further dimunition of job discrimination by companies holding Government contracts.

My real concern, however, is that this is only a small part of the concept of equal job opportunity for all. I am proud to state that I have introduced legislation that would prohibit discrimination by companies and labor organizations because of race, color, creed, or national origin. While my proposal will not come before this committee, I merely want to apprise the members of my thinking in the matter.

CONCILIATION SERVICE

Reference has already been made to Senator JOHNSON'S proposal to conciliate disagreements by establishing a community relations service. I only wish to pose this question: Will this approach hamper enforcement?

Will conciliation, at the level it is proposed, be a necessary prerequisite of judicial action?

I wish to thank the Chairman and members for their kind attention and to commend the Committee on the Judiciary for its desire to hold full and necessary hearings on civil rights legislation.

May I merely add that I am pleased to have been able to offer my comments and to indicate my support, for the reasons I pointed out, of the Civil Rights Act of 1959.

## Poison in Your Water—No. 31

EXTENSION OF REMARKS
OF
## HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Rome (Ga.) News-Tribune, September 18, 1957, entitled "Stream Pollution Problem Grows":

STREAM POLLUTION PROBLEM GROWS

The problem of stream pollution in Georgia grows and with it grow concomitant problems of public health, loss of wildlife and recreational areas, and depreciated property values.

Polluted water is a constant hazard which will continue to increase until we take steps to clear up our rivers and streams of industrial and municipal wastes.

A case in point is Big Cedar Creek in neighboring Polk County. Once widely known for its scenic beauty and fishing abundance, the stream in large part is befouled and poisoned by wastes today.

The same is true of Rome's own three rivers which are disposals for municipal and industrial wastes, destructive to their water life and ruinous of appearance.

Federal laws provide aid to cities and towns for construction of modern sewage disposal systems. Some industries privately have realized their share of the pollution problem and have constructed waste treatment plants. Others have failed to accept this responsibility.

The problem can be met only with adequate legislation which is supported by public demand for action.

## Forty Years of Service

EXTENSION OF REMARKS
OF
## HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 17, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very illuminating editorial on the birth and 40 years of accomplishments by that great veterans' organization, the American Legion. It is well from time to time, to be reminded of the outstanding work of this great organization since World War I in behalf of the veterans and their families.

The editorial follows:

FORTY YEARS OF SERVICE

Except for those coy people, both male and female, who do not wish to admit their age for fear they will be dated, most people, young and old, rejoice in birthdays.

The youngsters look forward to them with joy because they know their family, their relatives, and their friends will remember them with gifts.

The oldsters who are not ashamed to admit their age look forward to it, not for gifts but for the greetings they receive from family and friends but, more particularly, for the memories which the years have brought them.

During this week the American Legion will be celebrating its 40th anniversary—not so long in calculating years but quite long in accomplishment.

As we look back on the meeting in Paris in March 1919 when the idea of the formation of the American Legion was first contemplated, we feel certain that the founders of the American Legion had little or no idea of what the organization might develop into as it dedicated itself to "God and country."

The ideals which the founders of the American Legion put forth in their deliberations 40 years ago in Paris were but a dream of the reality which their organization has accomplished.

But, to prove that their thoughts were not only dreams but a vision of the years to come, the activities of the American Legion during these past years has been a perfect demonstration of the thoughts which they might have envisioned and which have come true in the sense of service to their country, their comrades, the Nation and the community, from the lowest to the highest level.

Little did they know—those men drawn from all ranks and from all services in the AEF in France 40 years ago, that the group which founded the American Legion would grow up to such a power, dedicated to their country's welfare, that today it has attained a membership so great that their deliberations have a profound effect on the welfare of our country. They were idealists but the organization which they founded has lived up to the highest concept of those ideals, born of war and comradeship.

There will be no concentrated birthday celebration of the Legion this year but posts throughout the country and the world will recall the day in 1919 when the Legion was formed and rejoice in their service to their country in the past and resolve that this service will grow and grow until all America will realize that the American Legion stands for all that is good and great in this country of ours.

To tell of the accomplishments of the American Legion in the past 40 years would be but a story of the accomplishments of the Nation since the signing of the Armistice on November 11, 1918.

Let us sum up in a short time what the American Legion has given to the country their members served in time of war. We have only to look about us and realize that every part of our country has benefited by the work of the American Legion.

While it is possible to count noses and reckon expenditures, the profound effect of the labors of millions of Legionnaires on American life cannot be measured. They had a tremendous and beneficial impact on the American scene.

Few have ever credited the American Legion with pioneering in new social concepts. But it is a fact that through its rehabilitation activities for World War I veterans, the American Legion brought about enlightened new concepts in the care of all sick, disabled, and physically handicapped.

Likewise the American Legion through its child-welfare program achieved a recognized leadership in raising the standards of the care and protection of all children in America.

By its persistence on adequate national preparedness since its cradle days, the American Legion helped to convince the American people that peace can be insured only through strength and not by example in disarmament.

The American Legion has made monumental contributions to the cause of education. It initiated American Education Week in 1921 to focus public attention on the accomplishments and needs of American schools. The annual observance of this week has become an American tradition. From its very beginning, the American Legion has supported better pay for teachers and during depression periods fought against economies that would have closed schools. Through the educational provisions of its World War II and and Korean war GI bills, the American Legion brought a boom to college and vocational training that has resulted in raising the intellectual level of the entire Nation.

Through its unflagging and militant opposition to communism, the American Legion was largely responsible for the creation of the House Un-American Activities Committee in 1938 whose exposés have aroused the American people and Government to the Red conspiracy in the United States.

American Legion legislative efforts helped to bring about enactment of the National Defense Act of 1920 which gave this country its first workable plan for a small Regular Army, augmented by adequate National Guard and Organized Reserve components.

The Veterans' Administration is the American Legion's greatest living memorial. Organized first as the Veterans' Bureau through American Legion legislative efforts in 1920, it became the VA in 1930.

The adjusted compensation for World War I veterans was largely the product of American Legion efforts.

Benefits taken away from veterans by the Economy Act of 1933 were restored by the American Legion-backed Public Law 141 over a Presidential veto, March 28, 1934.

Since 1925 the American Legion and its affiliated organizations have expended more than $148 million for child welfare, most of this money going for food, clothing, shelter, and medical treatments. It continues to spend about $8 million a year on this work.

In 1925 the American Legion raised a $5 million endowment fund, the earnings of which help to finance its national rehabilitation and child welfare activities. This was increased to $7 million in 1945.

In 1946 the American Legion and its auxiliary contributed $50,000 to start the American Heart Association on its career.

In 1950 the American Legion gave $25,000 to the National Association for Mental Health to launch this organization.

The American Legion launched its junior baseball program in 1925; its boys state program in 1935 and its boys nation program in 1947.

The American Legion National Child Welfare Foundation was incorporated in 1954 to make grants within its means to finance needed surveys and studies relating to childhood diseases and improved services for mentally retarded and partially seeing children.

More than 60 percent of the 17,000 American Legion posts today own their homes. A recent survey of 12,539 posts found 7,759 owning their homes with a total valuation of $263,375,000.

With these facts and many more which could be cited, the American Legion has every reason to be proud of its service to God and country and may look forward to years and years of service as, more and more, the American public realizes what the American Legion means to every citizen of our great Nation.

## Montana's Outstanding Citizen

EXTENSION OF REMARKS
OF
### HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. ANDERSON of Montana. Mr. Speaker, I concur in the remarks of a good friend of mine in a letter I received recently regarding one of Montana's most famous citizens, the late Charles Russell, Montana's cowboy artist and philosopher, whose memory will be honored forever with the dedication of his statute in Statuary Hall on March 19 of this year. I am happy to present at this time this letter, from a man who knew Charles Russell for 18 years. I feel that his comments would be of interest to the membership of the House, and therefore, I would like to include his letter in the RECORD. It is as follows:

HELENA, MONT., *March 1, 1959.*

Hon. LEROY ANDERSON,
*Congressman from Montana,*
*House Office Building,*
*Washington, D.C.*

DEAR LEROY: Today's Great Falls Tribune carried an article about the placing of the Russell statue in the Hall of Statuary in the Capitol Building.

One very interesting statement was to the effect that the dedication would take place on the 19th day of March. Had Charlie lived he would have been 95 years of age on that date. Nothing could be more appropriate than the placing of this statue on his birthday.

I knew Charlie for 18 years of his lifetime and attended his funeral in Great Falls during October 1926, one of the most somber events of that kind I have ever attended. His saddle horse following the remains seemed to know that Charlie had passed on.

He did more to perpetuate the open range in Montana than all the rest of the artists and writers. He is receiving an honor long due him as Montana's outstanding citizen.

I hope that you have a good horse for that ride.

Sincerely yours,

JOHN JACOB JEWELL.

## Secretary Benson Dissents

EXTENSION OF REMARKS
OF
### HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include an interesting letter written by the Secretary of Agriculture, Ezra Taft Benson, in reply to one of Joseph Alsop's columns. The letter which was printed in the March 11, 1959, issue of the Washington Post and Times Herald newspaper follows:

SECRETARY BENSON DISSENTS

My attention has been called to the February 25 column, "Operating on Ezra," by Joseph Alsop.

Mr. Alsop's article is based on the premise that the farm program operating today is my program. The farm program now in effect is not that of this Secretary of Agriculture. The Benson program has never been allowed to go into effect.

Today's program is a holdover from a Democrat administration, modified grudgingly to the limited degree to which Congress has been willing to grant our requests for changes. If it were my program we would not be asking Congress to make the far-reaching changes contained in the President's recent farm message to the Congress.

It is true that the Government will have $9 billion invested in price-support commodities (as of July 1, 1959) and that it will cost over $1 billion a year for storage, interest, and transportation on these stocks. However, these stocks consist mainly of wheat, corn, and cotton accumulated under programs we inherited and have tried to change with but little success.

The President has pointed out these facts. The Secretary of Agriculture has called attention to these facts. These facts are a visible demonstration of the bankruptcy of the old program. We have recommended changes to the Congress.

Mr. Alsop says a proposed production payment plan will cost "half the cost of subsidies requested by Benson." Our figures based on studies by career economists show the Talmadge-Brannan payment program will cost annually about $5.4 billion, for payments for the basic commodities alone. In addition we would still have the present tremendous stocks and attendant costs, the special surplus disposal programs and the soil bank, etc.

Mr. Alsop cites a $2 billion figure for the Brannan proposals. This is the first time that I've seen this figure. It is fallacious.

Congress refused to adopt this program when submitted by my predecessor, Secretary Brannan. It would have these undesirable effects:

1. Require drastic controls of production to keep costs within reason.

2. Will limit opportunity of new farmers to enter into the production of these crops.

3. Unless extended to livestock (which would boost the cost to even higher levels) could create extremely serious problems for livestock producers.

4. Will lead to international repercussions because U.S. surpluses would be dumped on world markets.

5. Would make farmers even more dependent than now on Government appropriations for farm income (quite obviously this payment approach would be a step away from our efforts to balance the budget).

We want a farm program which will give farmers a satisfactory level and stability of income consistent with a balanced and expanding consumption of agricultural commodities here and abroad and the most rational use of resources. Our alternative suggestions to achieve this goal already have been submitted to Congress. The type of farm program we will have in the future will depend upon the action Congress takes.

Unless Congress makes changes in the present unworkable and unrealistic farm program, we are bound to have costs in the future of the size Mr. Alsop cites regardless of who is Secretary of Agriculture.

EZRA TAFT BENSON,
*Secretary of Agriculture.*

WASHINGTON.

---

## Promoting United States-Philippine Islands Friendship

EXTENSION OF REMARKS
OF
## HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. VANIK. Mr. Speaker, on March 2 last, the distinguished floor leader of the majority party in the House, the gentleman from Massachusetts [Mr. McCORMACK], spoke on the floor to hail the return of Gen. Carlos P. Romulo as the Philippine Ambassador to the United States. The gentleman from California [Mr. MILLER] also spoke on the floor in the same vein.

On Saturday, March 7, we had the pleasure of welcoming General and Mrs. Romulo in Cleveland, Ohio, where he appeared to speak at a dinner honoring one of Cleveland's foremost citizens, Rabbi Abba Hillel Silver, a great American, who was given the national award for 1958 of the National Conference of Christians and Jews. Speaking for labor was Albert J. Hayes, and for capital, Philip Sporn. The presiding officer was Sterling E. Graham, president of the Forest City Publishing Co., and the toastmaster was Louis B. Seltzer, editor of the Cleveland Press, who himself received the same award a year ago. It was a great tribute by the citizens of Cleveland and the northern Ohio region to a civic and religious leader who has earned the esteem and regard of all those privileged to know him.

I am not speaking on this occasion of my good friend, Rabbi Silver, but I wish to invite attention to an incident which occurred during General Romulo's visit to Cleveland which to my mind shows how a good friend of the American people can ably and effectively defend the interests of his nation and at the same time win our respect and affection.

I had the pleasure of meeting the Romulos when they arrived at the Cleveland airport and escorted them to the Carter Hotel. Upon their arrival in their hotel room, a reporter of the Cleveland Plain Dealer showed the general a proof of an editorial on the Philippines that was to appear in the paper's Sunday edition. The Philippine ambassador forthwith proceeded to answer the editorial.

The editorial, entitled "The Heart of the Matter," follows:

THE HEART OF THE MATTER

A great deal of hurrying and scurrying by diplomats can often conceal some unpleasant but pertinent truths. This is certainly the case in the present strained relations between the United States and the Philippines.

There are real differences, of course. The United States owes the island republic more than $900 million for past services and supplies, the Filipinos claim. We have rejected most of this claim but have decided to pay some of it. There is the question of military bases. Also continued American aid comes into the picture.

The Philippines desperately need current cash. The present trouble which brought Ambassador Charles E. Bohlen hurrying back to Washington and Ambassador Carlos P. Romulo scurrying back to Manila was sparked when the republic which we fostered to independence raised the tariff on American goods to get that cash.

Bohlen has returned to Manila and Romulo when he arrived yesterday in Washington said that conditions in the Philippines are fine. He must have been talking about weather conditions.

The basis of the trouble came out in an interview which Vice President Diosdado Macapagal gave the other day. He is head of the opposition party, the Liberals, while President Carlos P. Garcia heads the Nationalist Party. The Nationalists are inclined to be a bit anti-American, but Macapagal hit it when he said that this anti-Americanism is fostered in the hope of diverting the attention of the people from graft * * *"

American residents in Manila report that the corruption in the government and in business today is wide-spread. Everyone is out to make a fast peso and the devil with the country or its condition. The politicians are having a saturalia at the public trough. Until this situation is eradicated anything done for the Philippines is likely to be futile.

When the Sunday Plain Dealer appeared the following day, both the editorial and the interview with General Romulo appeared, together with a picture of the general and his wife.

The interview follows:

AMBASSADOR IRKED BY PLAIN DEALER EDITORIAL

"I differ vigorously. This is so unfair," the Ambassador of the Philippines to the United States said last night at Hotel Carter.

"Yes, I am angry," said Carlos P. Romulo, former president of the United Nations.

In his hand was a first-edition copy of a Plain Dealer editorial on page 4B of today's paper.

His voice shook as he said: "There is no anti-Americanism, not unless it is caused by things like this. There is no idea of diverting attention from graft.

"Certainly there is graft in my homeland. There is graft in Washington, D.C. There is graft in Cleveland.

"The administration is doing all it can to eliminate this cancer from our body politic.

"If there is news of graft now it is because the Government is busy exposing evildoers."

Ambassador Romulo, who speaks English without an accent, criticized what he called a "whispering campaign."

"If those 'American residents in Manila,'" he said, quoting the editorial, "have any information, they should have the courage to speak up instead of conducting a whispering campaign against a government that gives them protection and a people that extends to them hospitality."

Ambasador Romulo, here to speak at a dinner honoring Rabbi Abba Hillel Silver tonight in Hotel Carter, made the brief visit from Washington just for the one occasion.

"But now, reading this, I may have other business in Cleveland," he said.

"Write this down. In 1946 the United States gave the Philippines political independence.

"In 1974 we are to achieve economic independence. (Then full duty will be charged on imports from the Philippines to the United States.) We are simply trying to prepare for that day, looking for new markets."

At the dinner Sunday evening where General Romulo spoke, many of those who heard him favorably commented on the fact that he made no reference to the critical editorial. A man of lesser caliber would have taken advantage of the opportunity to retort. As a veteran diplomat, he knew that it was neither the place nor the occasion to make his reply.

The following day, however, on the editorial page of the Plain Dealer, featured prominently, was General Romulo's letter to the editor, as follows:

ROMULO'S ANSWER

EDITOR, PLAIN DEALER.

SIR: May I expand on the short interview that I had with your reporter in order that your readers may get all the facts regarding current Philippine-American relations. I regret to say that your editorial, "The Heart of the Matter," is the type of writing that does not contribute to the friendship of our two nations which men of good will in your country and mine have been working all these years to foster and strengthen.

It is not true that the present trouble was sparked by our raising our tariff on American goods. The fact is that it is the cumulative result of many unresolved issues, most important among which are our claims totaling $942 million—one of them of 24 years' standing—and the military bases question. Neither is it true, as you say, that your Government has rejected most of our claims. We filed such claims 5 years ago and we have received no official reply. It is only now that we are in the process of negotiation.

The military bases question is a matter of national pride and self-respect for us Filipinos. We cannot understand why your Government should be willing to grant to Japan, a former enemy country, and to Iceland, with which you do not have the close political and economic ties that you have with us, the same court jurisdiction rights that you refuse to give us.

I have just returned from Manila and I can say truthfully that I found no anti-American sentiment among my people. That our opposition party should attack the present administration is nothing bizarre in a democracy such as ours with a two-party system. But while it may be effective for electioneering purposes to accuse the party in power of fostering anti-Americanism "in the hope of diverting the attention of the people from graft," the charge does not hold water when it is known that we have in the Philippines a free and courageous press the pages of which are full of revelations of cases of corruption precisely because the

present administration is engaged in identifying and exposing those guilty of malfeasance in public office. President Garcia has gone as far as to propose the creation of an antigraft court that will be independent of both the executive and the legislative as an earnest of his determination to weed out this cancer from our body politic.

I must say that I am amazed by your statement that "American residents in Manila report that corruption in the government and in business today is widespread" and that in the Philippines "everyone is out to make a fast peso and the devil with the country or its condition." I cannot believe—although I am sure you will not make such an attribution without direct communication with them—that "American residents in Manila" should indulge in a whispering campaign against the government that gives them protection and libel an entire people whose hospitality they are enjoying. If their charge has any basis in fact, why don't these "American residents in Manila" have the civic courage to go to the authorities in Manila and cooperate with the administration by exposing those they know are guilty instead of merely "whispering" to you in Cleveland the slander that among my people "everyone" is out "to make a fast peso"?

Would it be fair for us in the Philippines to say that because of the padded payrolls of Chicago all the American politicans are having a saturnalia at the public trough?

The Philippines is unquestionably your best friend in Asia. While it may be true that sentiment, much less sentimentality, does not govern the relations between Governments, I hope it is not amiss for me to recall that in America's darkest hour in the Pacific we stood loyally by you without counting the cost. That your Government and mine should differ at time should not cause intemperate statements to be made by either of us. It is when such misunderstandings occur that we should counsel with each other as friends and allies with sobriety and restraint. That we Filipinos should stand up for our rights should draw your understanding and admiration and not your resentment because if it shows anything it is that American tutelage does not breed spineless servile puppets.

One last word, Mr. Editor: We are today engaged in a common fight against a ruthless, unscrupulous foe. Communism seeks to divide us against ourselves. Let us not allow thoughtless statements that wound the dignity of a people to help the Communists in their malevolent work. This is the sincere plea of one who need not protest his friendship for your country nor his loyalty to the ideals of freedom and democracy.

CARLOS P. ROMULO,
*Philippine Ambassador to the United States.*

When I discussed this incident with General Romulo on our return flight to Washington, this was his comment:

The American sense of fairness was never better shown than in this instance. The Plain Dealer wrote an editorial in accordance with the editor's honest conviction based on the information given him. But to be fair he sent his reporter to me so that my interview would appear in the same edition with his editorial. This morning he played up my reply on the editorial page so prominently no reader can miss it. That is what I call fair play and that is one of the reasons why I have such faith in America and the American people.

Mr. Speaker, that is an example of General Romulo's effective service to his country as Ambassador to the United States. How fortunate, indeed, for his country to have him as its representative. How fortunate for our Nation to have him as our friend.

## Crime Casts a Wide Net

EXTENSION OF REMARKS
OF
## HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. LINDSAY. Mr. Speaker, on March 9, 1959, the New York Herald Tribune published an editorial on the subject of the campaign by the New York State's Attorney General Louis J. Lefkowitz to curb underworld infiltration of the securities field. This is a matter which deserves nationwide attention, as it is demonstrated that the real principals in this nefarious scheme make good use of interstate facilities to pursue and put into effect their programs.

Attorney General Lefkowitz is to be commended for his early and effective action.

The Tribune's editorial follows:

CRIME CASTS A WIDE NET

The campaign of New York State Attorney General Lefkowitz against underworld infiltration of the securities field is clearly paying off. One firm moved across the river after Mr. Lefkowitz began his attack and into the arms of the Securities and Exchange Commisison—which has suspended its registration. This action was preceded by allegations to the Commission that the president of the suspended firm, George Wagner, has a police record as a bookmaker and that the real principals, Arthur Tortorello, Carmine Lombardozzi, and Louis de Fillipo, all have extensive criminal records. Lombardozzi, in fact, had been identified in testimony before the Senate Rackets Committee as the defendant before a mobster court at Apalachin, N.Y., where, it was said, his death sentence was commuted to a $10,000 fine.

It is good to find Mr. Lefkowitz' efforts producing such positive results; it is good to have the Government moving in on a tainted operation and to have a little more light shed on the dark and grimy corners in which invisible government functions. But each bit of evidence of the width of the net which crime has cast over our society comes as something of a shock. Once crime was considered a localized phenomenon, acting in specific areas and in particular ways. Now, like free cancer cells, it affects the whole body politic and economic.

Gangsterism is by no means a new thing in the United States. In the cities it provided strong-arm men for many illicit purposes: settling labor disputes by force; intimidating voters; exacting toll from shopkeepers and shanghaling seamen. In the West, where the gangsters only seem more romantic because they rode horses, they terrorized mining camps, were the tools of range wars, and engaged in organized banditry. The record of the past is not a pretty one. But it became uglier when prohibition made the defiance of law popular, put millions into the hands of those who supplied the means for that defiance, and gave crime a national scope for organized activity.

Despite the gangland killings and the jailing of some members of the prohibition rackets (which, even before repeal, had branched out into many fields of extortion and "protection") the end of the great experiment found the United States infested with a large number of wealthy racketeers, skilled in breaking the law and looking avidly for new worlds to conquer. The national climate was less favorable to the kind of outright thuggery that had characterized the prohibition gang wars, but with a more sophisticated organization the mobsters were able to apply their old methods to stifling competition and pushing sales in enterprises which were themselves not illegal. Their influence has spread into such dissociated fields as jukeboxes and securities. They have made money, corrupted officials, and ruled themselves by their own anarchistic law.

The answer to all this—and there must be an answer—is not a simple one. Crime has spread its net wide; law must do the same. The kind of digging that the Rackets Committee has done has provided invaluable clues to action. The work of Mr. Lefkowitz and the SEC is an example to all law-enforcement agencies. Where gangsters break the law, let the police and courts move in. Where they can be debarred from certain enterprises, let all licensing authorities be alert and swift to repel any underworld invasion. Publicity will help where laws and regulations are weak.

It must be remembered that when the mob muscles in on a legitimate business there is not only a threat to free competition in that business. Often it can provide a front and the sinews of war for even more dangerous operations by the gang, for the lawbreaking that threatens the lives, the pocketbooks, and the civic spirit of whole communities. The battle against invisible government must be fought on many fields and it must be fought with spirit and determination. Its survival cannot be tolerated.

## The Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
## HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. ADDONIZIO. Mr. Speaker, I am pleased to call to the Members' attention the resolution adopted by the Essex-West Hudson Federation of Holy Name Societies of the Roman Catholic Archdiocese of Newark, N.J., with respect to the Federal Bureau of Investigation. I know that it is heartening to the distinguished Director, the able special agent in charge of the Newark office, and the excellent personnel of the agency to have this expression of their fellow citizens' esteem and gratitude.

The resolution reads:

Whereas the Federal Bureau of Investigation has performed exemplary service over many years in the safeguarding of our country against criminals of all degrees of viciousness and against subversives of all species of cunning and mendacity; and

Whereas the Federal Bureau of Investigation has performed its work with a keen regard for the constitutional rights of individuals, and in doing so, has added dignity and respect for our system of Government; and

Whereas a great part of the record of achievement of the Bureau is due to its highly efficient, self-sacrificing Director, J. Edgar Hoover, who has given the Bureau a leadership of preeminence based on morality and patriotism; and

Whereas in our own area of Newark, N.J., men such as the present special agent in charge of the Newark office, William G. Simon, and his predecessors in that office, and the personnel serving under them, have always impressed us with their efficiency, dignity, and conduct: Be it

*Resolved by the Essex-West Hudson Federation of Holy Name Societies of the Archdiocese of Newark, N.J., in regular meeting*

*assembled, on this 4th day of March 1959,* That this organization publicly thank the Federal Bureau of Investigation, its Director, J. Edgar Hoover, the special agent in charge of the Newark office, William G. Simon, and all the personnel of the Bureau, for their successful and dignified efforts in the protection of our country against its enemies, domestic and foreign; and be it further

*Resolved,* That a copy of this resolution be transmitted to Director J. Edgar Hoover, to Special Agent William G. Simon, to our U.S. Senators and to our Congressmen, and to the newspapers in the Newark area.

WALTER L. JOYCE,
*President.*
FRANK DE GEORGE,
*Secretary.*

## Latin American "Marshall Plan"

EXTENSION OF REMARKS
OF
## HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. PORTER. Mr. Speaker, our Latin American policy, for many reasons, some defensible and some not, has been either negative or sterile far too long. The kind of thinking Paul R. Porter has been doing about a Latin American "Marshall plan" is what is needed in the formulation of a positive new policy. If Milton Eisenhower's report has made a great contribution I agree with Mr. Porter that we need more vision and inspiration in order to evoke the heroic efforts which are necessary.

I recommend close attention to the following article, which I include here by unanimous consent:

LATIN AMERICAN "MARSHALL PLAN"
(By Paul R. Porter)

(Paul R. Porter has been associated with the Marshall plan as chief of mission in Greece, Assistant Administrator in Washington and as European regional administrator. Earlier, he served as the U.S. member of the European Coal Organization.)

If the United States acts boldly while circumstances remain favorable it could spark a transformation in Latin America more fundamental and far reaching than the historic changes stimulated by the Marshall plan in Europe. I mention the Marshall plan to connote an imaginative program that kindled hope and courage among millions, that inspired emerging leaders to create effective institutions for intra-European cooperation, and that produced a working compact between the United States and free Europe which is the main bulwark of democratic strength and hope in the world today. Reference to the Marshall plan is not intended to suggest a massive program of economic grants, which would not be relevant.

The element of novelty and greatness in the Marshall plan was the concept that the recovery of Europe was one problem—not a collection of national problems—and that its solution would require a joint European effort no less than U.S. financial assistance.

The central problem in Latin America is rapid industrialization so that the region's natural resources may support more adequately a fast-increasing population. Diversified and more efficient agriculture, education, and medical care—these too are urgent, but the most pressing problem is industrialization. The transformation of more than a continent within a generation should be the goal, and it should be regarded as one goal to be undertaken by all Latin American nations in a joint effort with assistance from the United States.

Such cooperation in economic development might lead to one or more institutions of political federation among the Latin American nations. But whether or not this would be the case, we should make it known that we would welcome and will strongly back joint efforts toward rapid industrialization.

It is the absence of an imaginative concept of a transformed Latin America which makes the Eisenhower administration's new look southward so disappointing. Since Vice President RICHARD M. NIXON'S misfortunes in Peru and Venezuela last May, the administration has been trying to devise new policies. When President Juscelino Kubitschek of Brazil tried to turn the dismay over the demonstrations against NIXON toward constructive ends by proposing a major undertaking in economic cooperation, his proposal was dignified by a John Foster Dulles visit to Rio de Janeiro. But any fault in the American response must be found in substance rather than in protocol.

In the popular fashion of celebrating any new governmental activity with a title in the Operation series, the new look came to be known as Operation Pan-America. A hemispheric conference of foreign ministers in September initiated a gathering in Washington in November of representatives of 20 Latin American Republics plus the United States, known officially as the Special Committee To Study the Formulation of New Measures for Economic Cooperation.

President Eisenhower encouraged the committee with a message of well-worn phrases such as "constructive measures," "concrete measures," "fruitful cooperation," and "we are determined to press forward." Participating State Department spokesmen kept the conference on a creative level with similar sentiments and more specific references to "practical measures," "problems already at hand," and "one step at a time." No new measures were formulated, but before the committee recessed—a working group was appointed with instructions to keep trying.

It would be unfair to leave the impression that the administration's new look has been or will be wholly barren. There are some concrete and constructive measures, though not especially new ones, contained in the special report submitted to the President by his brother, Dr. Milton S. Eisenhower. The scope of what the administration has in mind is presumably to be found in this report, which was made public on January 3.

After noting that there is "a high degree of illiteracy, poverty, and dependence on one-commodity economies," and that the people of Latin America look to the United States for assistance in remedial actions, Dr. Eisenhower states that "heroic efforts are required" and submits recommendations. The recommendations are a basket of many things, offered in the following order:

Each American republic should establish a body of distinguished citizens to promote better understanding.

Latin American news should be better reported in the United States.

Activities of the U.S. Information Agency should be increased.

The United States should support a Latin American proposal for an Inter-American Development Bank.

Latin American nations should control inflation and create a favorable climate for private investment.

The U.S. Government should offer tax incentives to Americans investing abroad.

The Latin American nations should establish three regional common markets.

The United States should disclose information to commodity study groups without implying support for price stabilization efforts.

We should make a modest increase in the present $32 million technical assistance program.

Each U.S. Ambassador should have direct supervision over technical assistance.

General responsibility for the technical-assistance programs should be vested in the State Department.

The Latin American people should recognize that they have benefited indirectly from our aid programs in Europe.

A council on inter-American affairs should be created to advise the Secretary of State.

If we are obliged by internal political pressure to discriminate sometimes against Latin American countries in trade matters, we should inform them in advance.

We should cease bestowing decorations or other honors upon dictators.

This melange of some potentially important economic measures, possibly useful good-will committees, and minor juggling of administrative responsibilities falls short of the heroic. Unquestionably, Dr. Eisenhower, a man of demonstrated good will, earnestly hopes to promote more literacy, less poverty, and better understanding. But his recommendations lack the vision and inspiration which alone can evoke heroic efforts.

There is nothing in Dr. Eisenhower's report that suggests that he or the administration contemplate a major transformation in the economic status of Latin America, or any fundamental change in power relationships which would put our neighbors on a more equal footing. It would be fair to say that Dr. Eisenhower's concept is a nicer status quo.

Any program to lift Latin America to a significantly higher economic level by democratic means will doubtless require a large volume of public loans for the infrastructure industries. The administration's acceptance of the idea of an Inter-American Development Bank to make such loans, which it had earlier opposed, is a welcome move. About half of the capital would come from the U.S. Government; some loans would be repayable in dollars and some in local currencies.

The usefulness of the bank will depend upon the magnitude of its operations and the relationship of loan projects to a general development plan. Until now the administration has also resisted the idea of a general plan. Dr. Eisenhower's report does not foreshadow a change in this position.

Development on a major scale would also require a major infusion of U.S. private capital. A major private investment in the nonextractive industries is unlikely without substantial tax incentives in both the United States and in Latin America. Current administration views on this subject are sharply divided, but even the proposals for tax incentives thus far offered by those in the administration who favor them are fuzzy and fail to focus on areas where the need is greatest.

Commodity price stabilization, which Dr. Eisenhower in effect opposes, is unquestionably a difficult subject. A major part of Latin American exports, however, are unusually sensitive to such external factors as a U.S. recession. Unless the economies of Brazil, Chile, Peru, and Colombia, among others, can receive some protection against violent price swings, these countries are likely to be subject to severe and unpredictable economic crises no matter how bravely they try to control inflationary forces. Until these economies become more diversified we should give sympathetic consideration to stabilization proposals.

To the south of us circumstances are now favorable for a big step forward. Never in the history of these nations have so many of them simultaneously had democratic leaders who place popular welfare above personal ambition. Kubitschek in Brazil, Arturo Frondizi in Argentina, Lleras Camargo in Co-

lombia, Romulo Betancourt in Venezuela and Lopez Mateo in Mexico appear to be men of ideas with a high sense of dedication. Among these men and others like them may well be leaders who, with U.S. help, could collectively create a new age in Latin America.

Dr. Eisenhower has urged a more cordial attitude toward democratic governments than toward dictatorships. "Trivial as this may sound," he says, "I recommend that it be our official policy in relations with Latin American leaders and nations." It is a pity that he conveys an impression that the policy he recommends really is trivial. His single illustration of what he has in mind concerns bestowing medals on officials.

A policy of giving solid encouragement to the democratic forces in Latin America would seize the present occasion for initiating an undertaking which would be as bold and beneficial—and untrivial—in this hemisphere as was the Marshall plan in Europe.

## Who Really Desires a U.S.-Latin American Rift?

EXTENSION OF REMARKS

OF

## HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. ANFUSO. Mr. Speaker, on May 26, 1958, I introduced a resolution in the House of Representatives, House Concurrent Resolution 335, to establish a Pan American Parliamentary Association to be made up of parliamentary representatives of all the 21 nations of the Western Hemisphere. In my statement on the floor of the House at the time the resolution was introduced, I defined the purposes of the association as follows:

> The purpose of this organization should be to create better understanding among the peoples of the hemisphere, expansion of educational and scientific exchange programs, closer cultural relations, improvement in trade relations, encouragement of large-scale tourism between North and South America, help to provide relief in times of disaster, seek means to dispose of surplus commodities in the various countries to help their economies, etc.

In that statement, I also pointed to the Communist efforts to obtain a foothold in Latin America and to discredit the United States. I stressed the urgent need for the United States to help Latin America achieve a higher standard of living, and I concluded thus:

> We have taken the Latin Americans for granted, while pouring our aid to other parts of the world. A positive people-to-people approach in our dealings with our neighbors has been lacking. We must restore such relationship.

Subsequently, I made a trip to several Latin American countries in connection with my resolution and was received by heads of governments, as well as legislative leaders, with whom I discussed my proposals. The press of the countries I visited reported on my trip and the comments made by various leaders who hailed the purposes of the resolution as a great step in the right direction. For example, the chairman of the Foreign Affairs Committee of Argentina's Chamber of Deputies, Juan Lopez, was extremely enthusiastic about my plan, while the President of the Brazilian Chamber of Deputies, Ranieri Mazzilli, made a public statement in which he said about the proposed Pan American Parliamentary Association:

> It could mean a new stage in the relations among our countries, a new era of good friendship.

From time to time thereafter, because of my interest in Latin American affairs, newspaper representatives visited me or called me on the telephone for an expression of my views whenever Latin American problems arose. I saw such a reporter on March 2, 1959, after it had been reported in various newspapers and magazines that trouble was brewing between Haiti, the Dominican Republic, and the new Government of Cuba, and that threats of invasion had been made against one or another of these countries.

On this particular occasion I was asked by the reporter, who represented the United Press International—certainly a most reputable news agency—whether I favored armed intervention on the part of the United States in the event of such invasion. I stated most emphatically that peace in the Western Hemisphere "should not be left up to the United States alone." Then I added as follows:

> The whole idea of the Monroe Doctrine has been superseded by the Organization of American States. However, the United States has a large stake in maintaining peace and security at its backdoor and this certainly concerns such countries as Haiti, Cuba, and the Dominican Republic.
>
> For this reason, I think if there is a serious threat that any one of these nations will start an armed invasion, then the United States should take the lead in calling upon the other 20 members of the OAS to establish a police action to prevent such an invasion.

The above is taken verbatim from the UPI story as it appeared on the UPI news ticker of March 2, 1959, and which was published in various newspapers here and abroad. On March 3, Radiodifusora at Caracas, Venezuela, broadcast a vitriolic attack on me which was intended as a reply. Following is the full text as reported by the Foreign Broadcast Information Service, in its daily report No. 42:

REPRESENTATIVE ANFUSO HELD WIDENING UNITED STATES-LATIN AMERICAN RIFT

Caracas, Radiodifusora Venezuela, in Spanish to the Americas, March 3, 1959, 0400 GMT—W.

The U.S. Democratic Representative VICTOR ANFUSO said today that the United States should ask the Organization of the American States to intervene to prevent the liberation of the Dominican Republic, Haiti, and Nicaragua. Such is the sense of a statement of another disciple of Foster Dulles. The Representative says that the OAS must prevent any invasion in the Caribbean by police action.

The impudence of this enemy of Latin America reached such extremes of cynicism that he added: "The United States should (play a bigger role?) in the maintenance of peace and security." And further on he said: "If a threat of an armed invasion presents itself"—naturally, he is referring to the Caribbean problem—"then the United States must take the initiative to call on the other 20 members of the Organization of American States to take police action to prevent such an invasion."

Such are the demagogic statements of Mr. VICTOR ANFUSO, Mr. VICTOR ANFUSO, Representative, Democrat, to the U.S. Congress, trying to (bring back?) a new intervention of the sadly famous marines, going back 40 years in history and (one word indistinct) to discredit even more, if it were possible, the foreign policy of the State Department. No wonder that the rift between the United States and our peoples is growing daily.

Mr. Speaker, when this attack and distortion of my words and aims was called to my attention, I was shocked and infuriated. The report of the Venezuelan radio appeared to be a deliberate attempt to create dissension and to discredit me as a friend of Latin America. No fairminded person could have so mutilated my statement, which a careful comparison between my words and the Venezuelan radio will readily prove.

I say, in all sincerity, that I profoundly regret this. If friends of Venezuela and of Latin America generally, people who are earnest in their efforts to create better understanding and mutual cooperation throughout the hemisphere, are going to be thus berated, then I fear not only for the future of Venezuela but for the future of all of Latin America and of the whole world to survive in freedom and democracy. We are waging a great struggle against an evil power which seeks our enslavement and the eradication of every vestige of human freedom and human dignity. This is no time for bickering. We must stand united throughout the whole Western Hemisphere, if we seriously want to prevent this hemisphere from falling under the yoke of communism.

To deliberately distort my words to show that I am preaching armed intervention, when in reality I suggested that the United States call upon the other 20 members of the OAS to prevent such an invasion; to call me an enemy of Latin America, when actually I am advocating hemispheric unity and cooperation to achieve a higher standard of living for the people of Latin America and I am urging greater economic aid to the Latin American countries, to twist my words in this manner and to make them appear demagogic could have been done only by someone who is not serving the interests of Venezuela or of Latin America, but those of communism.

Only a person who is steeped in Communist methods of falsification and forgery, in Communist propaganda tactics and the perversion of ideas, could do something as vicious as that. That person is not interested in creating better United States-Latin American relations—his interest lies in creating a greater and a wider rift on which Communist elements could capitalize for their benefit.

I expect to communicate with the President of Venezuela in the very near future and to request an explanation of this vitriolic attack on me, who is behind it, and why I was singled out for this attack.

## Pow-Wow on 40th Street

EXTENSION OF REMARKS
OF

## HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 3, 1959*

Mr. ABBITT. Mr. Speaker, on Friday, February 27, 1959, there appeared an editorial in the Richmond News Leader, Richmond, Va., entitled "Pow-Wow on 40th Street." This editorial points out cogently the efforts of certain elements in trying to brainwash our people into accepting integration. It also points out the lack of coordination of effort on the part of the people of our area who are trying to maintain constitutional government in America. The comparison is well demonstrated and I hope that enough of our people will read this editorial and profit therefrom so as to set up some cohesive and coordinated effort to get across to the people of the Nation the truth regarding the false propaganda being carried in many elements of the press and news mediums.

There also appeared in connection with the same editorial the minutes of the mass media committee of the Consultative Conference on Desegregation meeting on February 4. Our people are entitled to know what is going on and under leave to extend my remarks in the RECORD I desire to include the editorial as well as the minutes referred to in the editorial:

[From the Richmond News-Leader, Feb. 27, 1959]

POW-WOW ON 40TH STREET

In the following article appear the minutes of a most interesting meeting held in New York City on February 4, at the NAACP's headquarters on West 40th Street. The document speaks for itself, and it should speak eloquently to white southerners.

Until this week, we ourselves had never heard of the "Consultative Conference on Desegregation" or of its "Mass Medina Committee." Inquiry this morning to the Associated Press elicited a few facts, drawn unwillingly from a reluctant source: The CCD is made up of about 40 organizations with an interest in promoting racial integration. The AP's source declined to release a list of these members. The CCD's "Mass Media Committee," we may conclude for ourselves, is charged with influencing newspapers, magazines, press associations, and radio-TV networks in behalf of the integration cause. In a free country, this is certainly anybody's privilege, and there ought not to be any particular secret about what these people are up to.

What are they up to? They are a busy crew.

They are distributing thousands of copies of a "Pogo" comic strip which ridicules Virginia's action in closing schools last fall. They are reprinting a series of pieces from the Arkansas Gazette and circulating some articles from the Washington Post. They direct attention to a pamphlet of the Urban League and a "workshop report" of the National Social Welfare Assembly.

Several special assignments claimed the committee's attention on February 4. A letter was at hand mentioning that the Associated Press and United Press International are engaging in "race labeling." Alan Reitman, of the American Civil Liberties Union, is instructed to talk with officials of the wire services concerning this matter. Evidently the committee had been unsuccessful in planting in Life magazine an article about southern clergymen who support integration. Mr. Reitman agrees to contact Life again. The busy Mr. Reitman also will call upon the New York Times to suggest a particular article there. The NAACP's Henry Moon is to push the same kind of stories at Time and Newsweek.

To judge from the waspish tone of minute No. 9, the famed Carleton Putnam letter is beginning to hurt. This was an open letter sent by Mr. Putnam to President Eisenhower last fall. Following its publication in the Richmond Times-Dispatch in October, the letter was distributed widely around the country. Subsequently, a group of Alabamians formed a committee to arrange for publication of the letter as paid advertising in major newspapers. James E. Simpson, attorney, 317 North 20th Street, Birmingham, is treasurer of the committee.) Mr. Putnam, who assuredly is distinguished though he has not described himself as such, had nothing to do with formation of this committee. In his letter, the New York-born historian, biographer, and businessman ringingly defends the Southern point of view on school segregation, and urges upon the President a reconsideration of civil rights agitation. The integrationists' Mass Media Committee finds the Putnam letter a problem, and outlines various schemes for undermining the letter's effectiveness.

There is much for the Southern traditionalist, believing in essential separation of the races, to learn from the minutes of this New York committee. Two points especially bear emphasis:

First, this is a coordinated effort. Nine different organizations sent representatives to the committee meeting.

Second, this is a professional effort. Reitman and Moon are not amateurs in public relations. They are pros, full-time people, and when the committee members meet on West Fortieth Street in Manhattan they meet within a few minutes' taxi ride of the top men in the communications industry.

What does the white South have to match this? Let us attempt an answer in one word: Nothing.

Organizations that believe in the constitutional right of the States to maintain racially separate institutions have no coordination of any sort. Conservative, right-wing groups as a whole have no unity or strength. We have no consultative conferences, no mass media committee, no skilled and personable representatives to call upon magazine editors and network officials. Is it any wonder that the South continues to take a terrible licking?

Let us ponder these revealing minutes more in sorrow than in anger, more in honest concern than in resentment. We live in a day of the pressure group, in which public opinion is molded like wax, and the grassroots are fertilized from a hundred artificial sources. It is high time for the conservative South to unstuff its shirt, put up some real money, and adapt the techniques of its foes to the cause we hold to be right.

MINUTES OF THE MASS MEDIA COMMITTEE OF THE CONSULTATIVE CONFERENCE ON DESEGREGATION WEDNESDAY, FEBRUARY 4, 1959

Present: Arnold Aronson, National Community Relations Advisory Council; Gunther Lawrence, Union of American Hebrew Congregations; Henry Moon, National Association for the Advancement of Colored People; Alex Morisey, American Friends Service Committee; Guichard Parris, National Urban League; Alan Reitman, American Civil Liberties Union; Ed White, United Steelworkers of America; Chairman, Ali Bernheim, American Jewish Committee; Secretary, Harry Fleischman, National Labor Service.

1. Approximately 15,000 copies of "POGO and the Speakeasy Schools," a reprint of Walt Kelly's comic strips on that subject, will be published by the National Labor Service of the American Jewish Committee, the Southern Regional Council, the Anti-Defamation League, the American Friends Service Committee, and six AFL–CIO unions. Sample copies will be distributed to CCD agencies.

2. A letter was received from Herman Long, of Fisk University, Director, Race Relations Department, Congregational Christian Churches, mentioning that race labeling has begun to appear widely in wire service stories in the newspapers. It was agreed that Alan Reitman would talk with officials of Associated Press, United Press International and Editor and Publisher concerning this matter.

3. Reitman agreed to contact Life magazine again concerning a proposed article on the role of the clergy in the South in supporting law and equality.

4. The American Friends Service Committee is sponsoring a pamphlet on American Race Relations, which will be published by the University of Oklahoma Press. Agencies interested in quantities of the pamphlet should write to Alex Morisey, American Friends Service Committee, 1201 Chestnut St., Philadelphia 7, Pa.

5. The Southern Regional Council reported that it will reprint the Arkansas Gazette report on the effect of the desegregation controversy on economic conditions in Arkansas. Sample copies will be sent to all CCD agencies.

6. The National Urban League has prepared an attractive 11 by 14 illustrated pamphlet, "Half a Life," in connection with Equal Opportunity Day. Copies are being sent to CCD agencies.

7. The Turnpike Press has just published as a 24 page pamphlet, "The Truth About Desegregation in Washington's Schools," which first appeared as a series of articles in the Washington Post by Erwin Knoll. The series is an excellent survey of progress in the Washington schools and should be helpful in countering the vicious propaganda being spread by Governor Faubus of Arkansas and other southern segregationist leaders. Single copies are 15 cents postpaid; 10 copies or more 10 cents each postpaid; 100 copies or more 7½ cents postpaid; 500 copies or more 5 cents each plus shipping charges. Please order from the Turnpike Press, Annandale, Va.

8. A group of organizations in Miami, under the leadership of the United Church Women, have conducted a community audit in connection with United Nations Human Rights Day. Copies of the folder describing the community audit are being mailed to all CCD agencies.

9. Prosegregation ads have appeared in the New York Times, January 5, 1959, and in the Wall Street Journal, February 9, 1959, under the signature of Carleton Putnam, who describes himself as a distinguished New Englander. Putnam, a board member of Delta Airlines, has set up a Putnam Letter Committee in Birmingham, Ala., to solicit contributions to reprint his letter as an ad in additional northern newspapers. When a similar ad was placed by Louisiana segregation leaders in the New York Herald Tribune in February 1958, we urged CCD member agencies to alert their local units to such ads and ask them to check with editors and publishers about the problem. When such ads appear in northern papers, it would be helpful if southerners would write dissenting letters to the editors analyzing the misstatements and errors in the ads. Where such ads appear, editors should be asked to include editorials rebutting the segregation thesis advanced in the ads, or at least run

news articles (in the same issue carrying the ads) quoting opponents of segregation.

10. "Integration—A Challenge to the Social Agency," a 25-page report of a workshop conducted by the National Social Welfare Assembly's Committee on Intergroup Relations, features discussion of case histories in hiring Negro social workers, establishing integrated programs, problems of loss of financial support by prointegration agencies, achieving community acceptance, developing national and local policy on integration, etc. Copies of the Workshop Report are available at 75 cents each from the National Social Welfare Assembly, 345 East 46th Street, New York 17, N.Y.

11. Papers throughout the Nation carried an Associated Press wirephoto February 2 and 3, showing a lone Negro boy in Maury High School Auditorium in Norfolk, Va.—apparently shunned by his classmates. An article in the New York Post February 3 reported that the photo was phony. Photographers had beckoned the Negro boy up front and took the picture. A minute later the seats around him were filled and other kids were asking him if he could play basketball or football. By then the photographers had gone. It was agreed that it would be useful if editors throughout the country who used the photo would query AP on the alleged irresponsible reporting, and also bring this to the attention of Editor and Publisher magazine.

12. Alan Reitman agreed to suggest to the New York Times that it carry a story concerning the reactions of students who have returned to desegregated public schools from private schools and tutoring classes. It was felt that such a human interest story might make the comparison more meaningful, even in the South. Henry Moon agreed to suggest the same kind of stories for the educational pages of Time and Newsweek.

13. Members of the committee expressed great indignation over the way in which Chet Huntley had called for virtual suicide by the NAACP on his program on "The Second Agony of Atlanta." It was suggested that the February 8, 1959, program ought to include a genuine moderate, who recognizes the importance of the role of the NAACP in the desegregation issue. This, it was felt, could effectively explode the Huntley thesis that southern moderates were only awaiting NAACP abdication to rise up in their might to support orderly desegregation. NAACP attempts to arrange for the inclusion on the program of such a moderate were unavailing. (Fortunately, Roy Wilkins did such a tremendous job on the February 8, 1959, NBC program with Chet Huntley and Thomas Waring, editor of the Charleston, S.C. News and Courier, that he removed a good deal of the sting from the Huntley thesis.)

Respectfully submitted.

HARRY FLEISCHMAN,
*Secretary, Mass Media Committee, CCD.*

## Telegram From Eugene Castle to President Eisenhower

EXTENSION OF REMARKS
OF
### HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. DORN of South Carolina. Mr. Speaker, the following telegram from Eugene Castle to the President will be of interest to the Congress:

MIAMI BEACH, *March 8, 1959.*
President DWIGHT D. EISENHOWER,
*The White House,*
*Washington, D.C.*

Mr. PRESIDENT: Every loyal American applauds your promise not to give an inch in West Berlin. Our Government must not provide another inch of helpful propaganda for Khrushchev while he threatens war. All good Americans resented the propaganda tour of Anastas Mikoyan. We can never hope to hold our own in the cold war by fawning over Soviet leaders and their agents. The tour of the Bolshi ballet in the United States should be stopped before it starts. The ballet is a principal promotion weapon for the Kremlin. Following British Prime Minister MacMillan's experience with Khrushchev I also urge you to terminate our cultural exchange pact with Soviet Russia and to postpone indefinitely such projects as the fairs scheduled to be held in Moscow and New York City. We cannot expose ourselves to these propaganda traps that would help the false peace claims of the Soviets and disgrace us before the entire world while the Kremlin points a gun at our Armed Forces in West Berlin. It is imperative that this action be taken immediately to preserve our country's good name and as a mark of respect to the thousands of Americans who made the supreme sacrifice in two World Wars.

EUGENE W. CASTLE.

## A Challenge to Our Diplomacy in the Middle East

EXTENSION OF REMARKS
OF
### HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. ROOSEVELT. Mr. Speaker, the following article by Dr. Albert Simard, "Pertinent Facts on the Aswan Dam," appears in the 1959 winter-spring issue of the magazine, Prevent World War III, published by the Society for the Prevention of World War III, Inc.

Based on Dr. Simard's letter in the Christian Science Monitor, the article, in the words of Dr. Simard, "challenges the ability of our diplomacy to develop a farsighted approach in regard to the Middle East."

I believe this article is well worth perusing for its factual content and timely subject:

PERTINENT FACTS ON THE ASWAN DAM
(By Albert Simard)

The Soviet Union's offer to loan the equivalent of $100 million toward the construction of a high dam at Aswan on the Nile challenges the ability of our diplomacy to develop a farsighted approach in regard to the Middle East. It is probable that the Soviet move will stimulate pressures here to have our Government participate in the financing of this project or other grandiose schemes. Besides the propaganda overtones of the Russian gesture, it is clear that Egypt's aim is to entice the United States to emulate or to outbid the Soviets.

However, if our Government shows prudence and realism, it will avoid the pitfalls which lurk behind the diplomatic maneuvers of the Kremlin and Cairo.

It is in the context of Cairo's imperialistic ambitions and its failure to substantially improve the plight of the Egyptian people, that the Aswan project serves as a gigantic political diversion for a bankrupt leadership.

Contrary to a widespread impression, the efficacy of the Aswan project has been challenged by authoritative sources. For example, the International Bank for Reconstruction and Development asserted in detailed analyses that the construction of the project would impose upon the Egyptian people rigid austerity over a period of years and in the end provide them with a standard of living no higher than the one on which they now barely subsist. The Bank asserted that, if the dam were built, the pace of industrial growth will be slower than heretofore, and that "it seems probable that over the next decade or two the overall expansion of the manufacturing industry will take place at a considerably slower rate than in the past 15 years."

As regards the Aswan project's effect on the Egyptian agriculture, the Bank pointed out that even with an increase in agricultural income over the next two decades, "Egypt will no doubt face continuing problems in keeping pace with the growth of population. In view of the probability that the population by 1975 will be about 60 percent greater than at the present, there is little or no prospect that Egypt will have done much more than maintain the present standard of living * * *."

Mr. Morris L. Cooke, a consultant engineer of international reputation who has served the U.S. Government in high posts, has also analyzed the soundness of the Aswan project. ("Panacea or Politics?" by Morris L. Cooke, published by the Public Affairs Committee, Washington, D.C., 1957.) The following are some of the pertinent conclusions made by Mr. Cooke:

(a) "The $1,350 million high dam project would not, in fact, raise the present abysmal living standards of the Egyptian people."

(b) "The enormous cost of the undertaking would impose upon them a decade of severe austerity, during which urgent needs for social improvement and industrial expansion could not be met."

(c) "Construction of the high dam would invite disastrous inflation unless the Egyptian Government were willing and able to enforce rigid controls over the country's economy."

(d) "This the Nasser regime appears unable and unwilling to do. In the face of the World Bank's advice, the Nasser Government has persisted in a capricious 'development' program completely out of line with the realities of its precarious economic position."

(e) "Most striking of all is the fact that Nasser has so crippled the Egyptian economy through his arms-for-cotton deal with the Soviet bloc and his huge internal military budget, that it would now appear impossible for Egypt, with or without Suez Canal revenues, to mobilize the financial resources necessary to complete the project."

Mr. Cooke further observes that the project in its proposed context would discriminate against other states through which the Nile flows, including the Sudan, Ethiopia, and Uganda.

However, the decisive factor which militates against the Aswan project is the underlying character of the present Egyptian regime. In Mr. Cooke's words, the Egyptian economy has been undermined by "militarism, fiscal manipulation and political adventuring of the Nasser regime."

Thus, by its very nature, the Nasser regime cannot implement a sound constructive economic program to better the living conditions of the Egyptian people, and the construction of the Aswan Dam cannot produce any significant improvement in the economic status of the people.

Practical economic measures for the benefit of all of the people in the Middle East are,

of course, a high priority. Experts on this subject have been in general agreement that the nature of the distribution of the resources in that area makes it advisable that economic programs be conceived in terms of treating the Middle East as a unit. The validity of an overall approach was reaffirmed in the President's speech before the United Nations General Assembly in August, 1958. On the other hand, it has been proven that the Aswan project is not only of questionable economic advantage to the Egyptian people, but it also discriminates against the rights of other states on the Nile. Therefore, the national interests of the United States and of all friendly countries in the Middle East area would best be served by developing practical programs of aid based on the principles outlined by the President.

It follows from the foregoing that a hasty attempt to outbid the Russians in projects such as the Aswan Dam would, in the last analysis, only serve the political objectives of the Cairo government. These objectives contemplate the subjugation of free countries in the Middle East and the ultimate undermining of the U.S. position in that vital area of the world.

## Attack on the FBI—V

EXTENSION OF REMARKS
OF
### HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 3, 1959*

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks, I include the fifth in a series of articles by Pulitzer Prize winning reporter, Edward J. Mowery, dealing with the campaign to discredit the Federal Bureau of Investigation. The following installment appeared in the February 5 Newark Star-Ledger:

INFLUENCE OUTWEIGHS RED PARTY SIZE

(By Edward J. Mowery)

WASHINGTON.—One of the principal themes of the current anti-FBI campaign is the asserted weakness of the Communist Party, U.S.A. The party is pictured as a faction-torn "political" entity with no Soviet ties and "falling apart at the seams."

In short, the Communist Party is harmless both in ideology and accomplishment. And FBI Director J. Edgar Hoover is perpetrating a colossal fraud on the public in casting the organization in any other light.

A top FBI spokesman flatly refused today to disclose the Communist Party suspected membership (revealed in fiscal 1958 by Hoover as approximately 17,000), but he did assess the movement's inherent danger to the overall national structure.

Charge: The FBI continues to picture the Communist Party, U.S.A., as a threat to internal security when the party is falling apart at the seams.

The facts: Many misguided people still retain the erroneous belief that the Communist Party, U.S.A., is a dying organization which no longer represents a threat to our internal security. They base their opinion on the party's relatively small size in relation to our overall population.

For every party member, 10 others in Communist fronts knowingly or unknowingly carry on the party's work. Party influence far outweighs its numerical strength and its leaders consistently emphasize quality, not quantity, in membership.

In recent years the party has been trying desperately to remove the stigma of its Soviet ties. But the Supreme Court passport ruling to ease restrictions on suspected subversives found a steady stream of Communist leaders and sympathizers heading for the Kremlin, the fountainhead of the international Red conspiracy.

(A State Department official said 702 individuals with some record of subversive activities have applied for passports since the Court ruling; 650 received passports up to January 1.)

Some were in Moscow for the party's "Extraordinary 21st Congress." Later younger Communist Party adherents will join the 17,000 delegates attending the July 26 World Communist Youth Conference in Vienna.

Obviously, these people aren't traveling to Moscow and Vienna for their health. They'll bring back new orders and techniques from their Soviet masters.

Charge: Factional battles within the Communist Party, U.S.A., have weakened its influence and rendered it harmless, but the FBI claims otherwise.

The facts: The party's propaganda and agitational activities suffered to some extent, dissident elements were removed and the national leadership solidified. However, the hard core of devoted Soviet followers at the party helm can still count to a large extent on full support from the dedicated Marxists who are not bona fide party members.

At present, the party is taking a nationwide headcount. They're registering mainly in Illinois, California, New York, Pennsylvania, Ohio, and Michigan.

The comrades issue no membership cards or receipts for dues.

Here are some noteworthy results of the "dying" Communist Party's 1958 activity:

With firm party support, a candidate long identified with Red causes received 400,000 votes in a State primary for the post of superintendent of public instruction, although he didn't qualify for the general election (Holland Roberts, California, June 1958).

The party is infiltrating Negro mass organizations not to champion Negro rights but to exploit the racial situation, create unrest, spread confusion.

Communist pressure campaigns directed at the President and Congress to benefit the Soviets accompanied the landing of our marines in Lebanon, deployment of our naval forces in waters adjacent to the Red Chinese mainland and recurrent demands to seat Communist China in the U.N.

Even the tragic Chicago parochial school fire became a pawn for Red propaganda leaflets distributed by the party's Illinois district. The United States spends so much on arms, the leaflet explained, there's no money for new schools. The leaflet urged a shower of letters to Government officials to divert money from war expenditures.

Infiltration of trade unions is a primary and continuing goal of the party with stress on the vital railroad and steel industries where success would strangle internal security.

And one of the party's most deadly objectives is the formation of a revitalized nationwide Marxist Youth Organization now in the formative stage of development.

Charge: The FBI is an avowed enemy of liberal groups which seek to safeguard civil liberties. Like the party, they are harmless.

The facts: The Communist Party's influence, abetted by fronts, sympathizers and stooges, has penetrated every phase of our society. Fronts are methodically used to gain the support of unsuspecting citizens to further Communist Party goals. Unceasing efforts are also being made to infiltrate and ultimately control lethargic, legitimate groups.

At present, the FBI has approximately 150 known or suspected Communist and Communist front organizations under investigation.

The official Congressional Guide lists 628 cited Communist or Communist front organizations and 105 subversive publications; the Attorney General has designated 282 groups.

The Communist Party, U.S.A., remains today as it has since its birth, an integral part of the international Communist conspiracy. In evaluating its current menace it should be remembered that the U.S.S.R. currently poses a far greater potential threat to world peace than ever before.

Russia's scientific and technical capabilities have been thoroughly mobilized to enhance its military and political position in world affairs. And the seriousness of the domestic threat from a Soviet-dominated Communist Party in this country bears a relationship directly proportionate to the world threat posed by its master in the Kremlin.

To minimize the current danger of the American Communist Party to our security could lead only to ultimate disaster. The U.S.S.R. is now astride 800 million people, most of whom were not subjugated by force of arms.

(Another Government spokesman pointed to the recent coup in Cuba as dramatic evidence of the "successful technique of revolution" by a small band of partisans. Fidel Castro, this official said, initially raided Cuban soil in 1956 with 82 men, 12 of whom escaped in the first encounter. He is master of Cuba today.

(And while this is a Nationalist, not a Communist movement, "some Communists" have infiltrated Castro forces. Castro's coup, the official added, has painted a vivid picture of revolt for the "venomous, 'dying' Communist Party in the United States.")

## Poison in Your Water—No. 30

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Seattle (Wash.) Post Intelligencer, August 12, 1958, entitled "Report Tells Pollution at Seattle, County Beaches."

The article follows:

REPORT TELLS POLLUTION AT SEATTLE, COUNTY BEACHES

A comprehensive report on pollution at 105 Seattle and King County bathing beaches was received yesterday by Mayor Gordon S. Clinton.

The report, prepared by the sanitation division of the Seattle-King County Health Department, rates only 11 of the beaches usually good and 11 generally good. These are the highest ratings pollutionwise.

The list includes both public and private beaches. They are listed in eight classifications—Salt water, Lake Washington, Mercer Island, Lake Sammamish, North End lakes and East Side and southeast and southwest King County. The beaches and the ratings by the Health Department follow:

Salt water: Richmond Beach, not recommended; Carkeek Park, not recommended; North Beach, generally poor; Golden Gardens, not recommended; Alki, 53d Avenue SW., fair; Alki, 61st Avenue SW., fair; Lincoln Park, not recommended; Seola Beach, not recommended; Three Tree Point, fair; Normandy Park, no information; Des Moines

and Zenith, not recommended; Redondo, not recommended; Salt Water State Park, fair; Burton (Vashon Island), fair; Lowman Park, not recommended.

Lake Washington: Kenmore Beach (Ward's Resort), ordered closed, swim at own risk; Lake Forest Park, no longer sampled since found to be grossly polluted, no improvement since 1956; Sheridan Beach, no longer sampled since high pollution was determined; Mathews Beach Club beach, no longer sampled since high pollution determined; Mathews Beach, not recommended, Seattle Park Department has not developed pending sewers, highly polluted from Thorton Creek; Windermere, usually good except after heavy rain; Laurelhurst, usually good except after heavy rain; Edgewater Apartments Beach, fair; Madison Park, fair; Denny Blaine, usually good.

Seattle Tennis Club, usually good; Madrona, fair to good; Leschi, usually good; Mount Baker, fair to good; Lakewood Pl., usually good; Seward Park, fair; Martha Washington School, usually good; Pritchard Beach, fair to good; Kennydale, fair; Enatal, fair; Beaux Arts, no recent information; Bellevue, Chesterfield, generally good; Bellevue, Meydenbauer Park, generally good; Bellevue, Clyde Dock, generally good; Medina, no new information, still considered highly polluted; Houghton City Park, generally good, bacteriological counts running very favorably.

Kirkland, 7th Avenue S., generally poor; Kirkland, City Park, fair; Kirkland, Camp Kiwanis, fair; Kirkland, Marine Park, unclassified (newly established sampling point); Juanita, Forbes Beach, fair; Juanita, Shady Beach, fair; O. O. Denny Park, generally good.

Mercer Island, 97th Avenue SE., fair; Shorewood Apartments, generally poor; McGilvra Dock, should be satisfactory since sewers are in; Franklin Dock, generally poor; Forest Avenue, generally good; Mercer Island Beach Club, fair; Wormser's private beach, generally good.

Lake Sammamish: Gateway Grove, generally fair; Idylwood Park, generally fair; Smith's Beach, generally fair; Vasa Park, fair; Timberlake, generally poor; Sammamish State Park, fair to poor, municipal treatment plant remains potential pollution source; Alexander's Beach, fair to poor, initial bacterial counts running more favorably this year; Parr's Park (now Maggard's), generally good.

North End lakes: West Green Lake, fair to poor, closed by park commission; East Green Lake, same as West Green Lake; Bitter Lake, fair, not sampled in recent years; Haller Lake, generally poor; Echo Lake, Erickson's, fair to poor; Echo Lake, Ranch Motel, fair; Echo Lake, E. L. Motel, fair; Cottage Lake, Norm's Resort, generally poor; Cottage Lake, Bon and Ray's Resort (was Erickson's) generally poor; Cottage Lake, Cedar Grove, fair.

East side lakes: Pine Lake, French's, fair to poor; Beaver Lake, Andy's Resort, fair.

Southeast lakes: Lake Boren, public access street end, fair; Lake Kathleen, usually good; Lake McDonald, generally fair; Lake Desire, generally good; Shadow Lake, Heiser's fair; Shadow Lake, Foss' Resort, fair; Lake Wilderness, Gaffney's generally good; Lake Lucerne, Cherokee Bay, generally poor; Lake Meridian, Ky. Fox Resort, generally poor; Lake Meridian, Vista Park, generally fair; Lake Sawyer, fair; Lake Retreat, L. R. Resort, good to fair; Lake Retreat, Baptist Camp, usually good; Deep Lake, usually good, no late information.

Southwest lakes: Hicks Lake, fair to good; Lake Burien, fair in past area around lake now sewered, should be all right; Angle Lake, (A. L. Plunge) usually good; Angle Lake, Dreamwood Park, usually good; Star Lake Inn, usually fair; Steele Lake, King County Park, usually fair; Mirror Lake, fair to poor, no recent information; North Lake, North Lake Park, fair to poor; North Lake, public fishing area, fair to poor: Lake Geneva (Broomes') fair; Lake Geneva (Jardin's), fair; Lake Killarney, fair to poor; Five Mile Lake (Baptist Camp), poor; Five Mile Lake (Five Mile Lake Resort), poor.

## Tristate Rail Agency

EXTENSION OF REMARKS
OF
### HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the March 10 issue of the New York Times, entitled "A Tristate Rail Agency," which I believe should be of general interest to the Congress.

While I believe that some of the points made in the Times editorial require more study, the editorial as a whole is an able statement of some of the problems involved in the present transportation crisis in the New Jersey-New York-Connecticut commuter area.

Most important, I believe, the editorial recognizes that the problem is a tristate one, and will not be solved alone by the piecemeal proposals presently being offered—even though several such proposals should be carried through and will be genuinely helpful.

It is this fact, Mr. Speaker, that moved me to urge the Subcommittee on Intergovernmental Relations of the Government Operations Committee to initiate a study of how best the many levels and units of government in the area might best cooperate to develop a long-range solution. The subcommittee is ideally situated to make such a study, I believe, especially since its findings would be entirely nonpolitical and could serve as a case study for similar situations in other metropolitan areas of the country.

The editorial follows:

A TRISTATE RAIL AGENCY

Recognizing, as we must, the failures of the past to get a cooperative attack, joined by New York, New Jersey, and Connecticut, upon the problem of the commuter railroads, we nevertheless remain convinced that only by such cooperation will maximum results over the long term be achieved. There was evidence yesterday in the New Jersey Legislature of new desire to revive a common approach to the problem. We believe it should be welcomed and encouraged by New York and that further explorations should be sought with Connecticut.

It is perfectly clear that New York and New Jersey have the major stake and the major responsibility; Connecticut would not want to be an equal partner in burdens borne, certainly, but she would nevertheless be a respected member of the team in making decisions and policy. The importance of the New Haven Railroad to Connecticut and its residents is manifest.

The problem of the railroads will not be solved by fiat, whether executive or legislative, or by a quasi-judicial agency. The problem runs deeper than equipment, or capital needs, and it will not be solved by tax forgiveness alone. It crosses State lines, and any authentic major solution of the Hudson River crossing that would promise transportation improvement, such as tying-in with the New York City Transit System, certainly requires bistate cooperation.

One seldom sees or hears a discussion of the commuter-railroad problem that does not yearn for involvement of the Port of New York Authority in it. This is inspired largely by flattering respect for the port authority's efficiency in coping with difficult problems. But the authority achieved this position of respect by paying its own way, by balancing its budget with sure income that made its bonds safe for investors—since it has no taxes to rely on—and by agreeing to undertake only what offered sound promise of being self-sustaining by revenues.

The heavy financing, to say nothing of work load on executives and staff, that lies ahead in waterfront development, in construction of the Narrows Bridge, in improvement of the George Washington Bridge and other projects leaves no room for accepting a multimillion dollar, sure-thing deficit operation like the commuter railroads. The port authority is not a community banker to be assigned to bad risks, or a trustee in bankruptcy for nearly defunct enterprises, no matter how seriously fraught with public interest.

This is not a job for the port authority, a good horse that some of our friends in New Jersey, for instance, and in New York as well from time to time, would be willing to ride to death. The railroads are a State job, as New York recognized in helping the Long Island, to be shared with the local communities according to benefits received. There lies the authority for tax relief; there lies the taxing resource if deficits are to be subsidized. And we say it would be better done as a tristate job.

## News Release Issued by Industrial Union Department, AFL-CIO, on the Discount Rate Increase by the Federal Reserve Board

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, February 25, 1959*

Mr. LANE. Mr. Speaker, Al Whitehouse, director, Industrial Union Department, AFL–CIO, charged that the action of the Federal Reserve Board in raising the discount rate from 2.5 to 3 percent is "in callous disregard of the Nation's welfare, especially that of almost 5 million unemployed workers."

The IUD official added that the Board appears "more interested in the welfare of the Nation's bankers than of the Nation's people." He declared that this latest action will tend to brake "an economic recovery that is not yet fully underway."

He further declared:

I am appalled at this Federal Reserve action which bears earmarks of social irresponsibility. Only the other day, one of the Federal Reserve Board of Governors noted that high unemployment was causing the Reserve to move cautiously. Evidently, the Board has now thrown caution to the winds.

Two years ago, organized labor warned against the high interest policies of the Reserve. These warnings were ignored and

the recession that followed stands as a monument to a philosophy that subordinates the welfare of the many to that of a privileged few.

Industrial workers have borne the brunt of unemployment throughout the recession and during today's lagging recovery. They are again being made sacrificial lambs to a monetary policy that will further restrict job opportunities.

Tight money had an almost disastrous impact upon the housing industry 2 years ago and its return could once more deprive the American people of needed homes. There are reports that auto sales will fall below even the relatively low levels previously anticipated by that industry. Small business, just starting to revive, can hardly be expected to appreciate this new dose of credit restriction.

The Federal Reserve and the administration should have found out by now that they cannot fight the gray ghost of inflation with policies that restrict the Nation's growth and prosperity. High interest rates in the present situation make no more sense than baying at the moon. The major shortage in the United States today is that of jobs. The Federal Reserve apparently is more interested in the welfare of the Nation's bankers than of the Nation's people.

This most recent action of the Federal Reserve is proof of the need for broad representation on its Board so that it may become, in fact, a public system representative of American life, as urged by the AFL–CIO executive council. It is time to remove the people's central banking system from complete domination by the bankers.

## Report of Citizens Medical Committee on Health, of Florida

EXTENSION OF REMARKS

OF

### HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Monday, March 9, 1959*

Mr. SIKES. Mr. Speaker, I wish to call attention to the report of the Citizens Medical Committee on Health appointed by Gov. LeRoy Collins, of Florida. This committee is made up of a distinguished group of doctors and other outstanding citizens and its officers are: Dr. Edward R. Annis, chairman; Dr. H. Phillip Hampton, vice chairman; and Mr. W. Harold Parham, secretary. The objectives as outlined by the Governor are:

(a) Care of chronically ill and aged indigents.

(b) Outpatient care of indigents.

(c) Coordination and maximum utilization of State agencies rendering health services.

(d) Role of voluntary health agencies operating in Florida.

(e) Maximum utilization of personnel trained in the health field.

(f) Additional areas of study deemed advisable by the committee.

Mr. Speaker, I submit for publication in the RECORD a summary of the report which I recommend for the careful reading of my colleagues in the Congress. The complete report and the charts which give much more detailed information are available upon request to the Secretary at Post Office Box 241, Jacksonville 3, Fla.:

SUMMARY REPORT—CARE OF THE CHRONICALLY ILL AND AGED; AND OUTPATIENT CARE OF INDIGENTS

To accumulate the factual data needed for sound planning the staff of the committee conducted extensive studies. Major findings are presented in the full report and the detailed data are in the files of the committee. There was an examination of population distribution and trends; a review of plans used in other areas for the care of chronic illnesses and for the provision of health services to the aged, and an examination of auxiliary home services now available in Florida. In the study of medical care the nature of outpatient services in one of the major cities was examined fully. There was a detailed investigation of nursing homes and their patients, the first adequate study of this type in Florida. This involved collecting information on 330 of the State's 344 nursing homes, also individual, personal, medical, and financial data on 6,298 of the 6,567 known residents of the homes. There was an even more extensive study of hospitals conducted with the cooperation of the Florida Hospital Association. Medical and financial data were collected on 8,474 patients in 114 hospitals located in 65 counties. These represented a cross section of Florida's hospital population. Additional data were elicited on 1,590 patients who remained in the hospital for 15 days or more. This was a cross section of the approximately 10 percent who are long-term patients in Florida's hospitals. Data on the present State program for the hospitalization of the indigent were reviewed also. In cooperation with agencies offering medical and health insurance, there was an exploration of possible plans for the provision of appropriate insurance to cover chronic illnesses and to meet the needs of the aged. In these studies there were the following observations which are particularly pertinent to the specific assignments of this committee.

*Population data*

Population trends indicate a Florida census in 1960 of 4.9 million with 9 percent (400,000) aged 65 and over.

Almost 50 percent of the men and 75 percent of the women in this age group reported incomes of less than $1,000 in 1950. (This economic measure does not take into account other assets or the factor of relative responsibility.)

State welfare recipients in Florida during the month of October 1958 in the four categories numbered:

| | |
|---|---|
| Old age assistance | 69,839 |
| Aid to dependent children | 26,171 |
| Aid to the blind | 2,540 |
| Aid to the disabled | 6,785 |
| Total recipients of public assistance | 105,335 |

*Nursing home study*

Information obtained from 330 of the 344 licensed nursing homes in Florida revealed:

| | Number of beds |
|---|---|
| 273 privately owned | 7,061 |
| 38 nonprofit (including church related) | 936 |
| 19 city or county institutions | 510 |
| Total | 8,507 |
| Nursing home median bed capacity | 20 |
| Total nursing home residents | 6,567 |
| Average age resident | 79 |

*Nursing home study*—Continued

| Religious preference: | Percent |
|---|---|
| Protestant denominations | 74 |
| No preference | 37 |
| Baptist | 21 |
| Methodist | 16 |
| Presbyterian | 7 |
| Episcopalian | 6 |
| Lutheran | 3 |
| Christian Scientist | 2 |
| Remainder (17 other denominations) | 8 |
| Catholic | 11 |
| Jewish | 5 |
| No preference | 10 |
| Mentally: | |
| Clear | 33 |
| Completely confused | 25 |
| Sometimes confused | 42 |

Incontinence of bowel or bladder or both occurred in one-third.

Less than 50 percent were able to walk alone.

The average resident had been in the nursing home 2 years.

The median charge for nursing home care was $123 a month, chiefly ranging from $70 to $500 a month.

The median drug cost reported was $15 a month.

Total nursing home costs analyzed were:

| | Percent |
|---|---|
| Patient and family | 22.1 |
| Social security | 15.5 |
| Insurance | 1.1 |
| Welfare, State | 22.6 |
| Welfare, county and city | 35.7 |
| Other | 3.0 |

According to the opinion of the operators or senior nurses of the nursing homes, about one-third of the occupants could be cared for in a home, if they had one, and if home nursing or other supporting services were available in the community.

*Hospital service for indigent program*

The Hospital Service for the Indigent Program is State-county financed and administered. Its purpose is to provide hospital services for indigent persons who are acutely ill or injured. An added objective is to stimulate all counties of the State to recognize and discharge their responsibilities for providing adequately for indigent residents. Participating counties are required to appropriate, annually, county funds of at least 50 cents per capita according to a current population estimate. State matching funds are available also.

In summary the activities of this program for the period October 1, 1957, through September 30, 1958, were as follows:

Effective October 1, 1958, all counties except Franklin, Gulf, Washington, and Okaloosa were participating (effective for 97 percent of State's population).

For the first 6 months of the current budget year, 10,483 hospital admissions, representing 101,020 patient days, were financed in whole or part by the program.

The average length of stay per hospital admission was 9.6 days at an average per diem cost to the program of $19.94 or an average cost of $191.42 per admission.

The average total cost for inpatient care to hospitals submitting data was $22.45 per diem.

For the period October 1, 1957, to June 30, 1958, (three-quarters) total funds expended amounted to $3,056,782, consisting of $1,686,603 county funds and $1,370,179 State funds.

Of all patients 26 percent were aged 65 or over. There was also a concentration of nonwhite females aged 25 to 34 who were admitted primarily for delivery or the complications of pregnancy.

In a sample of cases in which data were obtained from the State welfare department 46 percent of those admitted were categorically indigent. The proportion varied from county to county; for example, in Pinellas County 59 percent were categorically indigent in contrast to 31 percent in adjoining Hillsborough. In only 10 percent of the admissions was there participation in payment to the hospital by family or relatives, charitable organizations or insurance.

Based on previous studies it is conservatively estimated that the value of physicians' services given gratuitously for the care of indigents approximates the cost of hospitalization.

*Hospital studies*

This study was designed to assemble information, including hospital cost, on a representative cross section of the total hospital population. Information was provided on a total of 8,474 patients in 114 hospitals located in 65 counties. Average length of stay was 6.7 days.

Length of stay of patients discharged:

| | Percent |
|---|---|
| 1st week | 73.6 |
| 2d week | 16.6 |
| 3d and 4th week | 7.7 |
| 1 to 3 months | 1.8 |
| Over 3 months | .2 |

Nine and seven-tenths percent of the total hospital population remained for longer than 2 weeks. Average length of stay of long-term patients was 90.4 days. Average total cost of hospitalization was $183 per case and tended to increase with age. The highest average cost was for those age 65 and over. This study revealed that 40 percent of the long-term patients did not need the specialized care of a general hospital.

*Outpatient care*

Currently outpatient care is available only in the major cities. Hospital outpatient clinics were of substantial importance in making medical services available to the aged. In the area studied a relatively small percentage of those attending the clinics were categorically indigent. The remainder are classed as medically indigent by the social service department.

*Hospital insurance for the aged*

Sixty-three percent of the population of all ages have health insurance; however only 35 percent of those 65 and over are insured.

*Recommendations*

1. For the extension of the benefits of health insurance: through every practicable channel encourage the development and promote the use of voluntary low-cost health insurance which will extend benefits to the aged and cover long-term illnesses.

2. For reduction in the costs of hospital care in long-stay illnesses: the encouragement of the construction and operation of "limited service hospitals" in close proximity to major general hospitals to promote early transfer of patients from general hospitals and to provide efficient long-term care of chronic diseases.

3. For more adequate nursing home care: legislative authorization for the welfare board to implement a program to pay the cost of nursing home care for public assistance recipients, this to be provided by county, State, and Federal matching funds as outlined in House bill 1561 of the 1957 legislature; also encouragement of the active participation of religious groups in developing and maintaining nursing home facilities.

4. For accessible and economical medical care for the aged and those with chronic illnesses: the expansion of present' outpatient clinics and the organization of additional clinics to meet the medical needs of the indigent aged and the chronically ill, with such services coordinated with and fully utilized in expanding and strengthening the intern and resident medical training program.

5. For home care of the aged and the chronically ill: within the realm of existing health agencies expand and modify community nursing programs so the services of visiting nurses will be widely available; and existing welfare agencies to sponsor foster home care, and homemaker and friendly visitor services.

6. For extension of the hospitalization of indigent program without added State or county tax funds: continue program at present level of State and local support with authorization for extending benefits to outpatient care of indigents for chronic as well as acute illnesses; expand budget through the development and adoption of acceptable plans whereby Federal matching funds for medical care of the categorically indigent will be available to Florida administered as at present insofar as practicable (to finance the additional outpatient care).

7. For increased State and local responsibility for medical care of the indigent program: use every possible influence to obtain a release to the States of tax sources now utilized by the Federal Government for the support of health services with planning and administrative responsibility centered as close as practicable to those served.

8. For promoting positive health in the aged: develop a pilot demonstration in one or more communities of a total comprehensive health program for the aged with strong emphasis on the maintenance and enrichment of the health of the senior citizens, involving broad coordinated participation of the medical profession, health department, hospitals, institutions, and other community agencies.

9. For the accumulation of statewide budgetary data on health and welfare services: the evolution by the State auditor (in cooperation with appropriate county officials) of uniform budgetary accounting procedures covering public welfare, medical, and health activities.

COORDINATION AND MAXIMUM UTILIZATION OF STATE AGENCIES RENDERING HEALTH SERVICES

Information concerning the medical and health programs of 13 State agencies was assembled and reviewed in committee with representatives of the agencies concerned. These detailed reports, including budgetary data, are in the files of the committee and a summary description of the program of each agency is included as a part of the full report of this committee. The annual cost in State tax funds for these medical and health services is approximately $30 million. Local and Federal tax funds still further increase this total. Furthermore, expenditures for medical care for those receiving public assistance, with major support from Federal sources, has been increasing and there is no indication of a reversal of this trend.

The committee had particular concern with the provision of medical services at public expense. In addition to the State hospitals for tuberculosis and mental illnesses, six State agencies contract for medical care. There was wide diversity, rather than general uniformity, in plans. There was a greater variation in determining eligibility than deemed desirable. There was no uniform policy governing the selection and payment of medical consultants and hospitals. The more adequate investigation of the financial status of the family of patients in State hospitals is needed.

The committee was further concerned by the lack of definition of the role of welfare agencies in medical and health matters. The responsibility and authority of the public welfare and public healthy agencies for medical and health matters is not now adequately specified. The committee holds that services provided by the medical professions, particularly for medical care in and out of hospitals, should be the responsibility of the medically-directed health organizations. As a basis for sound planning and to foster even better working relationships, a clear definition of roles in medical matters is indicated.

In the matter of tuberculosis control the State at present is believed to have infectious cases which would more than completely fill all available beds in the tuberculosis hospitals. However, there are currently vacant beds. Moreover, in the State prison in Raiford, with present hospital facilities admittedly inadequate, open cases of tuberculosis are being cared for under less than satisfactory conditions. Particularly vigorous case-finding and follow-up programs at this time are indicated to maintain the progressive decline of this disease and through prevention to avoid the high future cost of treating this prolonged disease.

The continuing inadequacy of physical facilities, despite current expansion, is the notable feature in the mental hospitals, child training schools and the State Prison System. There is the lack of any special facility for the care of psychotic children.

The alcoholic rehabilitation program is a pilot activity rather than one designed to fully resolve a state-wide problem. Eventually other agencies will need to participate in the application of effective procedures. The present program appears to be arriving at a point where appropriate agencies—on a cooperative pilot basis—might with advantage be encouraged to incorporate specific portions of the alcoholic rehabilitation program within their broad activities.

Regarding organization of medical and health services in Florida, the Committee sees no serious disadvantage in distributing the responsibilities for medical and health services at the State level to the agencies now concerned. However, at the community level consolidation is essential for economical and efficient operation. The State has virtually complete coverage by well established county health departments which could be strengthened so they could provide broader services.

In view of the importance of accidents as the first cause of death in Florida for persons from 1 to 45 years of age, the accident prevention programs of State agencies were examined separately. There is much concern with work in this field but at present each agency is proceeding independently with its own particular activities. That the programs are not as effective as desired is apparent from mortality and morbidity statistics.

The committee is favorably impressed with the variety and amount of needed medical and health services provided through official agencies to the people of Florida. They commend the agencies for the generally smooth and effective cooperative relationships. There is no significant amount of unwarranted overlapping or duplication of services at State level. With a program distributed through 13 agencies there could be obvious imbalance but this was not evident. Despite these generally favorite observations, it also was clear that there are possibilities for improvements in organization and in operations. The following recommendations call attention to these and are designed to still further strengthen these very creditable medical and health services.

*Recommendations*

10. For the provision of medical care at public expense: central purchasing by the State Board of Health of medical care vendor services together with establishment of uniform criteria for eligibility for medical services at public expense, and the adoption of a uniform policy governing the selection and

payment of medical consultants and hospitals.

11. For the provison of medical services to recipients of public welfare: the assignment of responsibility for medical and health matters to the medically directed health agency with the evolution of appropriate interagency administrative relationships.

12. For tuberculosis control: an intensification of casefinding activities to identify and treat every active case of tuberculosis at the earliest possible stage of the disease. and for the best use of tuberculosis hospitals, a consideration of the practicability of transferring prisoners with tuberculosis to wards with appropriate security in a tuberculosis hospital.

13. For better care in State institutions, proceed without delay with the planned and needed expansion of mental hospitals, child training institutions and the medical facilities in the State prison system and establish a unit for the treatment of psychotic children.

14. For improvement of the alcoholic rehabilitation program: the cooperative development by the alcoholic rehabilitation program, and some selected local health department, of a pilot control program incorporated within the general community health program.

15. For the organization of medical and health services: no wider dispersion of responsibilities at State level, and at the community level an immediate effort to consolidate all medical and health programs for the protection and promotion of health, physical and mental, within strengthened and expanded health departments which would serve the local needs of the various State agencies on a cooperative basis.

16. For school health services: continue and strengthen the present cooperative program.

17. For accident prevention: the designation of a Governor's interagency committee on accident prevention to foster and coordinate all promising activities.

18. For the promotion of interagency cooperation in medical and health programs: the establishment of an interagency advisory committee or council to consider on a continuing basis interrelated medical and health services and facilities with view to their progressive improvement.

ROLE OF VOLUNTARY HEALTH AGENCIES IN FLORIDA

There has been a marked expansion of voluntary health agencies in the past decade. Prior to 1949 only 5 are known to have been active in Florida. Since that time State organizations of voluntary health agencies, with full-time paid staff, have been established in Florida at a rate of more than one per year. Of 19 known agencies, 18 provided data concerning activities and budgets. (Only the National Foundation failed to submit the information requested.) Detailed reports on the activities of each of these agencies are in the files of the committee, and brief summary statements are a part of the full report.

The people of Florida contribute voluntarily each year nearly $5 million for the support of these 18 agencies, and with the estimated contributions to the National Foundation, the total would be between $5.5 and $6 million, an amount equal to the total tax funds provided for any major statewide heatlh program. Each voluntary health agency has tended to develop a distinctive and independent program. Some emphasize research, others education and promotion. Provision of direct medical service is unusual. Cooperative programs with official agencies are common but there is little coordination of activities among the voluntary health agencies themselves.

The important contribution of voluntary health agencies in the initiation and promotion of health activities in Florida is warmly acknowledged by the committee. Likewise, the generosity of the residents of Florida in voluntarily making available these millions of dollars for special health activities is recognized. The work of the leaders who give of their time, with and without compensation, displays an admirable concern for the welfare of the less fortunate. Even though present activities are commendable, it is believed they may be strenthened. It is feared also that there may be danger to the voluntary health agencies through wholly uncontrolled multiplication of organizations seeking public supoprt, and particularly through the possible promotion of agencies with less worthy programs.

Funds provided voluntarily by large numbers of contributors for the support of the voluntary health agencies are regarded as the public's money. The public cannot see and appraise the results derived from the expenditure of their funds for widely dispersed health activities. Inevitably there is a degree of public uncertainty as to whether funds contributed are used to the very best advantage. Therefore, it is recommended:

19. For the protection of the public's investment and of the favorable reputation of the agencies: legislation requiring the issuance of permits by an appropriate official agency (aided by the guidance of an advisory board) for the solicitation of funds for voluntary health activities, with provision for public reporting of activities and budgets.

20. For more effective coordination of the work of voluntary health organizations: every encouragement be given to evolve a State Coordinating Council to facilitate interchange, to promote effective evaluations, to coordinate activities and to plan cooperatively with related professional bodies and official agencies.

MAXIMUM UTILIZATION OF HEALTH PERSONNEL

Currently 7,037 physicians hold licenses to practice in Florida and of these 4,585 are residents of the State. There are also 519 licensed osteopaths, 2,356 dentists, 14,443 registered nurses, and 6,059 licensed practical nurses. Sound scholarship plans assure opportunities for training in the major health professions to the sons and daughters of Floridians. In this State, as in most States, the troublesome problem is one of distribution of medically trained personnel. Placement services are maintained by some institutions and professional bodies. However, there is no central body with general responsibility for maintaining current data as to needs and personnel available. Therefore it is recommended:

21. For distribution and placement of medically trained and health-related persons to satisfy needs; that the State board of health maintain a central clearing house for placement services with the major objective of bringing together interested prospective employees and employers, and of accumulating and distributing information concerning openings for qualified persons who are interested in locating or relocating in Florida.

RADIOLOGICAL HEALTH

A statement of this problem was presented by the radiologist member of the committee and is a part of the full report. There is the problem of assuring a safe and effective use of radium and radioisotopes and of X-ray particularly as widely employed for diagnostic purposes. Education of the public and the medical profession is involved and special control measures need to be evolved. Therefore, it is recommended:

22. For the better control of the medical application of ionizing radiation: that there be designated a medical committee on radiological safety, a majority of whose members would be qualified radiologists, to serve as a subcommittee of the Radiological Safety Committee of the Florida Nuclear Development Commission.

IMPLEMENTATION

The committee recognizes that the improvements visualized in its recommendations may be attained through different channels. Recommendation number 7 seeks a modification of Federal legislation and outlook. State legislative authorization would be required to implement recommendations Nos. 3, 6 and 10, relating to the provision of nursing home and hospital care for the recipients of public welfare with partial support through Federal matching funds, including administration of such programs, and No. 19 requiring permits for voluntary health agencies. Three recommendations, Nos. 5, 12 and 13, involve State budgetary considerations. Others might be attained by administrative directive or suggestion, e.g., the last part of No. 3 and Nos. 9, 10, 17, 18, 21 and 22. Professional persuasion and interagency planning are the major needs for implementation of the remainder (Nos. 1, 2, 4, 8, 14, 15, 16 and 20). For all, the support of the professional groups involved and an informed public is to be desired. Therefore, it is recommended:

23. For the dissemination of factual data relating to medical and health services in Florida: that the committee be authorized to prepare for appropriate publication selected findings of importance to the medical profession, hospital administrators, health workers and the public.

## Advertising Most Effective Good Will Ambassador

EXTENSION OF REMARKS

OF

### HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. WILSON. Mr. Speaker, too often the functions of advertising are misunderstood. This is especially true in the fields of education and politics. Oftentimes sincere and well-meaning politicians and educators make unwarranted and untrue attacks on the advertising profession. It has become a favorite whipping boy for those who want to discredit business and enterprise in America.

As one of the few advertising men in Congress, I was much impressed recently by a speech made by the Secretary of Commerce Lewis L. Strauss, a distinguished citizen who is well-known for his service as an admiral in the U.S. Navy and as Chairman of the Atomic Energy Commission. Secretary Strauss' remarks should be read by every student of economics, and by leaders in Government, too. These remarks present a clear picture of the relationships of advertising to the American system of free enterprise. Under unanimous consent, I include his speech as a portion of my remarks:

ADVERTISING MOST EFFECTIVE GOOD WILL AMBASSADOR

(Remarks by Lewis L. Strauss, U.S. Secretary of Commerce, at the annual New York conference of the Associated Business Publications, New York City, February 26, 1959)

Calvin Coolidge once said, "The chief business of America is business." If that state-

ment is still valid, then Mr. Coolidge's description also depicts the significance and the importance to the Nation of publications designed to assist business.

The more than 2,000 business periodicals with a circulation of approximately 40 million and a $540 million advertising revenue in 1958 constitute a tremendous generative force in our free enterprise system.

You are the eyes and ears of business, collecting news of value to resourceful executives. You also are the voice of business—bringing timely information and stimulating ideas to your readers who range from big corporation executives all the way to proprietors of "Pop and Mom" shops. Indeed, your specialized publications have well been described as the research department of small business.

For these reasons, as Secretary of Commerce, I am happy to acclaim your special service in the practical promotion of private industry. I understand that my great predecessor, Secretary of Commerce Herbert Hoover, initiated contacts with business editors and worked in close cooperation with them. I shall try to maintain the same relationship.

EXTREMELY VALUABLE PUBLIC SERVICE

Your publications already are performing an extremely valuable public service for the Commerce Department by creating abroad a better understanding of our American free enterprise system and its products. I refer, of course, to the thousands of copies of business and technical publications which you freely contribute to our numerous international trade fairs—from Addis Ababa to Zagreb.

Thanks to the publishing industry, a fresh, new library, numbering around 1,000 volumes of business and technical publications, fact-books and directories, is shipped with each trade mission. These become quick, authoritative referencee sources for Government experts and business executives on our trade teams, enabling them to answer questions about American markets, techniques, convention dates, tariffs and other information of interest to potential buyers and sellers.

One of the most effective American ambassadors for good will is the American advertisement.

European and Asian businessmen, women and other trade fair visitors gaze with excited wonderment at—to them—the unbelievable superabundance displayed in the ads. Tourists are intrigued by the pictures; students and authors gain an insight into the American way of life.

The Soviet pavilions at trade fairs generally have information booths but their supply of reference works and publications is meager in comparison with the U.S. exhibit.

Incidentally, in Poland not only were American periodicals eagerly thumbed through from cover to cover, but also every American city telephone directory was scrutinized line for line by the news-starved people, searching for traces of relatives and friends in the land of the free.

In your comprehensive collection of facts for business, I trust that you will find fresh sources of information in the Department's new series of economic censuses now underway. Included are: the Census of Business, of Manufactures, and of Mineral Industries. The Census of Agriculture, which is taken every 5 years, is scheduled for October and November of this year. Next year, we shall take our great Decennial Census.

And while on the subject of censuses, let me express appreciation to the Associated Business Publications for your active assistance, particularly with respect to the Census of Business. Your cooperation with us has helped to insure the cooperation of the millions of businessmen to whom the reporting forms were mailed. It is important for them to realize that this information is being gathered not to harass them but to help them.

Still another vital function of business publications that is becoming of increasing importance is the spread of genuine economic literacy. None can do this job better than you. The success or failure of growth depends primarily on managerial decisions made in more than 4½ million independent American enterprises. The more adequate and accurate the information, the more likely the wise decision. Yours is that opportunity of leadership—to provide the truth—the whole truth on our economy—thus benefiting sound judgment in economic planning and action.

RISING NATIONAL ECONOMY

I hope to contribute a few facts about the economy, which may be of some use to you in further appraising for your readers the recovery, the current business situation, and the outlook. Some of this data is new.

For the past several months, it has been apparent that the national economy is in the rising phase of a business cycle.

The total value of the Nation's output of goods and services—the gross national product—rose from an annual rate of $430 billion in the second quarter of last year to a $453 billion rate in the final quarter.

The American people's purchasing power is at an all-time high. Personal income in January was at a seasonally adjusted annual rate of $362½ billion, $2½ billion above the previous month.

In retrospect, now that rather firm figures for 1958 are available, it appears that the gross national product for the year as a whole was very little below the 1957 record total. At $438 billion, gross national product in current dollars was virtually the same, and after adjustment for the 1957–58 rise in prices, was only 3 percent lower.

There seems to be a fairly general feeling among many economists and business executives that in dollar terms the 1959 gross national product will exceed 1958 by about the same margin that 1955 was above 1954—more than $30 billion.

How much the gain will be in real terms depends upon our ability to maintain price stability. It should be evident by now to all Americans—and especially to businessmen—that President Eisenhower, and we of his administration, consider this the most important problem that the American economy has to contend with today.

If the richest nation on earth, in the richest year of its history, refuses to live within its income and pay its bills as it goes, when will it ever get out of the red?

We have in prospect an increase in our population from 165 million in 1955—it is now 176 million—to 195 million in 1965. By 1980 the population may not be far below 260 million.

DANGERS OF INFLATION

I think we are well warranted in assuming—if we do not stunt real growth through runaway inflation or other blunters—that living standards, rather than declining, will tend to rise. This means that the demand for consumer goods will be greatly increased. As that dynamic market expands, production must increase to meet its demands and new jobs will be created.

Our long-range view of the national economy and its prospects ought to be a compound of great optimism and common sense caution. The outcome will depend upon how wisely the government and the people handle the temptation of inflation. The forthcoming expansion of the American economy therefore represents a challenge not only to those who formulate public policy but to the free private enterprise system and all engaged in it.

The prospect also offers to the business publication industry immeasurable opportunities of private and public service.

The keys to our continually rising standard of living are mass production and a high rate of technological progress. But in a land of vast distances and millions of inhabitants, production, unaided, never could reach the entire market. The progress of growth will depend in considerable measure on the pace and breadth of distribution. It is in this field that publishing and advertising supply a driving force.

This fundamental truth often is misunderstood and frequently denied by business-baiters. They like to cite Ralph Waldo Emerson who said, "If a man can make a better mouse trap than his neighbor, though he builds his house in the woods, the world will make a beaten path to his door." This, the pundits say, illustrates why advertising is superfluous. That is nonsense, of course, for if the successful trap manufacturer had the intelligence to invent the better mouse trap in the first instance you may be sure that he also had the good sense to see that the path to his door was well indicated by direction signs attesting to the virtue of his product and tied in with display advertising in all the media of the day.

One of my prized possessions is a copy of Weekly Observer and General Advertiser of Culpeper Courthouse, Va., for May 28, 1858. I prize it because it contains the advertisement of my grandfather who came over from Germany 9 years earlier and had saved enough money to set up in the mercantile business. As advertising copy it isn't much but it shows at least that my respect for the institution of advertising is inherited.

Government and business should stand up for the distribution factor of our economy. Last month, at the meeting of our National Distribution Council, an addition was suggested to be made to the objectives and responsibilities of the Department's Office of Distribution. The recommendation reads as follows: "The Department of Commerce should assume responsibility for disseminating an adequate understanding of the vital importance to our economy of the distribution process in all its dynamic activities; and to take appropriate action seeking to defend it against misrepresentation or attack, from whatever source they may arise."

You may be interested to know that on the council's committee of leading executives who drafted that challenge was your own Associated Business Publications president, William K. Beard.

Those recommendations will be carried out.

PROUD TO CHAMPION ADVERTISING

This is how I feel about advertising. To me it is more than a specialty; it is the bloodstream of healthy growing business. Think of a country without advertising. It would be drab—as drab as Russia. I don't mean just the absence of neon signs and lights and display. I mean the monotony of sterile uniformity. Come to think if it, one of the great differences between our system and the Communist system is well exemplified by advertising. For the significance of advertising is that the buyer has a choice.

It is the very ozone of the free air of freedom—the freedom to choose. "Buy my product," one advertiser will urge, "it sells for less." "Buy mine," says another, "it is more durable," or "king size," or "copper riveted," or "aged in the wood," or better than any one of a thousand different ways.

Choice—something the unfortunate dweller under communism never has. Somebody makes the choice for him—even the choice of candidates. There is no place for choice and therefore none for real advertising in a dictatorship.

Freedom of choice is as important as freedom of speech but in this blessed land we take it for granted. We ought to recognize it as the fifth freedom and advertising is the touchstone which proves its existence and its vigor.

Advertising stimulates competition, which in turn, keeps free enterprise vigorous. It

points to where needs can be supplied and adds stardust to humdrum living. As the average modern family budget can cover more than sheer necessities, advertising steers discretionary purchasing power.

The size, quality and news coverage of the daily papers, magazines, radio and television are made possible by advertising revenue. Naturally, the detractors of the profit system and the enemies of private enterprise deplore such commercialism. Some would even prefer government subsidy because with it goes the possibility of government thought control.

You, as publishers, and I, as Commerce Secretary, are proud to champion advertising—because its primary function helps our economy to grow and its revenues help a free press to remain free.

## Why Small Colleges Need Help

EXTENSION OF REMARKS
OF

### HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. WOLF. Mr. Speaker, we will shortly have before us for action the National Housing Act of 1959. I have received many letters recently concerning the college housing program, which is a part of this act.

In these days when everything is inflated, and when bigness is a help in attracting attention, anything small is likely to be lost in the shuffle. It has been brought to my attention by a number of sources that the small college appears to be at a disadvantage in securing a loan under the college housing program as well as under the National Defense Education Act. The president of upper Iowa University, the eminent Dr. Eugene E. Garbee, has stated excellently the case of the small college in a recent letter to me, excerpts from which are as follows:

WHY SMALL COLLEGES NEED HELP

The recent refusal of a dormitory loan application by the Housing and Home Finance Agency prompts this letter. Your interest in the problems of the small businessman and your interest in the individual citizen and his personal problems are a very encouraging departure from the usual viewpoint on the national scene.

As you know I have been the president of Upper Iowa University since 1952. Since Upper Iowa University is located only a few miles from your hometown of Elkader, you are familiar with her outstanding record of service to northeast Iowa. This service, primarily to a local area, is one of the soft spots that some Government agencies point to as a reason for favoring a more cosmopolitan college. The fact that many smalltown and farm boys and girls want to stay near home, are actually afraid of the bigness of large colleges, who want to continue their education in an environment pleasing to them, should be a strong reason for the continued support of small colleges such as Upper Iowa University. You know, too, that Upper Iowa University is independent and has no church or community affiliations.

What is the size of a small college? In Iowa we have twenty-four, 4-year degree granting colleges and universities. Three have more than 5,000 studnts; 3 have from 1,200 to 4,999; 5 have from 800 to 1,199; and 13 have fewer than 800. Within a few years the number of colleges in each group will change, each is growing in enrollment. Right now, however, a small college appears to have fewer than 800 or a thousand students enrolled.

One major problem which we face is that of misinterpretation to the public of the aid received by small colleges from various governmental and foundation programs. The public thinks that such assistance is available on request of the college. The refusal to grant Upper Iowa University a second dormitory loan by the Housing and Home Finance Agency is an illustration:

"This action is without prejudice to reactivation and further consideration of the proposed project at a later date when the financial position of Upper Iowa University indicates the ability to assume this added obligation. This, of course, is subject to the availability of funds under the college housing program at that time."

Obviously we met the financial requirements for the 1954 loan. At the time of application, we had 232 students enrolled. A budget of $256,144.30 which included a deficit item of $50,141.11. A restricted estate grant for a dormitory from which we pledged $50,000 plus $25,000 for the bond and interest sinking fund, plus coverage of any charges exceeding the contract cost. We had an outstanding accumulated indebtedness of $146,389.26; an endowment of $368,786.22; $141,720 of the indebtedness was covered by a loan against the endowment. Apparently certain individual representatives of the Agency feel that with a loan goes the right to advise the administration on any or all problems of the university.

The Agency required that the charter be renewed and that the bylaws of the university be rewritten to meet the Agency's approval. This brought about a reorganization of the trustees which caused a writeoff of the loan against the endowment thus reducing the endowment. Subsequent sales of nonincome producing property has reduced the endowment to $136,128.76 as of this date. This attitude on the part of the Agency was further, very pointedly, made clear to us when we were advised not to invest our Ford Foundation grant in an addition to the Graf Hall on which we have the Housing and Home Finance Agency loan. I am sure that such a representative of the Government would not dare make such a suggestion to a larger college.

In June of 1958 we received preliminary approval for a second loan in the amount of $540,000 for a boys' dormitory to house 180 students. The 1958 fall semester enrollment showed an increase of 115 students over the preceding year. We were advised that our request would be strengthened if we changed the occupancy to 209 students. This was accomplished by placing three students in each room. Thus the basic plans were not changed and the estimated construction cost was unchanged. However, we were given a real going over on finances. In each conference we were repeatedly reminded that we had not taken the advice of their representative. Subsequently the loan request was disapproved as indicated in the previously quoted paragraph.

What was our financial position at the time of disapproval? On January 18, 1959, we had 476 students enrolled. Our present budget is $453,354, with an anticipated excess of income of $3,196 over expenses. Our accumulated outstanding indebtedness was reduced in 1958 from $142,786.66 to $108,618.48, a gain of $34,160.18.

Twenty-seven thousand of this is owed to 11 trustees; $18,300 is owed to the alumni association. Two new buildings have been constructed and are paid for. The Dickman Recreation Hall at a cost of $42,000, and the Colgrove-Walker Memorial Building at a cost of $400,000. Both buildings are income producing. The total budget is increased by operating these two buildings at the same time income receipts are increased, because of income from each of the buildings. As you can see the university has made astounding progress financially as well as in increased enrollment.

Being a small independent college without tax support or organized group support such as a church, must have influenced the Housing and Home Finance Agency decision.

Let me cite another example of such reasoning on the part of the Housing and Home Finance Agency. According to a newspaper account in October of 1958, 7 or 8 tax-supported colleges located in New York State were approved for dormitory loans to house from 196 to 210 students each. The approved loans ranged from about $850,000 to $1,200,000. Why? Upper Iowa University requested $540,000 for 209 students for a splendid building. One must draw the conclusion that being tax supported and large are very important factors.

What about the National Defense Education Act? The public across America was thoroughly indoctrinated that the act would solve many of the financial problems of the colleges and universities. Individual giving to the small college fell off very markedly.

In only one area does the small independent college have any chance at all to participate—in the loan program. However, the formula established is based on X number of dollars per student enrolled. Upper Iowa University submitted a request for $10,000, which was the actual amount needed by 32 students. According to publicity they were eligible for $16,000, or $500 each for the spring semester. Late in January I received a telegram from the agency in Washington informing me that our request was greater than 87 percent of the colleges in our area and "strongly urged" that we review our request to bring it more nearly in line. We had submitted actual needs. We received a total grant of $3,609, to which we have added $191 of our own funds. From this amount, 15 loans have been made, only two for $500 each. The State University of Iowa received $27,924. Our position is that the small college simply does not get effective help although the general public is led to think that we do get all the help that we need.

"A small college such as ours cannot participate in any of the other programs of the National Education Act for the very simple reason that the requirements fit only large, complex institutions. Our constituency does not know that. Therefore, they are led by the publicity to wonder "What is the matter with our colloge?"

The bills now before Congress purporting to make funds available to colleges for the modernizing and construction of classroom and other facilities on the college campus will, once again, make our problem more difficult. If the small college cannot qualify for an income producing loan, how on earth can we expect to borrow and repay money for improvements which add to our cost with no return? Once again, only the large and the wealthy will be helped.

The picture at the local area is no brighter. In Iowa each of the three large tax-supported education institutions has one or more active fund raising campaigns under way. The competition from this source for the gift dollar from the people in tremendous. The small college is virtually helpless to fight back.

In Iowa the State board of regents has authorized the three large tax-supported educational institutions to give a large number of "full tuition remission grants" to students. A conservative estimate would be as many as 1,200 in the three institutions. This in effect is free college education at the taxpayers' expense.

There is not a single representative from a really small college on a single government committee and very few on committees representing higher education.

The small colleges need a champion in Washington. I trust that you will be that champion.

EUGENE E. GARBEE,
*President.*

## Winning Speech by Jimmy Owens—"The Bill of Rights: Reciprocal Rights, Duties"

EXTENSION OF REMARKS
OF
**HON. JOHN SPARKMAN**
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. SPARKMAN. Mr. President, recently Jimmy Owens, a student of the Clements High School in Limestone County, Ala., was the winning speaker in a contest covering several counties. The contest was under the auspices of the American Legion. It was based on the United States Constitution.

Jimmy's speech was entitled "The Bill of Rights: Reciprocal Rights, Duties." It was a very fine speech, and I believe it will be interesting to all who may read it. Accordingly, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE BILL OF RIGHTS: RECIPROCAL RIGHTS, DUTIES

(By Jimmy Owens)

The Constitution of the United States is a beacon that has lighted the hopes of men throughout the civilized world. For well over a century and a half, it has withstood the ravages of time. It is one of the most important documents ever conceived by the minds of men. Before nor since has the world of civil government seen its parallel.

The Founding Fathers who assembled in Philadelphia in the long, hot summer of 1787 knew that their work was an experiment; if this grand experiment were successful, it would herald the dawn of a new day of freedom for generations yet unborn.

The convention directed that Gen. George Washington should keep the records of the convention "subject to the order of Congress, if ever formed under the Constitution". These three little words, "if ever formed", illustrate how dangerously near we came to breaking up in the very beginning.

However, never was a project in more capable hands. The most illustrious of all statesmen were in attendance at Carpenter's Hall. Aristocratic Alexander Hamilton was there. George Washington, the savior of his country, was president of the convention. Gouverneur Morris, a financial wizard and great orator, often had the floor. Benjamin Franklin, America's senior statesman, cast his influential shadow upon the assembly; and James Madison, the most methodical of all secretaries, preserved for posterity the very words of this brilliant assemblage.

The Constitution itself stands as a monument to the ideas of that great son of the enlightenment, Thomas Jefferson. The document, like Jefferson himself, condemned tyranny over the minds of men. Its wisely constructed Federal system was a master stroke in governmental design. The Frenchman, Alexis de Tocqueville, in his "Democracy in America," praised federation as the most effective safeguard of individual liberty. Its checks and balances ingeniously prevented a concentration of power. Article V allows for amendments and improvements.

All these things were wonderful, but they were not enough. Several States refused to ratify unless individual liberties were guaranteed. Today, we are, indeed, grateful for these holdouts, for the result of their struggle was the most revered section of our Constitution, the Bill of Rights.

The rising chorus of "Holy, holy, holy" wafting on the Sunday morning air, the chant of the cantor in the huge city synagogue, and the strains of the Ave Maria vibrating against cathedral walls—these are living testimonies to the freedom of every American to worship in his own way. Freedom of religion, though it is one of the most cherished privileges, brings with it the obligation of tolerance. How could we dare practice such liberty if we would deny it to others?

Our Bill of Rights guarantees no more important liberties than those of speech and press. For this right is the very foundation upon which democracy rests. It is the right to protest, to praise, to encourage, and to criticize. And yet it does not guarantee the right to slander. Every radio and television station, magazine, newspaper, and street-corner politician owes its very existence to this great liberty. It is the duty of all of us to use this privilege wisely.

How many of us realize that when the Parent-Teachers Association meets to discuss a youth center, when the Kiwanis holds its regular meeting, and when the American Legion assembles to plan its Fourth of July parade, that these activities represent a right that many countries of the world do not enjoy? A privilege like this must not be taken lightly.

Where else in the world do the people have the right to petition the Government for a redress of grievances? Many people have never even heard of this right; yet we are prone to take it, like too many of our other freedoms, for granted. It is not only our right but our duty to attempt through any legal means to rectify any unsatisfactory situation for which we hold our Government responsible. Grunting and groaning will not change a thing, we must be constructive. We must air our views, write our Congressmen, stand for our rights, and do our duty.

Under our Bill of Rights we may not be prohibited from bearing arms; yet the good citizen does not murder. He does not use arms carelessly. In this regard, he is aware of his responsibilities to his fellow citizens.

Has any soldier, sailor, marine, or airman of the United States been quartered in your house uninvited? No; of course not. Does an officer of the law search your house without a warrant? Certainly not. But our forefathers were forced to fight against such unwarranted acts. Colonial Boston was enraged over the quartering of British soldiers in the colonists' homes. They were subjected to humiliating searches by British officials. Yes; they were enraged. This, they could not stand, would not stand, and did not stand. Against this they fought, and we thank God that they won. Protection from such invasions is worth fighting for. The modern American citizen must not lose sight of these sacrifices made by our forefathers. He must manifest an equal willingness to do his part to preserve our freedoms.

The drafters of the Constitution, realizing the importance of the protection of individuals through the courts, added four articles covering this subject. In these four articles is embodied our cherished principle that a man is innocent until proved guilty. Colonial Americans had seen their countrymen accused of crime and carted across the ocean to be tried in an alien land by jurors whose impartiality they suspected. Consequently, they were very specific in indicating the procedure to be followed regarding those accused of crimes. The Bill of Rights guarantees that we shall not be obligated to testify against ourselves and that we may not be deprived of our property without just compensation and due process of law. Amendment 6 assures us a speedy trial before an impartial jury.

To be tried, an American citizen must be aware of the charge made against him, must be confronted by witnesses, must be given every opportunity to secure witnesses in his favor, and must be allowed the help of a lawyer. He cannot be tried twice for the same offense. In suits at common law, if the amount in question exceeds $20, he may demand trial by jury. We are protected against excessive bail or cruel and unusual punishments.

Do we as Americans realize the significance of these four short articles? Though they are brief, they speak volumes. We have only to observe the evidence of the mock trials held in the Soviet Union during the last few decades to appreciate the fruits of justice which we enjoy. We are obligated to be ever alert to see that our courts remain untarnished. We must be willing to cooperate with the forces of law, to serve on juries, and to help protect the rights of the guilty as well as the innocent.

The retention of local sovereignty is provided for in the 10th amendment, the last section of the Bill of Rights. This amendment nourishes the grassroots of democracy. On this principle the power and sovereignty of our 49 States rest. For it is at the State level that our people come into closest contact with our governmental processes. Throughout our history, the matter of States rights has occupied the attention of our most brilliant statesmen. Our own day offers no exception. This is a question that should concern and does concern every citizen of every State of this great Union.

Few are those who would claim that the Constitution with its Bill of Rights isn't an adequate foundation for our democracy. Abounding are those prophets of doom who claim that Americans no longer care about preserving their traditional liberties. Americans do care, but caring is not enough. We must be ever watchful for subversive ideas that would undermine the structure of our Republic.

A contemporary writer has said that "freedom is but one generation from extinction." He means, of course, that if the youth of America are not made aware of its heritage, its duties, and its responsibilities, then freedom cannot perpetuate itself. It is up to the older generation to see that our young people are instructed in Americanism, that they are familiar with the principles contained in our Declaration of Independence,

our Bill of Rights, and the other famous American documents that make up the basis of our law and our way of life. On the other hand, we as the youth of America are almost ready to assume full citizenship. We cannot afford to be indifferent to our civil duties. We must be courageous, sacrificing, and informed if we are to subdue the forces that would destroy our heritage.

This is easier said than done for the space age with its many uncertainties has complicated our roles as citizens. We have faith, however, that Americans will not fail to meet the challenge of our time. From Lexington and Concord to Pork Chop Hill, loyal Americans have given their utmost to preserve the traditions of liberty that have made us the greatest Nation on earth.

No, we will not fail to meet our obligations. We will agree with the words of William Tyler Page's "American's Creed": "I * * * believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

## Gen. Floyd Parks

EXTENSION OF REMARKS
OF
## HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 12, 1959*

Mr. THURMOND. Mr. President, the untimely death of Gen. Floyd L. Parks is a national loss, but is most deeply felt in South Carolina, his home State. General Parks and I were close friends. I was proud of the fact that we were both South Carolinians, both graduates of Clemson College, and both Army men. General Parks was outstanding in all three. He was a great soldier, a great South Carolinian, and a great American.

In view of his assignment as Chief of Information for the Army, he maintained close relationships with the newspaper people in the country. The esteem of one's associates and neighbors is usually most difficult to earn. General Parks considered Greenville, S.C., his home. In recent years he spent a great deal of his time in Washington. It is only appropriate that the editors of the Greenville and Washington newspapers have written editorials testifying to the fine qualities of General Parks.

I ask unanimous consent that editorials from the March 11 editions of the Greenville News, the Washington Post, and the Washington Evening Star be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greenville (S.C.) News, Mar. 11, 1959]

GEN. FLOYD PARKS

Although he was not born here and, in fact, spent relatively little time here, Lt. Gen. Floyd Parks regarded Greenville as his home and honored the community by doing so.

During his long and illustrious military career, General Parks never lost the common touch. He was the least "military" general officer we have ever known, though admittedly that term is difficult to define precisely.

The list of his honorable service is a long one. He was Chief of Staff to Gen. Matthew Ridgway and jumped with the latter into Nazi-occupied Holland in the largest airborne attack in history. After the defeat of the Axis forces, he was commanding general of the U.S. sector of Germany and led the first American troops into Berlin. He served as head of the administrative arrangements for the Potsdam Conference in 1945 and was commended by President Truman for his work.

General Parks was best known to thousands of Washington newsmen in his later role as Chief of Public Information for the Department of the Army. In that trying task, he was consistently courteous and helpful to a degree—to use an old military expression—"above and beyond the call of duty."

General Parks was a graduate of Clemson College and his name had been mentioned among those being considered for the presidency of that school. He would have been an excellent choice.

His death yesterday of cancer is a tragic event for it cut short a life still filled with activity and promise for the future.

The State which he loved so well pays him homage.

[From the Washington Evening Star, Mar. 11, 1959]

GENERAL PARKS

Lt. Gen. Floyd L. Parks, dead at 63, had a distinguished career in the Army—in peace, in war, and in the difficult period which has beset the world since 1946. Both his competence as a soldier and his skills in the field of interallied administration were reflected in the many honors paid him by our own and other governments. But to newsmen in Washington, and indeed to many from other cities at home and abroad, General Parks occupied a special place of respect and affection. He did two tours of duty as the Army's chief information officer at the Pentagon and they were years of pleasant and productive harmony between that service and the press. On that level, General Parks was serving his country again in the finest tradition of a good soldier—an officer and a gentleman.

[From the Washington Post, Mar. 11, 1959]

FLOYD L. PARKS

Lt. Gen. Floyd L. Parks was a fine soldier with an exceptional understanding of the importance of public information. This graduate engineer who served with armored and paratroop forces had a splendid wartime record as chief of staff at headquarters of the Army Ground Forces in Washington, as Chief of Staff of the 1st Allied Airborne Army in Europe, and later as commander of the 1st American Airborne Army and commanding general of the U.S. sector in Berlin. He led the first American troops into Berlin, helped restore public services in that devastated city, and made administrative arrangements for the Potsdam Conference. Afterward he served two tours as Army Chief of Information, as deputy Army commander in the Pacific and as commanding general of the 2d Army at Fort Meade before his retirement 3 years ago.

But these cold statistics do not tell the full story about a warm and able man. Floyd Parks had an innate sense of the situation, and his judgment, whether in command or in his information activities, was almost invariably keen. He was a valuable counselor who made his impact felt at top levels. He was an expert golfer and rifleman who also lover a good story. This flair for putting the Army's best foot forward was recognized in the fact that he was twice brought back to the Pentagon as Chief of Information. His credo, as described in the Army Information Digest, was a simple one which bears much emulation:

"Many people mistakenly think that the primary public information mission is to suppress unsavory stories or at least counter them with favorable releases. In reality it is not possible to suppress news, whether good or bad, and it is poor policy to tray. * * * Therefore if the story is bad, I admit it; if it is good, I try to see that the good points are known—and speedily."

In addition to the many military comrades who will miss Floyd Parks are a host of grateful newsmen who respected him as a good friend and ally.

## The Youth Conservation Corps

EXTENSION OF REMARKS
OF
## HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 12, 1959*

Mr. MURRAY. Mr. President, experienced newspapermen, from nationally known columnists like Walter Lippmann to publishers of country weeklies, like A. M. Secrest of the Cheraw Chronicle in South Carolina, have called attention to the failure of the Eisenhower administration to implement the Employment Act of 1946.

Some additional legislation such as the Emergency Unemployment Compensation Act proposed by the Senators from Michigan [Mr. MCNAMARA and Mr. HART], the Senator from Pennsylvania [Mr. CLARK], and several other Members, are necessary to combat unemployment. However, as the Cheraw Chronicle has clearly pointed out, the administration does have on the books laws which would help increase employment if the administration only chose to use these laws.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the March 5 issue of the Cheraw Chronicle. This editorial states that—

For those, however, for whom private enterprise cannot provide, State and Federal Governments should work out a plan, perhaps patterned after the New Deal's old CCC

Thereby, this vigorous country weekly endorses the proposal of the Senator from Minnesota [Mr. HUMPHREY] and many other Members of the Senate, to establish a Youth Conservation Corps.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEVERMIND LABELS, WE'RE FOR EMPLOYMENT

There is a Federal statute known as the Full Employment Act. This law, presumably, would abolish unemployment.

We are not acquainted with the provisions of this particular law and cannot know, therefore, whether it, in truth and in fact, is capable of doing the job for which it is intended. We suspect, however, that, as is the case with so many other problems, there are ample laws to take care of the unemployment situation. What is lacking, most probably, is the will of the present administration to use effectively those laws already enacted.

Despite record-breaking prosperity, the soaring stock market, and all the other evidences of good times, there remains a chronic unemployment problem in America. It affects all sections of the country, but it is most apparent among the ghettos of the northern cities and in small towns and rural areas down south.

The effects of unemployment are felt right here in Chesterfield County. To shrug off the difficulty with the remarks that "there are always unemployable people" and those "inherently indigent" is a thoroughly inadequate response to a very real and cruel human dilemma.

It is up to private enterprise and the government to join hands in a cooperative effort to lick the problem. Failure to do so spells poverty for large numbers of our citizens—not only material poverty but intellectual and spiritual poverty as well.

For honest labor, whether it be painting a portrait, digging a ditch, managing a store, regulating an assembly-line lathe, or writing a best seller, lends a person self-respect, self-confidence, security, and dignity.

Much crime, delinquency, squalor and disease stems from enforced idleness. Furthermore, an area's economy and living standards decline when chronic unemployment becomes the accepted pattern. The more people we have making more money to spend on more things, the greater prosperity we all enjoy.

When you see lines of strong able-bodied men and women reporting for their unemployment checks, or crowding the offices of the employment services; when you observe stout-looking fellows hanging around street corners without anything to do, when you see empty streets and scantily-filled stores during mid-week, you realize the need for more industry to provide more jobs for the folks here at home.

While the white population is affected considerably by unemployment, the situation is at its most acute and painful among colored people. What a monumental waste of human brains and brawn one sees.

What we need is an ambitious cooperative undertaking, involving private management, and the State and Federal Governments, to provide useful work for those who aren't employed now. At a time when the economy of Communist nations is multiplying at a rate far greater than our own, it is sheer folly not to use all our resources.

There's still much want in this country. There are still great conservation measures to be taken, roads to be built, dams to be constructed, forests to be planted, swamps reclaimed, and civil defense projects to be erected.

We are opposed to putting men on leaf-raking schemes so long as there are so many worthwhile projects to undertake. The primary aim, however, is to put people to work, preferably in jobs near their own homes. Work secured in private industry is the ideal answer, and for that reason we ought to bend every effort to attract more risk capital here and bring in more outside industry.

For those, however, for whom private enterprise cannot provide, State and Federal Governments should work out a plan, perhaps patterned after the New Deal's old CCC.

Greater productivity creates greater real wealth, and such a program should, eventually, more than pay for itself. We suggest, furthermore, that bookkeeping problems should not be our primary concern. Solutions ought to be sought, and we should not permit opponents of full employment to use scare words, such as the much-abused and overused label "socialism," to defeat worthwhile goals.

## The Mikoyan Salesmanship

EXTENSION OF REMARKS
OF
## HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles dealing with Deputy Premier Mikoyan's visit to the United States.

The first article by Harrison E. Salisbury was published in the New York Times of January 11, 1959, and is entitled "Mikoyan's Success."

The second article is one which I prepared for the North American Newspaper Alliance.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 11, 1959]

MIKOYAN'S SUCCESS—SOVIET VISITOR MAKES DEEPENING IMPACT DESPITE WASHINGTON'S HANDS-OFF ATTITUDE

(By Harrison E. Salisbury)

SAN FRANCISCO, January 10.—Anastas I. Mikoyan brought his Soviet good will mission to the Pacific coast today. There were signs in each city that the First Deputy Premier has visited of a deepening impact resulting from his blunt words, crackling wit, and unfailing good humor. For a man who has spent most of the last 35 years high in the ranks of the Kremlin leadership, Mr. Mikoyan has displayed outstanding gifts of public relations. He has campaigned in Cleveland, Detroit, Chicago, and now San Francisco with the skill of a veteran of the American political lustings.

In fact, his whirlwind trip has acquired much of the flavor—but few of the amenities—of a national Presidential campaign tour. However, Mr. Mikoyan is not running for American political office—not yet, at least.

He is running for peace at every point, in every city, before every kind of audience—before workingmen in the River Rouge powerplant of the Detroit Edison Co., before the bankers of Cleveland, the furniture salesmen of the Chicago Merchandise Mart, the lawyers of the Middle West. To every American he can reach with his message, Mr. Mikoyan is saying: Let's argue, let's dispute, let's compete, but let's not fight.

SEES NO GOLDEN AGE

He is not holding out hope of a golden age in which the capitalist lion and the Communist wolf shall lie down together. But he is saying with every modulation of his quick-witted Armenian temperament that this is one world and that Russians and Americans must live in it together, at least as peacefully as, for instance, General Motors and Ford inhabit the environs of Detroit.

Mr. Mikoyan's speech has not been completely uninhibited. But he has been saying the kind of things that Americans are not used to hearing from Kremlin spokesmen. He is talking in pithy terms of men whose names so long have been headline words in the United States—Lavrenti P. Beria, former police chief; Vyacheslav M. Molotov, former foreign minister; Nikolai A. Bulganin, former premier.

He is talking about these men not in the cliches of Pravda but in salty language of his own. And the American audiences, made up of influential business, industrial, and banking leaders, are reacting positively. Their warmth surprises Mr. Mikoyan and sometimes, it seems, even his listeners as well.

U.S. HANDS-OFF ATTITUDE

No Soviet statesman has ever attempted anything like Mr. Mikoyan's campaign before. In fact, few foreign leaders of any country have taken to the road in the United States in the manner in which he has done. Few would care to tackle the odds against which Mr. Mikoyan has been working thus far with startling success.

The way in which Mr. Mikoyan's campaign has developed has brought into critical focus State Department policy with respect to the Soviet visit. The State Department has maintained an official hands-off attitude, taking the line that Mr. Mikoyan is here on a private visit that must not be dignified by official arrangements.

It has accepted minimum security responsibility for Mr. Mikoyan's movements, but nothing more. It has done nothing to facilitate his visits to United States cities. It has provided no official host of liaison for his party. It has refused to offer advice to local officials as to how Mr. Mikoyan should be treated, whom he should see or what he should be shown.

Under the circumstances, the White House statement expressing hope that Mr. Mikoyan would be afforded every opportunity to see American life at its best has a somewhat dubious ring to correspondents who have observed the Mikoyan visit.

The fact is that Mr. Mikoyan is seeing a good deal of the United States and is making a decided impact on many leading Americans. But he is doing this in spite of the State Department.

The impression given to Mr. Mikoyan is that there is a deep split between official Washington, on the one hand, with its narrow definition of protocol and deep-freeze approach, and the attitude of powerful business interests of the country. In contrast to the Government, big business has acted with traditional warmth.

It would appear that the State Department once again was caught off balance by Soviet initiative. It seems probable that Washington, despite repeated advice from Llewellyn E. Thompson, Jr., Ambassador to Moscow, underestimated the force and vigor of Mr. Mikoyan's personality and the energy that he would dedicate to the cause of convincing Americans that it is time to end cold war.

The seeming discourtesy of the State Department, the constant harassment by Hungarian pickets and the erratic arrangements of the local police, who in Chicago spent more time fighting newsmen than holding back demonstrators, have produced a barrage of negative publicity for the United States in Europe.

Mr. Mikoyan's trip is being covered in minute detail by a corps of foreign correspondents. Many of their dispatches have been couched in acid terms as far as official America is concerned. And Mr. Mikoyan is getting the highest marks for ability to maintain equilibrium under trying circumstances.

Mr. Mikoyan's talks have not been a mere collection of platitudes about good relations. He has been advancing a consistent line for United States-Soviet relations. This is simply: Let us stop arguing about the past and concentrate on negotiating our way out of present difficulties.

Mr. Mikoyan insists that the Soviet position on Berlin will not be changed. But at the same time he has given repeated and clear hints that, like all Soviet positions, this is in fact negotiable.

With regard to United States-Soviet relations in the United Nations, he has said:

Let us stop making the United Nations a propaganda forum. There is no useful purpose served in rolling up majority votes against the Soviet Union. This settles nothing.

Instead let us negotiate. Let us seek to reach agreements. If we cannot get an agreement, let the question lie over for 6 months or a year while the diplomats work at it. Perhaps after a year they will come up with a solution. Meanwhile, do not bring the issue up for a vote, which may go against the Soviet Union but certainly will not solve the issue.

---

MIKOYAN'S VISIT SPELLS FURTHER SOVIET SALESMANSHIP ON TRADE AND BERLIN, SENATOR HUMPHREY STATES

Anastas Mikoyan's tour of the United States added up to:

1. A new chapter of Soviet supersalesmanship to win the American "market" of public opinion.

2. A signal of additional Soviet overtures to come so as to break the diplomatic impasse over Berlin.

In appraising the coast-to-coast Mikoyan tour, too many people jump to one or the other conflicting conclusions to the effect that the overall result was a success or a failure, that it changed nothing, or changed a great deal.

Actually, Soviet diplomacy is relentless and is based on the most intricate long-range planning. It rarely consists of "one-shot" trys. Successful or not, each step fits into an unending pattern of probe and thrust. That means, constantly feeling for weak spots and then exploiting every point which may yield to pressure.

Throughout his travel, the shrewd First Deputy Premier evaded, in effect, all the embarrassing $64,000 questions, such as the martyrdom of enslaved Hungary and what if anything he would concede as being wrong today in Russia. Instead, he seized the offensive and boldly sought to appeal over the heads of U.S. officials. His aim was a psychological breakthrough, especially on the trade, Berlin, and other key fronts.

How successful his effort was, only the future can really confirm or deny. But these facts seem evident:

(a) Mikoyan's deft public relations, his "soft sell" salesmanship did pay off in favorable reaction in some quarters. The fact which is obvious, now even to the Soviets, is that their traditional "hard sell"—bluster and threats—wins few, if any, friends or converts here. But some Americans do react to Soviet "soft sell."

(b) The Soviets may now be expected to offer a new alternative formula looking toward disengagement in central Europe. Mikoyan's comments at the luncheon of the Senate Committee on Foreign Relations indicated that the road to any agreement on troop rollback from the Elbe is still a hard one, but that it is nonetheless a possibility which the Soviets are seriously offering.

(c) Mikoyan did bring home at least part of the bacon for the 21st Congress of the Communist Party of the Soviet Union, which opens next Tuesday. Khrushchev, in dispatching Mikoyan here was, I believe, determined to be able to report thereby to the assembled comrades that Khrushchev and company are making some progress toward settlement of the serious Berlin crisis. I am convinced Mr. Khrushchev is extremely concerned as the May 27 "ultimatum—which was not an ultimatum" approaches for Allied forces to get out of Berlin. The Soviet Premier knows that the Allies remain united in rejecting the ultimatum, and he has somehow to get off the hook of his own making.

(d) Mikoyan did, I believe, considerably jolt American opinion in high circles. He forced the State Department to think through whether our old, tired formula of weak counterpunching to the flurry of Soviet cold war proposals will suffice. The vigorous, imaginative Soviet diplomacy such as Mikoyan represented can hardly be contested effectively except through far greater vim, imaginativeness, and initiative on our own part. But these are qualities which have often been conspicuous by their absence in recent U.S. diplomacy.

(e) Mikoyan has impelled American opinion and the American Government to answer the question of, "What, indeed, is our policy toward expansion of U.S.-U.S.S.R. trade?" To date, our attitude toward such enlarged trade has been neither "fish nor fowl."

We had better make up our minds whether (a) we, in effect, regard all such trade as needlessly strengthening world communism, or (b) whether we feel there should be such expanded trade aside, of course, from materials useable in military weapons.

We cannot underestimate how zealous the Soviets are to trade in heavy items, especially those like petrochemical equipment and pipelines, which are crucial to the success of their ambitious 1958–65 7-year plan.

This was an impression which I gained in my December 1 talks in Moscow with Khrushchev, Mikoyan, and with Trade Expert Kuzmin, whom Khrushchev had specifically suggested I see. Khrushchev went allout for trade. "We desire mutually beneficial trade, not gifts," he told me. "We trade with 70 countries. Our firm is a good one."

The Premier, however, did not hesitate to add that if we refused to sell various needed items Russia would produce them, anyway. "By refusing to sell items to us you do not prevent us from producing them; you simply cause a delay which we overcome because we are forced to rely on our own resources," he told me.

In any event, a priceless opportunity was, in my judgment, lost when Mikoyan visited the U.S. Commerce Department. There, we could have offered him before the eyes of the world a long list of consumer items which the Soviet people do desperately want (in contrast to the heavy industry goods) which alone interest the Kremlin.

It was Berlin, however, which was on Mikoyan's mind most of all.

Russia had confidently expected that her 6-month ultimatum would precipitate fissures and pressures inside allied ranks, but Big Four unity has held firm. Instead, there is evidence to believe that the threat of a May 27 deadline has, like previous Soviet saber rattling, actually caused alarm within the Soviet hierarchy itself. Among all governing people, the crafty leaders of the presidium are, perhaps, least of all willing to permit Khrushchev and company to risk an all-out war over Berlin or on any other local issue, however important.

Inevitably, the Soviet Premier has been getting more and more impatient for a Berlin settlement. "What are your counterproposals on Berlin?" Khrushchev had asked me, just as Mikoyan kept probing for some new formula and U.S. concession.

All in all, the Soviets feel that if the Mikoyan visit did set the stage for a U.S.-U.S.S.R. agreement on Berlin, it might establish a basis for further globe-changing decisions. These might bilaterally alter the map of spheres of influence. The implication here is: Let's you (the U.S.) and us (the U.S.S.R.) talk; just ourselves; no one else. This is a theme which I had heard repeatedly, in effect, from the Soviet Premier. But we are not buying it. The United States has no intention of violating genuine partnership with its allies by unilateral decisions without their consent.

For resolving world policy problems, Premier Khrushchev apparently divides people and nations into two categories: those with supreme power, or access to it, and those who lack such supreme power or access. He is interested basically in deals only with the powerful. He has no time for anyone else. "We're competing only against you, the United States," he told me. This was in the context of his pointing out a contrast between the Soviet Union and Red China. Here, he was referring to the latter's assertion that in 15 years, Peiping would surpass the steel production of the United Kingdom. To surpass Britain might be considered a feat for the Chinese Reds, but to the Soviets, there is only one big league team worth competing against, and that is the United States.

The "world series," so to speak, is the contest for the entire globe. It is a contest which the Kremlin would like to win peacefully through what I described to Khrushchev as its Operation Nibble. Khrushchev chuckled at the characterization, but did not refute it.

Peace was his refrain, just as it was Mikoyan's.

MIR—peace—is constantly on Khruschev's and Mikoyan's lips, just as it was on the lips of Russians in all walks of life whom I encountered during my week in Russia.

Khrushchev knows what world war III would mean, for during our discussion, he indicated in turning to a large polar map, a virtual East-West inventory of possible U.S. and Soviet thermonuclear targets.

But talk of the possibility of war is never too far from the lips of the Soviet hierarchy. It is determined to impress us with the fact that it is not panic stricken by the thought of conflict. Khrushchev, for example, told me, bluntly it will be war "if you attack the forces of the German Democratic Republic. We will not permit the liquidation of a Socialist state."

I do not doubt that Khruschev feels that his whole house of cards in Eastern Europe might indeed collapse if the very survival of the misnamed East German "State" were endangered. And that is one reason why he is determined to get the "Berlin bone" out of his "throat." For Free Berlin, apparently, does represent a critical threat to the puppet regime of Walter Ulibricht. The astonishing 10-year total of 3,500,000 refugees who had previously fled from East Germany through the Free Berlin escape-hatch is supplemented each month by an additional 20,000 refugees. How long, many observers have wondered, can a State like East Germany continue to hemorrhage in this fashion, losing its lifeblood—its people, particularly its top specialists like doctors and engineers?

Naturally, Khrushchev in his talk with me did not acknowledge that this embarrassing dilemma is the crucial reason for the Soviet's wanting so-called internationalization of West Berlin. Instead, Khrushchev pointed his fire at Allied occupation troops there, pretending that their presence constitutes a danger of aggression.

This camouflage of real reasons is characteristic of Soviet double talk and feint. Disguise, together with attempted outwitting—these are Soviet stock in trade.

It was not without significance that Khruschev recalled another memory from experiences at the key city of Kharkov during World War II. He mentioned how, anticipating the Germany onslaught toward that vital objective, the Red Army had laboriously built up extensive lines of defense. But a tour de force in Nazi strategy completely outflanked the defenses.

Khruschev has not forgotten that and a lot of other tricky lessons.

"We will outflank your NATO—it is obsolete," he told me. "We will surpass you

economically." And I believe that he is determined to do exactly that, particularly in the area of the world which has far too little concerned us—the emerging areas of Asia, Africa, and the Middle East.

Yet NATO is not obsolete if it can be transformed from a straight military alliance to a fountainhead of free world economic, political and social strength. Therein is a key to U.S. success in competitive coexistence.

## Need for Federal Aid to Schools

EXTENSION OF REMARKS
OF
### HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Thursday, March 12, 1959*

Mr. NEUBERGER. Mr. President, a thoughtful and informative editorial in the Medford Mail Tribune for March 1, 1959, entitled "NEA Points the Finger," has emphasized the fact that Federal assistance is needed in many school districts to avoid a ruinous increase in local school taxes. The editorial, written by Eric W. Allen, Jr., managing editor of the Mail Tribune has relied for its factual statistics upon material gathered by the National Education Association. My own experience with the NEA has convinced me that this material is fundamentally accurate and reliable. Mr. Allen, in his editorial, stresses further that since 1948 this Nation has spent only about half as much on public elementary and secondary schools as it has spent on alcoholic beverages, tobacco, and cosmetics. This is not an encouraging picture, but unfortunately it is the sorry truth.

I ask unanimous consent, Mr. President, that the editorial from the Medford Mail Tribune of March 1 be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEA POINTS THE FINGER

The National Education Association is not exactly an unbiased outfit.

It is composed largely of schoolteachers and administrators, and is, quite naturally, concerned with the future of the schools in particular and education in general.

For this reason its pronouncements can be eyed with the knowledge that they come from a not-disinterested group, although it is a group which generally is characterized by high ideals, and a dedication to their life's work—which is as it should be.

That preamble is by way of putting in perspective a release received this week from the national headquarters of the NEA, which had to do with what it called one of America's national blind spots—paying for good schools.

The news release concerns a report from the NEA Journal entitled "Can America Afford Better Schools?"

Here is a sample of the eye-opening statements of fact contained in the report:

In 1902 the share of all taxes going to education was about 17 percent.

In 1932 the share was 25 percent.

In 1958 it was 12 percent.

The figures, coming from this source, can be presumed to be accurate. (The only qualification that immediately suggests itself is that in neither 1902 nor 1932 was national defense a major taxeater, as it is today).

The report goes on to present other figures of interest.

It points out that the Federal Government, with its efficient, streamlined collection system, collects almost 3 out of every 4 tax dollars. And it adds:

"Yet, despite the national implications of our brainpower race with other nations, it (the Federal Government) pays only 4 percent of the cost of public schools. Local and State governments pay 96 percent."

The NEA says there will be a 100-percent increase in the cost of education within the next decade. This is based on census figures showing the rising number of school-age children, plus the expanding birth rate.

And the NEA doubts that local and State governments can handle this 100-percent increase, pointing out that local and State debt has risen 182 percent since 1948.

Unless the Federal Government assumes a larger share of the cost of schools, it forecasts:

A 50- to 90-percent increase in real estate taxes in thousands of communities.

A 2- to 4-percent increase in sales taxes in some States.

An income tax jump of 2½ to 5 percent in some States.

An increase of 4 to 8 cents in cigarette taxes in several States.

This is a pretty dismal picture.

Can America, then, afford to double its school expenditures, no matter what unit of Government pays for them?

The NEA says it can. It says:

"The value of all goods and services produced by the Nation in 1 year is now $430 billion. That's 70 percent over what it was in 1948.

"Our national income is up 63 percent since 1948, and our personal incomes after taxes and our personal savings have increased drastically. Since 1948, we were able to afford $110 billion for new and used cars, $151 billion for alcoholic beverages, tobacco and cosmetics, and $127 billion for recreation.

"In the same period, we spent only $78 billion for public elementary and secondary schools."

We would like to see some authoritative, unbiased source either corroborate or disprove these figures, for they look highly significant to us.

Are we, really, spending only about half of what we did in the depression year of 1932 (percentagewise) on schools?

Have our incomes after taxes, and personal savings, increased drastically since 1948?

Do we really spend only about half as much on schools as we do on liquor, tobacco, and cosmetics?

If these things are true, then we, as a Nation, ought to be thoroughly ashamed of ourselves.

Does education really mean so little to us?

If the NEA's figures are not correct, then they should be set straight.

But if they are correct we can have both guns and butter—which in this case means schools—with less sacrifice than in 1932 or 1948.

Taxes on all levels and of all varieties have risen sharply. But if the NEA's statement is well founded, they have not risen as sharply as personal income, and as a result, a lesser proportion of individual income is going to buy the things that only government can furnish.

The most important of these, in the short run, is national defense. The most important in the long run is education.

## Inflation: A Matter of $2 or $3 Billion

EXTENSION OF REMARKS
OF
### HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 12, 1959*

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and informative editorial from the Journal of Commerce of today entitled "A Matter of $2 or $3 Billion." It deals with the subject of inflation, and I think it will be most profitable for every Member to read.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MATTER OF $2 OR $3 BILLION

The administration keeps walking farther and farther out on that well-known limb with its every fresh assertion that the Federal budget must be kept in precise balance if this country is to avoid a renewal of inflation.

The fact of the matter is, barring the wholly unlikely eventuality that 1959 turns out to be a boom year of 1955 dimensions, that the 1960 budget is going to be unbalanced. A boom could produce enough additional revenue to put the Government in the black for fiscal 1960, but spending, regardless of economic conditions, is bound to exceed the budgeted $77 billion. This will happen because Congress will have it that way; because the administration based its every estimate of outgo on the happiest possible assumptions, and some of them are bound to turn out wrong; and because there is evidence of plain hanky-panky in some of the budget figures, such as the maritime subsidies.

Government leaders surely know this as well as we do, yet all of them, from the President down, keep warning of terrible inflationary consequences if there is a deficit, however small. They are doing this, quite obviously, because they hope to scare Congress out of voting additional spending programs.

But it would appear that the administration has never stopped to consider the fact that it is helping to create the very thing it is seeking to avoid—inflation—by this constant equating of a deficit with inflation.

The day of reckoning may come soon, and certainly not later than August or September, a few weeks after Congress has completed action on the last appropriations bill, when the Bureau of the Budget publishes its annual revised budget estimates. If the revision indicates a deficit, as we believe it surely will, the administration's response can only be one of two things, neither of them very pleasant to contemplate.

It can say, in effect, "Shucks, Mr. Citizen, Mr. Investor, Mr. Businessman, we didn't really mean it. A deficit of this size isn't really going to hurt much."

Or it can say, "Well, we warned you and now it has happened. Congress unbalanced the budget and prices are going to take off into the upper stratosphere."

Obviously, some version of the former, rather than the latter, is the line which will have to be adopted. But it may not be believed in the light of all that has been said in the past, and the financial markets,

business, and the public may begin behaving as though inflation were inevitable—thus helping make it inevitable.

Even if the public accepts the Administration's sudden assurances that all is going to be well after all, real damage will have been done, because no future warning of inflationary danger will be credited. This is no small point. In the calendar year 1960, unlike this one, economic conditions may be such that a balanced budget actually will be crucial to the prevention of inflation. And 1960, as everyone knows, is a presidential election year and therefore a year in which it will be difficult, indeed, to hold the congressional spends in line.

There are those (including one member of the Eisenhower Cabinet) who have chided us for not joining in the fight for a budget balanced to the last penny and asked why, as a conservative newspaper, we are not more concerned about the inflationary consequences of an imbalance.

This newspaper's unyielding opposition to even a little bit of inflation ought to be fairly well known by now. But as a conservative newspaper, we have always taken seriously our obligation to think straight on economic issues. It just isn't that to hold that a deficit of $2 or $3 billion would pitch this economy into inflation.

Such a hypothesis implies that the single factor which dictates the trend of prices is the Federal budget. Not so. The economy must be looked at as a whole and present conditions are not inflationary. It is an increase in the money supply, basically, which creates inflation, and the Federal Reserve—having learned a lot from its errors in 1953 and 1954—maneuvered through the late recession without allowing any important increase in the money supply and then pulled the reins tight again almost at the first sign of recovery. In addition, there is little reason to believe that consumer or business borrowing is going to expand to any dangerous extent this year. There is small prospect of any strong pickup in business spending for capital equipment until fall or later, and plenty of retained earnings in hand to finance what pickup there is.

In examining the inflationary impact of debt, it is the total of new debt creation that has to be looked at, not just the Government deficit. This is a fact the administration appears to have forgotten.

To be sure, the administration should try for a balanced budget because there is moral worth in pay as you go in reasonably good times. We agree with that. We should limit Federal spending because there is danger in constantly increasing the centralization of power in Washington. We agree with that.

We ought to balance the budget in 1960 so we can have a tax cut next year. We hope conditions will be such that we can agree with that.

Washington ought to stop telling us that the budget has to be balanced to the last penny because otherwise uncontrollable inflation will result. We know better, but many people will be persuaded if administration spokesmen keep saying it. And therein lies the danger.

## Safety in Operation of Boats

EXTENSION OF REMARKS

OF

### HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. NEUBERGER. Mr. President, one of the real accomplishments of the 85th Congress was passage of the Small Boats Act, which seeks to assure safety on the water for the ever-increasing number of Americans who venture out on rivers, lakes, and the sea in their own craft.

An outstanding and thorough book which seeks to advise our countrymen on how to operate and navigate boats has been written by a talented constituent of mine, Mrs. Enid Wolf, of Portland, wife of Professor Ray Wolf, of the faculty of Portland State College.

Mrs. Wolf's book is entitled "A-Boating We Will Go." It is published by the McGraw-Hill Book Co., of New York City. Mrs. Wolf's volume was capably reviewed in the Portland Oregonian of October 20, 1958, by Lawrence Barber, veteran marine editor of that daily newspaper. Because of our great interest in assuring safety on the high seas and on lesser water routes for the owners of pleasure and commercial boats, I ask unanimous consent that Mr. Barber's review of Enid Wolf's book be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANUAL ABOUT BOATING PUBLISHED

(By Lawrence Barber)

After several years of pleasure boating, Enid Wolf, of Portland, compiled a how-to-do-it manual which is being published this month by the McGraw-Hill Book Co., Inc., New York, under the title "A-Boating We Will Go."

Addressed to new boating families, and particularly to the first mates in these families, Mrs. Wolf's work delves into many of the little problems which face people who have just acquired their first boat.

Mrs. Wolf and her husband, Ray, a professor at Portland State College, acquired a 14-foot boat and outboard motor which they mounted on a trailer and towed off to alluring lakes, bays, streams, and sounds of the Pacific Northwest. But they hankered for a larger craft—say about 22 feet in length—with facilities for cooking meals, sleeping, and living comfortably afloat.

MANY BOATERS SEEN

Through the medium of the boat, the Wolfs met many dyed-in-the-wool boating people of Portland and vicinity, and they enrolled in the Portland Power Squadron's classes in piloting to learn all they could. Enid eventually became an active member of the Lady Pilots, the squadron's auxiliary, and she now is its secretary. They live at 4035 NE. 70th Ave.

When the inspiration to write a book on family boating overcame Mrs. Wolf, she turned to her new-found friends for much of the material. She wrote letters all over the Nation, especially to the commanders of power squadrons and members of auxiliaries, to gather together suggestions, recipes and experiences. So "A-Boating We Will Go" has a national as well as local scope, although many Portland boaters find themselves mentioned.

The book is slanted toward living and cruising in a 22-foot cruiser, which is about as small as a family of four can comfortably and safely get along with. To make the story more savory, Mrs. Wolf created a family of four, the Patricks—Ed, Sally, Bill, and Sue—who are typical of many Portland families now a-boating. She takes this family through 336 pages of do's and don'ts, a new language, tips on stowage and built-ins, cabin decor and conveniences, clothing, safety afloat, cruise planning, piloting and seamanship.

MISTAKES NOTED

She points out the awful mistakes of another imaginery boating family, the Marstens, who started out on their first cruise without giving thought to numerous mistakes that could be made in their first hour afloat. This family soon was back at the wharf utterly disgusted and confused.

"It's like trying to drive a car at high speed down a crowded highway without ever before having had hands on the wheel," the author notes.

One of the choicest sections in the book is given to food service—meals that can be prepared at home to take to the boat, meals that can be prepared on the boat for a small group, and meals that can be prepared on the beach for a large party.

Sketches throughout the text illustrate such diverse subjects as cabin arrangements, artificial respiration, knots and piloting problems.

## Meyer Berger, a Giant Among Journalists

EXTENSION OF REMARKS

OF

### HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. KEATING. Mr. President, one of the real giants of the fourth estate recently passed away. He was Meyer Berger, the skilled, knowledgeable, and human newsman of the New York Times. Better than any other man, he captured the sights and sounds, the heart and heartaches, of the city of New York. He managed to infuse into his writing the same warmth which characterized the man himself.

Shirley Povich, the able and well-informed columnist of the Washington Post, who possesses many of Meyer Berger's fine characteristics, epitomized Mr. Berger's qualities in his moving and effective column of February 12, which has been inserted in the RECORD by Representative DANIEL J. FLOOD. The Post of February 11, published a fine editorial about Mr. Berger which also describes well the special place he held in the hearts and minds of his fellow reporters.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REPORTER'S REPORTER

In city rooms across the country—where the ersatz is invariably given short shrift—the reputation of Meyer Berger has long held a special magic for newspapermen, young and old. Until his death on Sunday at 60, Mr. Berger seemed as much a fixture of the New York Times as the motto pledging all the news fit to print. Many of Mr. Berger's human interest stories were not only fit to print but also became known as classics of their kind because he was able to infuse such warmth and insight even into the most outwardly mundane local happening.

One reason for his success was that he retained the inquisitiveness of a cub reporter while his inborn gentleness shielded him from the arrogance which can be a journalist's worst occupational vice. Combined with this was a vivacity of style that placed Mr.

Berger among that small group of newspapermen who have become legend in their craft, writers like Robert J. Casey of the old Chicago Daily News, Richard S. Davis of the Milwaukee Journal, and Ray Sprigle of the Pittsburgh Post Gazette.

There remains an anecdote. In 1950, Mr. Berger won the Pulitzer Prize for his report of the day that Howard Unruh ran amuck in New Jersey, killing 13 persons. In its obituary, the New York Times adds: "Only one or two intimates ever knew that Mr. Berger sent his $1,000 prize money to the mother of the 28-year-old killer." Mike Berger's spirit as well as his pen will be missed.

## Death of Former Senator Joseph F. Guffey, of Pennsylvania

EXTENSION OF REMARKS
OF
## HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. CLARK. Mr. President, last Friday, March 6, a distinguished Pennsylvanian and a long-time former Member of the Senate, Joseph F. Guffey, died at the age of 88. A number of Pennsylvania newspapers, and also newspapers in Washington, where Senator Guffey lived during his declining years, published biographies of this stanch Democrat and fine American.

I ask unanimous consent that articles relating to Mr. Guffey and published in the Pittsburgh Sun-Telegraph, Philadelphia Bulletin, Pittsburgh Post-Gazette, and Washington Evening Star be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Sun-Telegraph, Mar. 7, 1959]

JOSEPH GUFFEY IS DEAD AT 88

Former Senator Joseph F. Guffey, 88, Democratic stalwart of New Deal days, died last night of a heart ailment in Doctors Hospital, Washington.

Guffey, only Pennsylvania Democrat to serve two Senate terms, was a power in the State's politics for decades.

Born in Westmoreland County, he spent most of his life in Pittsburgh, but lived in Washington since losing to former Senator Edward Martin in the 1946 GOP landslide.

Guffey's political ascension began in 1912 with a gamble that paid off.

Breaking with his uncle, Col. J. M. Guffey, veteran Pennsylvania Democratic leader, he backed his former Princeton University professor, Woodrow Wilson, for President.

Wilson's nomination and election established Guffey as a power in the Democratic Party.

During his years in the Senate from 1934 to 1947, he was one of President Roosevelt's strongest backers, describing himself as "a 100-percent Roosevelt man."

As Democratic national committeeman from Pennsylvania, he helped swing the first nomination of F.D.R. He also backed a fourth term for Roosevelt in 1944.

He defeated the late Senator David A. Reed for his first Senate term, and was reelected in 1940. He had a record of never opposing an item of New Deal legislation.

Guffey was best known for sponsoring a bituminous coal stabilization bill, known as the Guffey Coal Act.

The original act, which fixed prices, was voided by the Supreme Court. A subsequent measure was passed in a form that satisfied the Court.

In May 1941 Guffey urged Navy convoys for submarine-threatened merchant ships en route to Britain.

Guffey was at Princeton between 1890 and 1892. His first job was with the Post Office Department.

Then he held a string of executive positions with various oil and utility companies, rising to president of Guffey-Gillespie Oil Co., Atlantic Gulf Co., and the Columbia Syndicate.

Guffey began his long service on the Democratic National Committee in 1920. He battled Governor Lawrence during much of his career for control of the State Democratic organization.

Guffey was born in Guffey's Station. His father, John, was then sheriff of Westmoreland County. Guffey once said:

"I grew up in politics. There was a time when there were 31 Guffeys of voting age—all Democrats and voting in the same precinct."

He was a bachelor, and is survived only by his sister, Mrs. Emma Guffey Miller, with whom he made his home in Washington.

Guffey once summed up his feelings by quoting Senator Par Harrison of Mississippi:

"I love my party better than anything in the world except my country."

[From the Philadelphia Bulletin, Mar. 17, 1959]

SENATOR GUFFEY DIES AT 88; WAS ARDENT NEW DEALER

WASHINGTON, March 7.—Joseph F. Guffey, Democratic Senator from Pennsylvania from 1935 to 1947, died last night following a heart attack. He was 88.

Mr. Guffey, an ardent New Dealer, was elected on the one-sentence campaign slogan: "I will be 100 percent with F.D.R." He backed a fourth term for President Roosevelt in 1944.

The ex-Senator was taken to Doctors Hospital yesterday afternoon. He has lived here quietly since leaving the Senate.

Relatives said he had been having heart trouble for the last 2 weeks but was thought to have been recovering. He suffered a relapse and was taken to the hospital yesterday afternoon. Death occurred at 7:40 last night.

Guffey is survived by a sister, Mrs. Emma Guffey Miller.

BACKED WILSON

Politics was a lifelong hobby as well as a career for Mr. Guffey. He was a powerful figure in Democratic politics, both in Pennsylvania and nationally, starting in 1912 when he took a political gamble—that paid off—in backing Woodrow Wilson for the presidential nomination.

His own career reached its peak around 1940, when he was elected to a second term to the Senate. In 1946, a Republican landslide year, he was defeated for reelection by Edward Martin.

Mr. Guffey had an abruptness of speech and a manner which made it clear he was no backslapper. He habitually dressed like the picture of a conservative banker, including a vest with white piping. Yet he knew the value of friendly relations with his constituents, and was known to many of them as Joe.

Mr. Guffey had investments in oil and other things which brought him a comfortable income, once estimated at $50,000 a year. He virtually dropped from sight after his 1946 defeat.

LED DELEGATION

Funeral services will be held in his Washington apartment at 4 p.m. Monday, with burial Tuesday afternoon at the same hour in the family vault at West Newton Cemetery, West Newton, Pa.

He was born at Guffey's Station, near Pittsburgh.

His first big political success came in bucking his uncle and sponsor, Col. J. M. Guffey, to back Wilson for the Democratic nomination. The colonel favored Champ Clark, of Missouri.

Young Guffey won the day, and got a majority of the Pennsylvania delegation to back Wilson.

By 1920 he was a Democratic national committeeman. In 1924 and 1928 he lined up the Pennsylvania convention delegations behind Alfred E. Smith, of New York.

BROKE 58-YEAR STRING

But in 1932, the future Senator took another shrewd gamble that paid off. He quietly switched his allegiance to Franklin D. Roosevelt. Roosevelt didn't forget.

Two years later Mr. Guffey was elected Senator from Pennsylvania—the State's first Democratic Senator in 58 years. In 1936 he helped swing the whole State into the Democratic column in the presidential election.

After the Pearl Harbor attack, Senator Guffey declared that the fighting vindicated Wilson's League of Nations peace plan.

After World War II, Mr. Guffey spoke out frequently against the world's dictators. He opposed the sale of five transport planes to Franco's Spain and urged the Government to break diplomatic relations with Peron's Argentina.

He studied at but did not graduate from Princeton University between 1890 and 1892. His first job was with the Post Office Department.

After that he held a string of executive positions with various oil and utilities firms, rising to president of Guffey-Gillespie Oil Co., Atlantic Gulf Co. and the Columbia Syndicate.

Between the First and Second World Wars, Mr. Guffey served in the Petroleum Service Division of the War Industries Board and directed the Bureau of Sales in the Alien Property Custodian's office.

During his long service on the Democratic National Committee, he battled David Lawrence, now Governor, for control of the Pennsylvania Democratic organization.

He was known principally in the Senate not as an innovator but as a party wheelhorse, a 100 percent Roosevelt man.

GUFFEY, DEMOCRAT, UNMARRIED

Senator Guffey's biographical sketch in the Congressional Directory—which he wrote himself—was the shortest in the book. It said:

"Joseph F. Guffey, Democrat, Pittsburgh, Pa., unmarried."

After his defeat by Martin in 1946, Mr. Guffey vowed:

"I will never run again for any office, and I will not accept any appointive position."

But the lure of active politics was too much for him to overcome. In 1948 he ran for and was elected a delegate at large to the Democratic National Convention.

In the ensuing years, Mr. Guffey occasionally visited his old friend, Harry Truman, at the White House.

During the Adlai Stevenson-Dwight Eisenhower presidential campaign in 1952, Guffey showed up at a party rally in Pittsburgh's Syria Mosque. Grasping a cane, the former Senator seemed to glow as Truman loosed a blistering attack on Eisenhower.

In March 1953, Mr. Guffey announced that he had sold his 13-room house in Washington. He moved into a five-room apartment where he was reported writing his memoirs.

[From the Pittsburgh Post-Gazette, Mar. 17, 1959]

EX-SENATOR GUFFEY DIES AT AGE 88: DEATH OCCURS OF HEART AILMENT IN WASHINGTON, D.C.

Joseph F. Guffey, former Democratic Senator from Pennsylvania, died last night in Washington, D.C., at the age of 88.

Mr. Guffey, the only Pennsylvania Democrat to serve two terms in the Senate, had been retired since 1946. He had been ill for several years.

Born of a pioneer family in Westmoreland County, Mr. Guffey lived most of his life in Pittsburgh, where for years he was a power not only in State but in national Democratic political circles.

HELPED F.D.R. IN NOMINATION

As Democratic National Committeeman from Pennsylvania, Mr. Guffey helped engineer the first nomination of President Franklin D. Roosevelt in 1932 and even before his first election as Senator in 1934 was the recognized Federal patronage dispenser in Pennsylvania.

He unseated the late Senator David Aiken Reed and was reelected for a second term in 1940 largely on his record of having never opposed a single item of New Deal legislation.

However, he was defeated in 1946 by Republican Senator Edward Martin and was not active in politics since.

Nevertheless, he continued on the best of terms with old friends in the Senate, among them Harry S. Truman who became President upon Mr. Roosevelt's death.

In fact, one of the last times Mr. Guffey figured in the news was a report from Washington December 31, 1952, that he and his sister, Mrs. Emma Guffey Miller, long-time Democratic national committeewoman from Pennsylvania, had called at the White House to pay a farewell visit to President Truman.

PUSHED THROUGH COAL ACT

As long as he was in the Senate, Mr. Guffey never left any doubt about where his loyalty rested.

Often branded a "rubber-stamp" by his opponents—and he had many of them—he is reported to have said:

"I ran on a New Deal platform and I will vote for whatever the President wants me to vote for."

Mr. Guffey seldom spoke in the Senate and the few speeches he made were from carefully prepared manuscripts. He shunned the rough and tumble of extemporaneous debate but made his political and legislative influence felt mainly though private conversation with individuals or small groups.

As a Senator his most notable accomplishment was pushing through adoption of the bituminous coal stabilization act, known as the Guffey Coal Act. The original act, which fixed prices was voided by the Supreme Court but a subsequent measure, meeting the Court's objection, finally was passed.

The ex-Senator was born at Guffey's Station where his great-great-grandfather, William Guffey, had settled in 1758. His father, John Guffey, was sheriff of Westmoreland County at the time of his birth.

GREW UP IN POLITICS

Recalling his early days, Mr. Guffey once said:

"I grew up in politics. Why there was a time when there were 31 Guffeys of voting age. They were all Democrats and voted in the same precinct."

As a youth Guffey received his early education in Greensburg and then attended Princeton University. He was not a graduate but was always a strong Princeton booster. The Guffey family fortunes had their ups and downs and after leaving Princeton he went to work for the Government—his uncle, Colonel J. M. Guffey, was a State Democratic leader—as superintendent of home mail delivery in Pittsburgh.

He held the job until after he became, through the friendship of the late Judge David Reed, general manager of the Philadelphia Company, largest public utility in western Pennsylvania.

INVESTED IN OIL COMPANIES

He held that position for almost 20 years, worked hard and invested his money in oil and water companies. In 1918 he formed a partnership with E. N. Gillespie and resigned from the Philadelphia Company to devote his attention to the Guffey-Gillespie Oil Co. His holdings in the company were sold in 1921 to the Tidewater Oil Co.

During World War I he was director of sales for the Alien Property Custodians offices which led him into subsequent legal difficulties settled out of court.

Until he published his book of political memories, Mr. Guffey seemed to prefer to recall incidents in his long and eventful life in conversation rather than in writing.

His biographical sketch was certainly among the shortest ever published in the Congressional Directory. Written by himself, it said simply:

"Joseph F. Guffey, Democrat, Pittsburgh, Pa., unmarried."

Although a confirmed bachelor, the ex-Senator claimed he had been the best man or an usher at 31 weddings, including that of David Aiken Reed, son of his benefactor, Judge Reed, and, ironically the man he defeated for the Senate years afterward.

Once in 1936 he had to deny a rumor that he was engaged to an attractive young woman member of the White House secretariat and quipped:

"If I married all the girls I never proposed to, I'd be some marrying man."

FINALLY WROTE BOOK

But finally the urge to leave a written record of his times and experiences led him to write a book—"Seventy Years on the Red Fire Wagon"—but it never was available to the general public. Those who read it said it was interesting both for its history and anecdotes concerning the great and near-great, both living and dead.

The red-fire wagon, incidentally, was used in political parades to carry the powder which was burned to attract crowds to rallies in the days before torch light parades, now virtually forgotten along with political parades themselves.

EXPRESSED LOVE FOR PARTY

In concluding his book, Mr. Guffey seemed to sum up his political philosophy when he said:

"I never have regretted the decisions I have made politically, for they have all been made to the best of my knowledge and ability with one guiding principle, which has never been expressed more ably than by Pat Harrison (a Senator from Mississippi) whose words I echo fervently:

"I love my party better than anything in the world except my country."

In recent years, while looking after his still considerable oil and other interests, Mr. Guffey had made his home with his sister, Mrs. Emma Guffey Miller, in a Washington apartment.

---

[From Washington Evening Star, Mar. 7, 1959]

JOSEPH F. GUFFEY DIES: SENATOR IN NEW DEAL

Joseph F. Guffey, former Democratic Senator from Pennsylvania and a major party power in the New Deal era died yesterday of a heart ailment at Doctors Hospital. He was 88.

Mr. Guffey, who had lived at 2126 Connecticut Avenue NW., since his defeat for reelection in 1946, suffered a relapse and was taken to the hospital yesterday afternoon. Relatives said he had been having heart trouble for the last 2 weeks but was thought to have been recovering. He was a bachelor.

Mr. Guffey, who made politics both a hobby and a career, was the opposite of the back-slapping loquacious senatorial prototype. He had an abruptness of speech and manner and avoided the rough and tumble of extemporaneous Senate debate.

A keen discerner of potential political winners, Mr. Guffey's first success on the road to Capitol Hill came in 1912, when he bucked his uncle and sponsor, Col. J. M. Guffey, to back Woodrow Wilson for the Democratic nomination.

SWITCHED TO ROOSEVELT

By 1920 Mr. Guffey was a Democratic national committeeman, and in 1924 and 1928 he successfully lined up the Pennsylvania convention delegations behind New York's Gov. Alfred E. Smith. Four years later he quietly switched to Franklin D. Roosevelt and Mr. Roosevelt did not forget it.

Mr. Guffey reached the Senate in 1934, the first Democrat elected to wear Pennsylvania's senatorial purple since 1875. In 1936 he helped swing the State into the Democratic column in the presidential election that swamped Republican Alfred Landon.

Mr. Guffey was born December 29, 1870, near Pittsburgh. Recalling his early days, he once said: "I grew up in politics. Why, there was a time when there were 31 Guffeys of voting age. They were all Democrats and all voted in the same precinct."

He was educated at Princeton where he first met Wilson when the latter served as his professor.

An analyst who measured action in terms of results, Mr. Guffey never permitted sentiment to interfere with his conception of politics as a practical game. He was essentially a conservative in private life, though he was a "100 percent Roosevelt man" and an uncompromising New Dealer in the Senate.

THE COAL ACT

Mr. Guffey's most notable accomplishment in the Senate was as legislator of the Bituminous Coal Stabilization Act, known as the "Guffey Coal Act." The original act was voided by the Supreme Court, but a later measure was passed.

Mr. Guffey had sizable investments in petroleum and water companies, which brought him a comfortable income. In public life, though he virtually dropped from sight after his 1946 defeat by Republican Edward Martin. He sold his 13-room house here in 1933 and moved into a Connecticut Avenue apartment.

Mr. Guffey leaves a sister, Mrs. Emma Guffey Miller of the home address, who is an active Democrat, and four nephews.

---

## Endorsement of Secretary of State John Foster Dulles

EXTENSION OF REMARKS

OF

## HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. SPARKMAN. Mr. President, recently there appeared in the Dothan (Ala.) Eagle a reproduction of an editorial which was published by the Selma (Ala) Times-Journal commenting upon the situation of the Secretary of State, the Honorable John Foster Dulles, particularly regarding a comment which I made that the Secretary ought to be

given time to see if he can come back to his job.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WELL SAID, JOHN

In the past, the Times-Journal has experienced many differences with Alabama's junior Senator, JOHN SPARKMAN.

We, therefore, hasten to record that he reached the level of statesmanship in refusing to join the growing Democratic wolf pack dedicated to destruction of Secretary of State John Foster Dulles during his current bout with cancer.

Declaring that he saw no need for making a replacement for Secretary Dulles, Senator SPARKMAN said:

"He may bounce back. If anyone can, I believe he will."

This, of course, constitutes a strong endorsement of Secretary Dulles, which undoubtedly is justified but also probably is dangerous for an ambitious Democrat.

Well said, John.

## Rights in Berlin and Size of the Armed Forces

EXTENSION OF REMARKS
OF
## HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by James Reston, and published this morning in the New York Times. I think the article clarifies in a most effective way the debate which is presently occurring between the Congress and the Executive.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEGENERATING DEBATE: U.S. DISCUSSION OF RIGHTS IN BERLIN TURNS TO ANGRY DISPUTE OVER ARMS

(By James Reston)

WASHINGTON, March 11.—The debate on Berlin is getting out of hand.

What started as a discussion of political rights and objectives preliminary to a series of East-West negotiations has suddenly degenerated into an angry argument over military strategy in which both sides are now calling for peace and threatening war.

In the imprecise give-and-take of today's news conference, President Eisenhower said flatly, "We are certainly not going to fight a ground war in Europe." He left the impression that the West's reaction to a blockade of Berlin would be retaliation with nuclear weapons.

No doubt this would be true if the Soviet Army moved into West Berlin or advanced across the Iron Curtain into West Germany. The most likely prospect, however, is not that Soviet forces would get involved in the exercise at all but that the East German Communists would, at worst, interfere with the West's supply convoys to West Berlin.

On May 27, the Soviet Union is expected to make a separate peace treaty with the East Germans and to turn over to them the task of checking the West's Berlin convoys. It does not follow that the East Germans will halt or even harass the convoys. Even if they do, it is not to be assumed that Washington would resort to extreme military measures, even if the other Western Allies agreed (which they probably would not).

In the first place, there would probably be a series of negotiations with the Russians, whom Washington would hold responsible for any blockade of Berlin, and an appeal to the United Nations.

NO SUDDEN JEOPARDY

This is not a situation—despite all the current war talk—in which the passage of time is going to place West Berlin or the Western troops in sudden jeopardy. West Berlin has many weeks of supplies available in storage, and while a Western airlift to Berlin is more difficult now than it was 10 years ago, this alternative is still available to give time for negotiations.

The U.S. policy, even after all the talk about atomic war, is still a policy of making the punishment fit the crime.

In the official jargon it is a policy of graduated deterrence. That is to say, if the Communist attack is limited, the retaliation of the West will be limited, but if the attack jeopardizes the security of the United States or its allies, then the retaliation will be massive.

President Eisenhower answered his critics today as if they were saying that the addition of a few western divisions in Western Europe would enable the West to defeat the Soviet army in a nonatomic ground battle in Central Europe.

This is not what they are saying at all. They agree with him that the 21⅓ western divisions on the central front could not deal with the Soviet and satellite divisions in East Germany and Eastern Europe.

What the President's critics are saying is that his policy of cutting the ground forces might mislead the Russians and force the United States to choose between total war, nonresistance, or ineffective resistance.

One here thinks it would be easy to limit an East-West war in the center of Europe once it started. But to repeat, the crisis is likely to come, not with the Russians but with the East Germans, and in any clash at the East German border conventional weapons would be important.

"What good would it do to send a few more thousands or, indeed, even a few divisions of troops to Europe?" the President asked today.

The answer of the President's critics is that it might convince Moscow that it would be wiser to negotiate a reasonable settlement than risk a war.

FIGHTING A GROUND WAR?

"Why in the world would we dream of fighing a ground war?" the President asked.

Because, his critics reply, a limited ground action would at least give some time for common sense to prevail and negotiations to start, whereas a nuclear war would almost certainly devastate half the world.

One of the interesting aspects of the President's statement that "we are certainly not going to fight a ground war in Europe" is that it is precisely the opposite of the policy he advocated as Supreme Commander of North Atlantic forces in 1952.

Then he was arguing that the Western Allies must raise not the 21⅓ divisions he now says are adequate but 96 divisions. These were to be used to defend Europe "as far east as possible" and to stand as a warning to the Soviet Union that the West's rights were to be maintained.

General Eisenhower was not asking then what good a few mere divisions would be.

"Our Governments," he said in his official report on April 2, 1952, "must convert the Lisbon program (50 divisions by 1952) into actuality. It demands full and unstinting support.

"It can be done, given the will to do it. There is power in our Union—and resourcefulness on land, sea, and air. Visible and within our grasp we have the capability of building such military, economic and moral strength as the Communist world would never dare to challenge."

## Administered Pricing in Industry

EXTENSION OF REMARKS
OF
## HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

*Thursday, March 12, 1959*

Mr. KEFAUVER. Mr. President, as chairman of the Subcommittee on Antitrust and Monopoly, I have followed carefully the increasing supply of evidence to the effect that administered pricing in the big steel and other industries has been to a substantial extent responsible for the price inflation which is putting our cost of living close to outer space.

I have read with interest an editorial and an article dealing with this subject and bearing out the subcommittee's findings along these lines, both of which were published in the Washington Post and Times Herald of today. I ask unanimous consent that, in support of the subcommittee's findings, the editorial and article be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

THOSE ADMINISTERED PRICES

(By Woodlief Thomas)

(Woodlief Thomas, author of this communication, is the economic adviser to the Federal Reserve Board.)

Recent discussion of the influence of administered prices, stimulated by Gardiner Means' statement before the Kefauver committee (Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary), has made a significant contribution to a better understanding of the problems of inflation and fluctuations in economic activity and employment. This contribution is in pointing out that there are unstabilizing forces in pricing actions of the private economy—on the part of both management and labor—that cannot be effectively controlled or corrected by governmental actions in the area of fiscal and monetary policies.

The columns of the Washington Post have covered much of this discussion, beginning with Bernard Nossiter's lucid presentation on February 8. Gardiner Means placed major—and apparently undue—emphasis on the role of administrative decisions by powerful corporations and labor organizations in fixing prices and wages without due regard to economic forces or public interest. He also expressed the view, which was not supported and is inconsistent with his major thesis, that restrictive monetary policies brought on the recession in 1957. Eugene Havas in his letter of February 19 to the Washington Post pointed out the effects of pricing policies on the profits of steel companies and expressed the view that monetary and fiscal policies, though sound in themselves, cannot stop inflation spurred by administrative price in-

creases. Ralph Young, in his letter to Senator PROXMIRE and also in his more recent appearance before the Kefauver committee, pointed out the various demands and other market factors that have influenced price movements in recent years. Harold Dorsey, in some of his recent excellent Monday columns in the Post, has also presented a realistic analysis of recent price changes and their possible effects in contributing to economic instability.

Objection to administered prices, it may be concluded from these discussions, although not precisely stated in any of them, should not be so much that they contribute to inflation but that they interfere with the proper functioning of the price mechanism and lead eventually to unemployment of resources.

Prices should serve as a means for obtaining the most effective allocation of resources and maintaining a balance between output and use. In a free-market economy, there should be no objection if an industry or a company or an individual endeavors to obtain the highest prices obtainable for its products or services in the light of existing and foreseeable circumstances. Such a policy stimulates investment in increased productive capacity and tends to restrain demand.

One of the considerations in fixing prices, of course, should be what price can be sustained and whether markets might be lost for a longer period by asking the highest possible price for any short period of time. Criticism arises with respect to administered prices when they are not adjusted properly in response to supply and demand forces. They are harmful if prices are raised so as to choke off demand and lead to reductions in output or if prices are held up in the face of declining demand when lower prices might sooner or later stimulate some demand. The result is that production and employment are reduced more and kept down for a longer period than would otherwise be the case. Such a result is harmful to those responsible for the bad judgment in setting prices as well as to the general public interest.

Consumers have the privilege of deciding whether or not to buy a product or a service that is offered at the price demanded. Higher wages or other cost increases are not a decisive reason for raising prices, if consumers won't buy the output that can be produced at the higher prices asked. An economic system cannot be expected to operate on the principle that a seller can always obtain any price he wishes to ask for his product. In order to maintain sustainable economic growth, it is the task of the seller to adjust his prices or his product so as to stimulate demand. Otherwise, it is to be expected that resources will be allocated to other uses, but this is a time-consuming process and results in unemployment. Much of the unemployment existing today can be attributed to distortions and inflexibilities in the price and income structure.

It is most likely, for example, that some wages and prices were raised or kept up too high in 1957 and thus choked off demands. Moreover, they have not been adjusted downward sufficiently to stimulate demand since then. This is particularly true of the automobile industry with respect to styling as well as to prices. The principle is the same in either event. It is no doubt also true of the steel industry. At present the threat of further increases in steel wages and prices may be stimulating a surge of buying that might not last after the event.

Consequences of such distortions and inflexibilities in the price and income structure cannot be avoided by monetary and fiscal policies. Any attempt to do so would not remove the basic difficulty but might increase the distortions and lead to a more severe adjustment. Nor should monetary and fiscal policies be blamed for recession and unemployment that result from incorrect pricing policies of management and labor. They might alleviate some of the consequences and should endeavor to do so. Monetary policy, however, operates within a limited area and is concerned primarily with commercial bank credit. As Ralph Young pointed out in his statement before the Senate subcommittee:

"If monetary policy should undertake to finance whatever demands for credit are made upon the banking system, or permit itself to be used to justify all decisions made by producers, whether correct or faulty, it would become an engine of inflation, not a force for stability and sustainable growth. Monetary policy must be concerned with the interests of all the people, consumers as well as producers, not with particular interests or industries.

"Obviously, monetary and credit policy cannot do everything needed to attain stable growth; it must be supported by appropriate fiscal and other public policies, as well as by prudent private policies. During periods of expanding demands, accompanied by speculative psychology and expectations of creeping inflation, monetary policy has no option but to assume a restrictive posture. If it did not assume such a posture, widespread expectations that prices and costs would be steadily raised might indeed lead to further spiraling of costs and prices. Individual or group efforts then to hedge against or by escalation to protect against inflation would tend to aggravate inflationary forces rather than to bring them into balance."

In conclusion, the objection to administered prices and wages is not so much that they create inflation but that they tend to retard growth and to increase unemployment. Inflation might be created if monetary and fiscal policies attempt to validate such prices, but eventually these attempts will only make the inevitable collapse more disastrous.

---

THE PRICE ISSUE JOINED

Senator KEFAUVER reads national sentiment accurately, we think, in his warning to the steel industry that another round of unjustifiably high price increases this year would lead inevitably to some form of public restraint. There is a growing consensus that present fiscal and monetary controls of the Government simply cannot cope with the administered price sector of the economy, where concentrated industries like steel can, as they have shown, defy sagging demand, increase prices and profits and thus seriously retard economic growth. Woodlief Thomas, the distinguished economic adviser to the Board of Governors of the Federal Reserve System, notably reinforces this judgment in a published letter.

As important as his recognition of the fact of administered pricing is, Mr. Thomas' warning that monetary controls of the Federal Reserve cannot be cut loose merely because they alone are inadequate. As he notes, a different basic policy from that which the Federal Reserve now pursues could exacerbate the effect of demand-defying pricing by the concentrated industries if it served to ratify their unjustified price increases by easing credit.

Ralph A. Young, research director for the "Fed," has also joined the chorus of criticism of last year's steel and auto-price rises. Earlier Raymond J. Saulnier, chairman of the President's Council of Economic Advisers, sounded a similar note, blaming unsound pricing by heavy industry for limiting output between 1953 and 1957 and thus depressing employment.

So the issue is joined. If the masters of steel and autos and other heavy manufacturing and the unions which serve these industries will now acknowledge their power, accept the social responsibility that goes with it and discharge it in the public interest, the American economy can avoid further regimentation and control. If they will not, Congress and the administration will be under mounting pressure to devise effective restraints.

---

## Ship Repair Work Needed for the Port of New York

EXTENSION OF REMARKS
OF
## HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. MULTER. Mr. Speaker, the ship repair industry of the port of New York is in an extremely distressed condition. The decline began to assume serious proportions last summer and has since become progressively worse.

I urge the Defense Department to allocate enough ship repair work to the New York area to save this industry. In this connection, I commend to the attention of our colleagues the following article which appeared in the New York Times of March 1, 1959:

SHIP REPAIR WORK IN SERIOUS SLUMP—YARDS HERE ARE WORST HIT, WITH JOBS FEWER THAN 30 PERCENT OF 4-YEAR AVERAGE

(By Arthur H. Richter)

The ship repair industry in this area is in its worst slump since pre-World War II days.

Employment in local shipyards is at or below 30 percent of the average for 1954 through 1957. Some of the larger concerns, however, report even deeper cuts in their worker rolls.

The decline is not restricted to yards within the environs of the port of New York. Manpower reductions have been noted in yards on all three coasts and on the Great Lakes and rivers, although the drop is not so severe as in this port.

The decline, according to leaders of the ship repair industry, began to assume serious proportions last summer and has since become progressively worse. According to the Shipbuilders Council of America employment for vessel repair is now at its lowest point nationally since June 30, 1954.

TWO COMPANIES WORST HIT

Locally, the two hardest hit companies are Bethlehem Steel, which has four shipyards in this port, and the Todd Shipyards Corp., which has two. These are by far the larget ship repairers in this port. Employment at the Bethlehem yards is down to approximately one-third of the average over the last several years, while Todd is operating with less than a fourth.

A number of reasons are advanced for the decline, all of them, however, stem from some phase of the worldwide shipping slump.

Arthur Hiltebrant, general manager of Bethlehem's New York district shipyards, said yesterday that a principal cause of the present trouble was the large number of vessels withdrawn from service and laid up during the shipping decline.

Vessel operators also are postponing repairs wherever possible, doing only minimum work on their fleets. Foreign ship work is lost because time is of less value in a sunken market, and owners can send their ships to home ports, where labor is cheaper,

for all work that is not of an emergency nature, Mr. Hiltebrant explained.

The poor economic condition of the railroads serving this port was also blamed by the Bethlehem official for the lowered amount of work in local yards. He said little or nothing was being done on the tremendous marine fleets of the rail lines.

"Business in general may have recovered from the recent recession," Mr. Hiltebrant said, "but for the ship repair industry it is still here."

TODD SPOKESMAN AGREE

A spokesman for Todd agreed generally with Mr. Hiltebrant. He noted also that a large portion of the slump here could be traced to cuts in the Navy's and Military Sea Transportation Service budgets.

At present the Todd yards in Brooklyn and Hoboken have a combined production force of about 600 workers. The average over the last several years for this time of the year was about 2,500. Bethlehem's four local yards—Hoboken, Staten Island and 27th and 56th Streets, Brooklyn—are down to about 1,000 men from an average of 3,000.

The smaller ship-repair concerns in this port, known in the industry as shore shops, have not suffered to the same degree as the big companies. The smaller ones do not have the plant maintenance problems of their larger counterparts and, since they generally employ subcontractors on repair work, they do not have large work forces of their own.

The New York & New Jersey Dry Association reported a drop last year of about 30 percent in man-hours worked from the average for 1954-57. The association set the average for this period at 9,818,015 man-hours a year, compared with 6,912,929 for 1958.

Figures supplied by the Shipbuilders Council of America showed that 25,239 workers were employed on vessel repairs in 90 shipyards as of December 31, 1958. At the end of 1957 the totals were 91 yards and 37,627 workers, and at the close of 1956, 91 and 35,896, respectively.

The council said the last low to compare with present conditions was June 30, 1954, when 95 shipyards employed 27,291 workers.

## Dedication of the Cumberland Gap National Historical Park

EXTENSION OF REMARKS
OF
### HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
*Thursday, March 12, 1959*

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the remarks addressed to the President in his office by the Honorable Thomas B. Fugate, a former Member of Congress from Virginia, when he extended to the President an invitation to dedicate the Cumberland Gap National Historical Park on July 4, 1959.

There being no objection, the text of the invitation was ordered to be printed in the RECORD, as follows:

INVITATION TO DWIGHT D. EISENHOWER, PRESIDENT OF THE UNITED STATES OF AMERICA, TO DEDICATE THE CUMBERLAND GAP NATIONAL HISTORICAL PARK ON JULY 4, 1959

We are deeply grateful to you, Mr. President, for the privilege of presenting to you an invitation to participate in the dedication of the Cumberland Gap National Historical Park on July 4, this year, if that date is convenient with you, or on some other date prior to, or subsequently, subject to your selection.

We want to thank the Members of the Congress for their presence here this morning. We want to thank Assistant Secretary Kennedy and Conrad Wirth for their assistance. To all who have in any way contributed to our cause, we want you to know we are appreciative.

Mr. President, down in the southern Appalachians where the States of Kentucky, Tennessee, and Virginia corner, there is a famous pass through the Cumberlands. Through it moved the Indians for untold centuries. Through this pass the Cherokees journeyed every spring from their camp at Chota (Knoxville) to their summer hunting grounds in the Ohio Valley. Near the gap the Indians would camp in the spring and hold their spring festival. Again in the fall on their return they had their fall festival.

On April 12, 1750, Dr. Thomas Walker and a party of five discovered the pass. Mr. President, this was only 20 years after your maternal grandfather, Jacob Stover, came to Virginia. It was in 1730 he received from the Virginia colonial council a grant of 10,000 acres on the South Fork of the Shenandoah River near the present town of Luray, "for the settlement of himself and divers Germans and Swiss whom he proposed to bring thither within the next 2 years."

He named the gap Cumberland Gap, in honor of the Duke of Cumberland, son of George II who was then commanding the English armed forces. Cumberland Gap, because of its importance as a way through the mountains to the Ohio and the West, came to be the most renown place west of the Blue Ridge. From Virginia and the Carolinas the westward migration began about 1770 and continued for half a century. Among the first were Henderson and Boone who cut a road through the wilderness to become the highway of the pioneer. A human drama was enacted on this Wilderness Road which has been the subject of many books. In this trek were the Lincolns, the Hanks, the Logans and many, many others. By 1792 100,000 people had transited the gap to populate a State. Kentucky was chartered in 1792, to become Virginia's eldest daughter. Toward the middle of the 19th century Henry Clay and a companion on horseback were riding the road to the gap. Clay halted his horse and tilted his head, remaining completely silent. When asked by his companion why the pose, he said, "I am listening to the tread of the coming millions."

In the War Between the States Cumberland Gap was a strategic point. In the first year of the War the Conferedate forces occupied the gap. These forces were commanded by General Zollicoffer. The Confederates held the gap for the first year of the war.

In the spring of 1862 General George Morgan with 10,000 men came down from the Ohio and captured the gap and held it until the fall of 1862.

Gen. Carter Stevenson commanding a large force of Confederates came in September of 1862 and laid seige. Morgan discovering scouts on the north side of the Cumberland Mountains withdrew. On October 8, 1862, an outstanding battle took place at Perryville, Ky., which ended in a draw. Cumberland Gap was held by the Confederates until September 1863. General Ambrose Burnside had captured Knoxville in August 1863. General Burnside after the capture of Knoxville had moved in from the South. Union forces commanded by Col. John de Courcy came down from the North. The Confederate forces under General John Frazer surrendered. About 2,400 men were taken prisoners.

Gen. U. S. Grant visited the gap on January 6, 1864, and spent the night. Because of the independent nature of the citizenship and few slaveholders the area was largely Union.

It was in a conference here at the White House that President Lincoln said to Gen. O. O. Howard, "Howard, if you come out of this horror and misery alive, I want you to do something for these people—around Cumberland Gap—who have been shut out from this world all these years." Howard's answer was the founding of Lincoln Memorial University whose campus adjoins the lands of the Cumberland Gap National Historical Park. The university has one of three of the finest collections of Lincolniana in the world. It would be most appropriate, therefore, during the visit to dedicate the park and during this year of the sesquicentennial of Lincoln for you to place a simple wreath of laurel from the Cumberlands at the foot of the statue, "Lincoln the Lawyer," located within the quadrangle on the university grounds, thereby honoring the great war President.

One mile north of the gap is Middleboro, Ky., a city of 15,000 people that was established by an English land company and named for Middlesborough, England. When the city was laid out the company also laid out a golf course. It is the oldest course in America. It would be historically significant for you to play a few games while visiting with us.

Mr. President, the first concerted effort to establish a national monument at Cumberland Gap came in 1929. A commission was appointed by the three States to make a study and recommendations. The senior Senator of Virginia was then the Governor. In 1938 a three State meeting was held on the campus of Lincoln Memorial University. In 1940 the enabling act to establish the park was passed by the Congress and signed by the President. The period from 1941 to 1956 was devoted to the purchase of the lands. In September 1956 the park property was transferred by the States to the U. S. Government. Since then considerable development has been made. There will be, by the time set for the dedication, a beautiful visitor center along with parkwide improvements.

The people of the Appalachian highlands are proud of their park. It is the largest historical park in the United States. Its history is the story of a great migration accomplished by toil, deprivation, and human suffering. It is, therefore, proper and fitting that you, the President of these United States, honor the occasion of the dedication by your presence. We do hope you accept our invitation.

## Farm Subsidies in Perspective

EXTENSION OF REMARKS
OF
### HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Thursday, March 12, 1959*

Mr. WILEY. Mr. President, we are all aware that the American farmer continues to be faced with serious economic problems.

Unfortunately, the admixture of Democratic and Republican farm programs now in effect has not brightened the outlook for the future.

According to USDA, the prospect for 1959 is a drop in farm income. At the

same time, surpluses are piling higher and costs are continuing to be high.

The big question facing the Nation is: How can we deal with this situation more effectively?

We recognize, of course, that there is increasing public interest—including a substantial amount of criticism on the cost of the farm program.

Like the American farmer and the public, I look forward to the time when these costs can be reduced and an economically healthy farm economy can forge its own way toward a brighter future.

Meanwhile, I believe it is extremely important to correct a false impression that may exist in the minds of many people—that is, that farmers, alone, are the recipients of subsidies in this country.

The contrary is true.

Across the Nation, a great many people, businesses, industries, and others in various fields of endeavor benefit from Government subsidies. Yesterday the Washington Daily News published an article by Dickson Preston: "Millions of Americans Rely on Federal Subsidies." In this article Mr. Preston outlines the fact that not only the farmers, but many other segments of the economy—including publishing, manufacturing, transportation, and dozens of other special groups—benefit from subsidies of one type or another.

To put the subsidy picture in better perspective—particularly as regards the farmer—I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILLIONS OF AMERICANS RELY ON FEDERAL SUBSIDIES

(By Dickson Preston)

Millions of Americans live wholly or partly on U.S. Government subsidies. Many may not even know it. Others think their own special interest groups are peculiarly deserving of Federal aid.

But the sum total of their demands for what they consider free money from Uncle Sam is a major factor in pushing the Federal budget higher year by year.

$5.4 BILLION

Most publicized are the farmers. Helping maintain their prices is costing U.S. taxpayers $5.4 billion this year. Here are some others:

Magazines, newspapers, and businesses which use the mails. They benefit from postal subsidies—in the form of deficits—which add up to more than $6 billion since World War II.

Manufacturers. One study by the House Appropriations Committee estimates they have received $43 billion in subsidy-like benefits such as tax amortization and business reconversion payments in the past 12 years.

Veterans. Besides pensions, they get free schooling, special help in finding jobs and in many cases medical care for nonservice ailments. These and a host of other benefits have cost more than $60 billion since 1948.

Airlines. Direct subsidy payments from 1938 through 1957 totaled $614 million. Some airlines are still receiving them. Federal aid to airports has already passed $465 million, and Congress appears likely to vote $270 million more.

Water transportation. Every ship flying the American flag is subsidized. Construction and operating subsidies have cost $3.5 billion since 1938. They're in the budget for $217 million next year. Improvements to inland waterways add up to additional billions.

OTHER GROUPS

Dozens of other special interest groups—mining firms, oil producers, public power users, cooperatives, labor unions, religious, and educational institutions—receive subsidies or tax concessions which amount to the same thing.

---

## TVA: A Fine Investment for the Nation

EXTENSION OF REMARKS

OF

## HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. EVINS. Mr. Speaker, as we know, the Public Works Committee of the House is considering a bill to permit the TVA to finance needed additions to its power capacity through the sale of revenue bonds.

Once again the hearings of the committee have offered the enemies of the TVA an opportunity to propagandize, and once more we are hearing many misrepresentations about the TVA, and particularly in regard to taxes. In this connection, I should like to commend to my colleagues' attention an objective survey of the TVA's power operations written by Mr. Miles McMillin, of the Madison (Wis.) Capital Times, which appeared in the New York Times.

Because this article so cogently presents the facts, I request unanimous consent to have the article inserted in the Appendix of the RECORD.

The article follows:

POWER, PROFITS, AND PROPAGANDA

(By Miles McMillin)

John Gunther once said: "Quite possibly the TVA is the greatest single American invention of the century, the biggest contribution the United States has yet made to society in the modern world."

If TVA were just an idea—and not the reality it is—Gunther might find his evaluation accepted these days even at the White House. The Eisenhower administration has shown that it is sufficiently impressed with TVA to export the idea to foreign lands. But to President Eisenhower, TVA in actual operation at home is a disease called creeping socialism which should be treated with applications of old-fashioned power trust snake oil bearing the Dixon-Yates label.

The paradox of TVA is that, while we proudly export its principles, it is the one New Deal achievement which has to continue to fight at home the hammer blows of those who have long since accepted, in varying degrees, the other accomplishments of perhaps the most socially creative era in our history. Hardly a session of Congress goes by that the friends of TVA do not have to ward off another attack. And the propaganda campaign, organized and financed by the power trust to persuade the American people that what has made the Tennessee Valley livable is communism or worse, continues unabated, day after day, year after year.

Why?

The reason is simply that TVA produces and sells electric power at prices people can afford to pay.

The other functions of TVA—flood control, navigation, fertilizer development, recreation, soil-erosion control—have come to be accepted. But the power program is still treated as if it were proscribed by the Ten Commandments.

When Louis V. Sutton, chairman of the board of the Carolina Power & Light Co. submitted a statement for the U.S. Chamber of Commerce last year to the Senate Subcommittee on Rivers and Harbors opposing legislation to give TVA authority to issue its own revenue bonds, he was careful to distinguish between TVA's power and nonpower functions.

"TVA," he said, "should conduct only its authorized nonpower functions. The TVA power facilities should be transferred to local ownership and operation. This transfer should include transmission lines, steam plants, and hydroelectric plants at TVA dams, but not the dams or other related river control facilities."

What Sutton almost said right out loud was that TVA is a great idea if the utilities can have the power produced by the dams. The more closely the anti-TVA propaganda is examined, the more clear it becomes that the utilities have only one aim in their attacks: To get their hands on the power-producing facilities of this great public asset.

The enemies of TVA have not always been willing to grant the wisdom and legitimacy of its nonpower functions. In the earlier stages of the fight against TVA, the utilities were willing to finance any argument that would discredit TVA—almost to the point of defending the anopheles mosquito whose life has been made more difficult by TVA's malaria control program.

One of the earliest campaigns against TVA—then under the chairmanship of Arthur E. Morgan—was an attempt to persuade the public that the multiple-purpose dams could not do all the things they were constructed to do. Numerous authorities were cited in an effort to prove that flood control and navigation were not compatible with power production, but enthusiasm for this argument waned under the weight of contrary evidence.

As late as February 1948, TVA's detractors were praying for a great flood in the valley—the kind that in pre-TVA days regularly ravished the countryside. On February 15 of that year the Associated Press carried a story out of its Atlanta bureau saying: "On the Tennessee River the floodwaters were too much for the great dams set up by the TVA. The huge reservoirs filled and the water was released to rush over the low country."

Anti-TVA papers whooped up the story, bellowed for photographs—and then settled back into a deep funk when the AP's Atlanta bureau contritely explained it had not bothered to check rumors concerning the flood-breeding rains in the valley. Actually, as the New York Times reported, the "great reservoirs of Norris, Cherokee, Douglas, Fontana, and Hiwassee on the tributary streams, took all the water that was poured into them and had plenty of room left. By this means the flood crest at the Chattanooga was cut 10 feet with an estimated saving of $6 million."

TVA's flood control program has succeeded because it has adhered faithfully to the mandate of Congress to regulate the streamflow primarily for the purpose of promoting navigation and controlling floods. While private power companies must necessarily give primary emphasis to power production, power production by TVA must be consistent with the operation of its dams for flood control and navigation.

As the flood season (late December to early April) approaches in the Tennessee Valley, the TVA dams are controlled to reserve 12 million acre-feet for water storage. Near the end of the flood season the reservoirs are allowed to fill and are fed out during the dry season for power production and stabilization of navigation. The average annual benefit from flood reduction is estimated at more than $11 million. In February of 1957 the valley had its second largest flood of record. TVA's control of the water prevented damage of an estimated $66 million. TVA has helped also to control floods along the Ohio and Mississippi Rivers, into which the Tennessee's waters flow.

The 630-mile navigation channel is a national investment, making the Tennessee part of a 19-State, 9,000-mile inland waterway. Sixty-eight percent of the shipping is either from outside or destined for outside the TVA region. In 1933 traffic on the Tennessee was 33 million ton-miles. In 1956 it was about 2 billion ton-miles. Transportation savings, now $20 million a year, return over 10 percent on net navigation investment when measured against the cost of maintaining and operating the waterway.

This is a success story that that the foes of TVA cannot ignore. If the late George Norris and the others who dreamed the TVA dream had not tacked on the authority to produce power, TVA would be as acceptable today as Federal bank deposit insurance. But they had the practical idea that as long as dams had to be built, the power potential should be used for the benefit of the people who were paying for the dams.

The nonpower functions have changed the history of the valley. But it is the power program which is primarily responsible for raising the productive level of the region. And it is the power program that has made TVA the target of one of the most relentless propaganda campaigns in the history of the Nation.

TVA power has not only changed the way of life for millions within the seven-State region it serves; its price yardstick has jutted out of the valley to drive down the rates for other million of consumers served by the private power companies.

TVA power is distributed by 151 distributing systems, 149 of which are publicly or cooperatively owned. In fiscal 1957 they sold 15½ billion kilowatt-hours and earned revenues of $163 million, of which $25½ million was net profit.

There are 1,460,000 customers buying TVA power for the use of 4 to 6 million consumers. In the pre-TVA era, the private power companies served 275,000 in the same area. The average annual consumption of electric power in valley homes has jumped from 600 kilowatt hours to 6,000—twice the national average. The price has dropped from an average 5.7 cents per kilowatt hour to 1.2 cents, less than half the national average of 2.6 cents.

Less than 4 percent of the valley farms were electrified when TVA's turbines started rolling and its first highlines leaped the mountains. Today 95 percent have electricity. The customers of these rural co-ops are buying power at less than 5 mills per kilowatt-hour. Except for the Pacific Northwest, where Bonneville and Grand Coulee are transforming the energy of the mighty Columbia, this is the lowest rural electric rate in the Nation.

TVA power has made the valley a strategic defense area for the Nation, accounting in large measure for the rapid expansion in steam-produced power. More than half (57 percent) of TVA's power goes to the atomic energy projects at Oak Ridge and Paducah. It is estimated that this power at private utility rates would cost the Atomic Energy Commission from $50 to $60 million more each year than it pays to TVA. The Air Force wind tunnel plant at Tullahoma is supplied by TVA, as is the Redstone missile program. Huge amounts of aluminum and chemicals vital to the defense program are produced by private industry using TVA power.

It is worth speculating, considering the power shortage of World War II, whether the United States would have taken the lead in the development of atomic energy had not the power facilities of TVA and the Columbia River program been available to pour out the staggering amounts of electricity needed for the Oak Ridge and Hanford projects.

The utility propaganda which seeks to inspire sectional jealousy against TVA is always careful to hide from the American people this monumental record of service to the defense program of the whole Nation. Also ignored in these sectional appeals are the expenditures made by TVA with industry located outside the valley. In the years 1934–56 TVA made purchases of $1,024 million from businesses located outside of the seven States in the TVA area. Almost a billion has gone for manufactured articles. Here is where some of the money went: Pennsylvania, $311 million; New York, $156 million; Ohio, $127 million; Illinois, $112 million; Wisconsin, $60 million.

Add to that the $1,750 million the users of TVA power have spent on appliances—most of them manufactured in other States—and you get a fair notion of how TVA is helping business in the rest of the country. Workers in Milwaukee and Schenectady are living better because farmers in the Tennessee Valley are living better.

No assessment of what TVA has done for the country as a whole would be complete without mentioning what has happened to the Valley's tax contribution to the Federal Government since TVA lifted it to a level more comparable with the rest of the Nation. In 1933, 3.4 percent of total Federal individual income tax collections came from the seven States which embrace the TVA region. Recent studies show the proportion of tax contribution has almost doubled. During the 1933–56 period $21,900 million was collected. At the 1933 rate only $12,200 million would have been collected. That $10 billion difference is almost five times the amount the Government has invested in all of TVA's functions.

If TVA is doing these things for the Valley and for the rest of the Nation, then why the incessant campaign to wreck it? Has TVA done so much damage to the private utilities that they should continue to spend millions of their customers' dollars in a campaign to destroy it?

TVA has forced the utilities to sell power more cheaply, it is true. In 1932 some of the highest electric rates in the Nation were paid in the TVA area cities, according to studies made of cities of 50,000 population and over. By 1956 the situation was reversed. In cities of 50,000 and over, the lowest rates are now in the TVA area and the area serviced by the Bonneville program. The influence of these two great public power projects is shown by the fact that rates get progressively higher as the distance from TVA or Bonneville increases.

Significantly, the private utilities in the areas bordering TVA have not been hurt. They have found that the TVA theory of power distribution works profitably for them. As they reduced rates under the impact of the TVA yardstick, they reaped the financial benefits of the resulting increase in demand. Studies of the period 1937–55 show that earnings available to common stockholders of the big profit utilities across the country multiplied by less than three times—yet companies bordering TVA multiplied similar earnings 6½ times.

The utilities claim that TVA is unfair because it is subsidized. If the utilities themselves weren't subsidized by the Federal Government on a scale more staggering than TVA, this argument might have some appeal to fair minded citizens. The truth is that under the fast tax writeoff policy the utilities have been handed subsidies over a 2-year period that exceed the total investment in TVA in more than a quarter of a century.

The Senate Antitrust and Monopoly Subcommittee recently issued a report quoting R. C. Rainwater, Chief Accountant of the Federal Power Commission, as saying that the tax writeoff policy has benefited utilities in the 1955–57 period by $2,621,318,000. The report made it clear that consumers receive no benefits from these subsidies, because of Government rulings that they need not be passed on in decreased rates.

Are these tax writeoffs subsidies? Let Walter H. Sammis, president of the Ohio Edison Co., a large utility with offices in Akron, Ohio, testify. Sammis appeared before a Senate subcommittee in opposition to the bill to allow TVA to issue bonds to help finance its operations. Senator ROBERT KERR, Oklahoma Democrat, was presiding. The following exchange took place:

SAMMIS. It should be the policy of the Federal Government to cooperate with taxpaying businesses and to encourage their participation to the fullest extent in the power features of water resources instead of engaging in unfair competition through the advantages of Government subsidies.

Senator KERR. Let's talk about Government subsidies. Has your company received any certificates of accelerated depreciation (tax writeoffs)?

SAMMIS. Yes, sir.

Senator KERR. How much?

SAMMIS. $46 million as of February 28, 1957.

(There followed several minutes of argument about depreciation formula and other matters and KERR returned to the tax writeoffs.)

Senator KERR. I asked you if that was in the form of Government subsidy?

SAMMIS. Oh, surely.

Senator KERR. That is all I asked you.

SAMMIS. That is right. Surely, I am sorry. I didn't get your point earlier.

Senator KERR commented that the utilities really have no objection to subsidies as such. Their complaint seems to be that others get bigger subsidies. The testimony of the Federal Power Commission's chief accountant would seem to indicate that if anyone has cause to claim discrimination in the matter of subsidies, it is TVA.

TVA's power operations are often criticized by the power trust as unsound and unbusinesslike. But when the critics are examined on this point they are usually found retreating to another point which permits them to make vague charges about socialism or to cry out that TVA pays no taxes or interest.

By law, TVA's power operations have to be self-supporting and self-liquidating. The record shows that the law has been obeyed. Gross power revenues from 1933 through fiscal 1957 amounted to $1,474 million, of which net revenues amounted to $424 million.

Here is a summary of TVA's power operation through fiscal 1957:

| | *Millions of dollars 1933 through 1957* |
|---|---|
| Revenue | 1,474 |
| Expense: | |
| Operation and maintenance | 736 |
| Taxes | 46 |
| Depreciation | 268 |
| Total expense | 1,050 |
| Net income before interest | [1] 424 |
| Investment assignable to power (24-year average) | 442 |
| Annual return on investment (24-year average)—percent | 4 |

[1] Of the $424 million net income before interest shown above, $10 million has been used to pay interest on bonds, $65 million has been used to retire bonds, and $175 million has been paid into the Federal Treasury as an offset to appropriations previously made. The remainder, $174 million, has been reinvested in power facilities.

From a cold business viewpoint, Uncle Sam's stockholders would have a difficult time finding a better investment.

The law imposes on TVA another obligation, one that distinguishes its power operations from the exclusive profit motive of the private utilities. TVA's objective is the widest use of electricity at the lowest possible price to consumers. This aim is achieved by utilizing more economical sources of power and by keeping operation and maintenance costs below the national average of the industry. The distributors of TVA's power also operate at costs far below those of other utilities. As the use of electricity by consumers goes up, the cost per kilowatt-hour of delivering it goes down. Many of the distributors have been able over the years to reduce rates.

The utility industry insists that these low rates are made possible because of TVA's tax-exempt status. This is the argument most frequently made in the propaganda of the utilities.. Of course, TVA pays no income taxes to the Government. Income taxes are based on profit and all of TVA's profits belong to the Government, not just the part paid in taxes by the private companies. TVA's net income in fiscal 1957, after allowance for the cost of money to the Government at 2½ percent, was approximately $21 million. Uncle Sam claims all of it. If it were the income of a private utility, the Government could claim only half of it, in the form of income taxes.

If TVA had been privately owned over the last 24 years, it would have paid Federal income taxes of about $170 million. TVA earned $424 million—a 4-percent return on the investment. The average cost of money to the Government over this period was 2 percent. Had that rate of interest been charged against the power investment, it would have amounted to half the 4-percent return, or $212 million, leaving a margin of $212 million for the Government. This is $45 million more than the $170 million that would have been paid in taxes under private operation.

Despite the sweeping claims that TVA pays no taxes, it does pay local and State taxes or tax equivalents. They amounted to $4,744,000 in fiscal 1957. Its distributors paid $7,646,000 in taxes or equivalents in 1957. In 1937, when power in the TVA area was distributed by private companies, taxes paid to local and State governments by the utilities amounted to $3,350,000. The total under public ownership in 1957 was $12,390,000. In the intervening 19½ years the increase in State and local taxes was 270 percent. In roughly the same period the State and local taxes paid by private utilities across the Nation increased by 232 percent—a difference of 38 percent in TVA's favor.

Furthermore, the utilities' argument that the difference in tax payments accounts for the difference in rates doesn't stand up in the light of practical experience. Two of TVA's distributors are private utilities, selling power at the same low rates as TVA's publicly owned distributors. Yet they are able to make a profit just as if they bought power from private sources for resale at presumably higher rates.

If a lot of water has been spilled over TVA's dams in the last quarter of a century, it is perhaps exceeded in quantity only by the volume of words that have been spilled attacking and defending TVA. TVA has endured, not because the words of the defenders have been wiser or more forceful. Its own record of achievement for the people of the valley and the people of the Nation is its stoutest shield. The avalanche of utility propaganda has not been able to dent that record. It has stood up through 5 years of an administration which has been steadily probing for weaknesses—indeed, has tried to create some.

This record was made possible because TVA produced power at prices people can afford to pay. If its power program is allowed to be pillaged and turned over to the profit utilities, TVA's service to the people of the valley and of the Nation will be ended. But more than that, its service to democracy would be destroyed. For TVA has come to mean something to the rest of the world. It was best expressed by the people of the valley who belong to the Tennessee Valley Public Power Association, in a letter to President Eisenhower in April of 1957:

"TVA is more than a regional agency; more than just a Federal power system. It is an international symbol to people of free Nations all over the globe—a symbol of democratic methods and democratic ingenuity and enterprise applied to one of mankind's most challenging problems: How to develop natural resources for the benefit of the most people. TVA carries a vital international message—a message that people from all over the world can see and study and carry home to their own lands."

## Off to Australia

EXTENSION OF REMARKS
OF
## HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, February 26, 1959*

Mr. WHARTON. Mr. Speaker, as an exponent of the small family farm and deploring legislation under which corporation farms and million-dollar operations have skimmed off benefits intended by Congress for the small operator, I submit for the RECORD an editorial of the Catskill Daily Mail which seems to reflect grassroots opinion:

OFF TO AUSTRALIA

The rugged individualism of the American farmers is obviously still with us. Consider the story of the Michigan poultry farmer who has announced his intention of selling his farm and moving to Australia.

Apparently this embattled farmer has had his fill of what he calls regimentation. Tired of acreage allotments, crop restrictions and most of what goes to make up our domestic agricultural program, this intrepid Michigander says the question is: Do I own my land, or don't I?

While this is probably an extreme view, there is a kernel of truth in it. American agriculture, under the aegis of big government and a price-support program, is necessarily subject to some regulation. With subsidy inevitably comes a measure of restriction on the freedom to act. Government assistance and government direction too often go hand in hand.

It is this sort of thing that can frustrate a man who wants to run his farm in his own way. But without price supports and the regulation that goes with them, the farmer takes great risks. It boils down to the question of how much regulation is justifiable to minimize the risk. The Michigan poultry farmer's answer seems to be: Not this much.

## Hon. John V. Lindsay on the Passport Question

EXTENSION OF REMARKS
OF
## HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. WAINWRIGHT. Mr. Speaker, the Republican Party from time to time produces a young, adventurous crusader who can be likened to the bright star of the future. The new Representative from New York's 17th District, JOHN V. LINDSAY, falls squarely into this category. Typical of his courageous, forthright and intelligent appraisal is a recent address he delivered in New York on the passport question. While not in complete sympathy with Mr. LINDSAY I feel that his approach deserves public hearing and should be set forth in the RECORD.

The address follows:

One of the most important subjects of legislative concern to the 85th Congress, and I suspect it will be to the 86th, is passport legislation. It is important because it involves the question of a citizen's right to travel—not only the question of whether there is such a right, but its metes and bounds. These questions have been cast into special prominence by the Kent, Briehl, and Dayton cases, decided by the Supreme Court of the United States in June of 1958. The Court did not decide these cases on constitutional grounds. It held only that Congress had not given the Secretary of State authority to withhold passports from citizens because of their beliefs or associations. This put it up to Congress. What kind of legislation do we want, if any? What kind of balance should we strike between competing interests?

When the Supreme Court said that the Congress had not given the Secretary of State authority to do what he was trying to do in these cases, it said a mouthful. The word "authority" is a big word. And when one is talking about the sovereign and its powers, the word "authority" means different things under different circumstances. What does it mean here?

We start with a pretty broad hint from the Supreme Court. The Court said this: "We deal here with a constitutional right of the citizen, a right which we assume the Congress will be faithful to respect." And this: "The right to travel is part of the liberty of which a citizen cannot be de-

prived without the due process of law of the fifth amendment." Now this may give us the dimensions of the ball park but it doesn't tell us much about the ground rules of the game.

In July 1958, the President and Secretary of State sent to the Congress proposed passport legislation with accompanying messages. The legislation was introduced and received considerable bipartisan backing, but not enough to get it through. It has been reintroduced in the 86th Congress, although to date there has been no comment from either the White House or the State Department. The proposal spells out the authority that the Secretary of State would have in respect of the issuance of passports. The chief difficulty I have with it lies in two short provisions.

One gives the Secretary authority to withhold passports from citizens where it is "determined upon substantial grounds that their activities or presence abroad or their possession of a passport would * * * (ii) seriously impair the conduct of the foreign relations of the United States, or (iii) be inimical to the security of the United States." The other would permit the Passport Hearing Board of the Department of State, in determining an application for a passport, to consider nonrecord (undisclosed) information. The Board would be required to furnish a résumé of the confidential information to the applicant and certify that it is a fair résumé. The findings, conclusions and recommendations of the Board would be transmitted to the Secretary of State, who would make a final determinatoin. The Secretary, if he should deem it in the interest of the national security or the conduct of foreign affairs, also would be empowered to consider nonrecord information, whether or not contained in the résumé. Presumably, under the general rules and regulations of the Department of State, the Secretary is not obliged personally to consider the case but may delegate the authority, including that of resorting to confidential information, to a subordinate officer. There is provision for appeal to the U.S. District Court for the District of Columbia, but the court is not given access to undisclosed information and must accept the résumé provided by the Board. There is no definition of the circumstances under which confidential information may be used, such as on certification by a senior officer of the State Department that its disclosure would expose so-called double or buried agent of tested and known reliability, that the case cannot be decided without the use of such information, and that the decision as to the need for both its use and its secrecy has been made by a top officer of the Department of State. And, as I have stated, the court would not have access to the information. The power thus reserved to the Department is sweeping and final; its exercise is not subject to scrutiny by applicant or judicial tribunal. On what ground, then, does the Department of State predicate its request for such authority?

In an important address last November before the Veterans of Foreign Wars, a State Department spokesman made a strong plea for this proposed legislation. He cited examples where the Department of State had been required, as a result of the Supreme Court decisions, to issue passports to known members of the Communist Party. One of two were admitted members with long histories of attendance at various international Communist meetings and functions. Undoubtedly true, and certainly distressing to us all. But let's take a look at the proposed cure. The spokesman stated that personal communication by travel is the most effective way for any person or group to do business, whether it be the U.S. Government, United States Steel Co., two individuals trying to make a contract for the sale of paper clips, or members of the international Communist Party. What is needed, therefore, it was argued, is authority in the State Department first, to refuse to issue passports on the broad ground that their issuance would impair the conduct of foreign relations or be inimical to national security, and, second, to act as sole judge, in many cases, of what impairs or what is inimical, because neither the applicant nor a court would be allowed to know what the evidence is. The rationale for this approach is stated as follows: "By so doing we can very seriously hinder the effective operation of the Communist Party both here and abroad by making it difficult for the supporters of that party to depart from the United States." In other words, put a crimp into communication.

Like every American who bears allegiance to this country, I loathe and detest communism. It is not only dangerous, but as a philosophy it is repugnant to a freeman's sense of ordinary decency and fairness. Its trained agents and obedient servants in this country are detestable, mainly because they lie to you and to me in their daily lives. They use us and our institutions while their total allegiance is to a foreign power. They are mere pawns, and their objective is to use us in the same fashion. Undoubtedly, this raises a question of security. Here, then, is a competing interest which may call for some careful, limited restrictions on personal freedoms in certain cases in the interest of safeguarding the whole. But, to quote Justice Frankfurter, "let's not throw out the baby with the bath." The way to fight the disease is not to kill the patient with the cure, but to strengthen the body with the same nourishment that made it strong in the first place—by holding high the torch of liberty and rekindling its fires. Important as the need for vigilance is, let us not be so overcome by fear and mistrust that we lose precious ground gained in the ancient struggle for freedom. It is our duty to etch out legislative standards which, while giving due regard to the dangers of the international Communist conspiracy, preserve and safeguard to each individual his most precious liberties.

What is the right to travel? In my book it is one of the most fundamental liberties that we have. The Supreme Court tells us that it is "part of the 'liberty' protected by the due process clause of the fifth amendment." The Solicitor General of the United States conceded as much in his argument before the Court in Kent and Dayton. But I would suggest also that it is conjoint with, and a part of, the first amendment—freedom of speech and assembly. Of all the freedoms that we have, the one I should most hate to lose is freedom of speech. Speech is communication, and communication this modern day is impossible without locomotion. Speech is meaningless unless thought of in the context of the physical and social aspects of human existence. The social aspect suggests that speech is not effectively exercised when a man talks to himself; speech implies communication. The physical aspect renders communication impossible under some circumstances—or possible only through certain means. The social aspect may in turn attach connotations to the physically possible means, rendering all but one appropriate. The Supreme Court has repeatedly recognized the interaction of these aspects in its interpretation of free speech and has held that denial of the appropriate means of communication may abridge free speech.

The abridgement of free speech is precisely what is sought to be accomplished by this legislation. Let's recognize it for what it is, and then see how far we should or can go. In other words, let's find the balance.

Now let me make it absolutely clear that we are not here talking about anyone who is under indictment for the commission of any crime, or is under restraining order of any kind by any court, or has been stripped of any right or liberty by due process of law. There may well be risks inherent in allowing a member of the Communist Party, or one identified as such by our intelligence units, free exit from our shores to travel abroad. But it is necessary to point out that this is true when Communists travel from Chicago to New York, or from New York to the Bahamas, or from Dallas to Mexico, or from San Francisco to Buenos Aires, or to any other South American country, none of which places requires a passport for exit or entry. It should be pointed out also that under the McCarran-Walter Act we are required to deport alien members of the Communist Party and we go to elaborate efforts to secure their removal after they have ben traveling freely in this country for years. Well and good enough. Yet under our passport procedures, until the Supreme Court decided otherwise, we have insisted that it is essential to the national security to keep citizen members of the party confined to our shores. The point is that there could possibly be something wrong with our reasoning; and when we are dealing with limitations on constitutional rights it is important that our reasoning be compelling and logical.

The elimination of passports between this country and Canada, and Central and South America, and all of the contiguous islands is a good thing and is consistent with the several statements that the President has made about the need for facilitating travel. In the last Congress, for example, following an administration request in support of greater ease and freedom of travel, the requirement of fingerprinting was eliminated from the McCarran-Walter Immigration Act for all transients and temporary visitors. Under modern means of travel and communication, and the expectation of greater miracles to come, the world has shrunk and distances mean nothing. It means little more to fly from New York to Paris or Vienna than it does to fly to San Francisco. Therefore, until passports are abolished under reciprocal arrangements with all countries—a development much to be hoped for—passports remain important.

What, then, is the nature of the passport? Passports have only been fashionable with our Government since World War I. Prior to that time we got along without them mainly becaues they were not a requirement of travel abroad. After World War I the citizen's request for a passport was generally regarded as nothing more than a request for a service from his Government to facilitate his travel in other lands—something which governments have an obligation to do for all citizens.

The right to a passport has always been assumed to be subject to the general war power. Few would argue that in the case of armed hostilities there are not extraordinary powers lodged in the sovereign to place limitations on all of our constitutional liberties, limitations which in the absence of the war power would be unconstitutional. The history of limitations over the right of exit goes back in the common law to the writ ne exeat regno under which the English kings could prohibit a man's departure or recall him if he had gone abroad. It was identified with war and service in the King's armies. In

more modern times it became a credential to facilitate travel. But since 1941, the crucial function of the passport in this country has been control over exit. The earlier purpose of the passport—to facilitate travel—is not only subordinate but has in fact become an appendix which we have appropriately gotten rid of in some areas in order to facilitate travel.

Let's go back to the first amendment. Although constitutional sources do not reveal that the first amendment was framed specifically to preserve a right to travel, they do not reveal the contrary. They strongly suggest, at least, that early Americans recognized a freedom to move beyond national frontiers. However uncertain its basis may have been, however unclear its limitations, the English recognized that freedom long before they crossed the Atlantic. The people of the colonies, moreover, evidently took the freedom for granted: witness the constant movement between colonies and to the West. That may explain why the freedom was not more clearly recognized in writing. The Declaration of Independence goes no further than to list as a grievance the restrictions which George III placed upon emigration. The Articles of Confederation merely guaranteed free movement between different colonies, though the colonies, not yet joined in a more perfect Union, were more like foreign countries to each other than the United States are today. Perhaps the most direct documentary evidence is to be found in the Pennsylvania Constitution of 1790 which declared "that emigration from the State shall not be prohibited."

These sources, taken together, and viewed in the light of the ninth amendment, warrant the assumption that omission of the words "right to travel" was not intended to eliminate the right. Nor is the omission inconsistent with a specific intention to include the right in free speech. The Constitution was designed to guide the United States for an indefinite period of time. It would have been impossible to enumerate the variety of ways in which free speech might be abridged—and the framers recognized this in the generality of the first amendment's language.

It is equally fundamental that the liberty guaranteed by the Constitution is not absolute. "Civil liberties", says the Supreme Court, "imply the existence of an organized society maintaining public order without which liberty itself would be lost in the excesses of unrestrained abuses." Freedom to travel, like other liberties, is subject to reasonable regulation and control in the interests of the public welfare. I am not sure that it is possible to draw up absolutely fixed rules which will in advance strike a proper balance which will meet the exigencies of every case, protect the public interest, and yet stay within constitutional limitations. Circumstances and the times vary and due process of law has never been a term of fixed and variable content. But the following general rules I would deem to be guideposts which should guide the Congress in its consideration of this subject:

First. The right to travel—to communicate—is a constitutionally protected right which may not be abrogated by the State except under the general war power, which normally may be invoked only in time of extreme emergency, usually involving armed conflict between nations. The right is a concomitant of, and conjoint with, the first amendment of the Constitution. A denial of a passport therefore, may result in violations of both the fifth and first amendments.

Second. Neither the right of the citizen to have issued, nor the right of the Secretary of State to deny issuance of, a passport is an absolute right.

Third. A general standard under which the Secretary of State is authorized to deny the issuance of a passport whenever he finds that its issuance would seriously impair the conduct of foreign relations or be inimical to the national security of the United States probably is too indefinite a standard when applied to a right as firmly grounded among our basic liberties as is freedom of speech and assembly. In the past we have too often seen examples of executive arbitrariness under the umbrella of "the national security" and "the conduct of foreign relations."

Fourth. A refusal to issue a passport may not rest upon confidential, undisclosed information, under a blanket, unlimited authority to use the same. Such a refusal would, in all probability, be a denial of due process of law under the fifth amendment. The authority to use confidential information in the administrative process, under imprecise standards, coupled with the power to delegate the authority to subordinates, can result in a breeding ground of arbitrariness in the course of which innocent people may suffer. I have spoken here of blanket, unlimited authority. There may be room for an exception to cover the hard core Communist case, under which the Secretary of State or the Under Secretary, personally, will certify that disclosure will expose a double or buried agent of tested and known reliability, that such exposure will be prejudicial to the national interests, and that the case may not be decided without resort to such evidence. But even then, full access to the evidence in question should be given to the court, under seal, for examination by the court in camera.

I have not in this discussion tried to spell out an entire code to govern the issuance of passports, or to draft legislation. My purpose here has been only to state my views on some of the fundamentals, and I would hope that consideration of this matter in the Congress would be guided by those fundamentals. Neither have I touched upon the whole subject of area restrictions, except indirectly. Here, I would recommend the report of the special committee to study passport procedures of the Association of the Bar of the City of New York, an excellent report, prepared by a distinguished committee of lawyers. Its conclusion on the subject of area restraints is as follows:

"Travel abroad by all U.S. citizens may be prohibited in areas where the Secretary of State determines that such prohibitions should be imposed in the national interest, but only in situations of exceptional gravity. The imposition of area restrictions should be accompanied by a statement by the Secretary of State setting forth the reasons therefor. Exceptions to general area prohibitions, permitting travel by particular individuals or groups, may be made by the Secretary of State in his discretion."

In closing, I should like to make a reference to a document of great importance, which is too seldom invoked. It is the Universal Declaration of Human Rights, which this year celebrates its 10th anniversary. Article 13 of the declaration reads as follows:

"ART. 13. (1) Everyone has the right to freedom of movement and residence within the borders of each state. (2) Everyone has the right to leave any country, including his own, and to return to his country."

The United States along with the other member nations, has pledged itself to achieve, in cooperation with the United Nations, the promotion of universal respect and observance of the human rights and fundamental freedoms set forth in the declaration. Let us in the United States be faithful to our pledge.

## Du Pont Report

EXTENSION OF REMARKS
OF

## HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mrs. ST. GEORGE. Mr. Speaker, I have spoken before, on the floor of this House, about the peril of pricing ourselves out of the world's markets, not to mention pricing ourselves out of our own home markets. This peril is not too apparent at present, but it has to be faced and conquered now, because when we have lost the world's markets and our people are walking the streets looking for work, it will be too late.

Mr. Speaker, the following editorial from the Newburgh·News of March 10 tells the story as it affects the Du Pont Co.'s plastic-coating plant in Newburgh, N.Y. It points out the facts and once more sounds the warning. It is necessary to face the truth, in the words of the editorial, that—

It will do none of us any good to raise wages 5 percent if the cost of living is to rise 10 percent at the same time.

The editorial follows:

DU PONT REPORT

The Du Pont Co., whose plastic-coating plant at Newburgh is one of the area's major sources of employment, has announced a 7-percent drop in sales for 1958, but the firm's final 3 months did set a record high for any quarter in the company's history.

That's good news, and news which we hope will carry over into 1959. There's no doubt that as Du Pont prospers, so does our community prosper, as do so many other areas where Du Pont plants are located.

In announcing the firm's achievements for 1958, President Crawford H. Greenewalt uttered a warning of the wage-cost price inflation which has been intensified in recent years.

"Prior to World War II," said Mr. Greenewalt, "advances in technology made possible by research and development in the Du Pont Co.'s plants and laboratories more than offset increases in the elements of manufacturing cost.

"It was thus possible to maintain competitive wages and salaries and a satisfactory return on our operating investment while prices were being reduced."

The executive noted that in the postwar years the increase in wages and salaries has made it difficult for improved technology to keep pace.

"In 1958 the Du Pont average weekly wage was 71 percent above the 1947–49 average, a rate of increase of 5½ percent a year, which more than offsets advances in technology arising from research and development activities during the period," added Mr. Greenewalt.

"In consequence, the company's sales price index increased 5 percent—a modest increase compared with the advance of 23 percent in the U.S. Bureau of Labor Statistics consumer price index."

In other words, Du Pont ingenuity and skill was able to a large degree to offset the inflationary trend. But it couldn't overcome the thing in its entirety.

This is the peril that confronts us. If our best brains, our most skilled scientists,

are unable to preserve the American tradition of industrial supremacy over costs and prices, how shall we be able to save ourselves in the markets of the world? In the markets of our own homeland?

There can be no genuine increase in our true wages and living standards unless we can produce more and keep prices down. It will do none of us any good to raise our wages by 5 percent if the cost of living is going to rise 10 percent at the same time. Serfdom lies at the end of that path.

PATH TO SERFDOM

Worst of all, as prices go up beyond wages, we shall find others under-selling us. Then, as our products remain unsold, we shall see the specter of growing unemployment stalking through our cities and villages.

The figures indicate that Du Pont is faring better than other industry of the land. This is encouraging in one way, but we shouldn't lose sight of the cold truth that, as a Nation, we seem to be losing this fight against wage-cost-price inflation.

Where is it going to end?

## Veterans' Direct Loan Program

EXTENSION OF REMARKS
OF
## HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. EVINS. Mr. Speaker, some time ago in passing H.R. 2256, a bill to extend the direct loan program of the Veterans' Administration, the House approved an amendment designed to remove from the language of the present statute, at that part which authorizes the Administrator of Veterans' Affairs to designate eligible areas for direct lending, specific reference that such areas be rural areas or small cities and towns not near large metropolitan areas.

The passage of this amendment raises questions as to the effect of the language on the operations of the direct loan program. Since the passage of the bill, I asked the Honorable Sumner Whittier, Administrator of the Veterans' Administration, to express the opinion of the Veterans' Administration in this regard. I should like at this time to ask unanimous consent to have Mr. Whittier's analysis inserted in the Appendix of the RECORD. And, to include, as background material, a short excerpt from the report of the Committee on Veterans' Affairs, House Committee Print No. 1, which deals with this matter, including the tables showing the National and State totals of direct loans under this program. Mr. Whittier's letter and the other data follow:

VETERANS' ADMINISTRATION,
*Washington, D.C., March 10, 1959.*

The Honorable JOE L. EVINS,
*House of Representatives, Washington, D.C.*

DEAR MR. EVINS: In your letter of February 25, 1959, you asked what effect the amendment to H.R. 2256, offered by Congressman ABRAHAM MULTER and adopted by the House in passing the bill, would have on the direct loan program and particularly rural areas served by that program. The amendment is designed to remove from the language of the present statute, at that part which authorizes the Administrator of Veterans Affairs to designate eligible areas for direct lending, the specific reference that such areas be rural areas or small cities and towns not near large metropolitan areas.

The concept of the direct loan program upon its creation in 1950 was that it would supplement the guaranteed loan program in areas where, historically, private capital for mortgage lending purposes was not generally available. Based on the legislative history the Veterans' Administration considered that the intent of the Congress was to confine the program to rural areas and small cities and towns. As a consequence, we followed the policy of restricting eligible areas to rural areas and small cities. Generally, we confined approval of cities to those of 25,000 population or less. On some three or four occasions we approved cities of over 50,000 population as eligible areas for a period of time.

When Public Law 85-364 was approved on April 1, 1958, the Congress evidenced concurrence in our practice by writing into the statute the references to rural areas and small cities and towns which would be deleted by Congressman MULTER'S amendment to H.R. 2256 should such bill, or one with similar language, be enacted and approved.

The effect of this action is not entirely clear to us. The colloquy on the floor of the House during the debate on the amendment seems to us to indicate an intention that eligible areas for direct lending could be established in any locality where guaranteed loan financing was not generally available. However, there is implied that direct lending should not be extended to large metropolitan areas. We refer to pages 1644-1645 of the CONGRESSIONAL RECORD for February 4, 1959.

We would certainly not favor any change in the basic concept of the direct loan program designed to make metropolitan areas eligible. Those areas where there is a supply of mortgage funds available can be accommodated through the guarantee program, provided the GI loan is allowed to have a competitive status in investor appeal. With the GI loan on a competitive basis, the direct loan properly may be confined to the rural areas and small towns where historically investment capital has not been available for mortgages.

We regret that we have no breakdown of our direct lending program which would show the number of loans and the dollar value of loans made to veterans in urban areas as compared to rural areas. Our reporting of direct loans made is by the county in which the property is located, without regard to whether it may be located in a city or town or a strictly rural area. The House Committee on Veterans' Affairs has published an excellent summary of our direct lending operations by counties. It is House Committee Print No. 1 dated January 26, 1959, and a copy is enclosed for your information.

Sincerely yours,
SUMNER G. WHITTIER,
*Administrator.*

HISTORY OF THE DIRECT LOAN PROGRAM
LEGISLATION

The direct loan program as authorized by the Servicemen's Readjustment Act, as amended, has been extended from year to year for financial assistance to those veterans living in rural areas, or in small cities and towns not near large metropolitan areas, where other types of financing are not available. The direct loan program, as originally authorized, was to extend from July 19, 1950, to June 30, 1951, and empowered the administrator to make direct loans up to $150 million (Public Law 475, 81st Cong., approved April 20, 1950). After expiring, on June 30, 1951, the program was renewed on September 1, 1951, on a revolving-fund basis, limited to $150 million outstanding at any one time and extended the program to June 30, 1953 (Public Law 139, 82d Cong.). The revolving fund included the unreserved portion of the original $150 million fund allocation, plus the increment from loan repayments, and the proceeds of sales of direct loans to private investors. The revolving fund was augmented in April 1952 by an additional allocation of up to $125 million, to be made available by the Secretary of the Treasury in quarterly installments of $25 million, less the proceeds of direct-loan sales in the preceding quarter (Public Law 325, 82d Cong.). Under provisions of Public Law 101, 83d Congress, approved July 1, 1953, the program was continued for 1 year, to June 30, 1954, with up to $100 million added to the revolving fund, to be made available in quarterly installments, and the maximum interest rate on direct loans was raised to conform to the rate on guaranteed loans. The program was again continued for 1 year, ending June 30, 1955, by Public Law 438, 83d Congress, approved June 29, 1954. Public Law 88, 84th Congress, approved June 21, 1955, revised the program and extended the program for 2 years, expiring June 30, 1957. Public Law 1020, 84th Congress (Housing Act of 1956), approved August 7, 1956, extended the program for 1 year from July 1, 1957, to June 30, 1958, but failed to appropriate funds for the extended period.

VETERANS UNABLE TO OBTAIN LOANS

The committee made a survey throughout the country of the inequity of opportunity and found that of 3,234,438 veterans living in 1,635 rural counties, less than 10 percent had obtained a loan to purchase a home. This compares with 2,857,307 veterans residing in 126 metropolitan counties where over 40 percent have obtained a guaranteed loan.

The committee found that the administration of the direct loan program was such that it was almost impossible for a veteran to build a new home in a direct loan area. Approximately 80 percent of the direct loans were for the purchase of old and existing homes. The committee further found that veterans were unable to buy a farm and farm home with the aid of a VA direct loan because the Veterans' Administration required the veteran to obtain at least 60 percent of his income from farming operations. This was not the intent of Congress.

To correct this situation and clearly establish the intent of the committee and Congress, the committee reported H.R. 4602, which was approved by the Congress.

H.R. 4602 VETOED

H.R. 4602, approved by Congress, established the intent of Congress on direct loans, extended the program to July 25, 1958, provided $150 million for the year's extension, and increased the maximum amount of a direct loan from $10,000 to $13,500. However, the President vetoed the bill on September 2, 1957.

PUBLIC LAW 85-364

Public Law 85-364, approved April 1, 1958, contained all the provisions of H.R. 4602, extended the program 2 years, from June 30, 1958, to July 25, 1960, and provided $150 million for each year of the 2-year extension. Public Law 85-364 also increased the maximum interest rate the Administrator of Veterans' Affairs could set on guaranteed and direct loans. The maximum is set at 4¾ percent, but is also tied to the interest rate set for loans under section 203(b)(5) of the National Housing Act, in that the rate can-

not be higher than 4¾ percent, or one-half of 1 percent below the rate on type 203(b)(5) loans, whichever is the lower.

NEW DIRECT-LOAN PROGRAM

It was the intent of the committee and Congress that new rules and regulations be established by the Veterans' Administration for the direct-loan program which would enable builders to participate in the program in rural areas, small cities, and towns. The new program would also assist veterans to purchase a farm with a farm home, to purchase a farm and build a home on the farm, to build a home on a farm already owned, or to repair and remodel a home or farm home.

The intent was carried out in detail through the new rules and regulations issued by the Veterans' Administration on April 16, 1958.

PRESENT-DAY WAITING LIST

On April 1, 1958, the day the present law was signed by the President, there were 13,084 veterans on the waiting lists of the Veterans' Administration regional offices for a direct loan. The Veterans' Administration received the first funds under Public Law 85-364 on April 4, 1958. This $50 million was allocated to the regional offices with instructions to try to take care of the veterans who were on the waiting list as of April 1, 1958. Veterans who had applied after that date were to be placed on a new waiting list which could not be taken care of until the next allotment was received.

Veterans' Administration records indicate that 50 percent of the veterans who make application for a direct loan do not want one by the time their name reaches the top of the waiting list and funds are available to them. In many cases the veteran no longer desires the direct loan because he has obtained a loan elsewhere or there has been a change in his plans. In too many cases, however, the house he wanted has already been sold. The average amount of a direct loan is $9,044. If only 50 percent of the 13,084 veterans on the waiting list as of April 1, 1958, actually wanted a loan, it would have taken $65.42 million to make loans to the 6,542 veterans. However, only $50 million was available. Using the 50-percent figure, this would mean that 1,542 veterans had to remain on the waiting list until the next funds were received.

Veterans' Administration records indicate that on December 1, 1958, there were 41,025 veterans on the direct loan waiting list. The $50 million quarterly allotment will, if the average amount of a loan is $9,044, provide loans for only 5,000 veterans.

It is evident that additional funds must be made available if direct loans are to be provided the veterans who desire and are entitled to them.

If only 50 percent of the veterans on the waiting list still desire home loans by the time theirs is reached, it will take $216 million to eliminate the waiting list of 41,025 veterans.

Under the present law, the Veterans' Administration drew $50 million in January 1959, which will be the only funds for direct loans until July 1, 1959. This amount will make only 5,000 loans. The $50 million will be allocated to the VA regional offices and earmarked for the veterans on top of the list. This will leave over 36,000 veterans on the waiting list, who will have to wait until July 1, 1959, for a home loan—if the home they want is still available—and then only the top 5,000 veterans on the waiting list will be able to obtain a loan.

*State totals*

| State | Direct loans, April through November 1958 | | | | | | | | Guaranteed loans July through November 1958 | Veteran population | Veterans on waiting list for direct loan |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Total loans made | Purchase new home | Purchase existing home | Construct new home | Purchase farm with home | Construct farm home | Repair home | Repair farm home | | | |
| Alabama | 341 | 81 | 85 | 157 | 10 | 2 | 5 | 1 | 1,052 | 328,000 | 1,163 |

## Curbs on Oil Imports Opposed

EXTENSION OF REMARKS

OF

## HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. PELLY. Mr. Speaker, I believe that mandatory oil import limitations will increase fuel prices and are inflationary. Furthermore, by discouraging private capital in exploring for oil in South America and other countries we harm our security indirectly and kill the most effective and only type of foreign aid program that costs the taxpayer nothing.

Also, Mr. Speaker, the best long-range defense is to conserve our oil storage underground and that is what I thought was supposed to justify the Texas Railroad Commission's conservation control.

I regret and oppose these import restrictions and agree with the following editorial of the New York Times which was in today's paper:

OIL IMPORT QUOTAS

President Eisenhower's decision to set up a system of compulsory import quotas covering crude petroleum and its products is an unhappy victory for a group of special interests whose gain will be at the expense of the general welfare and perhaps, ultimately, even at the expense of those who sought this move. If the immediate aims of these interests are served, the new restrictions on imports will tend to raise the cost of oil and its products, and perhaps also of coal, thus further intensifying the inflationary pressure which, in other respects, the Government is seeking to combat. And if, as is hinted in the President's statement, the Government seeks to police the price of oil and its products by changing the levels of permitted imports in response to price changes in this country, the result will be a further major intrusion of Government control in our economic life, with consequent weakening of the free enterprise system.

The national security argument for these controls is not convincing. This is shown most obviously by the inclusion of Canada in the list of countries whose oil exports to us are curbed, though there is no threat of interruption of seaborne transport in the case of Canadian oil. Beyond that, if serious attention need be paid to assuring sufficient petroleum for future emergency needs there is much to be said for keeping as much of

our oil as possible in storage under the ground and increasing, not reducing our use of imported oil.

Nor can we look with equanimity upon the probable foreign repercussions of this move. The Canadian Trade Minister has already protested it, and similar resentment is undoubtedly felt also in Venezuela and other sources of imported oil. To many abroad this will look like still anther calculated act of economic warfare by the United States against its friends, an act they will interpret as again repudiating our frequent protestations of desire for the freest possible flow of international trade. It is an unhappy precedent which has been set.

## New York Upstate Convention

EXTENSION OF REMARKS
OF
### HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 2, 1959*

Mr. SANTANGELO. Mr. Speaker, a speech by Mayor Frank Seditta of Buffalo delivered March 10, 1959, at the DeWitt Clinton Hotel, Albany, N.Y., during a gathering of legislators and public officials of Italian origin proved so interesting to me that I believe it will prove worthwhile reading. This speech expressed beautifully and succinctly my thoughts and feelings of the large audience which had assembled in upstate New York under the shadow of the capitol.

Also attending and speaking were the Right Reverend Bishop Pernicone; Joseph F. Carlino, majority leader of the New York State Assembly; Anthony J. Travia, minority leader of the New York State Assembly; Joseph Caputa, New York State rent administrator; Angela R. Parisi, member of the New York Workmen's Compensation Board; and Carmine G. DeSapio, chairman of the New York Democratic County Committee. The chairman who arranged this function was Assemblyman Louis DeSalvio. More than 250 public officials of Italian origin from throughout the State of New York from Chautauqua County to Staten Island assembled at this gathering.

The following is the speech delivered by the mayor of the city of Buffalo, Mr. Seditta:

I think the idea of this dinner is a good one. I do not mean that any useful purpose is served by a mass demonstration of ego or self-satisfaction. Rather I think it appropriate that we remind ourselves of the special responsibilities which go with the collective positions of trust represented in this room tonight.

It is well to remember that governmental leadership for the American of Italian origin, in any large degree, is a relatively new thing. As a group, we are but once or twice removed from loved ones who are lately come from the mother country. In many cases, the new life they found here was only slightly less onerous than the one they left. Here they spent their strength and their skill in incredibly hard work, living simply, humbly, and in the gentleness which is the singular grace of our people. But they did find what they sought, something they did not have before. And that was hope—not necessarily hope for themselves, but the hope that their children, or their children's children, might find their places in the sun. This dinner, I think, is eloquent proof that this hope was well founded. But this proof is still fragile, still tentative.

This, I believe, is the important lesson for us to remember. It is still for us, on the one hand, to continue to justify the faith and the labor of our parents. It is, again, our special responsibility to discharge honorably the trust which we bear. True, this is the responsibility of any one in public life, regardless of origin. But we may not yet walk with the serenity and confidence that comes only with an American maturity of centuries. This challenge, which is ours, is the more biting because of our ancestral identification with an infinitesimally small percentage, who have become associated with the very worst in American life today.

We might point out that such an identification is grossly unfair. And we'd be right. We might point out that every group has its brothers who forever lurk in the shadows. And we'd be right. We might point out that our national character was formed by a culture and civilization that was old and wise when the rest of the world was emerging from the forests—that this ancient civilization developed systems of philosophy and ethics that today are the standards of morality throughout the Christian world. This would all be right. But still the identification would persist. It may not be reasoned away. It will pass in its own time.

And right here, it seems to me, is our special test. We can bring that time closer or we can put it off. But in no case do we have the luxury of thinking and acting and speaking just for ourselves. The judgment on all of our people, on what we really are and what we really stand for, will be made out of the things we do and the things we leave. It seems to me that these things should be a dominant theme, whenever Americans of Italian ancestry meet. There is no doubt in my mind, and I am sure in yours, that we are rising to the occasion.

## Federal Reserve Board—Please Take Note

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, the following article which appeared in the New York Herald Tribune of March 8, 1959, is worthy of the attention of our colleagues and of the Federal Reserve Board:

ECONOMIST FINDS NEED OF LOWER INTEREST RATES

The 1958 housing boom can be expected to fizzle unless effective mortgage rates are deflated to 5 percent rather than 6 percent, and mortgage terms closer to 35 years rather than 20 years, reports Eliot Janeway, economist and president of the Janeway Research Corp. He declared yesterday that "unless Federal National Mortgage Association mortgages are again selling at par on the basis of 5 to 5¼ percent yields, the so-called housing boom will go bust."

"Businessmen, investors, and just plain consumers who are still being stampeded into the stock market," said Mr. Janeway, "either don't know what's going on in Washington, and in the all-important housing sector of the economy, or are not concerned over the duration or the extent of the 1959 disappointment building up for business in general and housing in particular.

"No matter what happens, housing cannot be expected to pick up again until the end of the year, after money conditions have turned easy once again," Mr. Janeway said.

"People are assuming too much about the 1959 business outlook and they are going to be hurt by it. It is surprising," he said, "to see relatively well informed people believe that recovery can keep right on going in 1959 despite the stalled status of the trendmaking housing industry.

"But," he said, "there is a decisive difference between this year and last year in the state of the long-term Government bond market."

"Last year," he said, "the bond market strengthened enough to permit Washington to stimulate a business upturn led by housing. But this year, the bond market has weakened enough to stop this 1958 housing upturn in its tracks."

"No matter what kind of housing bill is finally enacted," Mr. Janeway said, "housing will not revive until the bond market has."

## Ever Vigilant

EXTENSION OF REMARKS
OF
### HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. HOFFMAN of Illinois. Mr. Speaker, it is indeed gratifying to know that in times of stress clear-thinking citizens come to the defense of our Republic and to safeguard our principles. I refer in this instance to the members of the American Legion. We have all heard and read of attempts by misguided individuals to abolish the Committee on Un-American activities of this House. This committee's role in safeguarding our freedoms is well known to every patriotic citizen. The following resolution adopted by Hinsdale Post 250, the American Legion, is reassuring in our efforts to preserve these freedoms:

Whereas it is an established fact that our concept of government based on the Declaration of Independence and the Constitution of the United States is under attack by an opposing ideology, despotic and godless in nature; and

Whereas the perpetrators of this ideology have ceaselessly proclaimed to the nations of the world their plans for subjugation of said nations; and

Whereas the U.S. Government has been designated as a major objective of aforementioned subjugation; and

Whereas one of the approved techniques of appropriation is the infiltration of the subversive element into policymaking levels of Government and into strategic defense positions;

Therefore the undersigned do petition the Congress of these United States for the continuation of the Un-American Activities Committee, the past achievements of which have been of inestimable value to our national security.

## Why We Are Unpopular Overseas

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, March 10, 1959*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thought-provoking editorial which appeared in the Evening Tribune of Lawrence, Mass., on March 9, 1959.

WHY WE ARE UNPOPULAR OVERSEAS

The U.S. Senate Foreign Relations Committee is digging into why America and Americans are unpopular overseas.

The auto of Assistant Secretary of State William M. Rountree was recently stoned in Iraq. Vice President Nixon was spat upon in Peru and Venezuela.

There have been 75 attacks on American libraries and U.S. information centers in 25 countries. They have ranged from window breaking to bombings and attempted arson. In Formosa the U.S. embassy was sacked. All this in spite of a multibillion-dollar U.S. foreign aid program.

The easy explanation is that Communist agitators are responsible, but that doesn't appear to be the whole story.

Two Syracuse University researchers, operating on a Carnegie grant, have been studying this question from the angle of whether Americans are properly trained for service abroad.

Their findings, to be published in book form next fall, have been given advance presentation to the Senate committee.

There are now over a million-and-a-half Americans, including dependents, stationed overseas. This is under 1 percent of the population. It includes 520,000 private business representatives and missionaries, 940,000 military personnel and 83,500 civilian Government employees.

The last category catches most of the criticism. It includes 50,000 working for the Department of Defense, 13,500 from the State Department, 11,500 on foreign aid and technical assistance, 3,500 U.S. Information Agency, 5,000 others.

These figures do not include another million-and-a-half tourists, students and traveling businessmen. They also contribute to the image of "The Ugly American," to use the title made popular by the current best seller.

The bad name is by no means proportionate to the number in any foreign country. A fourth of the Americans abroad are in Germany. Relations there are good. The same is true in Japan. And these two countries might well have the best reasons in the world for hating Americans.

The principal criticisms of Americans working overseas are that they are too rich, that they are too impatient about making over the world in the image of the United States of America, and that they live abroad in a cultural land, refusing to mix with or learn about the country to which they are assigned. In short, they don't make friends.

The two Syracuse University researchers tackled this problem of whether properly trained people were being sent abroad by interviewing 240 Americans in 6 selected countries—Mexico, Yugoslavia, Ethiopia, Iran, Japan, and Indonesia.

They first looked into why Americans go abroad to work. Missionaries go because of their dedication; Foreign Service and Army officers because they're assigned, as part of their career training. Some make good and some don't.

Civilians often take foreign posts because they can make and save twice as much and live better. Some go for escape—from relatives, wrong jobs, disillusion or because competition at home is tougher—all bad motives.

The investigators found that conditions under which Americans must work abroad are changing. The old idea that Americans don't mix in the affairs of countries to which they are assigned no longer holds. Every foreign job now concerns the country's internal economic, social, and political affairs.

One great difficulty has been that Americans stationed abroad have not been close enough to the new middle class leaders they are training to govern their countries in the future. The United States missed this boat in both Iraq and Cuba.

What all this boils down to is that Americans have not been properly educated or trained for overseas service. What should be proposed is a new set of standards for such education, so that more Americans can be properly prepared for what is called overseasmanship.

## Hawaii Statehood

SPEECH
OF
### HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 11, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4221) to provide for the admission of the State of Hawaii into the Union.

Mr. ASPINALL. Mr. Chairman, after the long and many years of effort and struggle spent in our quest, it hardly seems possible that the supporters of the legislation now before this committee can sense the thrill of success which is apparently only hours removed from this debate of today.

At this time I desire to especially commend to members of the Committee on Interior and Insular Affairs—the gentleman from New York [Mr. O'BRIEN], and the gentleman from Pennsylvania [Mr. SAYLOR]— who have so ably spearheaded the fight for granting the status of statehood to Hawaii—the last of our incorporated Territories. The gentleman from New York [Mr. O'BRIEN], is the ranking member of the majority side of the committee which I have the honor to chairman. The gentleman from Pennsylvania [Mr. SAYLOR], is the ranking member on the minority side of each committee. Each of them has done yeoman service in this program. To them, along with the Delegate from Hawaii [Mr. BURNS], is due more than to any other like Member of the Members of our body the credit of getting this legislation along so quickly in this session. Also they are due great credit in presenting the bill in the fine form and detail in which it is presented to us. Certainly, I do not desire to minimize the good work done in the interests of statehood for Hawaii by other members of the committee particularly, and Members of the House generally. The gentleman from Washington [Mr. WESTLAND], floor manager of the legislation for the minority, has been extremely helpful and constructive with his searching and meaningful questions which he had propounded during committee consideration.

Without in any way attempting on my part to prejudge the final decision on the legislation which we are now considering, may I say, that, in my opinion, a great majority of this body—truly representing the great majority of the citizens of our Nation—will voice their approval of the bill within the next day or two. Yet, may I say that there are those among us who look with question and fear—and may I add with some suspicion on what the sponsors and supporters of the legislation desire to do. In most instances these questioning and opposing colleagues of ours are most sincere in their opposition. I truly hope that as the advocates of the legislation present their case that the fears and especially the suspicions of our opposing colleagues may be allayed and even removed. Our presentation will be to that end.

Some of my friends have said that the granting of the status of statehood to Hawaii is but the beginning of like attention to be paid to other areas now under our national jurisdiction but not enjoying the status of full membership in our sisterhood of States. I say to those of my colleagues who oppose this legislation for this reason that you have no need for further worry—to be perfectly and brutally frank I say that you really have no logical justification for your opposition founded on such thinking.

Hawaii is the last of the incorporated Territories. With its admission to full statehood in our Union, we shall have filled the galaxy of stars in the field of blue in our National banner. For the foreseeable future there will be no more. It is my opinion that it is most unlikely that there ever will be others. Yet, I know full well that the Members of the 86th Congress cannot speak for the succeeding Congress or Congresses. And, here, may I add my own personal position, which is that I have sufficient faith in those who will be chosen to follow us that they shall do that which is best for the general welfare of our country and its people.

Now, may I explain in some detail just what I mean by stating to you that Hawaii is the last of our incorporated Territories and just what significance must be attached to such statement.

STATEHOOD IS THE NECESSARY CONSEQUENCE OF TERRITORIAL INCORPORATION

The claim that the incorporation of a Territory makes mandatory its graduation to statehood is supported overwhelmingly by historical precedent and the dicta of the Federal judiciary.

Every incorporated Territory—and there have been 31 of them—has become a State except Hawaii. The first of a series of organic acts for incorporated Territories was the Northwest Ordinance of 1787, which outlined a policy of ultimate status not only for the Northwest Territory, but also for all the Territories subsequently to be acquired. A basic provision was that when the population of any district within the Northwest Territory should total 60,000, that district was to be admitted into the Union on an equal footing with the original 13 States.

Organic legislation which ensued for the Southwest Territory, the Territory of Michigan, the Territory of Illinois, and so forth, incorporated the Territory to which each of the acts applied and made provision for eventual statehood.

One after the other, all the incorporated Territories on the mainland were admitted to the Union; and only last January 3 Alaska joined the great sisterhood. The constitutional status of Hawaii is identical to that of Alaska, as well as to that of each of the other former incorporated Territories. True, the Organic Act of Hawaii does not refer in explicit terms to statehood; but the fact that the act extended the Constitution in all its parts to our great Pacific Territory and thereby incorporated it into the Union was sufficient to guarantee it eventual statehood.

The courts time and again have made it plain that the act of incorporation constitutes a commitment by the Congress ultimately to admit as a State the Territory incorporated. In *Ex Parte Morgan* (20 F. 298, 305 (1883)), an incorporated territory is considered an inchoate State. In *McAllister* v. *United States* (141 U.S. 174, 188 (1891)), territorial government was said to be temporary and destined to be superseded when the—incorporated—territories became States of the Union. In *Balzac* v. *People of Puerto Rico* (258 U.S. 298 (1922)), the Supreme Court said that incorporation has always been a step, and an important one, leading to statehood.

One of the more baseless of the charges long cherished by antistatehood elements is the allegation that Hawaii's admission would be followed, necessarily, by that of Guam, American Samoa, and all the other unincorporated areas controlled by the United States. The very fact that these Territories are unincorporated precludes their admission. Not until the Congress makes them an integral part of the United States, and thereby accords them incorporated status, can they hope to achieve statehood. Such a development is utterly unlikely, at least for the foreseeable future.

*The 30 States having previous Territorial status and their respective periods of such status,[1] plus Hawaii interpolated as of 1959*

| State [2] | Date of organic act | Date admitted as State | Years elapsed |
|---|---|---|---|
| New Mexico | 1850 | 1912 | 62 |
| Hawaii | 1900 | 1959 | 59 |
| Arizona | 1863 | 1912 | 49 |
| Alaska [3] | 1912 [3] | 1959 | 47 |
| Utah | 1850 | 1896 | 46 |
| Washington | 1853 | 1889 | 36 |
| Michigan | 1805 | 1837 | 32 |
| North Dakota | 1861 | 1889 | 28 |
| South Dakota | 1861 | 1889 | 28 |
| Idaho | 1863 | 1890 | 27 |
| Montana | 1864 | 1889 | 25 |
| Florida | 1822 | 1845 | 23 |
| Wyoming | 1868 | 1890 | 22 |
| Mississippi | 1798 | 1817 | 19 |
| Arkansas | 1819 | 1836 | 17 |
| Oklahoma | 1890 | 1907 | 17 |
| Indiana | 1800 | 1816 | 16 |
| Ohio | 1787 | 1803 | 16 |
| Colorado | 1861 | 1876 | 15 |
| Nebraska | 1854 | 1867 | 13 |
| Wisconsin | 1836 | 1848 | 12 |
| Oregon | 1848 | 1859 | 11 |
| Missouri | 1812 | 1821 | 9 |
| Illinois | 1809 | 1818 | 9 |

*The 30 States having previous Territorial status and their respective periods of such status,[1] plus Hawaii, interpolated as of 1959*—Continued

| State [2] | Date of organic act | Date admitted as State | Years elapsed |
|---|---|---|---|
| Minnesota | 1849 | 1858 | 7 |
| Iowa | 1838 | 1846 | 6 |
| Louisiana | 1804 | 1812 | 3 |
| Kansas | 1854 | 1861 | 2 |
| Tennessee | 1790 | 1796 | 9 |
| Nevada | 1861 | 1864 | 8 |
| Alabama | 1817 | 1819 | 8 |

[1] The Thirteen Original States did not, of course, pass through any territorial stage. Vermont, Kentucky, Maine, and West Virginia were formed from already existing States. California and Texas were acquired from foreign governments and consequently escaped the territorial apprenticeship.

[2] States are listed under the names by which they are now known rather than by the name of the Territory from which each was formed.

[3] Alaska was incorporated as of 1868, but its first organic act was not passed until 1884. This first organic act, however, provided only for a "district" rather than a "territorial" form of government. Hence, the organic act of 1912, which created Alaska's first legislature, may more truly be considered the basic act in the establishment of Territorial government.

Source: Statutes at Large.

We have no more areas which have been or are likely to be designated as incorporated Territories. Hawaii is the last. The people of Hawaii—good, loyal, and patriotic citizens of the United States of America—have served well their apprenticeship. They are ready. They are deserving. We are ready to receive them. Let not any fears of ours deny to our own that which our own is entitled to receive—the blessing and responsibilities attendant with full sisterhood in the United States of America.

## Repeal of the Hiss Act

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. MULTER. Mr. Speaker, today I presented my statement in support of H.R. 578 which I introduced to repeal the so-called Hiss Act before the House Post Office and Civil Service Committee.

My statement was as follows:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, OF NEW YORK, BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, THURSDAY, MARCH 12, 1959, IN SUPPORT OF H.R. 578

Mr. Chairman, allow me to express my appreciation for this opportunity to explain the purpose of my bill, H.R. 578 and to urge its careful consideration by this committee.

The purpose of the bill is quite simple to explain. It is to repeal in its entirety Public Law 769 of the 83d Congress—the so-called Alger Hiss Act. This act, as you know, prohibits the payment of annuities or retired pay to retired civilian officers and employees of the Federal Government and to retired military officers and enlisted men who are or who ever have been convicted of certain criminal offenses or who commit certain acts in the future.

It is my firm belief that not only is repeal the simplest way to handle what promises to develop into a very complicated problem, but that it will prove to be the most effective and the cheapest way of doing it. I say this because, first, the law is grossly unfair to the great majority of persons to whom it applies and should, therefore, be either abolished or amended so as not to apply to them. Second, as regards the other individuals to whom it applies, the law is subject to attack on a number of constitutional grounds, and if allowed to stand it will be the subject of endless litigation with the probable result that its provisions will gradually be chipped away by the courts.

First, I would like to discuss the broader policy aspects of the law.

This law was passed during what might be termed the witchcraft era on Capitol Hill. When I say this I do not mean to imply that I do not think that we have never had a national security problem in this country or that we might not have one in store for us. However, looking back to the year 1954, I think that our increased concern with this problem made us lose sight of its true dimensions. In such a setting, the Hiss Act passed the House of Representatives, unchallenged and undebated. And this despite the warnings of Civil Service Commission officials that the legislation's language was so general and vague that numerous inequities and hardships would result from it.

From the reports I have seen and heard, a good number of these hardship cases have already presented themselves. To date some 200 civil service retirees have been denied annuities approximately some $300 million in benefit rights. I do not claim familiarity with all of these cases.

I have heard of some, however, which demonstrate the extreme injustices which can result from the provisions of the act. For example, a study undertaken by the Federal Bar Association in 1956 disclosed that 51 out of the 64 cases that had arisen at that time involved offenses that had been committed prior to the law's enactment. Thirteen of these 51 cases—more than 25 percent—concerned employees who had been hired or rehired by the Government after they had been convicted and punished for the offense for which their annuities were later denied.

The Government, in other words, employed these persons with full knowledge of their past convictions. They were allowed to work for years, making contributions to the civil service retirement fund with the expectation of retirement benefits for themselves and their families when they reached the eligible age. Out of a clear sky, this law appeared on the statute books and their plans and dreams for a secure old age vanished into thin air. This, I submit, is not in keeping with the American concept of justice and fair play.

The Hiss Act, like charity, it might be said, covers a multitude of sins. About one-third of the crimes for which a person can lose his retirement rights are misdemeanors. Thus, a very valuable property can be lost for a minor offense. It has been reported that one employee lost an annuity valued at over $49,000 for a conviction in which the court saw fit not to impose any fine or imprisonment. Another case involved a person who in his youth stole a ham from the Army. This law, it seems to me, fails to comply with the basic principle of criminal law of trying to make the punishment fit the crime.

There are other proposals before this committee to amend Public Law 769 so as to eliminate many of the problems I have referred to. The administration, I understand, has finally realized the problems that have arisen because of this law, which it advo-

cated in 1954. It now offers proposals to amend it to apply only to convictions for disloyalty reasons.

As I stated earlier, however, I believe that the problem would be best solved by repealing the statute entirely, as my bill, H.R. 578, would do.

I shall not undertake at this time to present a brief on the unconstitutionality of the law. That is a study which this committee is better equipped to undertake than I am. I am here only to point out that the subject deserves serious consideration.

Indeed one section of the act has already been declared unconstitutional by the U.S. Court of Claims. In the case of *Steinberg* v. *United States*, decided last July, the Court of Claims struck down the provision of the law denying retirement benefits to persons who refuse to testify on the ground of self-incrimination before a congressional committee, a Federal court, or a Federal grand jury. This provision, the Court declared, circumvents the fifth amendment guarantee against compulsory self-incrimination and indiscriminately links the innocent with the guilty.

To be sure, in the Steinberg case the Court was dealing with what is probably the most vulnerable section of Public Law 769, which does not even require a conviction but makes the simple exercise of a constitutional right grounds for withholding retirement benefits. It does point up, however, that the entire law was passed and adopted without careful scrutiny. Otherwise such an obviously invalid provision would not have been included in it. It also, I am afraid, portends the fate of other provisions of the act.

Those persons who were convicted of crimes before Public Law 769 was passed, but who will lose benefits if its provisions are carried out will attack it as ex post facto. The man whose name was made a part of its legislative history may well challenge it on the grounds that it is a classic bill of attainder.

Others may maintain that they are being deprived of vested property rights without due process of law. They will point to the concurring decision of Judge Whitaker in the Steinberg case and the recent decision of Judge Tamm of the District Court of the District of Columbia, in the Nester case which involved social security benefits. If there ever was a piece of legislation which was destined for rough sledding in the courts, this is it.

The judiciary, of late, has often been charged with usurping some of our legislative functions. But what about the other side of the coin? Isn't it about time we admitted to ourselves that perhaps in passing Public Law 769 we were trying to exercise some judicial functions.

I think that Public Law 769 was a mistake—well intended, it may be true—but still a mistake. I sincerely hope this committee will take early action on my bill, H.R. 578, which would strike this provision from the statute books.

## Whose Farm Program?

EXTENSION OF REMARKS
OF
### HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. McGINLEY. Mr. Speaker, I would like to bring to the attention of my colleagues a chronology of some statements made by the Secretary of Agriculture during the past 5 months. I will leave it to my colleagues to determine what the administration's position is on the farm program now in effect.

Washington Post, February 25, 1959—Joseph Alsop column:

Secretary Benson is ripe for the operating table because his farm program has finally got absolutely out of hand.

Letter to the editor of the Washington Post, March 11, 1959, by Secretary of Agriculture Ezra Taft Benson:

The farm program now in effect is not that of this Secretary of Agriculture. The Benson program has never been allowed to go into effect.

Omaha World Herald, October 9, 1958—interview with Secretary Benson at Nebraska City, Nebr., when the Secretary visited Nebraska on a campaign junket:

Mr. Benson said that his farm program has been in effect only since the fall of 1955 and that there had been a steady improvement in conditions since then.

Associated Press story of Secretary of Agriculture Benson's address to a luncheon of the National Affairs Forum sponsored by the Pittsburgh Chamber of Commerce which appeared in the Lincoln Journal October 8, 1958:

Secretary of Agriculture Benson says the American farmer "never had it so good."

## H.R. 105 Endorsed by International Rescue and First Aid Association, Inc.

EXTENSION OF REMARKS
OF
### HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. JENNINGS. Mr. Speaker, on the opening day of the 86th Congress I introduced H.R. 105 in the House. This bill is similar to a measure that I sponsored in the last Congress—H.R. 242—and would make volunteer fire departments and rescue squads eligible for donable surplus Federal property.

In the second session of the last Congress we approved a bill pertaining only to volunteer fire departments. However, this bill was not passed in the Senate prior to adjournment.

It is my sincere belief that both volunteer fire departments and rescue squads should be eligible for the surplus property that might be donated for their use. Each of these organizations performs a very vital public service.

A few days ago the board of directors and executive committee of the International Rescue and First Aid Association—IRFAA—met in nearby Alexandria, Va. The members of this group went on record as endorsing and urging passage of my bill, H.R. 105.

During the IRFAA's convention last November, the membership reaffirmed the association's position as set forth in a resolution adopted at the 1956 convention. I include this 1956 resolution in these remarks for the benefit of my colleagues who have sponsored legislation similar to H.R. 105.

The resolution follows:

Whereas in recent years our great Nation has suffered enormously from the destructive forces of nature by virture of hurricanes, floods, and tornadoes, which caused great tolls in loss of life and injury to thousands of our citizens as well as being most destructive to commercial establishments and residential structures; and

Whereas these catastrophies must be met by the immediate organization of disaster squads, equipped with articles from Federal surplus stockpiles, which would greatly enhance rescue, first aid and transportations so vital at said disaster areas; and

Whereas disaster squads should be organized, equipped and trained within the organizational planning of Armed Forces Reserve training centers, stations, and armories, Civil Defense, Civil Air Patrol, and organized civilian rescue-first aid squads; and

Whereas the release of said surplus Federal equipment would also enhance routine localized functions on a year-round basis and thereby greatly reduce death and injury tolls from the presently high rates; and

Whereas human misery could be relieved and alleviation of unwarranted delays could be achieved by trained and well-equipped squads which would provide the best in rescue, first aid, and transportation; and

Whereas within the past 2 years the eastern seaboard and the New England States have suffered high tolls in loss of life and billions in property losses, causing peril to our national security and public safety: Now, therefore, be it

*Resolved*, That this resolution be unanimously passed in concurrence and proper Federal authorities be notified.

This resolution outlines succinctly the need for this legislation; its statements are also applicable to the volunteer fire departments of the Nation.

Because of the important role IRFAA plays in community service in the Nation, I outline herewith the organization's purposes and objectives:

THIS IS THE IRFAA

The International Rescue and First Aid Association is an association of organized volunteer, paid, and industrial rescue squads, ambulance and first-aid crews, fire departments, and other comparable units equipped with all types of rescue and first aid apparatus and devices which can be carried in mobile units, either by vehicular, water, or air transport; county, State, and other associations; and individuals, both men and women, active or interested in the rescue and first aid movement.

The IRFAA membership thus is composed of individuals, organized units, and associations, and associate members in the United States, Canada, and other countries. This association was organized in 1948 at the first annual convention in Atlantic City, N.J. The IRFAA is incorporated under the code of the Commonwealth of Virginia as a voluntary nonprofit organization.

OBJECTIVES OF THE IRFAA

First. To promote the ideas of organized rescue and first aid work throughout the world;

Second. To promote and assist in the establishment and training of rescue and first aid organizations;

Third. To cooperate to the fullest possible extent with other organizations whose objectives are accident prevention, safety education, rescue and first aid work;

Fourth. To cooperate in, foster, and conduct research designed to advance the science and art of rescus and first aid work, and to encourage the desirable standardization of practice and equipment;

Fifth. To establish a system of mutual assistance both within the association and with other organizations to be used in the event of large-scale disaster;

Sixth. To develop and maintain a code of high ethical standards among rescue and first aid personnel;

Seventh. To promote the general good and welfare of the members of the association;

Eighth. To aid in bringing about and maintaining world harmony by developing a spirit of kinship among the people who are devoted to the cause of saving life and aiding the sick and injured;

Ninth. To bring together in a common association all organizations and individuals interested in the aforementioned objective.

ACTIVITIES

All activities of this association are designed and carried out to accomplish and forward the aforementioned activities. All elected and appointed officers are volunteers in their work in and for the association except the executive director who is employed to conduct the operations of the executive office and to serve as editor of the association's official magazine, the International Rescuer.

This association encourages plans of cooperative action and mutual assistance among its members; and on local, county, State, provincial, and other levels but it does not itself become operational in any emergency or disaster situation whether it be of a local, State, National, or international character. It does not order, dispatch, or request any member unit to go to the scene of any emergency or disaster of any type. Any unit, individual, or organization does not lose any autonomy or freedom of action through membership in this association.

Mr. Speaker, when surplus Federal property is available for donation purposes, it should be placed in the hands of those organizations performing a public service. The volunteer rescue squads and volunteer fire departments of America certainly meet this test.

The chairman of the Donable Property Subcommittee had advised me that when departmental reports are received on the pending bills that consideration will be given to hearings.

It is my hope that we can complete action on H.R. 105 in this session of Congress and make these organizations eligible to receive donable property.

## The Questing Desire To Know

EXTENSION OF REMARKS

OF

### HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. SCHWENGEL. Mr. Speaker, an editorial by President Virgil M. Hancher, of the State University of Iowa, won the George Washington Honor Medal Award presented by the Freedoms Foundation at Valley Forge, Pa. The award was made for "bringing about a better understanding of the American way of life." Since the editorial originally appeared in the National Education Association Journal, it is possible that not many of the Members of Congress have had a chance to read it.

Because its message is of such importance that all of us need to study these words and take them to our hearts during the deliberations we hold on one of the great issues of the moment, I ask unanimous consent to have the editorial reprinted in the Appendix of the RECORD.

In placing it in the RECORD, I also wish to pay tribute to Dr. Hancher for the continuing contribution which he is making to higher education. The George Washington Honor Medal Award is further evidence of the recognition he is receiving throughout the United States.

The editorial follows:

THE QUESTING DESIRE TO KNOW

Our Nation has been severely shaken by recent events. Hope and a profound belief in our ultimate destiny have sustained and strengthened this Nation from its earliest beginnings. Now, for the first time in this century, we have been asked suddenly to face the possibility that we may become a second-rate power. How shall we meet the challenge of that sobering fact?

Perhaps nothing has been so disillusioning to the rest of the world, nothing has so diminished the reputation and standing of our great Nation, as the conduct of our people since October 4, 1957. Russia launched a satellite, and the schools and colleges of the United States became the scapegoat for an adult generation's own feeling of inadequacy.

That generation, being unwilling to admit its inadequacy, turned its anger loose upon the schools. But if there is one thing under the sun for which today's schools and colleges are not answerable, it is the sorry state in which the world now finds itself.

Men have always sought scapegoats for their shortcomings. The search is as old as Abraham and as new as the latest political speech. In the midst of all this search for a scapegoat, someone needs to tell the blunt and bitter truth: If any schools or colleges are responsible for the present crisis, it is the schools and colleges of 20 to 40 years ago—the very schools so often cited as models of what we should return to today.

If the men and women of my generation can keep from blowing the world to bits in the next 10 years, those now about to graduate from our schools and colleges may well do a better job than we have done of keeping the peace and of building a great society.

"Make no little plans," said Daniel Burham, the great architect and city planner, "they have no magic to stir men's blood and probably themselves will not be realized. Make big plans; aim high in hope and work, remembering that a noble, logical diagram once recorded will never die, but long after we are gone will be a living thing, asserting itself with ever-growing insistency. Remember that our sons and grandsons are going to do things that would stagger us. Let your watchword be order and beacon, beauty."

The New Testament parable of the talents embodies a great spiritual law, and a great law of life. It says: "Unto everyone that hath shall be given, * * * but from him that hath not shall be taken away even that which he hath." If our young graduates play it safe and wrap their talent in a napkin, hiding it away until the Day of Judgment, as many of my generation have done, they will have nothing to show for the life and the talent given them, and will stand condemned.

But these young people are learning, I hope, as Somerset Maugham once said, that those who surrender their liberty in return for security will learn to their sorrow that in the end they have surrendered both their liberty and their security.

They are learning, I hope, that the fundamental challenge of our time is whether free men can achieve the intellectual eminence and the force of character requisite to demonstrate that freedom is better than regimentation and spiritual power greater than the Marxist dialectic.

This is a time for statesmanship, intelligence, character, and imagination. We need trained intelligence and intellectual eminence, as the Russians do, because these are national assets. But we, in this country and in the free world, need them even more because they are among the highest attributes of man.

Man alone, of all creation, possesses the restless and questing desire to know, and it is this desire which today's schools and colleges are seeking to stimulate and guide and direct into creative channels.

## North Dakota Legislature Urges Full Recognition of U.S. Maritime Service

EXTENSION OF REMARKS

OF

### HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. SHORT. Mr. Speaker, the North Dakota State Legislature, adjourned last week, passed a concurrent resolution memorializing the Congress to establish and maintain the United States Maritime Service as a uniformed service. I am sure that most of us are familiar with the history and great traditions of the Maritime Service, both in peace and in war.

The concurrent resolution passed by the North Dakota Legislature follows:

HOUSE CONCURRENT RESOLUTION "J-1"

Concurrent resolution memorializing Congress to establish and maintain the U.S. Maritime Service as a unifomed service

Whereas the U.S. Maritime Service performs a highly valuable service to the United States in time of peace and is an integral part of our national defense in time of war; and

Whereas a measure will be placed before Congress during its current session to recognize the status of the U.S. Maritime Service by making it one of the uniformed services of this country: Now, therefore, be it

*Resolved by the House of Representatives of the State of North Dakota, the Senate concurring therein,* That Congress is respectfully urged to pass suitable legislation to establish and maintain the U.S. Maritime Service as one of the fully recognized uniformed services of this country, and that copies of this resolution be forwarded by the Secretary of State to the Secretary of Commerce, and to each member of the North Dakota congressional delegation.

HJALMAR C. NYGAARD,
*Speaker of the House.*
GERALD L. STAIR,
*Chief Clerk of the House.*
C. P. DAHL,
*President of the Senate.*
VIC GILBREATH,
*Secretary of the Senate.*

## Administration's Failure To Promote Industrial Uses of Farm Products

EXTENSION OF REMARKS
OF
### HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. McGINLEY. Mr. Speaker, city dwellers often ask midwesterners why we disagree so firmly with the administration's policies on the farm program. And sometimes we wonder if, indeed, we are unfair.

But then other facts come to light which confirms our basic position that the administration should be working to improve the plight of agriculture which is one of the basic industries of the Nation.

A story told to me privately by J. Leroy Welsh and later told to a House agriculture subcommittee recently which was studying industrial uses of agriculture products further reaffirms our suspicion of the administration.

Welsh, of Omaha, is well known for his efforts as Chairman of President Eisenhower's Bipartisan Commission To Study Utilization of Farm Products for Industrial Purposes.

He said that he and other members of the Commission visited the Federal research laboratory in Peoria, Ill., that has been working for years in this field of agricultural products.

VISIT LABORATORY

While there, Welsh and others were told that 100 million bushels of corn could be utilized annually in the manufacture of paper if one problem could be solved.

By adding 5 percent starch to woodpulp in paper manufacturing, a better quality paper could be produced. It would be economically feasible since the cost of the starch would be competitive in price to that proportion of woodpulp it replaced. Incidentally, Welsh said that 90 percent of all woodpulp is imported.

This use of starch has been tried, but it developed that something in the starch caused it to become brittle and caused brown spots to appear on the paper after a time.

This was the problem.

Welsh asked the Peoria people if that could be solved. After some discussion, the Peoria people agreed that by intensifying their effort on the project it could certainly be done within 2 years—maybe 2 months. Two million dollars would be the most it would require to do the job.

ACTION PLANNED

Welsh went to the Secretary of Agriculture and other members of his staff and related the story. It was agreed that it was a wonderful plan. The $2 million could come from the money Congress made available to the Secretary for just such projects.

A man was named in that meeting as the person who would have the responsibility of working out the starch research project.

Welsh in visiting with the Secretary seven and a half months later found that nothing had yet been done.

When Welsh testified this past week to the Agriculture Subcommittee, he reported that it was now a year and a half from that meeting in which the project was set to go. As far as he knows nothing has yet been done.

The Secretary of Agriculture has a fund now of $300 million which comes from import duties earmarked by the Congress for use in financing a program for industrial use of agriculture projects. The Congress has authorized an additional $500 million for the same purpose.

And yet the Secretary insists that the new agency that is being considered in legislation pending before the Congress should be under the Department of Agriculture.

WHAT MOTIVE?

It is difficult to determine the administration's motives. It also raises the question if the administration provides the incentive needed to carry out this program which would be a boon to agriculture and reduce the ever-increasing burden on the taxpayer.

It has all the authority and all the money needed to have initiated a program within the framework of the Department of Agriculture.

However, I submit that the Department officials indicate that they do not realize that our present need is to push wholeheartedly for programs in utilization research, instead of continued attention to means of increasing production.

## Poison in Your Water—No. 35

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the RECORD an article from the Green Bay, Wis., Press-Gazette of July 3, 1957, entitled "Petitioners Ask End of Pollution in Rock River":

PETITIONERS ASK END OF POLLUTION IN ROCK RIVER

MADISON.—A petition asking Governor Thomson to bring an immediate halt to existing industrial and sewage pollution in the Rock River and Lake Koshkonong was forwarded Wednesday to the State committee on water pollution.

A delegation from Rock County presented the petition to the Governor Monday. It contained 3,000 signatures and said the pollution was damaging fish life, boating, swimming, and recreation in the area.

The Governor forwarded the petition to the committee along with a letter in which he said he wanted "our streams cleared as rapidly as possible."

"If the committee determines that all reasonable speed has not been used or if cooperation has been lacking," the Governor wrote, "I urge that you take the action within your power which may be required to impress upon the offenders our determination to see that the law is observed."

Practically all U.S. public waterways, including canals, are maintained today by U.S. Army engineers.

## Science Honors Utahan Who Heads Glen Canyon Archeological Salvage

EXTENSION OF REMARKS
OF
### HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. KING of Utah. Mr. Speaker, last week in New York City an honor of international importance in science was conferred upon the head of the Department of Anthropology at the University of Utah, Dr. Jesse D. Jennings. I believe the honor merits the attention of the Congress because Dr. Jennings is engaged in scientific exploration closely connected with that monumental reclamation development spawned and sustanied by the Congress—the Upper Colorado River storage project. Dr. Jennings is the director of the archeological and historical salvage work on lands which will be flooded by the Glen Canyon Reservoir.

In this salvage work, Dr. Jennings and his colleagues are working against time—once the reservoir begins to fill, the record will be closed forever on the lore which the reservoir bottoms contain. The best interests of not only western history, but the Nation and science generally, demand that this work be carried to a complete and successful conclusion. The work will be carried to such a conclusion only with the sustained support and interest of the Congress.

For this reason, I direct the attention of my colleagues to two articles—an editorial from the Salt Lake Tribune which list some of Dr. Jennings' personal accomplishments including the Viking Gold Medal which the Wenner Gren Foundation for Anthropological Research presented him last week, and a feature story from the Deseret News—Salt Lake City—which reviews some of the interesting progress which Dr. Jennings' salvage team has made in the Glen Canyon region.

The Tribune editorial follows:

HONORS TO JESSE JENNINGS

Jesse D. Jennings is a man of talent, boundless energy and many interests. He is the pleasing combination of scientist and extrovert.

Since coming to the University of Utah, where he is now head of the department of anthropology, Dr. Jennings has made extensive scientific studies of the remains of ancient life in Utah and neighboring States. Not the least of research papers he has published is called "Danger Cave," the name of an underground area near Wendover, Utah, where the remains of an ancient culture have been under intensive study.

Currently Dr. Jennings is director of the Utah side of an archaeological salvage project of lands which will be flooded by Glen Canyon Dam in northern Arizona. The project, financed largely by the Federal Government, is to preserve and evaluate remains of prehistoric villages in the rugged area. More than 90,000 specimens and thousands of pictures, maps, and records were processed last summer.

Before coming to Utah, Dr. Jennings gathered archaeological data in the Middle West, the Southwest and in Guatemala.

This week Dr. Jennings was presented the coveted Viking Gold Medal of the Wenner Gren Foundation for Anthropological Research. Some of his work has been done with grants from the foundation.

The Tribune joins in complimenting Dr. Jennings and his staff and the University of Utah for the honor.

The Deseret News story follows:

GLEN CANYON STUDY DATES INDIAN RELICS

(By Vard Jones)

Field and laboratory research by University of Utah scientists has disclosed that ancient inhabitants of the Colorado River area above the Glen Canyon Dam site were Pueblo Indians of the time from about A.D. 1000 to A.D. 1250.

Dr. Jesse D. Jennings, head of the department of anthropology at the University of Utah, said there is some indication that some inhabitants of the area were there even before the Christian era began.

"But while we have these indications of prepottery occupants, we must await much more extensive excavation and research before this is completely established," Dr. Jennings said.

SALVAGE OPERATIONS

The University of Utah anthropologist is directing salvage operations to preserve the remains of the cultures that existed in the Colorado River area which soon will be covered by water backed up by Glen Canyon Dam.

On June 15 field crews from the university will move into the area for the third summer of research along the north banks of the Colorado and San Juan Rivers.

"We expect to be excavating sites for about 75 days this summer," Dr. Jennings explained, "with the Museum of Northern Arizona conducting similar research on the south banks of the river," he added.

SAVE ARTIFACTS

To date the researchers have taken thousands of artifacts from the dam site to far above the confluence of the Colorado and San Juan Rivers.

Some excavations have been made as far as 75 miles from the Colorado River in order for the researchers to obtain comparative samples with which to classify artifacts found in the areas to be covered.

"By having such comparative objects we can tell the date of pottery and other artifacts by cross-dating with other areas," the university researcher said.

One such digging away from the river proper was made at Boulder, Garfield County, last summer by a team headed by Dr. Robert H. Lister, a full professor at the University of Colorado, who has been on leave to the University of Utah to help in the Colorado River salvage project.

FOURTEEN-ROOM DWELLING

At Boulder the researchers uncovered a complete 14-room dwelling inhabited by Pueblo Indians about a thousand years ago. Although covered with silt and soil, walls of wood and rock were still standing. Nine of the rooms appeared to be storerooms. Three main living rooms had fireplaces in the center of each.

Other potentially valuable historical sites have been found by field teams on the Kaparowitz Plateau in Kane County. A team headed by James Gunnerson, curator of the university museum of anthropology, has made initial surveys of this area, but these sites are not expected to be investigated until after the Colorado survey is completed.

IDENTICAL CULTURE

Objects found at Boulder and those found in the river bottom which will be flooded by water from the Glen cofferdam in the next few months have been cross-checked, showing the same culture of Indian lived at both areas.

"We have salvaged adequate samples at every significant site in the cofferdam area and feel sure we have a sufficient amount of material on which to do analysis," Dr. Jennings said.

This summer's project will cover sites above the confluence of the Colorado and San Juan Rivers up to Hite. With private funds, the university researchers will also do additional work at Boulder again this summer—hiring volunteer diggers.

THIRD PROJECT

"If sufficient funds are forthcoming, a third project will be undertaken also this year in the triangle formed by the Colorado and San Juan Rivers," Dr. Jennings said.

The project head also pointed out that the Navajo Indians living on the south side of the river are in no way related to the ancient Pueblos who once lived along the Colorado. The Navajos apparently migrated down from northwestern Canada about 500 years ago, he explained.

Dr. Jennings explained also that although some of the Indians of this ancient culture lived in cliffs, the bulk of them lived on the mesas and lowlands of the area.

## Oregon Selects Mrs. Harlan P. Bosworth as Its Mother of the Year

EXTENSION OF REMARKS

OF

### HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. PORTER. Mr. Speaker, I am particularly pleased to pay tribute today to the 1959 Oregon Mother of the Year. She is Mrs. Harlan P. Bosworth, of Medford, which is a city in my district. Marie Bosworth and her husband have four children, now grown. The Bosworths have many interests in local, State, National, and international affairs.

Oregon's Mother of the Year is concerned about matters which go far beyond the beautiful Rogue River Valley in southwestern Oregon. She considers her most important activity outside of home and church her work with the Medford chapter of the Oregon United Nations Association. She is on the State board and last year she attended the National United Nations Convention in New York. She recently was invited to join the Citizens' Consultation Group of UNESCO.

Marie Bosworth is an active member of the League of Women Voters. She has been president of the Medford Council of Church Women. Her civic activities are many.

She is a group leader for the Great Decisions program and a member of the Women's International League for Peace and Freedom. An active member of the Democratic Party, she once ran for the State legislature. At one time she taught in the public schools.

Under leave to extend my remarks in the RECORD, I should like to include an editorial which appeared in the March 4, 1959, edition of the Medford Mail Tribune entitled "Mother of the Year." It is written by Eric Allen and his comments cogently sum up some of the reasons for her selection.

I consider Marie Bosworth an outstanding mother, citizen and woman. I am proud to bring her work to the attention of this body:

MOTHER OF THE YEAR

Marie Bosworth has been a frequent visitor in the newsroom of the Mail Tribune, in pursuit of one or another of her activities and projects. She is a welcome visitor, for virtually always she has something constructive to offer or suggest.

Mrs. Bosworth's interests are both varied and broad. She is a conscientious worker in her church, and in the Medford organization of churchwomen. She is an ardent supporter of the United Nations, and of its various agencies. She has been active in a number of organizations which have as their objective the betterment of government, or of the conditions of American Indians.

She is concerned with proper nutrition, with air and water pollution, with artificial additives to foods—with anything, in short, which will tend to improve the human condition, mentally, physically, emotionally, or governmentally.

This she does without thought of personal reward. It is because she is the kind of person she is.

Our most vivid memories of Mrs. Bosworth are from an election campaign several years ago, when she was a candidate for the legislature. She put her whole effort and enthusiasm into the campaign.

She didn't win, but that wasn't the important thing to her. What was important was the individual's responsibility to participate in government, and to do what one could, as an active citizen, to make this a better community, State, Nation, and world.

This week she was chosen as Oregon Mother of the Year, an honor and a recognition which she did not seek, but which fits her perfectly.

We are proud of Marie Bosworth, perhaps almost as proud as must be her husband, her four children, and her seven grandchildren.

## Congratulations to St. Catherine's High School Basketball Team of Racine, Wis., Champions of Wisconsin State Catholic Conference

EXTENSION OF REMARKS

OF

### HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. FLYNN. Mr. Speaker, it is with a deep sense of satisfaction that I rise to inform this august body of the fact that my high school alma mater, St. Catherine's, of Racine, Wis., has again

in 1959 as in 1958 won the State basketball championship in the Catholic Conference of Wisconsin. This team, under the skilled leadership of Coach John McGuire and the tutelage of a most personable athletic director, to wit: the Reverend Cletus V. Uhen, has amassed the outstanding record of 26 wins and 3 losses for the 1958 to 1959 season and 51 won and 5 lost in the last 2 years. I might state that St. Catherine's High School in Racine, Wis., is one of the finest secondary scholastic institutions in the State, that a large building project recently completed has tripled its student capacity but that, with these enlarged facilities, the recognition of its valuable effect on the community and the good work of its Dominican Sisters who comprise its teaching staff and the hard work of its president, Rev. S. B. Whitkowiak, is such that its expanded facilities are already overcrowded to a point where the school is teaching on a two-platoon basis. The school is outstanding for its part in the development of a Christian attitude and a good moral character among the students in addition to its scholastic training.

High on the agenda of the school activities, however, is its athletic program. It has repeatedly won the State championship in both football and basketball. It is also active in track and other sports.

The basketball team has been invited by Georgetown University to participate in the first national Catholic basketball conference to be held here in Washington, D.C., on Friday, Saturday, and Sunday of this week, to wit: March 13, 14, and 15, 1959. The members of the St. Catherine team are: Jim May, Jim Poulsen, Joe Gammell, Jim Olley, Tom Schilke, Chuck Wood, Bob Letsch, Don Tempesta, Rocke Calvelli, and Todd Pettit.

I predict that this fine group of midwestern boys from Racine, Wis., will leave Washington on Sunday next with the national Catholic basketball crown tucked securely in their suitcase and I issue to all of you who enjoy watching basketball, played by artists in their field, to join me at Georgetown University Gymnasium in watching the Catholic invitational basketball tournament during this coming weekend.

## Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
### HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, March 4, 1959*

Mr. METCALF. Mr. Speaker, Secretary Flemming, of the Department of Health, Education, and Welfare, has brought to Congress a new proposal which he says will help meet the shortage of more than 140,000 classrooms. However, in order to build the 75,000 classrooms Dr. Flemming says will be built under his formula for Federal aid, State constitutional and statutory debt limits will have to be revised and basic tax concepts of many States will have to be changed.

Dr. Flemming should devote his considerable talents to other national programs which are in trouble. The United States lags behind the Soviet Union in ability to put heavy loads of instruments into space. He could offer a wealth of ideas to solve this problem. He could announce a new ratio of translation between Soviet kilograms and American pounds, which by a simple shift of two decimal points could make the United States payloads heavier than the Soviet performance. Better yet would be to abolish the law of gravity by Executive order, applicable only within the confines of U.S. launching areas. Then we could send our battleships on good will cruises to the moon.

Either of these proposals should be minor problems to an official of the executive branch who cannot see the difficulties in other jurisdictions. A simple edict should suffice, and if the Russians do not see things his way, that is only what should be expected of backward people.

## USDA Barter Regulations Depress Our Commodity Markets

EXTENSION OF REMARKS
OF
### HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. POAGE. Mr. Speaker, the awkward regulations which surround the Public Law 480 barter program have had the unfortunate effect of cutting world prices on U.S. agricultural commodities, seriously disturbing trade operations and preventing the movement of our farm products into some of our normal export areas.

As a result of the so-called modified barter regulations, instituted last fall by the Department of Agriculture, this program lacks the flexibility which would enable it to supplement our cash sales and to meet competition from the Soviet bloc. In fact the Department has publicly admitted that it is more difficult to move commodities under their present regulations than it was under the old ones, which the Congress had sought to liberalize under the new law.

Two years ago, over $350 million in surpluses were moving into export annually through barter, at discounts or commissions to exporters averaging only one-half to 1 percent, and with no disruption of world prices or normal trade operations. Now, as a result of the new regulations, we are moving commodities at a rate of less than a hundred million dollars a year, at discounts ranging from 7 to 12 percent, or even higher. And these discounts are beginning to have a serious effect on normal commercial sales and world prices.

I want to emphasize that the present high discounts on exported commodities are not taken out of the price paid to the CCC. They are made possible only because the private traders are able to capitalize on temporarily depressed minerals markets. In some cases, they are buying material at distressed prices. Were it not for the fact that stockpile materials can be purchased at 10 percent or so below world prices, it would be difficult, if not impossible, to negotiate barter deals under the present regulations. We are doing business now only because we can take advantage of the misfortunes of others.

Of course the American farmer, and the foreign producers too, are hurt by the big discounts, because they have the effect of cutting both the prices and the quantities of agricultural commodities that are sold abroad. Foreign buyers, in a desire to buy their stocks at a reduced price, may hold off buying in hopes of getting a discount.

In place of a good barter program which supplements and stimulates our cash sales, such as we had before these restrictions were instituted, we now have an operation which invites unfortunately large discounts on the small amount of goods that are being bartered.

There is absolutely no doubt in my mind that the procedures required under the so-called modified barter regulations are responsible for the present high discounts. These regulations make it so difficult to dispose of our farm surpluses overseas that those with materials to barter are having to pay these unreasonable commissions in order to barter at all. All the responsible contractors I talked with have affirmed this, and I believe that the experts in the Department of Agriculture would also affirm it.

I would like to explain, as I understand it, how the barter regulations are creating this situation. Although the matter is somewhat technical, briefly it amounts to this: in order to deliver goods into the big "A" and "B" markets—the countries which would be the best outlets for our surplus—a contractor must specify ahead of time the commodities and the country into which he intends to sell and from which he must secure the materials covered by the barter contract. By the time he gets approval from the Department of Agriculture, which takes up to 3 months, the contractor may find that the market he counted on no longer exists. In this situation, if he were permitted to dispose of the commodities into any of the free world countries, he could move the surplus into some other market; but under the present regulations he has to sell the commodities within the specified country. Under these circumstances there is a great risk that he may be forced to reduce his price or even to take a heavy loss. Thus the reason for the high discounts.

These regulations are creating the unfortunate situation they are supposed to

prevent. They depress our cash commodity markets. They cripple our barter program. They are a real hindrance to our efforts to distribute our tremendous agricultural surplus.

We urge the Department of Agriculture to modify or abolish these regulations which now frustrate the barter program.

## The Challenge Before Us in the Western Hemisphere

EXTENSION OF REMARKS

OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 5, 1959*

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by my good friend, Dr. José A. Mora, who has an extremely important assignment for the welfare of this hemisphere. The article appeared in the fall 1958 issue of the Lamp, a magazine published by the Standard Oil Co. of New Jersey:

PATHS TO UNITY IN THE AMERICAS—ACHIEVING CLOSER COOPERATION AMONG THE AMERICAN NATIONS REQUIRES BETTER INTERPRETATION OF ONE PEOPLE TO ANOTHER

(By Dr. José A. Mora)

The demonstrations against Vice President and Mrs. Nixon during their South American trip made it appear that Western Hemisphere unity was severely shaken. Yet, distressing as they were, the demonstrations may actually have the effect of strengthening inter-American ties.

It would not be the first time that apparent catastrophe turned out to have positive advantages. I will never forgt the rioting that broke out in Bogotá during the Ninth International Conference of American States in 1948. The instigators of the riots hoped to break up the conference. Instead of voting postponement, however, the delegates calmly waited until the rioters were dispersed. Then they took up where they had been interrupted. The demonstrations focused the attention of the world on Bogotá. When our work culminated in the charter of the Organization of American States, this document, the foundation of today's relations among the New World nations, awakened wider interest and assumed greater importance because of the turbulent circumstances under which it was created.

In much the same way, the recent incidents have also fixed official and public attention on a subject that can benefit from renewed scrutiny: the relations between the United States and her Latin American neighbors.

A MINOR SYMPTOM

Of course, there is unrest in some parts of Latin America, but I believe it is only a minor symptom of the tremendous forces of social and economic readjustment in motion all over the world. And at least some of the problems that beset us would, I believe, cease to exist if we of the Western Hemisphere could know each other better. Certainly there are no differences between us on human fundamentals, such as the freedom and dignity of the individual, or on the economic facts of life, such as our mutual interdependence.

Misunderstandings lie in lesser matters. Unfortunately, most people see those of other nations in terms of preconceived and not always flattering generalities that bear little relation to the truth. Such misconceptions are rarely held by those who have traveled or who have studied the cultures of other nations. But these people are the minority. Most of us get our stereotyped ideas of other nations secondhand from the press, novels and movies. Some distortion is unavoidable.

By distortion I do not mean the presentation of inaccurate facts. I mean, rather, that so many important things are not reported at all. The U.S. press, for example, rarely has the time or the space to give its readers the kind of details of South American life that would illuminate our character and our accomplishments. How many North Americans know that the oldest universities in the hemisphere are in Latin America, or that four of the eight largest cities in the hemisphere lie south of the Rio Grande?

NOT THE WHOLE PICTURE

Latin American reporting of life and events in the United States suffers from the same lack of background detail. Accurate enough in the facts presented, it fails to give a rounded view. It tells of the stock market, and tariffs, and automobiles produced and any number of other necessary things. But these do not give the whole picture or perhaps even the most significant part of the picture.

I know that my picture of the United States will always include the New York taxi driver who told me proudly that the earnings from his cab and put two children through college and were now sending a third. This man, an uneducated immigrant from Austria, represents to me the essence of the freedom and opportunity that the United States offers to the world. If more Latin Americans could hear this story, what it tells of the U.S. character would do much, I think, to correct mistaken impressions.

Good interpretive reporting does exist, of course, in both the Americas. Its influence can be astonishing. An outstanding example that comes to my mind is the series that appeared a few years ago in the Kansas City Star. In the whole United States there was probably no city more thoroughly insulated from Latin American influence than Kansas City. A few years ago Hal Hendricks, a Star reporter, took a vacation trip to South America. He wrote a series of reports on the trip, did some research and wrote some more stories. Then he began a weekly column on Latin American events. This became a twice-weekly, then a three-times-a-week feature. Presently a large group of Kansas City businessmen, led by Mayor H. Roe Bartle, paid their own expenses on a see-for-yourself expedition through Latin America. Later a group of mayors of municipalities in the state of São Paulo, Brazil, return the visit. The net result of one reporter's interest is that the people of his city in the heart of the Midwest have a better knowledge of their Latin neighbors than their compatriots in many cities closer to the border.

A UNIVERSAL TONGUE

Our arts are another path to better understanding, and have already accomplished much. Artists speak a universal tongue that recognizes no differences of politics, language or geography. Witness the recent triumph in Moscow of Van Cliburn, and of the Moiseyev Ballet in the United States. The 1950 tour by the talented Negro company, the Katherine Dunham Dancers, opened for enthusiastic Latin American audiences a whole new vista of interpretive and folk dances of the United States. More recently, Leonard Bernstein's triumphal tour of Latin America with the New York Philharmonic reiterated the principle that art surmounts all barriers.

Latin American artists find equally enthusiastic reception in the United States. The disciplined brilliance of Chilean pianist Claudio Arrau, of Brazilian soprano Bidú Sayão, of Cuban ballerina Alicia Alonso, draw capacity audiences wherever these artists perform in this country. The vivid and powerful conceptions of the Mexican painters Orozco, Rivera, and Siqueiros and of Brazilian Candido Portinari are well known and appreciated here.

Translations of leading writers' works also further understanding Edgar Allan Poe, Ernest Hemingway and William Faulkner, to name only a few, are always in demand in Latin America. Translations of Latin American authors are less widely known in the United States, but novels by Brazil's Erico Verissimo, Peru's Ciro Alegria, and Haiti's Marcelin brothers have attracted favorable notice. Argentine Ricardo Güiraldes' "Don Segundo Sombra" introduced the legendary life of the pampas to thousands of North Americans.

A BOOK BARRIER

Much more can be done. A proposal that I hope will be considered at the 11th Inter-American Conference in Quito next year recommends the adoption of a convention that will encourage, through the reduction of tariff barriers and administrative restrictions, the freer circulation of books among all American countries. I was dismayed to learn, not long ago, that the $40 million worth of books exported from the United States in 1954 actually cost foreign consumers $100 million.

In the struggle to know each other better, visiting professorships, student exchanges and other types of scholarships have immeasurable, permanent value. Thousands of U.S. students have gained firsthand knowledge of Latin America through attending summer school sessions at the University of Mexico. Recently the Fulbright scholarships were extended to Latin America, financed by local currency purchases of U.S. agricultural surpluses.

The creative forces in America, both North and South, can be joined in other ways. Much of South America, for example, is still a pioneer country, an economic frontier, where great opportunities await the enterprising and the courageous. These opportunities lie not only in the empty land and untapped resources but also in the unsatisfied needs of the people. There is much less of an unconquered West than formerly, but the frontier spirit is still strong in the Americas. It can still test its mettle in the conquest of untamed nature. We all know of the fortitude and daring of Lewis and Clark blazing the trail to the Northwest, and of the terrible 2-year climb of Jiménez de Quesada from coastal Santa Marta to the Sábana de Bogotà. But the Chilean engineers who harness the cataracts plunging from Andean snows are pioneering as truly as their ancestors who fought the Araucanos.

THE MODERN PIONEERS

To speak of 20th century pioneers in this sense of economic development is to bring up some of the most complex and urgent problems in Pan American relations. Basically the problems are rooted in the fact of one immensely powerful and productive Nation living next door to a group of smaller nations of greatly varying economies, populations and stages of progress.

Fifty years ago this did not matter. Travel was slow, and the Latin Americans who traveled went to Europe. But airliners chopped distance to a fraction of what it had been. Thousands of Latin Americans whose fathers had hardly been aware of the United States saw at firsthand the electrifying results of a technological economy. Mentally they com-

puted the tons of produce from their own plantations which better roads would enable them to get to market, and the improvement in their regions' standard of living that would be made possible by, for example, a single cement plant. These visions would not permit them to be content with the old ways. History had turned a page.

The major products of Latin America are traditionally farm produce and raw materials. This is one reason why these countries are classified as "underdeveloped." It would be more accurate to call them countries of "restricted" development. During the century in which North America slowly built its industrial might, we in Latin America did not feel the pressures that created your industrial empires.

UNEXPECTED RESPONSIBILITIES

Thus the 20th century burst upon us like a bomb. Two world wars and the vastly increased speed of transportation and communication created and released sweeping new aspirations. U.S. economic aid during World War II gave most Latin American people their first experience with the benefits of an industrial economy. Bulldozers had more impact that a revolution. At the same time, from the United States came avowals of such ideals as the four freedoms, with implications of a higher standard of living for all the free world.

After the Axis defeat, the United States found itself involved in totally unexpected responsibilities of worldwide scope. If this naturally detracted from the attention given Latin America, it also evoked among Latin Americans the fear that their powerful neighbor was no longer interested in the problems of the southern nations. There were fluctuations in the prices of some of Latin America's basic products, such as cotton, sugar, coffee, copper, tin, lead, and wool. These were accompanied by serious inflation in several countries. Uncertainty resulted. In some cases there were charges that the United States had abandoned Latin America.

We who are familiar with the United States know that this is not true. We know that the destinies of North and South America are indissolubly linked. The economic facts speak for themselves: The United States sells 25 percent of its total exports to Latin America, while buying nearly half of Latin America's exports.

Latin America, of course, is trying to industrialize. During the past 17 years employment in industry and related services increased 76 percent, while agricultural employment rose only 10 percent. During the same period industrial production increased 175 percent.

POPULATION EXPLOSION

This sounds like progress. However, though countries of Latin America are increasing their gross national products (at very uneven individual rates), the overall rate of increase is slower than those of highly industrialized countries. The result is that, by present indications, each year will see Latin America falling further behind such countries in living standards. In this one fact lies the sum total of all our material problems. As in all such situations, the great common denominator is the expanding needs of the people.

Latin America's population is increasing at the rate of 2.5 percent, or 4½ million, per year. This is the fastest growth of any of the world's major areas. The projected population of Latin America by the end of the century is 493 million, as compared with 380 million for the United States and Canada.

This population explosion multiplies demands for facilities that do not exist, and puts an intolerable overload on those that do exist. The simplest necessities of city life, such as electricity and water, taken for granted in U.S. communities, become a sort of Holy Grail for their Latin American counterparts. A generator designed to produce current for a thousand families is inadequate even before it can be delivered and installed. Similar shortages exist in housing, sewerage systems, schools, hospitals, tractors, telephones, railroads, automobiles, and textile mills, to name only a few.

To do the job ahead we must use all kinds of capital and technical assistance wherever we can get it. If Latin America is to keep a place in the industrialized world of today, we must make, in a single generation, the material progress that kept the United States busy for a hundred years.

Can we do it?

I believe so. I believe we must.

IT CAN BE DONE

Material progress takes money, investment capital which we must seek inside our countries and beyond our borders, as we have in the past. In the early stages of its development the United States too had to seek private investment capital from outside the country. There have already been impressive examples of cooperative use of private capital between Latin Americans and North Americans. Sears Roebuck, which has invited the participation of domestic capital in the building of plants in a number of South American countries, is one of the North American companies now engaged in developing Latin America's markets and resources. Less well known are such enterprises as the building of the free port at Nueva Palmira in Uruguay, where both foreign and domestic investors helped install heavy equipment for transshipping Brazilian manganese from river boats to seagoing vessels.

Of course, Latin Americans must continue their struggle in their own way. Sometimes a major development comes from little capital and much faith and hard work. The coffee industry of Brazil, today the largest in the world and a model of scientific planning and development, grew from the labor and imagination of a group of coffee farmers many years ago. Only recently, some young engineers and mechanics in San José, Costa Rica, started an airplane repair service that filled such a need that their business is their nation's second largest producer of foreign exchange. Such successful enterprises, small and large, give a nation economic stability.

KILLERS ON THE WANE

We must consider other vital matters, too. Take public health. A sick people cannot be a productive people. Under a concerted campaign by such agencies as the Pan American Sanitary Organization, working in cooperation with national governments, that great killer, malaria, is disappearing from many areas. Studies show that extension of the program, estimated to cost $150 million, can completely eradicate malaria in the Western Hemisphere within 5 years. The hideous and disabling tropical affliction of yaws yields easily to a massive shot of penicillin. These are only two of many health problems.

However healthy he may be, a man who cannot read can hardly learn to operate and maintain modern machinery. An estimated 40 percent of Latin America's adult population is still illiterate. Like malaria, illiteracy gives way before an intensive regional or nationwide effort. Progress here is encouraging but spotty. The effort must be increased.

On higher levels of technological and scientific training our own resources are inadequate. Improvement is an absolute necessity that touches every phase of 20th century life. Significant beginnings have been made in most areas. For example, the Inter-American Institute of Agricultural Sciences at Turrialba, Costa Rica, has for 10 years been turning out well-trained agricultural specialists who go back to their own countries to apply what they have learned and to teach their colleagues. The experimental farms, training programs, extension service, and homesteads at Tingo María have brought tens of thousands of once-idle acres in the Amazonian basin of Peru into the national economy.

FORWARD OR BACKWARD?

In several countries there are training and research centers operated by the OAS technical cooperation program. They deal with such things as housing, instruction for rural schoolteachers, evaluation of natural resources, agricultural extension, foot-and-mouth disease, economic and statistical training. The new OAS fellowship program will offer grants every year for specialized training in these and other fields. Pan Americanism, once a wholly intangible ideal, is now producing vaccines, making bricks, and tilling the soil.

All such programs are geared to the hard fact that the need is increasing more rapidly than the supply. Every hundred yards of water pipe is a help. But, if our expanding birth rate creates new families requiring 200 yards, we are not making progress; we are going backward.

In our list of Latin American scarcities, perhaps the most critical, in the long view, is that of physical scientists, those modern magicians who juggle forces that most of us can scarcely comprehend. Synthesizing materials through rearrangement of atoms, making cheap and plentiful what was once rare and costly; increasing agricultural yield by finding new food sources in the sea—these are some of the hopeful visions of 20th century man, and only the scientist can bring them to reality. A deposit of petroleum, a vein of ore can be mined out, but the human mind remains an inexhaustible natural resource that will produce forever. We need to intensify our educational programs so that the supply of trained people can keep pace with the demand.

COMMERCE IS COMPLEX

Solutions to our problems in the field of international commerce are perhaps even more complex. A number of nations have found an economic cushion in an expanded tourist business. But a country such as Chile, which depends almost entirely upon copper, or Cuba, which depends on sugar, is like a man walking on one leg. Anything that happens to his single support is likely to be disastrous.

Commodity agreements that would prevent overly drastic drops in the prices of important products would enable Latin American countries to make long-term plans with confidence. In addition, there might be an Inter-American Payments Union which could extend to member countries credits to be repaid during periods of high export earnings. This would also simplify the exchange of currencies and tend to stimulate trade through the entire hemisphere.

Perhaps the basis of all such foreign trade reforms should be a system of regional common markets or free trade zones similar to those now being planned among the Central American countries. This would be a first step toward economic integration of the hemisphere. It would rest on the slow but steady reduction of tariffs and other trade barriers.

UNDERSTANDING REQUIRED

These are our chief mutual problems in the Western Hemisphere. All are difficult, and all are inextricably interlocked. Some

are closer to solution than others, but I believe remedies exist for them all. Reaching the solutions presupposes a high degree of international cooperation; it also presupposes the will to change established policies. In this period of rapid transition our problems can be solved only through a deep understanding of common interests, on the basis of imaginative and far-reaching proposals.

This is the challenge before us. In it lies the answer to those who assert that the Americas are hopelessly divided. I am confident that men of the New World will unite their great gifts of spirit, intellect and technology to meet the challenge.

## Let's Plant Every Allotted Cotton Acre

EXTENSION OF REMARKS
OF
### HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. RAINS. Mr. Speaker, it is very important that southern cotton farmers plant their full allotment, if the South is to retain its cotton acreage and in effect, over the years remain in the cotton business.

The March issue of Progressive Farmer magazine, which is widely read in southern farm homes, has an excellent article in regard to the importance of planting every allotted cotton acre. I submit this article, by Eugene Butler, president and editor in chief of Progressive Farmer, for the benefit of my colleagues and in the interest of southern cotton producers.

The article follows:

LET'S PLANT EVERY ALLOTTED COTTON ACRE

(By Eugene Butler)

For many years, cottongrowers in the South have complained bitterly about the Western States of California, Arizona, and New Mexico stealing their cotton acres. It is true that since 1938 these States have increased their acreage about 85 percent, while other cotton States have lost 40 percent of their acres. But, in large measure, this is due to a difference in attitude toward the crop. These westerners appreciate and carefully guard cotton as an important economic asset. But we have taken our cotton acreage for granted and done practically nothing to protect it. The Western States have boosted their cotton acreage by always planting very close to their full allotment. And during years of uncontrolled production, they have sharply increased acreage, thus improving acreage history at the expense of other States. On the other hand, many people in parts of the South act as though cotton were a plague rather than a tremendously valuable asset. We have persistently failed to plant a considerable part of our alloted acres.

Now, the South has reached a crucial stage in its cotton acreage history. We had about 4,925,958 acres in the 1958 acreage reserve of the soil bank. In addition, there were about 700,000 acres of our allotment that we failed to use for various reasons. These 700,000 unplanted acres represent a larger acreage than has been allotted to Arizona, Louisiana, Missouri, New Mexico, North Carolina, South Carolina, or Tennessee in 1959. In all, there are better than 5½ million acres that are in jeopardy. We stand a good chance to lose a considerable part of these acres, unless cotton leaders in each State organize at once to prevent it.

PLANTS MILLIONS OF UNUSED ACRES

The situation as to acreage in each cotton State is shown by figures in the table on facing page. [Table omitted in RECORD.] The 1959 national acreage allotment is about 7 percent less than in 1958. But many States will lose 5 percent or less of their allotment in 1959. Alabama, for example, will have a 1959 allotment of only 50,000 acres less than in 1958. On the other hand, it had 466,000 acres or 45 percent of its 1958 allotment in the acreage reserve, and also failed to use nearly 40,000 additional acres. By picking up and planting a good part of its acreage reserve and making full use of its 1959 allotment, Alabama could easily plant several hundred thousand more acres in cotton in 1959 than in 1958. And this is true of the South as a whole.

The South has had its 1959 allotment base cut over a million acres. But we can draw on the nearly 5 million acres in the soil bank and the 700,000 additional acres of our allotment not used in 1958 to make good this loss. In fact, it is possible for the South to plant 2 or 3 million acres more in 1959 than in 1958. So, let's quit crying about the cotton acreage lost over the years and save the acres we have now.

What about the 5 million cotton acres in the soil bank? Many of them will be permanently lost if farms are abandoned and their owners fail to release their acreage. It is true that farm, county, and State allotments are protected in 1959. But if a landowner abandons his farm after the 1958 crop, it will be much easier to get him to release his acres right away rather than waiting until late in the year when he may be long gone out of the county. Moreover, he must release his acreage now, if it is to be made available to other growers in 1959.

The Progressive Farmer is dead set against taking a single cotton acre away from a grower that wants it and will plant it. But if a grower has unwanted acres and can release them 1 year without losing them in future years, it is dog-in-the-manger selfishness not to do so.

Even in the counties that are now more interested in livestock and poultry than in cotton, there are quite a considerable number of farmers who could very well use more cotton acres. With modern equipment and know-how, it now takes many more acres of cotton on a farm to make the crop pay.

If we could save all the 5-acre allotments that are lost by small farmers moving to town and pick up the 100-acre allotments that are canceled when cottonfields are made into livestock farms, there would be enough additional acreage to make cotton a profitable crop on many thousands of farms. Moreover, this would save hundreds of gins and oil mills, give balance to more farming systems, and add additional millions of farm income in areas where it is badly needed.

What can we do to save the situation? State meetings with no definite plans on the county and district level will not get the job done. State meetings are all right, but the real work must be done on the county level.

The Progressive Farmer has been able to learn of no other State in the South that is going at this problem with so well organized a plan as Texas. Leadership in Texas is being provided by C. B. Spencer, of the Texas Cottonseed Crushers' Association, working with Searcy Ferguson, the very able and cooperative chairman of the State ASC committee.

WAYS TO SAVE COTTON ACREAGE

Here are some of the things Texas cotton leaders are finding necessary to save these cotton acres, and which other States might well consider:

1. The full cooperation of office and field staff of the State ASC office must be obtained.

2. The problem is one that, if solved at all, must be accomplished in a county by cotton growers as a group working with the county ASC committee. This means that if there is no county organization of farmers available, a committee of growers must be set up to work with the county ASC office.

3. The organized farm group in the county must meet with the county ASC committee and make definite plans to get the job done and then follow through on such plans.

4. The primary responsibility for securing the release of unwanted cotton acres rests with the county ASC office and committee. But many ASC committees have neither the money nor the manpower to do the job. Organized growers of the county should provide the needed funds and appoint a prominent grower in each community to work with the ASC committee in getting unwanted acres released. And by unwanted acres, we mean the acreage of all growers who do not want to grow cotton on all or part of their allotted acres.

5. The dates by which unwanted acres must be released and reapportioned to those who want more acres vary by zones according to the period at which cotton is usually planted. The final release date varies from February 13 in south Texas to April in the northern part of the Belt. Then a period of a week or so is allowed for the county ASC committee to reapportion the released acreage.

6. In most cases, ASC community committeemen will take the lead and secure the release of unwanted acres on farms in their communities. When they run into trouble, they should be in a position to call on influential cotton growers, business leaders, and others to help secure the release.

7. Cotton growers who want to grow cotton in excess of their present allotment should request the county ASC committee in writing for the number of additional acres they want. The county committee should then reapportion the released acres to growers they feel certain will actually plant all of the additional acreage requested. This is important, because if they request more acres than they plant, the cotton history of the county will suffer.

8. The county cotton growers' organization, working with the ASC office, should enlist the help of other important individuals and organizations in the county.

It should request county agents, vo-ag teachers, newspapers, radio and TV stations to keep in close touch with the program and supply growers and the general public with all information needed to make the program a success.

No one plan will work in every county. Some county ASC committees are already doing a good job of getting unwanted acres released. In Kaufman County, Tex., for example, when Earl Wisdom, the ASC office manager, hears that land once in cotton is to be abandoned, he visits the owner and makes a special effort to get it released to the county ASC committee. Cotton growers of a county should not expect the ASC committee to make an aggressive effort to get this job done unless they (the growers) show a real interest in the problem.

FUNDAMENTALS TO GET JOB DONE

Check your plan to insure that it fits the needs of your county. But remember that

to get the job done, there are four fundamentals:

1. Get unwanted acres released quickly.
2. Urge those wanting more acres to apply in writing.
3. Get the unwanted acres reapportioned to growers who want them.
4. See that all the reapportioned acres are actually planted.

To those who think we are already growing too much cotton, it may seem ill advised to urge that unwanted acres be released and reapportioned to growers who will plant them. The Progressive Farmer is still heartily in favor of production control. But once national acreage is fixed by law and allotted to States and counties, we must use these allotted acres if we expect to hold them. And we must hold them, if we intend to remain in the cotton business.

## Small Business Investment Act of 1958

EXTENSION OF REMARKS
OF
### HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. SIKES. Mr. Speaker, Mr. B. R. Fuller, Jr., executive director of the Florida Development Commission, Tallahassee, Fla., has furnished me with material in connection with the Small Business Investment Act of 1958, which I feel should be brought to the attention of my colleagues and in order that the Congress may be informed, I take pleasure in having Mr. Fuller's communication under date of February 11, 1959, inserted in the CONGRESSIONAL RECORD. The letter follows:

FLORIDA DEVELOPMENT COMMISSION,
*Tallahassee, Fla., February 11, 1959.*

Hon. BOB SIKES,
*House of Representatives,*
*House Office Building,*
*Washington, D.C.*

DEAR BOB: I know that you are very much interested, as we are, in the problems of small business. We have been dealing with the Small Business Administration a good deal in the last 6 months, and we are confronted with a problem which is partly a matter of administrative interpretation and partly a matter of legislation. The law involved is the Small Business Investment Act of 1958.

Let me say first that we feel that the passage of the Small Business Investment Act of 1958 is a great step forward. The availability of financing to small business has not changed noticeably yet, but we think there will be a distinct change for the better among the more profitable businesses in middle size and large cities during the next year or two. Assistance to State and local development companies is particularly welcome, and this may help our rural counties. I think it is too soon to pass judgment on the administration of the law in general or to suggest amendment of the law itself in its financial aspects.

Our present problem concerns section 7(d) of the Small Business Act of 1958, which was actually enacted as section 602(c) of the Small Business Investment Act of 1958. It provides for "grants to any State government, or any agency thereof. State chartered development credit or finance corporations, land-grant colleges and universities, and colleges and schools of business, engineering, commerce, and agriculture," for the purpose of "studies, research, and counseling concerning the managing, financing, and operations of small-business enterprises and technical and statistical information necessary thereto in order to carry out the purposes of section 8(b)(1)."

The proposed regulations issued by the Small Business Administration (Federal Register, January 28, 1959) under this authority seem to us quite reasonable and workable except as to the interpretation of the phrase "studies, research, and counseling." They define counseling to mean "counseling with SBA," rather than with small businesses themselves, and they define "research" to mean "studies, research, and counseling." The effect of these definitions, as admitted in the cover letter sent to prospective applicants, is to exclude "programs primarily designed to give direct advice to small business concerns—without prejudice to the financing of these programs in subsequent years." We have discussed this matter with Mr. Wilford White, of SBA, and have protested officially by letter. A copy of Mr. Shelton's letter to Mr. White on this point is enclosed for your information.

There is an important substantive point here, which is quite simply: Is SBA going to use the funds available for the program merely to elaborate research reports, or are they going to use part of the money to try to get the research applied by individual small businesses? The total amount of money involved is about $27 million, for, on the basis of our discussions with SBA officials, we seriously doubt that they plan to change their definitions in later years except under congressional pressure. Notice also that this money, as we understand it, is not subject to annual appropriation because the source of the funds is money recaptured from the Federal Reserve banks.

We have discussed this matter rather widely in Florida with selected businessmen, Government officials and heads of schools of business. Dean Charles Rovetta, of the School of Business Administration of Florida State University, and Mr. David Caldwell, of Florida Power & Light Co., have been of particular help. We have concluded that in Florida the application of small business research is at least equally important with the conduct of further research. We also feel that to be useful, the program will have to be long term, and it will require the active cooperation of the Small Business Administration, the Florida Development Commission, the schools and departments of business administration in Florida, local chambers of commerce, and other groups of businessmen.

A brief study done in 1957 by Dave Caldwell, of the Florida Power & Light Co., indicates that the large amount of research work so far done by SBA is getting to small businessmen only indirectly if at all. There is little doubt in our minds that the application of research in this field is running way behind the conduct of research. We therefore feel that it is a great mistake to use this $27 million entirely to produce more research and not at all to try to popularize and put to use the research already done.

We also feel that the interpretation put by SBA on the phrase "studies, research, and counseling" is not a sound interpretation of the law. But SBA officials argue that this section of the law is not clear, and to this we agree. It would certainly help to straighten out this matter if the law could be amended to make clear that the administration of funds for "studies, research, and counseling" should give priority to a balanced program in each State for the conduct and application of research in small business.

Consideration should also be given to other changes in this section of the law, such as authorizing long-term rather than 1-year arrangements and requiring matching funds on the part of the States beginning at some future date. We have no final opinion on these points yet.

I am sending somewhat similar letters to the other members of the Florida congressional delegation. If you agree with our practical as distinct from academic approach to this problem, we would greatly appreciate anything you can do in this direction.

Sincerely,

B. R. FULLER, Jr.,
*Executive Director.*

Mr. Speaker, I think the points brought out should be explored very carefully from the standpoint of achieving clarification, either through regulation, or legislation, or both.

## Centennial Celebration of the Heffley & Browne Secretarial School

EXTENSION OF REMARKS
OF
### HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to pay honor to Heffley & Browne Secretarial School of Brooklyn, N.Y., on the occasion of its centennial celebration. Brooklyn is proud and fortunate to have had the hundred-year influence on its youth of this school. It is vitally important that capable, modern and scientifically designed instruction in present day office procedures be given to our young men and women. Heffley & Browne have kept abreast of the times. The student body, alumni, and faculty are to be congratulated.

This is the year which marks the centennial of the Heffley & Browne Secretarial School, founded in 1859, and the oldest school of its kind in the East. It has graduated over 100,000 students, many of whom now serve in positions of responsibility and distinction in the Nation.

We in Brooklyn are glad to call attention to Heffley & Browne's record of achievement as a pioneer in commercial education, in training personnel to fill important positions in the business world, and as Brooklyn's only accredited, registered secretarial school.

The success of the school is due in large measure to the demonstrated ability of the many young men and women who have emerged from our classrooms into the business world. We take pride in their accomplishments and feel deeply appreciative of the renown and distinction which these graduates, now in government, industry and the professions constantly, through their ability and outstanding service, are bringing to this institution.

## Attack on the FBI—VI

EXTENSION OF REMARKS
OF
**HON. AUGUST E. JOHANSEN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks, I include the sixth in a series of articles by Pulitzer prize-winning reporter, Edward J. Mowery. This series deals with the campaign to discredit the Federal Bureau of Investigation, and the following article appeared in the Newark Star-Ledger of February 6, 1959:

CONVICTIONS RECORD SPEAKS FOR ITSELF

(By Edward J. Mowery)

WASHINGTON.—How good is the Federal Bureau of Investigation as measured by its conviction record?

In the farflung anti-FBI campaign now underway, the FBI is accused of ballooning its conviction percentage to make itself look good and of backing away from arresting bigshot criminals.

Citing 24-year-old statistics of the Brookings Institute, one critic charged that the FBI's percentage of convictions in 1935 was 72.5 percent (not 94) and the FBI actually trailed five other Federal investigative agencies in the percentage of convictions.

This is one area of criticism, an FBI official observed today, where cold statistics more than speak for themselves.

Charge: FBI statistics concerning its own accomplishments can't be trusted, as evidenced by the Brookings Institute survey in 1935.

The facts: The fiscal 1935 Attorney General's annual report shows convictions in FBI-investigated cases brought to trial totaled 94 percent. The Brookings figures were based upon all Federal agency investigations presented to U.S. attorneys for consideration as to prosecution.

They were not cases that went to trial and resulted in convictions or acquittals. Actually there is little common ground for an objective comparison of accomplishment between the FBI and the other Federal investigative agencies due to the vast difference in the responsibilities of the FBI and other units.

And it's virtually impossible to make a comparison based upon convictions.

Many Internal Revenue Service tax cases, for instance, are settled or adjusted without reaching a court. Customs inspectors at ports of entry deter smuggling by their very presence. Efficiency of these agencies cannot be measured by convictions. The FBI also processes many types of cases seldom reaching court.

Intelligence and counterintelligence operations, as an example, are primarily preventive in nature. Information gained in this field frequently leads to protective measures before any violation of law occurs at all.

Two other such activities involve capture of fugitives who cross State lines to avoid prosecution, and deserters from the Armed Forces.

In the past 10 fiscal years FBI-investigated cases have resulted in 99,397 Federal convictions.

In fiscal 1958, FBI convictions totaled 11,457 (96.8 percent of those tried being convicted, 93.1 percent of whom entered guilty pleas).

Among FBI cases which seldom reach Federal courts are investigations to locate deserters from the Armed Forces as well as persons charged with certain local crimes who have fled across State lines in violation of the Fugitive Felon Act.

During 1958 (fiscal), 4,653 deserters were located and made available to military authorities. A total of 1,021 fugitives under the act were located in FBI cases last year. They were turned over to State and local authorities for prosecution in compliance with the intent of the act.

To get back to the question: The Brookings Institute statistics purportedly reflecting FBI cases that were adjudicated (in fiscal 1935) were erroneous.

Charge: Through the years, big-shot mobsters have operated without being bothered by the FBI, which didn't even investigate the Apalachin mob concave.

The facts: The FBI has arrested scores of bigshot "mobsters" through the years. "Mobster" implies the existence of a syndicate bent on criminal practices. To attain the statute of a big-shot mobster carries the obvious implication that both the individual and his mob have thrived unmolested by all law-enforcement agencies.

The FBI has never concerned itself with the potential power allegedly held by a mobster in determining whether it should investigate that individual.

The Bureau has one guidepost in undertaking an investigation: Legislation provided by Congress giving the FBI investigative jurisdiction over certain types of criminal or civil acts committed against the Federal Government.

During the twenties and thirties, so-called big-shot mobsters were most frequently involved in narcotics (Narcotics Bureau jurisdiction), bootlegging (Alcohol and Tobacco Tax Unit), gambling (strictly local jurisdiction), etc.

Today's mobsters prefer the lucrative and rewarding field of gambling, and activity not falling within the jurisdiction of the FBI.

The only phase of gambling in which the FBI is empowered to act deals with interstate transportation of lottery tickets and gambling devices or their parts.

Gambling activities fall within the jurisdiction of the State or municipality—the responsibility of State or local police.

Charge: The FBI stood by in the forties when an eastern gambling syndicate shuttled customers from New York to Bergen County, N.J. by limousine.

The facts: This was a State or local matter.

The FBI could only apprehend an individual criminal if he has fled from one State to another to avoid prosecution for murder, kidnaping, burglary, robbery, mayhem, assault, arson or extortion. And the FBI could make the arrest only if a local warrant is outstanding and local authorities request FBI assistance.

To make such an arrest without jurisdiction and specific authorization would, indeed, constitute methods of a Gestapo.

As for the FBI's role at the Apalachin meeting, the Bureau simply had no investigative jurisdiction.

## Poison in Your Water—No. 34

EXTENSION OF REMARKS
OF
**HON. JOHN D. DINGELL**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the San Francisco (Calif.) Chronicle, August 22, 1958, entitled, "State Orders Big Smell To Stop It." This story tells of the big stink at Candlestick Cove caused by dumping untreated sewage and municipal waste into Candlestick Cove. In addition to the danger to individual and municipal health this dumping causes a chemical reaction, a condition that creates a hydrogen sulfide smell:

STATE ORDERS BIG SMELL TO STOP IT

(By Donovan Bess)

The State of California yesterday ordered an end to the big stink at Candlestick Cove—but no deadline was set.

The resolution of the Regional Water Pollution Board asked the San Francisco scavengers to take steps at their garbage dump to eliminate the rotten egg small within a reasonable time.

Another resolution called for eliminating raw sewage from the lagoon created by the causeway—a section of the freeway. Richard Pomeroy, expert on hydrogen sulfides, found last week that sewage is only a minor culprit in the stench.

The unanimous decision of the board, meeting in Oakland, came after Pomeroy described the lagoon as worse than a cesspool and insufficiently flushed out. He said future research on the precise causes of the odor should be carried on, but not while the public continues to suffer.

Acting under the State water pollution control act, the board ordered that the odor be eliminated.

The Sanitary Fill Co., owned by the two San Francisco scavenger companies, specifically was ordered not to let garbage be washed by high tides—a condition that creates the hydrogen sulfide smell.

The resolution cited the smell-makers before the board on September 18, when they will be called to a formal hearing unless they can prove the requirements will be met within a reasonable time.

The requirements also were served on the Easley and Brassy Co., contractors for fill and cover dumping, the city of San Francisco, and the Southern Pacific Co., owner of the land.

Before the vote, Sanitary Fill's persident, Joseph D. Molinari, declared his firm believes its blame in the situation is relatively minor.

He said the company is conducting a 90-day experiment of filling on dry land to help determine the effects, if any, of the company's operation upon the odor problem. Simultaneously, he declared, a power shovel now is cleaning up and straightening the face of the fill to try to keep old garbage from sloshing with the tidal waters.

The board also set requirements for the Bayshore Sanitary District, whose sewage drains into the lagoon. A. H. Beckel, secretary of the district, said his board is ready to let a contract for a pumping plant as soon as San Francisco agrees on a project to connect the lines with the city's.

## Winning Essay in Employ the Handicapped Contest

EXTENSION OF REMARKS
OF
**HON. DANIEL J. FLOOD**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay written

by Janet Scott, student at St. Gabriel's High School, Hazleton, which was awarded first place in the Employ the Handicapped contest sponsored by the Tri-County Committee on Employment of the Handicapped. Miss Scott's essay appeared in the Hazleton Plain Speaker on Tuesday, March 10, 1959.

JANET SCOTT WINS EMPLOY THE HANDICAPPED ESSAY CONTEST

The following essay, submitted by Janet Scott, a junior student in St. Gabriel's High School, recently won first place in the annual essay contest sponsored by the Tri-County Committee on Employment of the Handicapped.

Using the assigned topic "Hiring the Handicapped in Our Town," Miss Scott's essay competed with 385 entries from students of seven area high schools.

WINNING ESSAY

It has often been said, "Employment is nature's best physician; it is essential to human happiness." A job to a person who has perhaps never known success, who has been looked upon by his family, his friends, and the community as different, assumes even greater importance than it has with the physically able. Some individuals have, through their performance, adequately demonstrated their ability to become self-supporting, contributing members of society.

It is an inspiring sight to see confined persons expand and assume personality and self-confidence through a job. It is with great respect that we salute the employers of Hazleton who have helped these physically handicapped people to an almost normal life.

VISITS TAILOR

One afternoon I went to the tailor's with a beautiful new coat which had been burned by someone carelessly tossing a cigarette away. I was sure it could not be mended and was heartbroken about it. The proprietor sent me to see a very attractive, charming young lady sitting behind a sewing machine.

She looked at the coat, and, with a cute smile and a wink, told me she would fix it like new again. Then she pushed herself over to a nearby supply table; to my amazement, she was in a wheelchair. Noticing my surprise, she told me that through an accident she had become paralyzed in both legs. However, she had a wonderful job, having been trained for it in the school of tailoring.

I was so interested in this case, I discussed it with my parents and learned, to my amazement once more, how many Hazleton employers have found that employing the handicapped pays off.

We all know one of the most responsible positions in our town is that of postmaster. I wonder how many of us know that our postmaster has had both feet amputated. He is a war veteran whose ability was recognized by the Government. The Government needs his brains, not his feet.

In an area hospital you will find a cheerful, understanding worker ready to help patients or visitors. He is an amputee; both of his legs are off, but that doesn't hinder him from helping others.

In one of the city's largest stores, there is a lovely young woman working in the office. She would not hear you come in, for she is deaf, but she works speedily and well, without distraction.

BLIND ASSOCIATION

In Hazleton we are fortunate to have the Pennsylvania Association for the Blind, which is made up of a board of directors, a group of local men and women who donate their service and time without pay to benefit those who cannot see.

Under their direction, Hazleton has a workshop for the blind who make rag rugs, brooms, whisk brooms, belts, caned seats for chairs, crocheted and knitted articles. These articles are then sold to the public at the workshop, or from house to house. The association has also arranged operations and eye examinations for those who are losing their eyesight.

They arrange to help people learn Braille. Through their efforts, blind men and women are brought out of loneliness and are made into splendid workers and proud workers.

In addition, I must include those who are mentally handicapped. In the Arthur Street School in our town, there is a complete workshop, with trained personnel, for the mentally retarded. There are 2 women instructors and 16 students. These young boys and girls are here taught many useful trades.

CLINIC TRAINING

The State and private organization called the Guardian Clinic buy the supplies needed at the Arthur Street School. My mother has a pair of earrings made by the students; we think they are as beautiful as any sold in stores downtown. A good percentage of these students will be taken into the local factories as soon as they have completed their training.

In Hazleton, many people with heart conditions hold positions, despite their handicaps. They are doing simple work where there is no climbing, no heavy lifting, no continuous standing or walking. That is, no strenuous activities that will endanger their heart muscles by undue strain are engaged in. These handicapped workers are sometimes more dependable than others, because there is less chance of their changing jobs.

People in Hazleton, as well as all over America, must share the responsibility of encouraging the employment of qualified workers with a handicap. It will be a source of tremendous personal satisfaction, and a major contribution to the welfare of the country. Experience here in our own town has proved that the job can and will be done. What citizens can do on a small scale locally, the country can multiply in every locality.

Formerly in our town the handicapped were limited to such jobs as elevator operator or nightwatchman. Now, as I have just shown, the handicapped have taken other and sometimes more difficult jobs and have proved their ability to handle them.

In future years, with new inventions, there will be an increasing demand for brains, not muscles. The physically handicapped will be wanted again by their communities. About 8 to 12 percent of the workers in Hazleton are handicapped, according to the local employment office. On the whole, it takes no longer to train the disabled than to train the physically fit. Employers in our town have expressed their amazement at the quickness of the handicapped to adapt themselves to their jobs.

Handicapped workers themselves realize that they sometimes have one strike against them; therefore they strive harder than ever to show employers that they can deliver the goods.

In a sense, the handicapped are not handicapped at all in our town, for they have been given the chance to go ahead and do their best in their respective jobs. In our town business is good; we hire the handicapped—it's good business.

## Why the United States Should Stand Fast in Berlin, Quemoy, and the Middle East

EXTENSION OF REMARKS

OF

## HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. THOMPSON of Texas. Mr. Speaker, on February 16 of this year, Mr. Eugene Lyons, a senior editor of the Reader's Digest, addressed the Detroit Economic Club on the subject of "Why the United States Should Stand Fast in Berlin, Quemoy, and the Middle East."

Mr. Lyons spoke with authority. He was, for 6 years, United Press correspondent in Soviet Russia. He is the author of: "Assignment in Utopia," "Stalin, Czar of All the Russias," "The Red Decade," "Our Secret Allies: the Peoples of Russia," and other works, on the Soviet Union and communism.

His comments on the recent Mikoyan visit are particularly timely. Mr. Lyons' words are worthy of close study by every Member of Congress and by the public generally particularly at this moment when we are faced with a showdown on the Berlin question and a decision in the Congress as to the size and power of our Armed Forces:

WHY THE UNITED STATES SHOULD STAND FAST IN BERLIN, QUEMOY, AND THE MIDDLE EAST—AN ADDRESS BEFORE THE DETROIT ECONOMIC CLUB, FEBRUARY 16, 1959, BY EUGENE LYONS

A mere writer facing a roomful of distinguished businessmen, as I am doing, is impressed and even a bit intimidated. While he's been making black marks on white paper, here before him are the doers, the builders, the practical men.

So it is reluctantly, and only as a matter of conscience, that I must begin on a sour note—by congratulating American businessmen, not on their wisdom, but on their strong stomachs. I'm not referring to these ritual luncheons either. I'm referring to their recent binge of hospitality to one of the toughest, cruelest and most cynical chieftans of the Moscow murder-bund.

There were plenty of Americans who refused to fraternize with Comrade Mikoyan—Congressmen, labor leaders, churchmen—but not, so far at least as the public record goes, a single eminent businessman.

Those who spurned meetings with Mikoyan were, I believe, a lot closer to basic American sentiment than those who dined, wined and applauded the butcher of Budapest. They showed, it seems to me, more moral sensitivity and more political sense. Congressman JUDD, of Minnesota, spoke for them all when he declared that he would not dine with Mikoyan for the same reasons that he "would not attend a social function honoring Hitler, Himmler, Nero or Genghis Khan." "Ghosts of many enslaved, tortured and murdered human beings," he went on to say, "will be looking down on the dinner."

There was no such squeamishness among bankers, businessmen and industrialists. They turned out eagerly, by the hundred, to shake the bloody hand and applaud the

impudent lies. And they frowned upon the unmannerly refugees from Communist terror who tried to remind freemen that the visitor was a ruthless assassin of freedom. Almost any one of those humble pickets might have told them more vital truths about communism than the slick Mikoyan.

Our business community, more than anyone else, helped to make Mikoyan's American safari almost a triumphal tour. It provided him with a platform for raw deception—especially the deception now being spread throughout the Soviet slave empire—that the American people have forgotten Hungary, their own murdered airmen, and the other piled-up Communist crimes.

Many of those who played up to the Soviet emissary are having second thoughts. Where there were red carpets there are now some red faces. Certain of the eager-beaver hosts claim that they talked "tough" to Stalin's—now Khrushchev's—man Friday. Unhappily, none of the toughness showed at the time. The public picture throughout the world was plainly that of an orgy of cordiality for a leader of the world movement pledgde to our extermination.

Did any of those who entertained Mikoyan pause to look at the spectacle through the eyes of th enemies of the regime in Soviet Russia itself? The Mikoyan affair has been a stunning blow to the morale of these people, to their spirit of resistance.

Whatever the alibis for kowtowing to Mikayan, it has reduced our moral stature. We who so recently were expressing horror over the blood bath in Hungary were now "honoring" the man who helped organize the carnage. And what did we get in return? Only a phony amiability and some verbal soothing syrup. The statements that sounded most reasonable and made optimistic headlines here were not even reported in Russia—just pap for American gullibles. Lenin once said that when it comes to hanging capitalists they will be bidding against one another for the sale of the rope. That unflattering estimate, we may be sure, has been revised—downward—as a result of the Mikoyan episode.

This Soviet visitor had a special claim on the good will of American industry. During the war there was a vast network of economic espionage here. Tons of industrial data, including nuclear information and samples, were stolen and shipped to Russia. In direct command of that noble allied enterprise stood none other than Anastas Mikoyan. The least that the American victims could do in appreciation was to entertain him to a fare the well.

As for Mikoyan's public palavar while in our midst, it adds up to a classic example of Communist double talk. He had the unmitigated gall to cry, "Peace, peace!" at the very moment his Government was holding a gun to our heads in the Berlin ultimatum. He lied without limit about the American plane illegally shot down in his native Soviet Armenia.

He described the barriers between our two countries as "nonsense," and there was no one to remind him publicly that we do not regard freedom and morality, systematic violation of treaties, and mass murder of innocents, including innocent Americans, as nonesense.

Mikoyan praised certain Americans for "helping to build Soviet industry." One can only hope that the kind words brought a flush of shame to the cheeks of a few of our captains of industry. By now they know, or ought to know, that the weapons and equipment produced by the Soviet industry they helped to build in due time killed American boys in Korea, slaughtered Hungarian women and children in their streets, and now threaten our very civilization.

But Mikoyan was telling the truth this once. I was in Soviet Russia throughout the first 5-year plan and can attest that it was more truly an American than a Soviet plan. At the peak there were some 10,000 foreign engineers and technicians engaged on it, most of them Americans. The Kremlin could not have gotten its industrialization off the ground if the West had not been blinded by a fever for immediate profit. It's an unpleasant thought, but one that should be faced today, when the Communists desperately need our machines and machine tools for their latest 7-year plan.

It was hinted to me that I might profitably comment on a certain financier who preceded me on this famous rostrum. I felt that Mikoyan rated priority, yet I can't resist a few kind words on Mr. Cyrus Eaton. Here's a man who insists that America is more of a police state than Russia; who has said that the Kremlin, unlike Washington, speaks for all its people; that our FBI is as bad as the Kremlin's murderous secret police. These are, of course, profound observations which indicate a deep political thinker and student, a man of balanced judgment.

Mr. Eaton has asked our country to "quit meddling in the affairs of other nations"—to quit meddling, that is to say, with Moscow's meddling in our own and every other nation. Just why he wants to give Moscow a monopoly of meddling, with the free world in the posture of a sitting duck, is not quite clear.

Mr. Eaton asked you, as he has asked other audiences, to "trust Russia." Now, as a businessman he would not, I assume, invest money without a tough-minded and thorough study of the credit record and reliability of those whom he must trust. But he is ready to invest the survival of our country, the survival of freedom on this planet, without such a study, by an act of sublime faith.

If anything is crystal clear in the world picture today it is that the Kremlin has violated virtually every treaty, every pledge, every promise it ever made. The injunction to trust Russia therefore amounts to a prescription for suicide, and anyone who accepts it uncritically is yielding to what Freudians call the death wish.

I'm not straying from the subject assigned to me in these introductory references. They are wholly pertinent to the challenge in Berlin, the Formosa Strait, the Middle East, and all other areas of Soviet infiltration and manipulation. The Soviet Minister's reception here—he said in California that he felt as if he were in his own Soviet Union—and the attention being paid to the Eatons point up the failure—worse, the refusal—of the free world to understand the nature of communism and its challenge. It reveals once more the chronic wishful thinking that has made us, these 40 years, such easy marks for Communist blandishments and perfidy.

The West's willful ignorance, its political sleepwalking, are prime elements in Moscow's calculations whenever it touches off another of the periodic crises to test our nerves, and intensify our jitters. Repeatedly, they have gambled—and won—on our refusal to see that we are engaged in a life-and-death struggle and not in an international parlor game; on our pathetic eagerness to end the cold war; on our hunger for narcotic phrases about peaceful coexistence. The Communists know our yearning for some patent medicine that will permit us to sleep in peace, and they exploit it to the limit.

How can we square peaceful coexistence with the Leninist mission of permanent world revolution, from which the present rulers have not retreated a single inch? It's a meaningless phrase intended to disarm us psychologically, so that they may more easily pursue that mission.

Khrushchev and his mob have made that amply clear again and again. As recently as 1957, the Moscow magazine, Kommunist, wrote: "The Socialist and bourgeois ideologies are mutually exclusive; there is not and cannot be any peaceful coexistence between them." And that goes back to the founder's, Lenin's, thesis, in 1920: "As soon as we are strong enough to strike down capitalism, we shall seize it by the throat." But at our end we persist in the pathetic hope that the Communist cancer can be cured with cultural exchanges, doses of good will and courtesy to visiting Kremlin killers.

Certainly the Communists themselves can't be blamed for our complacency and confusion. They have shouted their intentions so that even the deaf could hear them. Lenin, Stalin, Khrushchev and their myriad mouthpieces have made no secret of their plans—so successfully carried out that already a third of the human race is writhing under the Kremlin's iron heel.

Winston Churchill did us no favor when he called Russia "a riddle wrapped in a mystery inside an enigma." Actually, few historical phenomena are less mysterious and enigmatic. Communist purposes have been spelled out all too clearly both in words and in actions.

The real enigma is why we who are earmarked for conquest prefer to kid ourselves that communism can somehow be bought off, or contained, or induced to commit suicide by suddenly renouncing global conspiracy and world dominion. We behave as if this were a conventional disagreement between nations, a question of territory and markets and colonies, as in the past. But it's nothing of the kind. What's involved is the permanent revolution unleashed by Lenin, promoted with increasing zeal and increasing success by all his successors. And we're doomed to defeat as long as we subsist on political tranquilizers.

The great Western Powers, custodians of mankind's treasures of freedom and culture, seem to have suffered a disastrous loss of nerve. Western policies have been wholly defensive, improvised in a panic to meet the crisis of the hour, while ignoring the larger, all-embracing crisis of this historial period, of which each new outbreak is only a part.

We have shied away from firm, consistent policies on the ground that we might antagonize the enemy and close the doors to understandings with him. But the enemy has had no such inhibitions. He has attacked, attacked, and attacked. If you are under any illusion that there has been a change on this score since Stalin's death, read the speeches of Khrushchev and Gromyko at their party congress last month.

Oh I know, I shall be asked, "Do you want a third world war?" But the question makes little sense. It evades the grim lesson of very recent history, that appeasement and retreat, far from ending danger are the guarantees of more terrible dangers to come. Nobody in his senses wants war, and that includes me and Khrushchev. The real question is whether war is best avoided by softness, jitters, submission to blackmail, piecemeal surrenders—or by a principled, self-respecting firmness.

Those who point with trembling fingers to the new military strength of the Soviets should be reminded that communism scored its greatest triumphs precisely in the years when the free world held overwhelming military superiority; that the Kremlin conquered country after country at a time when we had an absolute monopoly of nuclear power. This land of poker players has consistently been bluffed out of winning hands.

The primary Soviet advantage, now as then, is not in material might. On that level we can continue to outmatch them, if we make up our minds to do so. No, their advantage lies on other levels, in their zeal, their determination, their unswerving dedication to a fixed goal. When two fighters are in the ring, one determined to score a knockout and the other looking only for a draw, who is likely to win?

There are those who argue that anything—even surrender—is better than war. Others imply this without saying it. At best that's a shabby, morally shocking proposition. People who fear death more than they love liberty, justice, and honor no longer deserve to survive as independent human beings. Already, before the chains have been welded on their wrists and ankles, they have assumed the posture of slaves.

The mischief of announcing in advance that we don't intend to defend our way of life is that it helps to provide the very catastrophe it proposes to evade. For it amounts to an open invitation to the enemy to make more demands, issue more daring ultimatums, create more dangerous crises. And these in turn push the world closer and closer to the wall of ultimate despair where even a terrified kitten turns on a big dog.

The advocates of surrender-rather-than-war are still few, of course. But their extreme view reflects, as in an enlarging mirror, the attitude of the free world. It differs only in degree from the policies we have actually followed.

Take Korea. There we won a costly victory, then proceeded to turn it into a more costly defeat, rather than risk the attack on the enemy's sanctuary in Manchuria demanded by MacArthur, Van Fleet, Stratmeyer and nearly all our military leaders. And remember that we had, at the time, unquestioned control of the air and exclusive control of the atomic weapon. Red China could not possibly have held out alone, and Moscow would not have courted annihilation.

A decisive United Nations victory might well have stopped Chinese communism in its tracks and reversed the whole trend of Asian history. But instead of clinching our victory, we settled for an uneasy stalemate that will burst into flames again just as soon as Moscow and Peiping consider the time propitious.

Then there was the siege of Berlin. Of what avail was the airlift to save the city, if we are called upon to save it again? In retrospect it is clear that had we followed the advice of the American military men closest to the scene—had we established our rights of access by force—there would have been no war, and there might have been no repetition of the challenge at a more dangerous time, such as we face today.

An even greater opportunity to arrest the expansion of communism—the kind that may not return for a great many years—was opened up when the people of Hungary overthrew their hated puppet regime. There were a hundred things the free world could have done, this side of open military involvement, to help the heroic people maintain their new-won freedom and head off Soviet intervention. Moscow, in fact, hesitated for nearly a week before sending its tanks rolling. It had to make sure that the West would not interfere with the slaughter. Obligingly, we gave them that assurance.

Yet the Kremlin was scarcely in a position then to invite a world war. Its whole satellite empire was tensed for revolt, and its own country, especially its youth, was in a rebellious mood. But Moscow had one great source of strength—namely, our psychological weakness. Again free nations were paralyzed by lack of nerve and heart and moral passion, and the unique chance to cut communism down to size was deliberately thrown away.

Or turn to China. In 1955 we forced the Nationalists to give up the Tachen Islands. Today we see that this has merely enabled the Communists to advance their fighting line to Quemoy and Matsu.

When the aggression against Quemoy was unleashed, a few months ago, hysterical voices were raised here, in England, and elsewhere, demanding withdrawal from the offshore islands. They painted a panicky picture of the world going up in smoke unless the Chinese Communists got what they wanted, and quick. But Secretary Dulles, almost alone, insisted on rejecting intimidation. And even limited resistance has sufficed to deny the Communists another victory by default.

If those islands are surrendered, or lost, exactly nothing will be settled. The line of conflict will simply have been moved deeper into our area—to Formosa, then to Okinawa and other American outposts, and after that perhaps to the Philippines. The trouble with buying peace by concessions and compromise is that the Communists never stay bought. On the contrary, every payment "ups the ante" for the next holdup.

And today there are voices, not so many or so loud but still powerful, urging that we seek what they call a sensible compromise in Berlin. Their zeal for appeasement is masked with beguiling talk of negotiation and disengagement—but it's still the same sick urge to surrender rather than risk conflict.

The Berlin ultimatum is aggression pure and simple, unprovoked, illegal, defiant. Moscow threatens to abrogate rights held by the West under wartime agreements, explicitly reaffirmed after the lifting of the Berlin blockade. It is a unilateral cancellation of clear-cut agreements.

Let's have not only the political but the moral picture clear. We are tied to the two-and-a-quarter million men, women, and children in West Berlin by solemn documents, by ordinary human compassion, by simple self-interest. They have stood up to the Communists because of unflinching confidence in our pledges. It was on the basis of our assurances of safety that they built homes and industries and founded families. To turn those people over to Communist vengeance would be a crime and a betrayal. If the free nations fail this supreme test, they will go down the drain of history and will not even deserve a better fate.

Let's not bemuse ourselves again with the hope that a tiny concession here and there—a soupçon of dishonor in the name of flexibility—will end the crisis. It will merely establish the conditions for a bigger crisis tomorrow. If we give Communist East Germans authority over the land and sky approaches to the beleaguered city, it would be merely the beginning of a process, no matter how the submission is disguised to save our face.

Step by step, the remaining autonomy of West Berlin would be cut away until, through sheer attrition, the city is drowned in the surrounding sea of totalitarian horror. The vengeance wreaked upon its people would then make Budapest look like a picnic. And the first to be tortured and liquidated would be our friends, precisely those who played bravely on our team.

Of course we must stand fast on Berlin, on Quemoy, in the Near East, in Iran, at every point where communism presses forward. Compromise may buy a little time—time that is more valuable to the Communists than to us, because they are more skillful in using it—but it will solve nothing. Whenever Moscow succeeds in making an outrageous aggression stick, the next one is even more outrageous.

In the Berlin gambit we see again the familiar Soviet technic. It is to create a crisis, then demand counterproposals. The bandit covers you with a gun, asks for all you possess, then suggests you make counterproposals. What could be more reasonable? And if you hesitate, even some of your friends complain that you lack flexibility.

To stand fast involves risks, terrible risks. But the risks of yielding are far greater, far more terrible. Remember that the only threatened segments of the map which have been kept out of Communist hands are those where we showed courage and a clear determination to back words with action. Greece and Iran and at least part of Turkey would by this time have been securely behind the Iron Curtain had we not acted boldly and in time.

By the same token, our position is least stable, most explosive precisely in the areas where we made most concessions and surrenders, as in Germany and Korea and China. We sought to buy peace in our time by turning over 100 million people in Eastern Europe—all of them our friends and most of them our allies—to the Red barbarians. We sought to buy peace in Asia by giving communism the right of way in Manchuria, and then in all of China. You know what we bought instead.

Much of our weakness derives from a myth that defies commonsense—the enfeebling myth that Soviets somehow dread war less than we do; that if we dare affirm our rights they will begin tossing bombs. The men in the Kremlin are utterly ruthless, but they are not suicidal maniacs. They are more determined than ever to achieve one Communist world, but this doesn't mean that they seek an all-out global war.

On the contrary, they aim to take over our world and its wealth intact, not in a heap of nuclear ruins. Above all, they don't want their own base of power, Soviet Russia, and the material foundations of that power, the Soviet industrial complex, reduced to rubble. They do not, of course, exclude the possibility of war, but they are profoundly sure that they can win the world without a major war, by means of the relentless harassment that we have come to call the cold war.

Now as always, the Communists count on victory through propaganda, subversion, Machiavellian diplomacy, the fomenting of economic crises and civil strife in target areas. They count on undermining our self-confidence and in the end destroying our will to resist. Safe in the knowledge that we won't start a final fight, they whip up panic fear of war in order to exact concessions, compromises, and thinly disguised surrenders from a terrorized world.

The Soviet leaders, I am convinced, fear a real war even more than we do. Surely, after the events in East Germany, Poland, and Hungary they have reason to wonder and worry which way satellite guns will be pointed in the showdown. They must reckon with the likelihood of rebellion in Eastern Europe and more important, they cannot count, as a certainty, upon the allegiance of their own subjects.

These gentry have a chilling memory of what happened in 1941, when the Germans attacked and they had to fight a war on two fronts—against the foreign foe and against their own people. Millions of Red soldiers surrendered virtually without resistance, and nearly everywhere the invaders were greeted with joy as liberators from communism.

Only after the nature of the Nazi beast and his insulting racial arrogance became obvious did the Soviet people rally around their hated tyrant. And even then close to a million Soviet patriots put on German uniforms to fight against the Kremlin regime. We have forgotten this, but not Khrushchev and his confreres when they weigh the hazards of war.

The great gulf of mutual distrust and hatred between the Soviet masters and their slaves, between the rulers and the ruled, is a fact of transcendant importance, which we have ignored and have lacked the wisdom to exploit. In my book "Our Secret Allies, I tried to show that Soviet history amounts to a continuous civil war between the regime and the people. That war is now, if anything, more intense than in Stalin's pe-

riod. The new intelligentsia, and especially the youth, are in a ferment of soul searching and discontent. This is not my guess—it has been repeatedly admitted by the regime itself.

As against the bland assumption by 3-week tourist experts that the people are behind the regime, there is the towering fact that in 41 years of absolute power, Soviet communism has failed to win what political scientists call legitimacy. It cannot, that is to say, count on the automatic loyalty of its subjects. It still feels obliged to maintain colossal machinery of brainwashing and internal secret police. It still dares not risk the slightest freedom of speech and press and must continue to seal its frontiers hermetically against outside ideas by jamming and censorships and medieval punishments. It continues to behave more like an occupying force in a conquered province than a native government.

I am not suggesting that we can expect a revolution tomorrow or the day after. I do say that the potentials for internal trouble are there; that the masters are deeply scared of an uprising of the slaves, especially under the impact of a devastating war.

In talking of the Russians, we should never fail to distinguish between the dictators and their long-suffering subjects. Nor should we ever lose sight of the nature of the Soviet setup—the framework of police-state oppression and terror; now harsh, now soft, but terror still. Too many of our hurry-up experts describe achievements without mentioning that they are talking about a prison land. It is as if they described the fine work being done in the shops of Alcatraz or Sing Sing but failed to make clear that they're talking about a prison.

And that leads me to another timely caution; namely, that not even eminent Senators or educators or industrialists can buy an understanding of a phenomenon as vast and complex as Communist Russia at the price of a 10- or 30-day tour—not even if it's capped with a personal interview with Khrushchev. Real understanding calls for long and deep study. Recently a special committee on Communist tactics set up by the American Bar Association offered some advice. "For those who want to understand communism" its report said, "we prescribe, not a 15-day trip to Russia but 15 days in a library studying the Communist conspiracy." I think it's sound advice.

We have no alternative in commonsense but to maintain our military vitality. It's our last-ditch insurance against all contingencies, the guarantee of everything else we do or dare. But the fateful decisions are being made now, by means short of war. The much discussed gap in missiles is negligible by comparison with the huge, almost complete gap in political weapons, those that have been giving the Communists an unbroken series of large and small victories. That's the gap, above all, that must be closed if we are to survive.

The Communists do not even pretend that what now exists is peace. For them it is war with revolutionary cold-war weapons—war to the finish—our finish. And that war can't be called off. Even if Moscow wished to do so—which it decidedly doesn't—it couldn't dismantle its worldwide apparatus of infiltration and subversion, its Communist parties, its global empire of false-front organizations, its paramilitary formations in some places, its vast agencies of mischief everywhere.

The essence of the matter, which so many of our opinion makers fail to grasp, is in the dual nature of the Kremlin. It is at the same time a conventional government and the spearhead of a world revolutionary movement. That's the hidden trap in negotiations with the Soviets. Agreements undertaken by the Government, even if they were kept, would not be binding upon world communism. Often, in fact, they have provided a convenient cover for expanded and intensified Communist activity.

Like it or not, the great and inescapable task of our epoch is not to end the cold war but to win it. And to win it we must acknowledge its reality, then develop a strategy for fighting it boldly, aggressively, on a scale commensurate with the stakes involved—meanwhile maintaining military superiority to make sure that the war remains cold.

It's late, but not too late, to save our civilization and the values we cherish from being overrun by the new barbarism. We must face up, once and for all, to the fact that the struggle with communism can't be wished away; that it won't end until their world or ours is eliminated. There is no reason why we should merely wait for the next Communist blow to descend. We, too, should confront the enemy with hard choices at times and in places of our choosing; encourage and intensify the tides of mutiny under the policed surface of Soviet life; keep the Communists constantly off balance—in sum, we should do to them what they have been so successfully doing to us.

I am uncomfortably conscious that because of the limited time I have dealt with vast issues in every summary, and therefore oversimplified, fashion. But I know I can count on your forgiveness. I consider it both an honor and a unique opportunity to have been invited to address you.

## The Present Administration Has Done Good Job of Steadying Prices and the Value of the Dollar

SPEECH
OF
### HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. CRAMER. Mr. Speaker, any consideration of inflation comes down in the end to this question: Which party has done the better job of steadying prices and the value of the dollar?

The record clearly is in favor of the present administration.

The Truman administration's policies burned up about 50 percent of the dollar's value. Under this administration, the value shrinkage has been less than a nickel in practically the same number of years.

Under the preceding administration, prices soared approximately 50 percent. The rise in the cost of living under this administration, in sharp contrast, has been held to less than 9 percent and the present plateau of price stability is one of the longest on record.

I agree generally with the statement on AFL–CIO President George Meany in the February issue of the Federalist:

Our trade unions have continued to obtain substantial wage advances while prices have remained relatively stable. * * * Real wages are showing very significant increases. This means a continuously rising American standard of living.

All this could be destroyed, of course, if the excessive spending indirectly and directly advocated in the majority Joint Economic Report of 1959 were implemented by an irresponsible Congress.

## Speech of Robert T. Murphy, Esq.

SPEECH
OF
### HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. FOGARTY. Mr. Speaker, St. Patrick's Day comes early—at least in Arlington, Va., where the Friendly Sons of St. Patrick of Northern Virginia traditionally conduct their annual banquet on the eve of the birthday of the Father of Our Country. In this way they honor the memory of our first President who became an honorary member of the Friendly Sons of St. Patrick in 1781 at Philadelphia. The northern Virginia chapter was organized some years ago by a group of Virginia residents headed by my former assistant and close friend, David P. Doyle.

This year the principal address was given by Robert T. Murphy, a member of the bar of the State of Rhode Island and the District of Columbia. Bob Murphy was my classmate at La Salle Academy in Providence R.I. He has long been a member of the Friendly Sons of St. Patrick of Providence of which his father-in-law, Felix Meenagh, is the oldest living member and its distinguished Almoner. Bob Murphy and Felix Meenagh are men of great stature and outstanding examples of what we like to consider as the best in Irish-American gentlemen. I feel privileged to count both of them as personal friends.

Mr. Speaker, under leave to extend my remarks, I include the address of Robert T. Murphy before the Friendly Sons of St. Patrick of Northern Virginia on February 21, 1959, at Arlington, Va.

Mr. Kirby, Mr. Wynne, our toastmaster, Father McMahon, distinguished guests, and members of the George Washington Chapter of the Friendly Sons of St. Patrick, I am honored, indeed, to be called upon to address a group of fellow Irishmen of northern Virginia once again. I say "again" for the reason that more than a decade ago, at the invitation of my dear, departed friend, Dave Doyle, I spoke to some of you in the old parish hall at St. James on the eve of St. Patrick's Day. About a year or so later, this society was founded and now I return to undertake this pleasant task again. Some may properly observe, at this point, that this lapse of time probably had some relation to the length and quality of my remarks on that occasion. Fortunately, for me at least, your toastmaster, Dick Wynne, a fellow-Rhode Islander, was not there at old St. James which may account for his invitation to me to speak to you tonight.

I wish only to briefly allude to some of the background of the Society of the Friendly Sons of St. Patrick—your own, George Washington Chapter, in particular—so that we may all appreciate, in some measure, its tradition and the purposes for which it stands.

The Friendly Sons of St. Patrick, a Society, was founded in the city of Philadelphia, in the year 1771, by 31 Irish gentlemen, 28 of whom were Protestants and but 3 were Catholics. Its first chosen president was Stephen Moylan, brother of the Catholic bishop of Cork, and later a famous Revolutionary War general. There was no bigotry then among them and, in keeping with the Christian love of St. Patrick, there is none among the Friendly Sons today.

From this group, as it grew, were furnished a number of outstanding Revolutionary War figures, both military and civil, so that 10 years later, in 1781, when George Washington was made an honorary member he could say that he was proud to wear the ensign of such a noble society which was distinguished for the firm adherence of its members to the glorious cause in which we are embarked.

Some of its members were Generals Moylan, Shee, Wayne, Knox, Butler, Irvine, Hand, Commodore John Barry, Capt. Matthew Mease, of the U.S. Navy.

On June 17, 1780, 27 members of the Friendly Sons of St. Patrick subscribed 103,500 pounds sterling to furnish provisions for are army. Robert Marris and Blair McClenachan, both members of the society, each subscribing 10,000 pounds. So numerous were Irishmen and their descendants in the Pennsylvania line, commanded by General Wayne, a member of the Philadelphia Friendly Sons, that it was characterized by General Harry Lee, Governor of Virginia, in his "Memoirs of the War" (vol. 2, p. 203), as follows: "They were known by the designation of the line of Pennsylvania, whereas they might have been, with more propriety called the 'line of Ireland.'"

Little wonder, therefore, that in the severe winter of 1780, in northern New Jersey, General Washington issued a special order to his half-frozen, half-starved troops, directing that all fatigues and working parties cease for tomorrow, the 17th of March in honor of the loyal support of the Sons of Ireland to the flickering cause of American liberty. So, I leave it to you to decide whether George Washington did not truly love St. Patrick and his society.

Thus, it is a perpetual tradition, among the Friendly Sons of St. Patrick of Philadelphia, that the toast, immediately following the first of the evening to St. Patrick, is always to "the immortal memory of Washington," its distinguished honorary member.

In New York City, on March 17, 1784, a Friendly Sons of St. Patrick was founded by Daniel McCormick and a group of Irish officers in the Revolutionary Army. William Constable, an aide to Lafayette, who had been a member of the Philadelphia group, was one of the founders of the New York society.

Since those days, it has spread and flourished in other parts of the Nation where men of Irish ancestry reside. From its inception, the society has been a truly democratic one, with no national headquarters, no national charter or bylaws, no national dues or retinue of national or international officers. Separate individual units have sprung up from coast-to-coast, each a law unto itself. Thus, in the great State of Pennsylvania, the birthplace of our society, we find a famous unit in the greater Pittston area, whose activities and achievements are a legend. In Lackawanna County, the home of many famous Irish leaders in American life, there is another. In my native city of Providence, a unit was organized in 1901 and I am proud to say that my father-in-law, Felix Meenagh, of County Tyrone, is its oldest living member. Other well-known units in Washington, Boston, Atlanta, Chicago, and elsewhere have long been functioning.

Yet there is common bond that ties one with the other—love of Ireland, love of God, love of country. Naturally, by virtue of its very name, love of St. Patrick, and all he stands for, is taken for granted and unites all its members.

The history of this group is comparatively short and yet its roots touch deeply on the history of the past. I can think of no other unit in the country which is more fittingly identified with the things for which the society stands. Here we gather, on the eve of the birthday of the Father of Our Country, close by his very home and near the place where rest his mortal remains. We meet in an area where men and women from Ireland were welcomed in the early 1700's, where many lived and died and from whence large numbers journeyed westward and south to carve out a destiny in the Blue Ridge, the Smokies, the flatlands of the Carolinas, from where so many of their children later rose to prominence in America's history.

It seems but a few short years ago, that David Patrick Doyle, fresh from Rhode Island and filled with a love and devotion to Ireland and its traditions, set about with many of you to bring the Friendly Sons of St. Patrick into being here. I recall an invitation to attend an organization meeting at his home. I was asked to bring a book containing the charter and bylaws of the Providence group, which I did, and upon which your own activities are modeled. It was there that I first met Joe Freehill, who worked so diligently on this project, as he did on everything he touched. Tonight, both these men, together with Addison Clohosey, Edward J. Kelly, and Creston Giblin, are not with us—although they truly must be in spirit. But if Dave Doyle or Joe Freehill left no other monument—and they certainly did—this group will, I trust, ever remain as a living testament to their zeal for St. Patrick and his sons and daughters in that part of the world where they lived and died.

In conclusion, let me repeat a few lines from an old poem dear to the heart of David Patrick Doyle, which expresses a happy view on life, a view which I find so well exemplified among you, his fellow Friendly Sons:

"From humble homes and small beginnings,
Out to the undiscovered lands,
There is nothing worth the while of living,
Save laughter and the love of friends."

## Emilie Martine Nelson and Her Famous Son

EXTENSION OF REMARKS
OF
### HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise my remarks, I include herein an award of the Boys' Club Bronze Keystone for long and devoted service to boys recently tendered to my dear and valued friend, Nils V. (Swede) Nelson by the famous West End House of Boston.

This award, which came in recognition of Swede Nelson's unparalleled contributions to the welfare of boys in the Boston area, came on the occasion of the 95th birthday of his beloved mother, Mrs. Emilie Martine Nelson on January 13, 1959.

I join many in expressing appreciation for this highly merited award, because there is no one in Massachusetts or the Nation who has done more effective work among our young people, to inspire, encourage, and guide them along constructive pathways, than the great Swede Nelson.

Time and time again he has been recognized and honored for his outstanding work in athletics, social service, career guidance, and worthwhile fraternal and charitable activities.

Famous wit, outstanding afterdinner speaker, indefatigable worker for every good cause, Swede Nelson is one of our greatest contemporary Americans. It is indeed appropriate that he should be honored again on the occasion of the 95th birthday of his dear mother who, like his gracious wife, throughout the years has counseled, inspired, and assisted him in his praiseworthy work.

I am highly privileged to join very many admiring and grateful citizens in Massachusetts and the Nation in congratulating these grand citizens for their unselfish endeavors for a better, stronger, and more vital America. Would that we had more Swede Nelsons.

BOYS' CLUBS OF AMERICA PRESENTS THE AWARD OF THE BOYS' CLUB BRONZE KEYSTONE FOR LONG AND DEVOTED SERVICE TO BOYS TO NILS V. NELSON

He has served on the board of directors of the West End House, Boston, Mass., since 1943. He has been of great assistance to the Boys' Club alumni and to the active membership of the West End House. He has been a constant proponent of the Boys' Club movement and has utilized his great speaking ability and humor to win many friends for its support. He is devoted to the West End House and is a good will ambassador for the organization. His interest and efforts have been of immeasurable value to the Boys' Club and to hundreds of boys. In recognition of his long and devoted service to boys, Boys' Clubs of America awards him the Boys' Club Bronze Keystone.

HERBERT HOOVER,
*Chairman of Board.*
ALBERT L. COLE,
*President.*
JOHN M. GLEASON,
*National Director.*
MORGAN D. WINSLOW,
*Chairman, National Awards Committee.*
WALTER M. HALL,
*Secretary, National Awards Committee.*

## H.R. 5633—To Amend the District of Columbia Code With Reference to Income Taxes

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. MULTER. Mr. Speaker, I have today introduced H.R. 5633 to amend the District of Columbia Code with reference to income taxes.

I am hopeful that by the enactment of this bill we will give to residents of the District of Columbia the same privileges as granted to all citizens in connection with the filing of their income tax returns with the United States. It is intended to equalize those exemptions and benefits.

At the same time it should put residents of the District of Columbia at least on an equal basis with residents in Maryland and Virginia in that connection.

The benefits will inure principally to our aged citizens 65 years of age and older and those who are called upon to pay large medical, dental, and hospital expenses.

## All-Out Air Alert Involves Problems for the Strategic Air Command

EXTENSION OF REMARKS
OF
**HON. DANIEL J. FLOOD**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. John G. Norris which appeared in the Washington Post and Times Herald on Sunday, March 8, 1959:

The great debate over the Eisenhower administration's defense program shifted course last week as critics turned their fire from the coming missile gap to the lack of a SAC air alert.

Considerable heat, but little light, however, was cast on the complex and vital military problem involved by what was said on both sides.

For shifting Strategic Air Command bombers from ground to air alert will require substantial changes in the Nation's all-important nuclear deterrent system. And the pro and con arguments within the Pentagon over an air alert proposal by Gen. Thomas S. Power, SAC commander, differ considerably from those in public debate.

Congressional and newspaper critics of the administration suggest that SAC bombers are in danger of being destroyed on the ground by a surprise Soviet ICBM attack, and therefore a sizable portion of them must be kept continuously in the air, armed and fueled for retaliatory attack. Since this would cost money, many conclude that budget limitations are hamstringing security.

President Eisenhower and Defense Secretary McElroy answer that the present SAC alert—which maintains nearly one-third of its bombers on a 15-minute readiness status on the ground—is completely satisfactory at this time. They say that the time may come when an air alert will be necessary and will be put into effect at that time.

Part of the confusion stems from some cryptic testimony by General Power before the Senate Preparedness Subcommittee. He said, without amplification or clarification under cross-examination, that he had made recommendations regarding an air alert and that what is done about it is up to higher authority.

Actually, what the SAC chief has proposed is permission and funds to go ahead with an air alert on a limited, trial basis. Air Force officials say he is not at present concerned about his bombers being caught on the ground by a massive, surprise Soviet missle attack.

But since the day could well come when Russia's ICBM strength may make such a disaster possible, Power wants to start now determining just how an air alert should be operated, and getting the additional resources needed for the purpose.

Some very small scale experiments already have been held in SAC, which convince its chiefs that an air alert is feasible, when and if it becomes necessary. From these tests the Air Force draws these tentative conclusions:

A continuous, large-scale air alert—up to one-third of SAC bombers aloft at all times—would involve much additional flying, perhaps doubling the maintenance and operations costs. That would mean providing sizable amounts of additional fuel, engines, spare parts, oxygen, overhaul facilities, and probably tankers. More ground crews, air crews, and support forces almost certainly would be necessary to maintain a maximum effort.

A regular air alert would be practicable only with SAC's B–52 heavy bombers, now numbering nearly 300 in operational status. Too many problems would be involved in extending it to SAC's 1,200 B–47's. Also the B–47's are old and intensive flying would wear them out quickly.

Cost of a B–52 alert is estimated at from $750 million to $1.5 billion or more, depending upon the proportion kept in the air, and what actual trial operations would prove. Rough estimates are all that is possible now. As the force of B–52's grows, the cost would be greater.

Adoption of an air alert would require major changes in SAC training schedules. Fully operational air crews conduct routine training and fly missions that are almost complete replicas of what they would do if the bell rings. They fly the precise distance to a designated target in Russia, actually on a triangular course over the United States. Other crews always are in training to replace them.

Instead of such replica flights in the United States, bombers on air alert would fly toward the Arctic, probably get an additional aerial refueling and remain in the North for a few hours. The refueling B–52's would be assigned a deeper target for a time, and then revert to their original target when their gas depletes. Longer missions would be flown, involving greater crew fatigue.

An air alert would degrade the present ground alert, as obviously both could not be maintained at anything like maximum strength. Weighing the relative merits of the two is complicated by the fact that an air alert is not desirable for protection against enemy bombers. It is also complicated by some questions raised by the Ballistic Missile Early Warning System, expected to be ready in 1961. If the two warning stations in Alaska and Greenland prove fully reliable, a ground alert might have greater advantage over an air alert.

All these things are being weighed at the Pentagon. But what General Power stresses is that the major changes required in SAC if an air alert is ordered in the next 1, 2, or 3 years, when Russia may gain a big ICBM superiority, will take time.

If SAC has to double its flying in 1961, reorganize and increase its maintenance, training and operating schedules, and procure additional crews, planes, and parts, it needs to start now, not only to find out exactly what must be done but do it in an orderly manner.

## Poison in Your Water—No. 36

EXTENSION OF REMARKS
OF
**HON. JOHN D. DINGELL**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the RECORD an article from the Salisbury, Md., Times entitled "Pollution May Bar Oystering in Sho' River":

POLLUTION MAY BAR OYSTERING IN SHO' RIVER

CAMBRIDGE.—The director of the State health department has been given authority to close the Little Choptank River, in the lower area of Dorchester County, to oystering unless residential pollution is reduced before the oyster season starts on October 1.

The board of health has directed Dr. Perry F. Prather to take this action unless satisfactory improvement is made in the meantime.

Robert M. Brown, chief of the department's bureau of environmental hygiene, recommended the board action after pointing out that inadequate sewage disposal has caused a problem in the river for several years.

According to sanitarian J. William Robbins, of the local health department staff, 13 new sewage systems have already been installed by property owners along the river. This leaves 31 of the 54 notified of inadequate systems, who have failed to take any steps to comply.

Earlier this year the State health department threatened to close the Little Choptank to oystering before the 1958–59 season opened. The closing threat was again made last week, unless a substantial number of corrections were made before October 1.

Dr. Clarence Tinsman, county health officer, said that all 54 violators were sent health department orders in July giving them 30 days to comply.

Next step of Dr. Tinsman's department will be to hold hearings, and then secure warrants against those property owners who refuse to make any attempts toward compliance.

Hearings must be held soon, Dr. Tinsman said, in fairness to the many watermen who depend on oystering in the Little Choptank for their livelihood.

## TVA Generator Award

EXTENSION OF REMARKS
OF
**HON. PHILIP J. PHILBIN**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. PHILBIN. Mr. Speaker, when the award was announced, I strongly protested to the President and Mr. Herbert D. Vogel, head of TVA, to withdraw the recent order for a 500,000-kilowatt turbogenerator for the Tennessee Valley Authority awarded to a British concern. The contract price was some $13 million.

There are concerns in my district and State which employ our fellow citizens and taxpayers with highest capability of performing this large Government contract.

It is neither just nor wise to displace American labor and penalize American business by giving out contracts to foreign competitors which results in depriving American industries of business and taking bread out of the mouths of American working people.

Most of us are willing to help our allies of the free world as much as we reasonably can. In the past 18 years, we have spent well over $100 billion for this purpose overseas.

In addition, we have allowed a flood of competitive goods to come into the United States to undermine standards of employment and industrial vitality.

This law is threatening to infect our whole economic structure. Industry after industry is being hit.

The practice of purchasing overseas government procurement items that can be purchased in this country, cannot be justified. Whether it technically complies with the Buy American Act or not, it is to say the least, ill-advised, unsound economic policy.

In any event I believe that this turbine-generator bid should be rejected

and the order canceled and readvertised so that American industry can qualify to get the work.

The Buy American Act formerly was interpreted to prohibit purchases overseas when the price range was within 25 percent. In my opinion, 25 percent is not enough in most cases to reflect the wide wage differentials between foreign and domestic labor let alone other cost factors.

Moreover, the Government has by administrative ruling, reduced the former 25 percent differential requirements to about 6 percent, and that literally opens the floodgates that could well permit foreign bidders to have a picnic at the expense of American producers and workers in the American market.

I also question heavy overseas purchases by the Armed Forces.

The offshore procurement policy, so-called, is another example in the assortment of huge financial subsidies we are heaping upon foreign nations at the expense of our own economic machine.

There are instances where it is feasible to purchase certain goods in foreign aid and military aid programs, but there are also instances where it is an extremely unsound, costly practice. The most recent instance of this practice was the purchase by the U.S. Navy of 7,000 tons of steel from Japan.

Mr. Speaker, I am preparing legislation to amend the Buy American Act, calling for the study and adoption of sound methods to bar large overseas purchases harmful to American industry where monopolistic or excessive costs are not in question.

Obviously Congress must protect the Government as well as the consumer against monopolistic or unfair trade practices.

The shortsightedness of the purchase is shown by the fact that servicing and repairing of this TVA foreign-made equipment estimated over a period of years will unquestionably raise the original purchase price very considerably above the bid price. If this additional cost were taken into account, it would prohibit the purchase under any fair interpretation of the Buy American Act, because it would bring the price within a prohibitory range.

The situation is the more indefensible because of the status of TVA, a taxpayer-supported public utility, grossly competitive with private enterprise utilities, having the temerity as a recipient of huge Government largesse, to award a contract to a foreign company and leave American workers in the lurch.

There is also a very serious security aspect to the award. What will the situation of TVA be in the event of war or emergency should this electricity-producing equipment break down and require parts replaced or technical aid from overseas?

I am astonished that any responsible Government agency would be willing to put its seal of approval on a deal so unfair to American industry and its employees.

## Debate on Military Cuts

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. James Reston which appeared in the New York Times on Wednesday, March 11, 1959:

DEBATE ON MILITARY CUTS: DEMOCRATS HAVE BUILT AN IMPRESSIVE CASE, BUT EISENHOWER HAS LAST WORD

(By James Reston)

WASHINGTON, March 10—The Democrats have built an impressive case against cutting the Army and the Marines in the middle of the Berlin crisis, but in the end, President Eisenhower will have the last word.

For this is not a questtion of objective fact, but a question of judgment, and on such a question the Democrats know that the public is not likely to reject the judgment of one of the most famous general officers of his generation.

Moreover, while the Constitution requires the Congress to raise and support armies, it does not give the Congress power to compel the Commander in Chief to do more than he wants to do. It can cut his funds and thus force him to do less, and it can, and probably will, vote him more defense funds than he requested, but he can refuse to spend them as he did last year.

STILL VASTLY OUTNUMBERED

The President's argument is that even if he did all the things proposed by his critics—increase the U.S. forces in Europe, urge the British and French to do the same, build up the North Atlantic Treaty's tactical air force, retain the present Army and Marine force levels, and step up the missile program—the West's total forces would still be vastly outnumbered by the Communists in Europe and would have to rely on atomic weapons to redress the balance of power.

What the administration has not been able to do, however, is to articulate its policy clearly enough to persuade many of the most responsible members of the Armed Services Committees of the two Houses.

The President has the final say, but the opposition has captured the debate. The result is that, lacking an effective presentation of the administration's case, the impression has been created that the President is more concerned about balancing the budget than in balancing his military forces with his political commitments.

LIVELIEST DEBATE

There was, for example, the liveliest debate of the present session of the Congress in the Foreign Relations Committee of the Senate today. Christian A. Herter, Acting Secretary of State, and Livingston T. Merchant, Assistant Secretary, appeared in secret before almost a full committee.

In the questions that followed, the two officials were repeatedly charged with following a policy that could be redeemed in any fight over Berlin only with the use of atomic weapons. The answers given were that these were highly speculative military questions that could be answered only by the President and the Pentagon.

This, however, merely added to the frustration of the members present, for while the President has said he was satisfied that he did have the necessary forces to deal with Berlin, the Joint Chiefs of Staff have taken a different tack.

The Army Chief of Staff, Gen. Maxwell D. Taylor, told the Congress:

"During the development of both the fiscal year 1959 and the fiscal year 1960 budgets, I recommended that the active Army be maintained at a strength of 925,000. The fiscal year 1960 budget will provide an active Army strength of 870,000."

"My reservation with regard to the personnel situation," General Taylor added, "is based upon the results of reports and of my personal visits to the principal Army commanders abroad and in the United States, all of whom consider their personnel resources as inadequate to meet the full requirements of their assigned missions."

NATIONALS SERVING

At the present time, large numbers of South Koreans (the Pentagon will not say how many) are actually serving in the regular combat units of the U.S. Army in Korea.

Also, while there are not, as General Taylor implied, foreigners serving directly in the U.S. Army in Germany, there are still 14,033 foreigners in uniformed labor service units of the U.S. Army in Germany.

Of these, 8,138 are Germans; 2,293 Poles; 84 Albanians; 144 Bulgarians; 232 Czechs; 240 Estonians; 999 Hungarians, of whom 810 are in Berlin; 922 Latvians; 457 Lithuanians; 57 Russians; 130 Ukrainians; 230 Yugoslavs, and 7 Rumanians.

In commenting on this method of compensating for a shortage or regular U.S. Army personnel, General Taylor commented that the Army was thus "incurring a heavy dependence upon foreign personnel which might have serious consequences in an emergency."

At no time since the beginning of the Berlin crisis last autumn has the Congress been more disturbed about the conflicting testimony before it on the adequacy of the Nation's defenses.

It is not so much that the legislators are worried about the actual strength of the services as they are about the psychology of cutting manpower further in the midst of the crisis.

Many of them believe this increases the dangers of miscalculation by the Soviet Union. The Members of Congress do not hope to master all the intracies of military power and strategy, but they feel they are entitled to a sense of confidence that military and political policy is being determined in a careful and orderly way.

This confidence is lacking in Congress at the moment. The legislators know they cannot force the President to change his plans, but they are still hoping that he and his Secretary of Defense will explain more clearly why the administration has confidence that it has adequate forces of all kinds to meet its political commitments.

## State's Oldest Editor Thinks 96 Is Time To Sell

EXTENSION OF REMARKS
OF
## HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. ANDERSON of Minnesota. Mr. Speaker, one of the miracles of our

times is the fact that the weekly country newspapers still go to press. In my district we have 84 newspapers whose editors brighten and lighten the days of farm people by the regular publication of the local news. The economic, mechanical, and other difficulties faced by these dedicated journalists are such that it is remarkable indeed that they continue to render this much needed public service.

For a quarter of a century I have regularly visited with the editor of the Echo Enterprise at Echo, Minn., and have marveled at his capacity. When I first met him, he had then been editor of his weekly for almost 30 years. At 96 he has reluctantly decided to sell out and those of us who have for so long enjoyed his wit and his wisdom shall miss him greatly. He has for 54 years dedicated himself to the publication of the Echo Enterprise and all of us who know him want to wish him well in his retirement.

Under leave to extend my remarks in the Appendix, I am including the following feature story from the Minneapolis Sunday Tribune of March 8 by Miriam Alburn:

STATE'S OLDEST EDITOR THINKS 96 IS TIME TO SELL

(By Miriam Alburn)

ECHO, MINN.—George B. Hughes, the oldest editor in Minnesota, has finally decided he has had enough of the newspaper business.

At 96 he is ready to sell out.

With the Echo Enterprise a new buyer would acquire a newspaper tradition of 68 years in Yellow Medicine County, a following of about 400 subscribers and printing equipment so old there is talk of moving it to the museum of the Minnesota Historical Society.

The shop, which occupies the first floor of a small frame building, is just about the way it was when Hughes took over the Enterprise 54 years ago.

It is crowded with essentials—the banks of type still set by hand, the flat-bed press run by a gasoline motor that could be heard all over town till a muffler was added a few years ago, the kettle of melting metal and the heating stove which never quite wins against cold weather.

Hughes' only major concession to progress in the printing business was to add a small job printing press about 8 years ago.

His clinging to the old techniques has been deliberate, and he gives you both philosophical and practical reasons.

"If you make more money, you just spend more money," he says. And if you buy expensive machinery, you have to hire expensive help to run it, and every time it breaks down you have to get someone to come all the way from the cities to repair it, he explains.

Hence the Echo Enterprise is the only hand-set newspaper left in Minnesota—to the regret of Hughes' daughter-in-law, Mrs. Leland A. Hughes, who now has the responsibility of getting it published every week.

George Hughes, who proudly maintains that his hearing and vision are still perfect, still comes into the office for an hour or so every day. He writes an occasional story in long hand, but no longer attempts to work with type or press.

His son, Leland, left a newspaper job in Beaumont, Tex., in October 1956 to return to Echo to help his father. Recently he went back to Texas to take a job on the Galveston News. His wife stayed for two reasons—to carry on with the Enterprise until it could be sold and to avoid having to shift their daughter, Lynn, to another high school.

Although George Hughes is still owner of the business, at present the Enterprise is practically an all-woman publishing operation.

Lynn and a friend, Elaine Rebers, both 17, come in after school and Saturdays to set type, and they help with the printing Thursday evenings.

Mrs. Arthur Holt, who has worked off and on for Hughes since she was in high school, now sets type 3 days a week.

But it is Mrs. Leland Hughes who does the supervising, writes much of the copy, sets type, puts the advertisements together, makes up the pages, operates the cranky press and sees that the papers get folded and into the mail every Friday morning.

She does enlist the help of a farmer, Lester Schroeder, to get the gas engine and big press running once a week.

Echo is a farmers' community of about 500 residents, 20 miles northwest of Redwood Falls. It has two grain elevators and a block of small stores. The creamery closed about a year ago.

Hughes, who came here in 1905 after working on newspapers in St. Peter, Mankato, Marshall and Redwood Falls, has liked the town because the people were friendly and it was a good base for the hunting and fishing he always liked.

Big cities hold no appeal for him.

"I've never been a chase-about," he said. "When you've seen one city, you've seen them all, though one may have higher buildings than another."

The Enterprise has four pages, filled with neighborly social notes, with news of school and church and town council activities and the ads of local merchants.

On May 6, 1955, the town held a "George Hughes day" in recognition of his 50 years with the newspaper, and there was a big celebration, with smorgasbord and band music in the village hall. Scott Schoen, editor of the Redwood Falls Gazette, then president of the Minnesota Editorial Association, was there to present him with a gold makeup rule, tool of the printing trade.

Hughes' wife died in 1942. "Now," he said, "there's not a person my age around here."

But the old editor, who started his newspaper career in 1881, still, as in years past, wears his hat in the shop, wears no coat outdoors, and walks the Main Street of Echo with a jaunty air.

## Small Business Administration's Aid to Aggressive Detroit Company

EXTENSION OF REMARKS

OF

## HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mrs. GRIFFITHS. Mr. Speaker, the Small Business Administration, as all other agencies of Government, comes in for its full share of abuse from the Congress and the public generally.

Therefore, I am happy to give them praise and to acknowledge their ability today in a case which happened in my own district. I am happy also that their able Administrator, Wendell B. Barnes, who has appeared before the Committee on Banking and Currency has done his best to make this agency of real service to the community.

The Lite-Vent Co., whose offices are in my district, got its start from the Small Business Administration. I herewith offer the article from the Detroit News for insertion in the RECORD concerning this company:

IT'S A MILLION IN THE SHADE FOR TWO WITH LOTS OF HUSTLE

(By William T. Noble)

Young men who have been warned by grumpy cynics that days of opportunity have gone forever in America, might get a kick out of listening to Leo P. Sklar.

Leo is an outspoken 29-year-old business administration graduate of Wayne State University who decided after graduation a few years ago that he now had the education, a surplus of ambition, and therefore should be a millionaire.

His only drawback was the fact that he didn't have more than $100 to start with and had to exist on a rather small salary as a hardware store clerk.

WELL ON WAY

But in about 4 years Leo and a rough and tumble partner named Samuel H. Ellman have built up a $1 million business.

"I haven't quite made my own $1 million yet," smiled the athletic young executive who occasionally relaxes playing golf, "but I'm three-quarters of the way."

How did he do it?

By providing Detroiters shade on sunny days.

There was an element of luck too. One stroke was his meeting Ellman, a busy 43-year-old gruff talking salesman who readily admits he spent at least 3 years in one grade, hitched rides about the country and never expected to be a "hundredaire," let alone flirt with a $1 million.

AVOIDED THE SUN

Sklar worked as a clerk at his father's hardware store at 2038 Springwells. Ellman ran an aluminum awning store across the street. Frequently he bought items at the Sklar store.

"But I always avoided letting young Sklar wait on me," said Ellman. "He did not know a nail from a nut."

Later, however, he started talking to Sklar who thought there might be a future in the aluminum awning business.

FORM COMPANY

Both men formed a company called Lite-Vent. Instead of trying to worm products out of a harassed outstate company, Sklar and Ellman decided to make their own step-down aluminum awnings for homes and industry.

"The first 6 months," recalled Sklar sourly, "we lost $10,000. It took a lot of maneuvering. We didn't have much money in the first place (all of it borrowed) and bills were piling high. But Ellman was a good salesman and I had learned quite a bit about paper shuffling at Wayne."

Money lenders agreed there was a fantastic potential in this area and happily risked their money, "in some cases at 18 percent interest," Sklar added.

THREE HUNDRED AND TWENTY-SEVEN THOUSAND DOLLARS IN SALES

The next year, with rotund Ellman cracking earthy jokes and flitting about the country selling, Lite-Vent sold $325,000 worth of awnings. They leased a building at 14637 Meyers and made their own special machinery to shape the light metal. But all of this took extra money.

"And then one day I read in the Detroit News a story about the Small Business Administration office here. I rushed down and landed the office's first loan for $35,000, pledging the company's assets. That was in 1955. In 1957 we landed a second $100,000

loan from the SBA. That put us in good shape."

All of the bill shuffling and tension gave Sklar a permanent case of heebie jeebies. But he relaxes his frayed nerves on a golf course or vacations after a 20-hour-a-day, 7-day week.

BRANCHING OUT

The company now employs about 25 skilled workmen; has a private plane Ellman learned to pilot so he could get to clients faster than the competition; and the latest IBM bookkeeping machinery in the city.

Lite-Vent also is branching into different aluminum products.

So when someone tells Sklar or Ellman there no longer is any opportunity in the United States, they smile to themselves and go home to their families with a pocketful of cash and a fat bank book.

Sklar, a native Detroiter, lives at 23880 Morton, Oak Park, with his wife and three children. Ellman, once well known about Detroit as "Sam the Repairman," lives with his wife and daughter at 18034 Birwood.

## A Friend to Our Rescue

EXTENSION OF REMARKS
OF
### HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein a recent editorial from the celebrated Holyoke (Mass.) Transcript-Telegram entitled "A Friend to Our Rescue," which a valued friend and constituent of mine has brought to my attention.

This able editorial makes reference to a recent article in the Saturday Evening Post written by my old friend, the famous, talented, Clinton-born writer, Richard Attridge, whose admirable pieces in the Post are so enthusiastically received by the American public.

This very well-written editorial, in mentioning the Attridge article, deals most appropriately with the great changes that have taken place in the banking business in recent years.

Mr. Arthur Ryan, able and distinguished editor of the Transcript-Telegram, is to be commended for the splendid coverage he has given to an absorbing, interesting facet of American business life which is not too often discussed in the press.

A FRIEND TO OUR RESCUE

A banker friend called the attention of the director of this editorial page to a sin of omission recently. It was failure to say a kind word for banks and bankers at the time they were staging their annual meetings for stockholders and trustees. There have been such tributes paid for a great many years and we admitted error to the questioner.

But there must be something in this subconsciousness of mind and power to awaken it in a pinch. While we were neglecting to think about this highly important matter, a good friend and fellow resident of the Holyoke community was thinking about it and was acting thereon. How else can one explain the fact that Richard Attridge, on whom we have fallen back on many occasions to provide an icing for many an important event cake, should have provided, in the latest edition of the Saturday Evening Post, an editorial that deals with the subject of the modern bank and its better relations with the general public than prevailed a generation ago under the title, "No Place for Old Scrooge in Today's Friendly Bank." It's most readable and, we trust, fills to overflowing the vacuum created by our own neglect. Here it is:

"One of the most amazing developments in modern merchandizing has been that carried out by American banks. It is not true, of course, that banks attempt to rival supermarket come-ons, although they do have gala openings for new branches, serve refreshments and present gifts to customers who open new accounts with even very small deposits. They have installed drive-in windows, increased the number and convenience of their offices, brought their personnel into approachable view and adopted a far friendlier attitude for the man in the street.

"Almost everyone has a banker today; for one thing, the immense popularity of pay-as-you-go checks has attracted millions of Americans to the banks' once forbidding portals. It is now estimated that approximately 14 million bank checks a day cover 80 percent of all our business transactions. The banks now place great importance on their personal-loan services for ordinary citizens especially for home improvements.

"Banks today are equipped to transfer funds by wire from city to city and by cable to foreign countries; they provide night depositories for businessmen; they offer packaged payroll plans for industrial firms; are a prime source of industrial credit information and handle business payments at distant points through correspondent banks. Trust departments assist in estate planning, executorship, trusteeship, guardianship, and administration of wills. In spite of many new and expanded business services, however, modern banking's most radical departure has been its concerted and successful efforts to sell its product to small, but good customers.

"Millions of Americans can remember when the general public regarded banks as forbidding cold storage plants and most bankers as calculating machines equipped with phonograph records set to say 'no.' The great change in banks is dramatized by the Connecticut institution which provides banking by video. The customers drive up to a deposit box equipped with a TV screen and a pneumatic delivery-and-return setup for money and deposit book. The customer just has to push a button to carry out his transaction with the teller. And it's a sure thing that the banker will give him a great big smile."

## The Principles and Guides for Adequate Area Development Legislation

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony by Mr. Solomon Barkin, Director of Research, Textile Workers Union of America, before the House Banking and Currency Committee on Monday, March 9, 1959:

The human, social, and private waste in America resulting from unemployment, underemployment and low living standards in distressed and underdeveloped areas represent a challenge to the American people we can no longer avoid. All but the committed economic standpatters have joined the supporters of area development legislation. There is a consensus that these areas and the people within them need outside help to convert their moribund and contracting economies into flourishing economic communities.

The distressed areas at one time represented the backbone of the American economic structure. No one can list towns such as Lawrence, Mass., Scranton, Pa., Durham, N.C., Detroit, Mich., and Portland, Oreg., without recalling their days of economic glory. Their present distress was brought about by the vast structural changes in American industry such as transferred demand from anthracite coal to oil; the surge of technology which has raised productivity to new heights, and the substitution of old by new products and processes and raw materials. These are changes which have brought new economic opportunities to the country as a whole and helped develop new areas. But now problems beset the older areas and their inhabitants.

The fate which has befallen these communities might well become the destiny of many other areas now enjoying the peak of their economic growth. Economic and technical changes may in the future spell decline for them. No group is protected from the ravages of this highly turbulent and dynamic economy. What is planned for the presently distressed communities will be of help to those which will arise in the future.

The proposed legislation for area development seeks to erect a permanent and continuing Federal organization which will be ever present to nip the economic decline at the beginning and help local areas reassess their problems and plan for their new growth and possible ultimate renaissance. Cities and areas have in the past experienced growth and decline cycles; others will in the future. The function of the present legislation is to provide the machinery for assuring the most facile and expeditious redevelopment. It is to shorten the decline and stimulate the growth phases.

The renewal of the distressed areas is imperative on both humane and economic grounds. To allow them to continue to fester without hope or plan for recovery or without assistance for definitive recovery is to permit human beings to deteriorate and be demoralized, to sink to levels of abject poverty and destitution and dependence upon public support, and to deprive them of an opportunity for constructive, dignified participation in society. The distressed area is a malignant social cancer which brings social difficulties and problems; it's a pathological state which breeds costly deficiencies in our society. They cannot be neglected without damage to the greater social matrix.

The physical investments, both by individuals and public institutions and organizations in these distressed areas, exceed tens of billions of dollars. To fail to help these areas is to scrap the efforts and savings of decades. At a time when we are faced with stupendous financial burdens to develop our military strength, help underdeveloped areas and to create the physical plant for our expanding population, and complete the facilities required by our bulging metropolitan areas and suburbs, we cannot afford to overlook existing plants, homes, and community investments. It would be poor national economy.

The redevelopment of these areas and the modernization of their facilities could save our Nation billions, hasten our growth and bring nearer the day of adequate facilities for all. If we forget these facilities and capital, we shall have to duplicate them afresh in new areas, a real costly process. We have accepted the principle of urban renewal as a necessary constructive and economic procedure for conserving our urban communities and utilizing our private and public capital. We are contributing millions to the rebuilding of cities as necessary for our national economic health. Similarly, the redevelopment of our distressed areas constitutes a comparable process of renewal dedicated to the same principles of economic growth.

The program of economic development of urban distressed areas followed in the bills are similar to those in our urban renewal program. The fundamental responsibility for economic expansion is placed in the hands of the local area. The ultimate burden must be carried by the people themselves. The State planning bodies must help these groups define the appropriate geographical area and lines of activity. Only where there are no such State bodies will the Federal agency be authorized to help local citizen groups constitute themselves. In defining the geographical area, the scope must be broad enough to undertake adequate planning for the true economic region.

To date the scope of most local developmental bodies has coincided with a preexisting political boundary. Economic areas do not necessarily follow such boundaries. Development has often been frustrated by such sharp limits. Therefore, it is hoped that the development bodies will be regional in scope seeking to conform with actual economic areas to be developed as a single unit.

Following the demarcation of the proper area, these development bodies will have to study their areas and formulate long-term plans for physical redesign and the upgrading of the human resources. The distressed economic areas are fundamental regions in which some human and physical locational advantages have become in part or wholly obsolete. Some part of the structure no longer fits current economic trends. It is therefore necessary to determine which locational advantages no longer serve, or no longer exist and what has to be done to refashion them for current use. Such a study will also uncover gaps in the human and social and private capital. These will have to be filled through public or private enterprise.

It is important that there be provision for public facilities. In many communities, the renewal of the area demands improvement in public facilities. Insofar as housing, continental roads, flood control, and other similar projects are concerned, varying amounts of help can be obtained from the Federal Government. But there are other facilities essential to development for which Federal funds are also necessary. The physical rebuilding of these areas demand immediate attention. They are the prerequisites to much effort in the area of economic growth. The communities don't have the money for these purposes in part due to other distress.

The upgrading of the human resources through schooling and retraining are also vital in many areas. That is why it is essential that the bill provide for vocational training and the subsistence grants for people during this period.

The above provisions of the bill are drawn for long-term development programs. There is also a need for immediate assistance; some areas have more or less completed the preliminary planning and blueprinting of the future lines of economic growth. The designing of the physical structure and economic pattern will necessarily be more limited in scope in some areas since the degrees of obsolescence and number and types of gaps in their economic structure are relatively small. They are ready for action to stimulate the cycle of economic growth. In these places, immediate help is essential to supplement their local financial resources to erect some of the structures vital to the economic renaissance. It is therefore important that we have the provision for loans for land and buildings.

A controversy has arisen as to the size of the funds for planning and the construction of industrial and comercial public facilities as well as the grants for public facilities. These differences are reflected most strinkingly in the provisions of the Spence and administration bills. The appropriation offered in both bills for planning for area development are inadequate. Certainly the administration bill which allows only for $1.5 million is deficient. Under urban renewal, the average assistance cost per single project is approximately $40,000. Certainly, a single area development project will require more money than the above sum. With the numerous areas needing these surveys and technical assistance, an impecunious appropriation would stifle progress. I would personally like to see the technical assistance provision increased to a larger sum.

As for the amounts of money needed for grants and loans for public facilities, I believe the present proposals in the Spence bill are quite adequate and we shall be prepared to await future experience.

Finally, as the funds for loans for industrial structures, the administration bill assumes as a current target a total number of jobs in excess of 6 percent in the distressed areas as it has defined it as being in the neighborhood of 200,000. Under the Spence bill, it is probable, though our figures are most inadequate to be able to make a definitive estimate, that the number is over 350,000. The difference results from the varying definitions of the distressed area. Moreover, the restrictive qualifications set up in the administration bill will rule out any significant new additions to the list of the distressed areas in the remainder of the year 1959 and 1960 whereas under the Spence bill a significant number will become eligible.

We estimate that the number of major areas currently qualified under the administration bill is 15, whereas it is 26 for the Spence bill. At the end of January 1960, the number qualified under the administration bill will be 19 whereas it will be 72 under the Spence bill. Obviously, the number of jobs which the respective bills seek to impel into existence are markedly different. In addition, the more liberal share of the Federal grants provided in the Spence bill will require more funds.

In considering the size of these funds and the proportion of the Federal share, we must remember that the more depressed the areas the greater the sums and the Federal share should be. If an area has only been recently affected by structural unemployment, much of the private and social capital still is in workable condition. The degree of obsolescence, the scope of redesign, and the amount of Federal participation will all be more limited. But for areas where distress has been long and enduring and where deterioration has proceeded far, the amount of assistance will have to be broader and the sums even greater. It would therefore appear likely that the average amounts of funds required per community will be larger for the group of communities which will be aided in the early years of the administration than in the later ones.

The purpose of the entire legislation is ultimately to help the communities in the first stages of structural dislocation so that renewal may be more immediate and adequate. The ultimate costs will decline except for those areas where the catastrophic change is most radical and far sweeping.

A sharp difference of attitude exists between the administration and Spence bills on the subject of rural development. While the Spence bill proposes comparable aid to both areas, the administration limits the rural areas to technical aid. The latter assigns a fund of $1.5 million for rural areas and in industry towns. The administration's attitude is that the present rural development program administered basically by the U.S. Department of Agriculture is sufficient and the proposed supplement would round out the project.

We are glad that the administration has recognized the need for funds for technical assistance and planning. Local rural groups have complained about these inadequacies. But the administration's failure to make any other proposals reflects inadequate analysis. One would have thought that the present experience with these rural areas and the broader international experience with underdeveloped areas would have provided the policy personnel in the administration with a better measure of rural needs. We have drafted adequate blueprints for economic development of rural areas in other countries, but we are conservative and niggardly as affects our own people. If we are ready to help to rebuild southern Italy, why not underdeveloped areas in rural America?

The present rural redevelopment program suffers from several major defects. First, only pilot counties have been selected. There are many regions where the need is very pressing which need help. The proper unit for assistance is the economic area and not the county. Second, these programs depend upon existing agencies and loans of personnel and funds from existing programs. Third, they are without funds for public facilities or industrial or commercial structures. Fourth, they are completely locally oriented so that the goals are as narrow or broad as the local group sets them. Fifth, the emphasis has been on immediate local goals rather than on long-term redevelopment of the area and the upgrading of the people. Sixth, the progress has been slow and modest because of the limited goals, the reliance on vountary and gratuitous help and the absence of funds. Seventh, the program has proceeded from the theory that local efforts are sufficient. A bootstrap operation has much virtue, but it is usually least applicable to underdeveloped areas. It's a choice which only a poor county follows. We can afford and have an obligation to undertake a more ambitious and effective program financed by Federal funds. These rural underdeveloped areas are seldom able to meet the severe tests of local participation set in the administration bill for urban distressed communities.

The last question on which I would like to touch is that of administration. Where should the responsibility be placed? The administration has insisted on assigning the work to the Area Development Office of the U.S. Department of Commerce. This operation has hitherto been a modest limited section of the Department. It has had no experience in making grants or planning operations; it has offered limited technical assistance other than through publications and hasty surveys; it has never passed on applications for grants or loans for public facilities and industrial or commercial structures. Its main functions were to follow general economic and locational trends and report on them and to deal with the problems of diversification. We believe that it can and might continue these functions. These are problems not of a catastrophic character. They are the routine questions arising in the ebb and flow of American industry. The administration's proposal to include funds and advise for technical as-

sistance for diversification of industry towns might be separated out of the present bill and used to expand the operations of the Area Development Office. But it is not the proper agency for the broader operation for the distressed community.

The one agency which has most experience in comparable fields is the House and Home Loan Agency. Its urban renewal program requires it to promote and pass on planning projects; its grants to local communities for the construction of public facilities are similar in character to these proposed in the present program; its procedures for loans for new housing projects leave many common elements to those offered in the present bill. Of existing agencies, it is best fitted for the task.

As for the rural redevelopment, the Department of Agriculture has long been associated with the big interests in this area and has not been prominent in its identification with the well-being of the low-income farmer. A number of agencies designed for this group have not fared well under the direction of the Department.

This area development work is so important to the future economic well-being of this country that it should be delegated to an independent agency which has status. It should report directly to the President and Congress.

We wish to underscore the importance of the citizen's advisory group proposed in the Spence bill because it will keep the purpose of this bill prominent in the administration and before the public. Another provision allows the Administrator to convene members of the industries responsible for the contracting areas and to help them reconsider the directions of their development for the possibilities of stimulating them to undertake redevelopmental work.

Finally, the current recession has brought a new group of distressed areas to the surface because of the vast technical and structural changes in society. It is most important that we recognize their plight by appropriate definitions of the term "distressed" so that they may begin the job of economic redesign. No matter how widespread and great economic recovery will be at the close of the year, the effects are not likely to be substantially felt in many of these areas. The number of distressed areas will remain larger than numbers in existence in the fall of 1957.

The Congress should again adopt the area development bill modeled after the Spence proposal. It follows sound principles and guides. The administration bill is too impecunious and restrictive to deal with the restraints imposed on America's economic growth by structural unemployment, and distressed and underdeveloped areas.

## Prospects for Gas Legislation

EXTENSION OF REMARKS

OF

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting in the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Oil Daily, Monday, March 9, 1959, quoting the able and distinguished chairman of the House Committee on Interstate and Foreign Commerce as saying, "I therefore have no plans at this time for scheduling of the gas bill (H.R. 366)":

[From the Oil Daily, Mar. 9, 1959]

PROSPECTS FOR GAS LEGISLATION SLIMMER THAN EVER, HARRIS SAYS

WASHINGTON, March 8.—The chances of gas legislation during the present Congress now seem slimmer than ever, with no prospect of action on a bill until the Eisenhower administration serves notice that this is a must measure.

The White House, to date, has given no indication that it supports the new Harris gas bill, although a majority of the Federal Power Commission backs the measure.

Representative HARRIS, Democrat, of Arkansas, chairman of the House Commerce Committee, spelled out the situation here at weekend to a briefing conference of the Federal Bar Association.

He said that unless the administration shows some enthusiasm for the bill, no hearings will be held. He pointed out also, that there are differences of opinion, even within the industry, on the bill. One segment now is opposed to the legislation, he said.

"I detect there are divergent views on the question," the Arkansan said, "and apparently the industry itself is divided which is not by any means historymaking, even though most unfortunate. Do I need remind anyone that a divided house cannot stand."

He declared that the bill, as amended to prevent dumping of offpeak natural gas in industrial markets would have been and would today be in the best interest of the American consumer.

"Some day," HARRIS added, "not too many years in the future, the full effect will be realized. Apparently it must get much worse before it can be made better. My fear is that it will be too late."

"While there is little enthusiasm in the industry for such legislation," he said, "there is apparently less enthusiasm within the present administration itself."

"As yet, this question has not been included in the program of the President for this Congress," HARRIS pointed out. "Certainly it was not included in the budget. Neither have we received any word thus far.

"In view of this apparent attitude, lack of enthusiasm or interest, my committee has plenty of other work to do and we have no time for lost motion. I therefore have no plans at this time for any scheduling of consideration of the bill and do not expect to do so unless conditions change."

Earlier, Chairman Kyukendall of the Federal Power Commission, indicated that those in the FPC behind a gas bill have thrown in the sponge, at least for now.

He told the briefing conference that some way must be found to work out a formula for handling producer rate cases, in the interest of orderly procedure. To continue the present policy of dealing with producers' gas prices on a case-by-case basis will only compound present administrative confusion.

Kuykendall generally favors the tests set up in the Harris bill for determining whether field prices are just and reasonable, but he also believes that under current court decisions costs must be taken into account, also.

Other members of the Commission, however, expressed the opinion that area, or field prices, probably will set the pattern for production regulation within the next several years. But, so far there is little agreement on the standards that could be used.

## Chronic Unemployment Needs Action

EXTENSION OF REMARKS

OF

### HON. JOHN M. SLACK, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. SLACK. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to insert and call the attention of my colleagues to testimony which I submitted yesterday before the House Banking and Currency Committee which is presently considering measures designed to benefit depressed areas and encourage area redevelopment.

The statement follows:

The general topic under consideration before this committee is second to none in national importance, and the actions to be taken as a result of these hearings will have far-reaching consequences. The economic redevelopment of those areas which have lost step in the forward march of our national progress is no longer a matter of interest to a few Members of Congress or to a relatively small percentage of our citizens.

It is demonstrably a national challenge, arising out of national and even international trends, and of increasing interest to more persons every year. The manner in which it is approached, and the extent to which it is recognized for what it actually is, will go far toward encouraging or discouraging national unity of thought and purpose in our struggle to maintain economic leadership among the peoples of the world.

Our people today pay high taxes, and with their money we support and maintain foreign aid programs of many kinds, reciprocal trade agreements, international barter arrangements, worldwide activities through the United Nations, foreign development programs and overseas information services. All of these activities are perhaps worthy of support, and are possibly a necessary part of our role in the world situation of today, but they are a mockery and a sham if we do not first and foremost adequately protect our own people here at home. For no matter how generous our intentions abroad, no nation overseas has a prior claim on us above and beyond that of our own people for food and shelter and the right to an opportunity to earn a decent livelihood.

At first glance it seems strange indeed that we must consider legislation of this kind at all. As a Nation we are generally prosperous today. At the end of 1958 our gross national product had reached an annual rate of $453 billion, an all-time high and an increase of $13 billion over the previous year. Personal income hit a new high also, reaching a rate of $362.3 billion annually in January, an increase of $13.5 billion over the preceding year. Construction and new housing are increasing, and the indications are that, with the exception of a few industries and a few areas, most of the ground lost during the 1958 recession has been regained.

Total unemployment has declined slightly, to 4,724,000, and constitutes 6 percent of the labor force, as against 7.6 percent a year ago.

In the face of these figures, however, we must acknowledge that there are areas which do not respond to the upturn of the business cycle, but remain dormant or continue to decline as our economy progresses. These areas are the victims of a special situation, and their recent history marks them as forerunners of serious trouble in the future.

Their circumstances underscore the need to begin action to solve their special problems now, that we may learn today on a pilot basis the procedures which will be effective wherever the situation may develop tomorrow.

On the basis of facts established there is little disposition to dispute the causes of chronic unemployment in particular areas. It is directly traceable to technological advancement by industry. We in the Congress support and actively encourage the increase of technical skill and productivity in business and industry. Much has been said recently about the threats from our enemies overseas, and fear has been expressed that they will surpass us in technical skills. All of us know that we as a Nation cannot afford to be second best in the international race for top industrial skill.

But some byproducts of this progress are, as in this case, problems in terms of displaced human beings. The advance of the machine adds muscle power to our national strength, but at the same time forces some of our people into permanent idleness. They become casualties of the battle for international survival, with none of the protection afforded the casualties of any other type of conflict or disaster.

We are actively encouraging programs designed to increase and accelerate the education of scientists and engineers. Their efforts will be reflected throughout our economic life in the years to come, and the pace of technological advance must inevitably quicken as their knowledge is brought to bear on existing methods and processes.

Already, however, the rate of technical progress has created a pool of chronically unemployed. It has happened gradually but steadily over a period of years, and in the face of growing national prosperity. The trend is established, and knows no state or industry boundaries. I call your attention to some findings of a special study of postwar job loss published recently in U.S. News & World Report:

"Since the close of World War II, the output per worker has increased 19 percent in the steel industry. As a result, the steel industry in 1957 employed only 536,000 workers. If output per man had been the same as in 1947–49, steel companies would have needed 637,000 workers to produce the same tonnage.

"In automobiles the loss during the past 10 years because of higher output per man is estimated at 132,000 jobs. An additional 48,000 jobs were lost because of the importation of foreign cars.

"In the oil refining industry there is an estimated loss of 71,800 jobs during the past 10 years.

"In coal mining there has been an estimated 46 percent increase in efficiency due to mechanization. In 1958 there were 195,000 employees in bituminous mining, but for the same output, as produced in 1948, there would have been required 95,000 more workers than are needed today."

You have heard from many other sources the details of the effect of mechanization on the coal industry which, on an industry-wide basis, has been first and hardest hit. I do not intend to review those details. I offer for your serious consideration, however, the knowledge that only a few weeks ago in my own State of West Virginia a mechanized mine was opened which will produce 50 tons of coal per day per man, as compared with the average of 10 tons per day by conventional pick and shovel operation.

This is technological advance run rampant. Yet, mine owners must mechanize to survive. They must be competitive nationally and internationally or they will lose markets to other fuels. What has been happening to coal will evenually happen throughout industry as we develop increasingly efficient machines and processes. It has been happening in other industries already—in textiles, leather products, and railroading, to name a few.

Recently a spokesman for the Michigan Unemployment Compensation Commission stated that, although the production of passenger cars is 12 percent ahead of a year ago, automotive employment is down 30,000 from that date, and stated further that the city of Detroit has developed a hard core of about 200,000 unemployed who just aren't going back to work in the plants.

The Wall Street Journal cites countless examples of increased productivity per man-hour, in everything from television to paper products and from floor wax to camera parts. The industrial drive for greater man-hour productivity is unceasing, and is a recognized part of the enterpriser's plan for success.

The trend is not confined to this country; it is not based on national characteristics but rather on the forces which drive an industrial economy. Recently the A. V. Roe Corp. of Canada laid off 15,000 men on 5 hours notice, and suspended the production of the Avro Arrow, Canada's finest supersonic interceptor plane. There was nothing wrong with the product or the workers, but the Arrow had been superseded by a new missile which is cheaper and more efficient.

If this can happen in supersonic aircraft, what industry or industrial region can feel certain about its status a year hence?

The foregoing statements add up to just one conclusion: The coal industry is far from alone in this situation. It has been first to feel the effects of technological advance, and its employees have seen the byproducts of that advance left unattended, with the result that temporary idleness has hardened into chronic unemployment with no hope for a return to work in the future. The condition of the unemployed miner today point dramatically to the need for pioneering in the field of economic redevelopment.

For the temporarily unemployed there are programs of assistance, but for the displaced and dispossessed worker there is nothing. He is consigned to a permanent dole, and it is the permanence of his condition that I wish to emphasize most strongly.

Several weeks ago, in an attempt to pinpoint the areas in which chronic long-term unemployment has hardened into a way of life, I requested from the Department of Agriculture a tabulation of counties in which 15 percent or more of the population received surplus agricultural commodities as needy persons. Persons in this classification are necessarily unemployed, and have been unemployed for a sufficient time to exhaust unemployment compensation benefits, have generally been certified for direct relief, have little or no income, and few other food sources.

The resulting tabulation which I received emphasizes the national scope of the problem. It reported that there were 210 counties, 7 percent of the counties in the United States, in which 15 percent or more of the population received surplus commodities under the classification of needy persons. These counties are distributed through 24 States, and are in the districts served by 75 Members of the House of Representatives.

In one county 51 percent of the population received these commodities, while in numerous others between 40 percent and 49 percent are in similar condition. The average for the 210 counties was 21.8 percent of the population.

I call these figures to your particular attention because of two conclusions resulting from a study of three of these counties in my own Sixth West Virginia District:

1. Reviewing the monthly percentages during the past 2 years, we found that the number of persons receiving commodities seldom rises or falls more than 1 percent in any month. In short, the trend has been growing slowly for a long time, and cannot be reversed overnight.

2. Employment experts in my district estimate that 72 percent of those persons now receiving commodities are unemployed employables.

As proof of the relentless growth and permanent nature of the trend, I offer you these statistics from the Department of Agriculture:

*Needy persons in family units receiving commodities*

| Fiscal year: | |
|---|---|
| 1956 | 3,170,000 |
| 1957 | 3,485,000 |
| 1958 | 4,665,000 |
| First half of 1959 | 5,230,000 |

Surplus foods are distributed to needy persons in 45 States, although the percentage of recipients is notably small in some. The percentages are excessively high in some other States, however, and it is noticeable that those are the very States which have been hardest hit by chronic unemployment due to technological progress. The top 10 States, according to number of recipients, are as follows:

*Total needy persons receiving surplus commodities*

| State: | |
|---|---|
| Pennsylvania | 829,550 |
| Michigan | 538,385 |
| New York | 348,871 |
| Mississippi | 331,441 |
| West Virginia | 278,223 |
| Kentucky | 254,377 |
| Oklahoma | 246,960 |
| Arkansas | 219,354 |
| Tennessee | 154,551 |
| Louisiana | 137,713 |

Statistics of this kind are helpful, but they must not cause us to lose sight of the human element they represent. The bald statement that a needy person receives surplus agricultural commodities means that he receives currently just five items—butter, dry milk, rice, flour, and cornmeal. The commodities distributed are controlled by previous legislation enacted by the Congress, and the Department of Agriculture has no responsibility to conduct a welfare program, or authority to purchase foods to help States or communities operate welfare programs for the needy.

In the areas of chronic unemployment thousands of families exist on these commodities alone, and in my own district I have talked with families who have not had fresh milk, eggs, meat, or citrus juices for periods ranging up to 2 years. These Americans actually exist on a diet less than half as nutritive as that provided for the occupants of displaced persons camps in Europe after World War II. From a nutrition standpoint they are slightly below the level of common laborers in the Soviet Union, as reported by Senator ALLEN ELLENDER last year after a visit to Russia, when he stated that the largest proportion of Soviet citizens in the common laboring class subsisted on a diet of black bread, cabbage, potatoes, beets, and tea.

To give you an idea of the situation that is developing, the Bureau of Nutrition of the West Virginia State Health Department reviewed the diet of persons existing on surplus commodities and announced that the average family of four would receive, for 1 month, 20 pounds of flour, 10 pounds of corn meal, 9 pounds of powdered milk, 2 pounds of rice, and 4 pounds of butter. This would give them only 26 percent of the calories they need each month, 36 percent of the proteins, and 46 percent of the calcium considered necessary for good health. In other words, a protracted diet of this kind will create a group of persons who will soon not be able to work, and will rear children con-

demned to be a permanent charge on the community.

This condition is destroying home and family life. Children quit school and migrate without being prepared to work, fathers desert their families so the families will become eligible for relief, crime is on the increase, but these desperate people steal food, not money, according to local enforcement officials.

Only one conclusion is supportable in the face of the evidence—our mode of industrial advance is cannibalizing our own people. Technical progress, without attention to its byproducts and effects on human beings is building a massive complex of industrial skill based on a pile of human bones and operating to the tune of wailing, hungry children.

We are already working around the edges of the problem. This year we will again appropriate funds for more surplus foods for needy families, and for school-lunch programs. We will, no doubt, extend the supplemental unemployment relief measure set up by the last Congress. In these and other ways we will spend millions of dollars to deal temporarily with the undesirable aspects of the problem without undertaking a general assault on the core of the problem itself.

This piecemeal approach cannot be effective. The problem is too great and its origins are too complex. It can only be overcome by a bold program of action in several areas simultaneously:

1. Liberalization of the surplus commodities program as a temporary measure to maintain life and health among those who have been displaced by the growth of machine efficiency.

2. An economic redevelopment measure to place the Federal Government in support of efforts to correct the situation, and to lend the power and prestige of the Federal Government to such efforts as a recognized Federal policy.

3. Public works activity in these areas where economically justifiable, on a priority basis, particularly where such public works will improve the attractiveness of such areas to industry.

I am not speaking here in behalf of any particular measure already introduced. Indeed, it may well be that this committee will, after hearing the testimony, conclude that a new and inclusive measure should originate with the committee itself.

Further, I am not proposing a massive spending program. But when we use that word "spending" it is only fair to remember a few facts: We are currently spending at the rate of $6½ billion per month, or $40 per month for every man, woman, and child in the United States. Would it be unreasonable to embark on a program to recoup the fortunes of the dispossessed at the rate of $10 per month for each of the 4 million unemployed employables? This would add up to $480 million a year.

I do not propose this figure as a basis of consideration, but only as a spending yardstick, if the program is to be considered as a spending measure. Certainly some money must be spent, but it will be self-liquidating through the return of these people to full status as citizens, able to bear their share of the tax burden. I have talked with dozens of them, and they want work, not handouts. Money itself is not the answer.

The answer would appear to lie in recognition of the trend as a growing national economic peril, of which the situation in these districts is but a forerunner; in placing the strength of the Federal Government behind a definite program of evaluation and correction; in activities which will increase job opportunity by creating conditions which will be attractive to industry and lead to long-term economic stability in these areas; in short, an investment in the future of a growing segment of our people.

The Congress has faced similar specific problems before and has acted to control them. When nuclear energy was born, the Atomic Energy Commission was devised to deal with its development and use. When space flight began to seem possible, the National Aeronautics and Space Administration was created. This problem deserves similar treatment on a long-range basis, or we will be caught unprepared in the years to come.

The alternatives are brutal and unthinkable. Condemn a growing number of Americans to a starvation diet, without hope for the future, or tell them to uproot themselves and be scattered across the continent, seeking work as best they can, destroying home ties and family loyalties. This would indeed mark a low point in the development of the American heritage, and constitute a damage to national morale far more serious than could be created by an enemy with a bomb.

I am confident that this committee will grasp the implications of the problem, and will demonstrate the resourcefulness in meeting it for which the Congress is world-famous, in war and in peace. And I believe that when the record of this Congress is written, and the pages are studied in future years, it will be unanimously agreed that your efforts to deal with this problem will stand as a high point of accomplishment for this congressional session.

## Tax on U.S. Coal

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Monday, March 9, 1959:

TAX ON U.S. COAL

The American people, particularly those in mining regions, will share the resentment of John L. Lewis and Thomas Kennedy of the United Mine Workers of America toward West Germany as a result of Bonn's unilateral action in levying a tax of $4.76 a ton against U.S. coal, thereby depriving this country of an important market.

What is especially aggravating is that West Germany is arranging barter deals with the Soviet Union, coal among them, at a time when the United States is trying to save West Germany from being crushed by Moscow. This is friendship and gratitude?

West Germany's only hope of survival is the United States. It is no secret that Germany is the principal target in the immediate offensive of the Soviet Union, the United States, of course, being the ultimate goal of the Kremlin. At this very moment, Nikita Khrushchev, the Red dictator, has stirred up a hornet's nest in Berlin the objective of which is the eventual conquest of Germany. He already has East Germany.

West Germany cannot be unaware of this, yet it has the effrontery to play ball with the Reds via barter deals. The irony of this is that trade is a part of the cold war the Soviet Union is waging against the West. It is hard to believe a people as intelligent as the West Germans cannot see through this ruse.

This reminds us of the efforts of a short-sighted Great Britain to do business with Red China.

Khrushchev is playing a wily game and in this instance he stands to obtain an extra bonus in the form of splitting the West under the old adage of divide and conquer.

Frankly, the United States had reason to expect greater cooperation from West Germany than the penalty on American coal in favor of Communist foes. Actions speak louder than words.

## General Electric News Has Been Serving Its Lynn, Mass., Employees for 40 Years

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, February 16, 1959*

Mr. LANE. Mr. Speaker, a lot of progress in labor-management relations has been made since the far-off days of World War I.

Back there, in most corporations, the gulf between front office and workbench was seldom bridged.

The reputation of a business enterprise was judged solely by products, sales, profits, and dividends.

Appreciation of the human element was secondary.

General Electric was an exception to the rule.

The industrial climate at General Electric in Lynn, Mass., encouraged forward-looking policies. Mangement realized the need of keeping in close touch with its thousands of employees on matters of mutual interest to all members of this successful industrial team.

And so, a plant periodical was started—one of the first of its kind on the American scene—that has become invaluable in promoting company-employee morale. Personal items, benefit plans, negotiations, business prospects, employee activities, as well as interesting pictures, enlivened the General Electric News.

It has been going strong for 40 years.

In recognition of that happy anniversary, which was reached on February 20, 1959, and under leave to extend my remarks, I bring you the story of that wholesome development in the art of company communication with its employees that appeared in the February 20, 1959, issue of the General Electric News:

GENERAL ELECTRIC NEWS MARKS 40TH ANNIVERSARY

Exactly 40 years ago today—on February 20, 1919—one of the pioneer employee publications in the country was born. It was the fledgling Lynn Works News—today the General Electric News—whose arrival on the scene was hailed as a fresh, new approach to employee communication.

The first Works News which sold at 1 cent per copy or 20 cents for an annual subscription was prepared locally at the West Lynn plant under the editorial direction of an employee committee comprised of Joseph A. Fortier, Phillip Watt, and Milton French. Before the second issue rolled off the presses, however, George B. Grant was named editor and took over official direction of the publication.

In those days, the publication was prepared locally but printed at the Maqua Co. in Schenectady. Many years later, in 1934, the printing of the Lynn Works News was taken over by the Dwyer Printing Co., which is known today as the Commercial Printing Corp., a local Lynn firm.

In the early days of the publication it covered employees at both the Lynn River Works and the West Lynn Works, today headquarters of the instrument department. According to a report in the first issue, there were 7,919 employees employed at the Lynn River Works in October 1918, shortly before the first issue was printed. At that time the River Works ground area was 100 acres; it's 123.65 today exclusive of the Government leased areas; and the floor space was 2,074,181 square feet; it is 3,374,253 today.

The Works News has remained in publication over this 40-year span except for a brief respite during the depression years, 1932 to May of 1934, during which publication was suspended. When publication resumed in 1934, the Lynn Works News split into two separate papers, one covering the river works; the other, the West Lynn plant.

Prior to the split, however, Manfred Bowditch and J. Edwin Doyle were named editors, and M. Frances Nicholson, who had a record General Electric News service span of 34 years before leaving the News last year, was named associate editor. Mrs. Nicholson edited the popular women's page.

When the News split in 1934, Paul Robinson was named editor at the river works and J. Edwin Doyle at West Lynn. Later Doyle was succeeded by Vincent G. Pendleton. Finally in 1938, the publication combined again, but broke again in 1943. Edward A. Smith, who had been editing the Quality News at West Lynn, was named editor, while earlier in 1941 Fred W. Mahan was named editor of the News at the river works. Editors successively at West Lynn have been Edward J. Murray, Dana C. Pierce, William Leavitt, John R. Richards, and presently Lucas Persinos. Editors successively at the river works have been William H. Weicker and the present editor, Dana C. Pierce.

The first issue of the Lynn Works News featured a front page of World War I service stars, showing that 1 employee had been captured, 42 died, 1 was missing, 14 were cited for bravery, 496 were reemployed and 66 were disabled, and a total of 2404 had served. Since 1919 a lot has happened in the General Electric Co., locally and nationwide, and a great part of it has been recorded in the pages of the General Electric News.

## Distribution of Obscene Literature Through the Mails

EXTENSION OF REMARKS

OF

### HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mrs. GRANAHAN. Mr. Speaker, it is indeed a sad commentary on our sense of values when we cannot distinguish between objects of art which are a matter of national pride and the use of such objects as lures to the theater box office.

There is a great deal of difference between the student of anatomy at a great university who is engaged in its study for the sake of humanity and the student of anatomy in the front row of a burlesque theater. It is high time that something is done to zero in our thinking on this important moral issue.

The American public—American fathers and mothers—have a right to resent the use of themselves and their families as a captive audience to be bombarded through the avenues of the U.S. postal service by material to which they object plainly calculated to undo years of training they have devoted to their children.

Mr. Speaker, as the House has directed our committee to look into the use of the mails to send obscene literature, I wish to announce that the Postal Operations Subcommittee, of which I am chairman, intends to take immediate action to thoroughly explore the situation as it now exists. We are watching with interest the present efforts of the Postmaster General to protect the rights of patrons of the postal service. We hope that his arm is strong enough to properly enforce what we believe to be the wishes of the public. If not, we intend to develop and recommend legislation which will give him the necessary tools.

It is unfortunate that the American theater should line itself up in this situation with those who seek to corrupt the morals of our country by sending obscene material through the U.S. mails. Obviously, the attempt to send through the mails the advertisement of the now notorious stamp portraying a nude painting was not intended to raise the dignity of the stamp or the painting. It was intended solely for the profit of the owners of the film.

## Conventional War Capability

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Constantine Brown which appeared in the Washington Evening Star of Wednesday, March 11, 1959:

CONVENTIONAL WAR CAPABILITY—U.S. ANTISUBMARINE BUREAU CURBED ON FUNDS IN FACE OF RED FLEET OF 475

(By Constantine Brown)

The sooner some of our policymakers get over the idea that the next worldwide conflict—if it ever occurs—will be fought by pushbutton machines, the better it will be for all.

The best post-World War II military minds who have been studying the preparations of the free world's enemies point out that while much noise and spectacular headlines center around the massive advantage of the Russians in guided missiles, the Communist would-be aggressors are working overtime to increase and improve their conventional warfare capabilities.

In the face of this, the administration is advocating further important cuts in the strength of our ground forces and in the Navy which may have to bear an important part of the brunt in any future conflict.

The Russians are known to have at least 475 submarines—the bulk of them ocean-going. Hitler almost won the last war in its early stages with fewer than 50 ocean submarines. Our best naval minds are sure the Russians are not building these submarines because they like to play with them. They are intended to cut off the United States, in the event of a major conflict, from both our Pacific and Atlantic allies. They are intended to interrupt the flow of essential raw materials and all seaborne communications with Asia and Europe.

The antidote to the long-range Soviet underseas fleets is, of course, antisubmarine preparedness by the U.S. Navy. Studies have been made and important new devices discovered to offset the likely efficiency of the Russian submarines. Yet the Antisubmarine Bureau in the Navy Department can hardly function because of lack of funds. The Budget Bureau in its great wisdom apparently has recommended that the funds for such developments were a luxury for the Navy. It believes, apparently, that the old-type cans dropped overboard from a destroyer proved pretty effective in two world wars and sees no reason why they should not be effective in a possible new conflict.

If international communism decides to unleash another world conflict, the U.S. Navy will have a burdensome role, principally because the navies of our allies have been reduced. The powerful British Navy is being cut down drastically, compared to what it was at the end of the last war. The French Navy is increasing in strength, but is still far from being an important adjunct in the event of an early world conflagration. The other navies are token forces which would not face alone the power of the Soviet fleets.

The Baltic Sea has become of real importance in the strategy of another world war. The NATO members—Germany, Denmark, and Norway—are supposed to prevent the Russian submarine and surface forces from breaking out through the Skaggerak and Kattegat Straits into the Atlantic. The naval forces of these three countries consist of 37 destroyers, 14 submarines, 107 minesweepers, 53 motor torpedo boats, and a few other minor auxiliaries. These forces, regardless of how efficient and self-sacrificing they may be, can hardly be more than a small bite for the Soviet Baltic fleet commanded by 53-year-old Admiral Charmalov, whose high competence as a naval commander is matched only by his ruthlessness.

Charmalov, who has under his orders 40 Red admirals, commands the most powerful of Soviet fleets. The Baltic squadron is composed of six heavy cruisers of the Sverdlov or Frunze class, 150 submarines, 70 destroyers and upward of 450 auxiliaries. An air force of 1,200 craft is always in readiness to support these naval forces. There is no doubt that should a major conflict break out, American carriers and other naval vessels would be compelled to reinforce the present NATO Baltic Forces whose mission besides that of interdicting an outbreak of the Soviet submarines into the Atlantic also is to restrict Soviet supply operations by sea above small craft transports for Red ground forces and to neutralize enemy operations on land, by sea and in the air directed against Danish islands.

There are no effective naval forces available to put into effect the NATO high command directions except the U.S. Navy. In the event of war, units will have to be sent from our Atlantic bases, and they will have to go through the submarine barrage of the Russians.

The problem could be licked by our highly advanced, but still in blueprint, antisubmarine operations and devices. These are working now at less than 20 percent preparedness efficiency because of lack of necessary funds.

Some of our planners are so hipped on pushbutton war that they are prone to overlook the fact that the international Communists with vast manpower and raw material resources are actually continuing preparations for a modernized conventional warfare.

## Let's Reason Together

EXTENSION OF REMARKS
OF
**HON. FRANK T. BOW**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include a thoughtful editorial on the subject of rural electric cooperatives.

In this connection, let me point out that four rural electric cooperatives provide service to some 2,000 farms in my congressional district. Recent reports show that each of these cooperatives is in sound financial condition and has been able to make substantial advance repayments on the money loaned by the Government.

The editorial follows:

[From the Ohio Farmer, Feb. 21, 1959]

LET'S REASON TOGETHER—REASONS FOR RESTRAINT

(By Earl W. McMunn)

During the past couple of decades rural electric cooperatives have supplied power to just about half the farm homes of Ohio. In many cases power would not otherwise have been available. And, it's a sure bet that the co-ops did the job a lot more quickly than it would have been done by the power companies alone. If you're getting your power from a rural electric co-op, you know how much it has meant to you in the form of low-cost, efficient service. You have every reason to be proud of the organization of which you are a member.

It doesn't follow, however, that everything done in the name of rural electrification can be accepted without question. Right now some leaders of the National Rural Electric Cooperative Association are screaming that the Government is out to kill the whole rural electric setup. They object to any increase in interest rate on loans from the Government to rural electric cooperatives. They resist all attempts to "wean" the co-ops from Government loans to private sources of credit. And, they want authority to move into urban areas to supply large industrial users located there.

Government loans to rural electric co-ops have been made on the basis of 2 percent interest. That's provided by law, even though the Government is now forced to pay more to get the money it lends. But, the National Rural Electric Cooperative Association has unleased a violent attack against any who even suggest raising the rate to what it actually costs the Government. They prefer the socialistic approach of letting others help bear the cost.

Then, they've turned a deaf ear to the suggestion that at some time the "bottle feeding" of Government loans should stop and be replaced by capital from private sources. This the farm credit banks did with great success. But, it's something the electric co-op leaders don't want.

Finally, these leaders want to sell service in urban centers in competition with the power companies. The REA was organized to provide electric power to rural areas. It received tax and interest favors for that reason. The very name declares this purpose.

You'll hear these points discussed in the months ahead. When you do, consider the motives of those speaking to you. Rural electric co-ops have earned a real place for themselves in our economy. This doesn't mean they should be given complete freedom to take business away from taxpaying utility companies. And, to do it with low-cost loans that every taxpayer is helping subsidize.

Ambitious people have the habit of running wild when they're provided with large amounts of public money. There are good reasons why these ambitions should be contained within proper bounds.

## Opposition to Chicago Water Diversion Bill

EXTENSION OF REMARKS
OF
**HON. JOHN D. DINGELL**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert an article from the Michigan Out-of-Doors, for March 1959, in opposition to the Chicago water diversion bill, H.R. 1:

LAKE STATES PROTEST MORE WATER DIVERSION AT CHICAGO—DRAFT STRONG RESOLUTION TO PRESENT TO SUBCOMMITTEE

All of the Great Lakes States except Illinois, meeting in Detroit February 25 and 26 under the sponsorship of the Great Lakes Harbor Association, again voiced strong protests over the proposed increased diversion of water by Chicago.

Out of the 2-day meeting came a proposal which said in effect that the group "rededicated themselves to the continued unalterable opposition to either direct or indirect diversion of any waters at Chicago from the Great Lakes Basin."

This proposal was then forwarded to Members of the Congress, the Governors of the States, the attorney generals of the participating States, mayors, civic and port officials.

The stand taken by the States was given further weight by the full support of Canada, who has already lodged a protest with the United States Government.

In a panel discussion led by Michigan's own Attorney General Paul Adams, State after State took the stand to protect against the proposed "steal" for private benefit of a publicly owned resource.

Canadian speakers said that the reduced water levels would hurt industry and transportation, as well as the power development along the Seaway.

Other Michigan speakers included Assistant Attorney General Nicholas Olds, and water resources secretary, Milton P. Adams, who have been working with Attorney General Adams against the diversion for some time.

Mr. Herbert Naujoks, outspoken president of the Harbors Association who is from Chicago, said that the people from Chicago have been ruthless in their demands.

During subsequent discussions it was made clear that the port authorities and harbor association will continue to protest in view of necessary reduction in shipping. A single inch of water drained from the lakes would mean that the shipping industry would lose $2,500,000 in revenue a year.

Mr. J. B. McMorran, representing New York State, said that it would cost the people of New York State millions of dollars in power revenue a year. He added that it would be more fitting if Chicago would spend a million a year to treat the sewage and water and return it to the lakes like other cities do.

On Thursday morning another panel headed by Detroiter Carlis J. Stettin, port of Detroit director, featured talks by Adm. Lyndon Spencer, president of the Lake Carriers Association, and Harry Brockel, port of Milwaukee director.

Brockel summed up by saying: "This conference has established that Chicago's proposals are contrary to the progressive and expensive programs to build the Seaway and improve the connecting channels and to the efforts of both public and private enterprise to expand and improve our port gateways for world shipping to the United States."

To bring the problem closer home, Nick Olds says that it behooves conservationists of Michigan to pay more attention to the Chicago diversion controversy.

"Hunters and fishermen should realize that the water depth and water area is the basic resource upon which their sport is founded and any destruction of this resource is an injury which will reflect in the number of ducks and fish that they will have in pursuit of their sport.

"It is important that conservation groups interest themselves in putting a halt to this water steal, which Chicago will continue to demand as the cheap and easy way out for flushing its sewage down the sanitary and ship canal."

As we go to press the subcommittee is meeting in Washington to hear arguments for and against the proposed diversion. Several bills have been introduced by almost every lawmaker from Illinois.

The first bill introduced in the Senate this session, Senate bill No. 1 was the Chicago diversion bill, indicating the determination of the city of Chicago in its attempts to get cheap sanitation.

A series of hearings, and the delay of a definite decision by the subcommittee of the Committee on Public Works has cheered those who oppose the bill. The Detroit meeting and other meetings have given hope that the proposal will have rougher sledding than it had last year in the final sessions in Washington.

## Patriotic Award to Citizens of Louisville, Clark County, Ohio

EXTENSION OF REMARKS
OF
**HON. FRANK T. BOW**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. BOW. Mr. Speaker, Louisville, Ohio, "Constitution City," has won new recognition for its annual Constitution Day program which has come to mean so much to the people of my district.

I include with my remarks the Louisville Herald story concerning the new award.

HISTORICAL SOCIETY PRESENTS PLAQUE, "A PATRIOTIC AWARD," TO CITIZENRY—CALLS LOUISVILLE "CONSTITUTION CITY"

Louisville's 125th anniversary celebration will be marked by various events throughout the year and the latest to be announced comes from the office of the Stark County Historical Society. An award in the form

of a plaque measuring 11 inches by 14 inches has been prepared as follows:

"A Patriotic Award to the citizens of Louisville, Stark County, Ohio, March 1, 1959.

"This tribute to Americanism is presented to the citizens of Louisville, Ohio, for the splendid effect in honoring the Constitution of the United States of America with a yearly celebration climaxing with Constitution Day.

"Special recognition is also accorded to Mrs. Olga T. Weber, prime mover in the project which was first held in September 1952.

"Our congratulations to Louisville, Ohio, the Constitution City.

"The Stark County Historical Society.

"FREDERICK BRODA,
*"President.*

"EDWARD T. HEALD,
*"Local Historian.*

"JOSEPH M. MARKLEY,
*"Secretary-Treasurer.*

"GEORGE R. BECHTEL,
*"Field Representative."*

(Official presentation will be made on Constitution Day, 1959, by the Society.)

## Some Stars That I've Lived By

EXTENSION OF REMARKS
OF

## HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. RAINS. Mr. Speaker, for the past 22 years Dr. P. O. Davis has served as director of the Extension Service of Alabama Polytechnic Institute, better known as Auburn. During these years, his devoted leadership and guidance has served the farm families of Alabama on many fronts, bringing to our rural society higher levels of education, the benefits of agricultural research, advice, and assistance in crops and constant improvement in the family farm home.

On May 1, Dr. Davis will retire and another highly qualified and gifted extension director, Dr. E. T. York, a native of DeKalb County in the Fifth Congressional District, will succeed him.

We in Alabama feel that Auburn and our State are highly fortunate in having such men to guide and assist our farmers. The Agriculture Department's Extension Service is equally fortunate in having men of their caliber and ability as recognized leaders in the program.

Recently Dr. Davis delivered an address to the Alabama Association of Home Demonstration Agents which reveals his personal faith in democracy, in America, and in the family farm as a vital unit of a free society. I submit his remarks for the benefit of my colleagues:

SOME STARS THAT I'VE LIVED BY

(By P. O. Davis, director, Alabama Polytechnic Institute Extension Service, Auburn, Ala., at the annual meeting of the Alabama Association of Home Demonstration Agents in Birmingham, February 26-27, 1959)

A good beginning for any speaker on any occasion is a proper recognition of his audience. You are as fine a group of coworkers as any man ever had and I shall always be profoundly grateful to you. Because of you, our other coworkers, plus those who have been with us and passed on the Extension Service of the Alabama Polytechnic Institute is now at a new summit of value and influence.

We can think of it as the end of an era during which the record has been constantly upward and the beginning of a new era during which new records will be made and bigger goals attained. All of them enable farm people to move upward and forward at the same time for their own good and for a greater Alabama in every way.

Dr. E. T. York who will succeed me on May 1 is highly qualified in every way. I bespeak for him your complete and enthusiastic cooperation. You will soon be devoted to him as he will be to you; all working together as a real team on one program of work for all.

Therefore, we can now review together before taking another forward look into the future to see what it holds for Alabama and for the Extension Service. Our primary concern is farm people but farming is now so big and so involved that it includes all people, either directly or indirectly.

It has been my good fortune to be director of the Extension Service of the Alabama Polytechnic Institute during the most eventful period of American history—the period of greatest progress in the entire economy of Alabama. On all fronts and in all segments Alabama has gone forward and continues to go forward. Today exceeds yesterday and tomorrow will exceed today.

The Extension Service has been out front in this matchless progress; and, for my part, I give full credit to the staff in the counties and at the State level. I have tried to be the symbol and leader as well as the administrator but the work has been done by the personnel.

It has been, and is, the age of science, the age of technology, the age of vision, the age of change, the age of progress. President Eric A. Walker, of Pennsylvania State University, depicted it when he said:

"A central characteristic of the scientific age is that it replaces, at the level of routine chores, human labor, and machines that do the work faster, more accurately, and at less cost.

"Consequently, all along the line everyone must operate on a correspondingly higher human level of mental activity.

"We replace muscle power with brain power. The unskilled laborers must then become craftsmen, the craftsmen technicians, the technicians engineers and professional people, and the professionals must become scientists and philosophers."

This has been the major star in my horizon. It is the star which beckons and challenges mankind to nobler achievements based upon clearer thinking about life and the multitude of problems involved in earning and in living; and I have not lost sight of it.

SCIENCE, TECHNOLOGY, FARMERS

Underneath this star is my belief in science, in technology, in life itself. I believe in people, in the dignity of the individual, with emphasis upon farm people.

This State, this Nation, and no other nation will ever be too grateful to farm people for what they are, for what they have contributed to the Nation, for the progress which they have made, and their unfailing faith in the future.

Again and again I have insisted that farmers go first class and be first class. They deserve it.

No longer is a farmer rated as a hayseed who scoffs at book farmers. Instead, he is a student, a thinker, and a leader—a real man among men.

Young people are especially dear to me because the future is for them. It will be what they make it in addition to what we and our ancestors have done up to now.

About everything that we have in this Nation stems from the fact that we have a surplus agriculture. Without it we would not have, for example, our gigantic industry which produces adequate clothes, automobiles, trucks, tractors, household appliances, radios, television, and countless other things that remove drudgery and lift life to a higher level.

This reveals why I believe in agricultural research, including home economics. At last we are about to learn that it's one thing to produce the essentials of life in abundance and another thing to use them for better living. It took a long time for mankind to learn this; and too many people don't yet know it.

The family farm is a star that never grows dim with me. It entered our crown of lasting stars with the birth of our country at Jamestown, Va., three and a half centuries ago. It has endured and will continue to endure.

The growing brilliance of that star is now reflected in public education, in research, in organized farmers, in farmer cooperatives.

During all of my public career I have been positive for each of these four horsemen of good farming, good farm homes, and good living. It went to dignify, to glorify, and to use them.

Educated farmers know how to work together in their own organizations for their mutual welfare; and how to transact their business in their own way within their co-ops to better themselves and their families.

It has long been clearly obvious to me that the community is second only to the farm family as the unit upon which rural society rests and within which it lives and thrives or dies and decays. It is the basis for much more of our work than we have yet done to be more effective with more people. It's a big challenge to us.

THE POWER OF DEMOCRACY

Naturally, I believe in democracy in terms of the sovereignty of humanity. We must never forget the fact that our success has been determined much more by our way of life than by the abundant natural assets that we have for earning and living.

Other nations have people who are, in many ways, naturally as intelligent as we are. They are probably as abundant in natural resources as we are but they lag far behind us in food, in clothes, in homes, and otherwise. Most of them are hungry, ill clothed, and ill housed all the time.

This lethargy, or lagging, on their part stems not from what nature did or did not do for them but from what they have failed to do for themselves in developing a way of life which enables man to be productive and to live adequately with genuine faith in the future.

In brief, they don't have human freedom without which our lot would be at their level; and our future as dim as their future.

My faith in our democracy is strengthened by this statement by Helen Keller who is prepared to speak as no other living American can now speak. I quote her:

"I did not choose my country any more than I chose my parents, but I am her daughter just as truly as I am the child of my southern mother and father. What I am my country has made me. She has fostered the spirit which made my education possible. Neither Greece nor Rome, nor all China, nor Germany, nor Great Britain has surrounded a deaf-blind child with the devotion and skill and resources which have been mine in America.

"But my love for America is not blind. Perhaps I am more conscious of her faults because I love her so deeply. Nor am I blind to my own faults. It is not easy to hold a steady course in a changing world.

"It need not discourage us if we are full of doubts. Healthy questions keep faith dynamic. In fact, unless we start with doubts we cannot have a deep-rooted faith. One who believes lightly and unthinkingly has not much of a belief. He who has a faith which is not to be shaken has won it

through blood and tears—he has worked his way from doubt to truth as one who reaches a clearing through a thicket of brambles and thorns."

When all events in the world since its creation are viewed and measured in importance the birth of Christ stands at the summit. Up to now He has had more influence on the world than all the armies and navies combined. The same will be true in the future of the world, as I see it. Therefore, Christ is the big star of all time for all people. From Him came our democracy.

SOME BASIC FAITHS

In brief, I believe that man is a triumvirate with body, mind, and spirit. His needs are distinct and clear in all three parts of his nature. This is the essence of democracy while communism thinks of man as being an economic and physical animal.

Thus you see that I believe in the American competitive enterprise system; that man's search for progress should be encouraged by maintenance of opportunity, not hindered by illusions of security; that a person should be rewarded in accordance with his productive contribution to society; that every man is entitled to own property, earn money honestly, save, invest and spend as he chooses; that property rights cannot be taken away without infringing on rights guaranteed by the Constitution; that the Constitution is the basic law of the land, and that its interpretation should be in accordance with the intent of its authors; that government should operate impartially in the interest of all; that government's regulatory functions should be based on law; that governments should provide only minimum controls and aids; that government should stimulate, not discourage, individual initiative; that propagandizing by government is dangerous to the maintenance of self-government; that monopoly, whether by government, industry, labor or agriculture is dangerous; that voluntary cooperation is a part of the American system; that all candidates for public office should state their beliefs with respect to communism, socialism, and capitalism.

Obviously, I believe in the land grant college—in our own Alabama Polytechnic Institute and all of its divisions at Auburn and throughout Alabama.

In all the world there is no real counterpart to our land-grant college but it is heartening to know that other nations are now trying to follow the American pattern and ideals for the same goals. More power to them.

Always and everywhere I have insisted that we of the Extension Service must look first class, think first class, act first class, and be first class.

We should strive always to be real artists in all that we do both by precept and by example.

We are engaged in the highest form of education because it is for practical people; and it must be true information to succeed when intelligently applied which may be immediately.

To meet the high calling which is ours we must have men and women of high ability; men and women who are adequately trained; men and women of unfailing character; men and women who are always and everywhere loyal to the Service and to those who are administratively responsible. One who is not loyal is unfit and unworthy of any trust.

A LOOK INTO THE FUTURE

So far I've talked about principles and the past which, after all, is gone and static. Nothing we can do will change it, but the future will be what we make it.

My three big stars are (1) truth, (2) people, (3) God. Truth includes principles and philosophies as well as science and technology.

Based upon my experiences of the past, my studies of the present, and my crystal ball of the future I am bold enough to name 20 specifics which I foresee for the year 2000, as follows:

1. A nation of 250 million people, life expectancy lengthened a third over 1959, and far more people 60 years and older.

2. Farm population has declined from the present low of 12 percent to 8 percent of the total; fewer farms and bigger farms.

3. Adequate food and fiber for all—even more per capita than in 1959—so that all who earn are fully fed, comfortably clothed, and well housed.

4. A little more land in crops than in 1959, but production per acre is 50 to 100 percent higher. There is a big increase in grazing land; and meat, milk, or egg production per acre annually is much higher, due to better breeding, better feeding, better management, more fertilizer, and much more irrigation in the South.

5. Animal power is gone except to convert feed into meat, milk, and eggs. Animal efficiency in feed conversion is double that of 1959.

6. Mechanical power per farmworker is three to six times that of 1959, which is eight times that of 1910.

7. By rotation, legumes, livestock, fertilizer, lime, and management land is improved, while it produces more farm products.

8. Fertilizer contains more plant food per ton, and plant food used annually per acre is thrice that of 1959.

9. Chemicals are a major factor in weed control, the same as insects.

10. Cotton is still a big cash producer on southern farms and the Nation's best and most widely used fiber.

11. Trees are still No. 1 in the use of southern land. They are managed as a crop. Hybrid trees are established, and forest fires are almost entirely an evil of the past.

12. Homes, especially farm homes, are much better. Power and machines and gadgets are serving the average home with the equivalent of 50 to 100 human slaves.

13. The farm family is still the essence of America's greatness, and many more people with nonfarm employment and income live in the country.

14. Both farm and nonfarm rely more heavily upon the Extension Service for sound information about farming, about living, and about many other subjects.

15. Nonfarm income of farm people exceeds their net farm income each year.

16. Rivers—especially in the South—are fully developed for power, navigation, industrial water, and flood control.

17. Most farmers are active in their organization; and real farmer cooperatives are bigger and better in service to both farmers and nonfarmers.

18. Farm production and marketing are dominated by science, power, engineering, and applied economics. These have freed farmers from grants, from subsidies, and from artificial controls; but price supports remain with politics in the farm program.

19. The U.S. Patent Office is still issuing more than 100 patents daily; as now; and most people have faith in the future.

20. The United States is still the No. 1 democracy in the world and farmers, as in the past, are the foundation and the bulwark of individual liberty and freedom through the processes of democracy.

WHAT ABOUT ALABAMA?

Alabama will continue to go forward because the people of Alabama were born to go forward. They know that things don't get better and better by themselves. Human energy and human intelligence must be applied.

We're proud of the past but we would be unworthy of it if we were not eager to make the future better. I remind you that the 4-H motto is "To Make the Best Better."

Alabama will go forward on farms, in factories, in mines, in banks, in business, in the professions, and otherwise. The forces of science and technology are impressive, irreversible, cumulative, and continuous.

Indeed, Alabama is the heart of the Southeast which is the great magic area of the United States. It's a great State where all of the essentials of nature are rolled together for success and inviting us to use them for abundance and with no limit as to our future.

We should build our State upon our young people—upon their training because "the foundation of every State is the education of its youth."

The Alabama of tomorrow is being molded by our schools of today; and the effectiveness of our schools is determined, in a large measure, by funds available for them. Therefore, all of us need a willingness to be at least as good to our children as we are to our highways which we are not now. Unless we are, the Alabama of the future is certain to suffer.

So all the stars that I've named are shining brighter before you and me today; and all of the challenges are ever more inviting and more dynamic. By keeping our eyes upon these stars and driving full speed ahead toward them we cannot fail.

We must ever be mindful of the fact that the only limit to our realizations of tomorrow are our doubts of today. As we remove our doubts and go on with what we have and what we know the ideals and goals of the entire Extension Service will be attained in an ever-increasing measure.

This star is big and bright before me as I near the end of my 22 years as director.

## LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

## CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

## PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

## DAV Services in Maryland

EXTENSION OF REMARKS
OF

## HON. DANIEL B. BREWSTER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I should like to insert the following speech which I made at the DAV installation of officers last night in Greenbelt, Md.

I believe that it speaks for itself.

An exceptional record of vital rehabilitation services freely extended to thousands of Maryland citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Maryland, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims is Cicero F. Hogan, and its national director of employment relations is John W. Burris—all located at its national service headquarters, 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability-compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after it formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veteran organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans, themselves, these service officers are sympathetic and alert as to the problems of other less well informed claimants.

Located in the Veterans' Administration regional office at St. Paul and Fayette Streets, Baltimore, Md., is the DAV national service officer, Mr. Frank Dubinskas, a fine friend of mine. Because of the financial inability of the DAV to pay salaries in competition with commercial enterprise and the Federal Government, Mr. Dubinskas is now doing the work that should ordinarily be done by two national service officers and he is doing a fine job.

The present department commander of the DAV in Maryland is another friend of mine, Mr. John Stubbs, and the adjutant is Jake Finn. The DAV Department of Maryland has nationally appointed representatives to the Veterans Administration Voluntary Services Advisory Committees at each of the Veterans' Administration hospitals servicing Maryland veterans. These DAV representatives and the hospitals are as follows: Mr. John E. Kellam at the 291-bed Tuberculosis Hospital at Baltimore, Mr. Earl Vellaca at the 377-bed General Medical and Surgical Hospital at Fort Howard, Mr. Charles Kennedy at the 1,800-bed Neuropsychiatric Hospital at Perry Point, and Mr. Earl Rosensteel at the 1,340-bed VA Center at Martinsburg, W. Va.

During the last fiscal year, the VA paid out $67,498,000 for its veteran program in Maryland, including $20,506,324 disability benefits to its 27,041 service-disabled veterans. These Federal expenditures in Maryland furnish substantial purchasing power in all communities.

Only about 7 percent—1,756—are members of the 27 DAV chapters, ranging up to 510 members in the Baltimore Chapter No. 1.

This 7 percent record is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Maryland's veterans and dependents during the last 10 fiscal years, as revealed by the folowing statistics:

| | |
|---|---|
| Claimants contacted (estimate) | 45,438 |
| Claims folders reviewed | 37,865 |
| Appearances before rating boards | 3,670 |
| Compensation increases obtained | 3,332 |
| Service connections obtained | 661 |
| Nonservice pensions | 456 |
| Death benefits obtained | 66 |

Total monetary benefits obtained were $1,082,193.72.

The above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32 and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Maryland's veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted these DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms, and businesses, etc. Helpful advice was also given as to counseling and placement into suitable useful employment (to utilize their remaining abilities), civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death, or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult—too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendent, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV Acting National Director of Claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others, at an aggregate loss to them of more than $28 million per year. About 1 percent (.013) of such discontinuances and reductions have probably occurred as to disabled veterans in Maryland, with a consequent loss of about $364,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Maryland to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the back-

ground of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag (miniature automobile license tags) project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project is thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag Department, 13,555 of whom during the last 8 years, were Maryland residents.

Every elegible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000 exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the general support of all service claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Maryland by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100 ($50 to those born before January 1, 1902 or World War I veterans), payable in installments within two full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal, and civic associations. All of American's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of Amercia's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

I am proud to be a life member of the DAV.

## Representative Francis E. Walter, of Pennsylvania, Passes 26 Years in Congress

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. McCORMACK. Mr. Speaker, a great American and a great legislator of outstanding ability and courage is the gentleman from Pennsylvania [Mr. WALTERS].

In the March 4, 1959, issue of the Daily Record of Stroudsburg-East Stroudsburg, Pa., appears a splendid and deserving article and editorial relating to our friend from Pennsylvania [Mr. WALTERS], which I include in my remarks:

REPRESENTATIVE FRANCIS E. WALTER, OF PENNSYLVANIA, PASSES 26 YEARS IN CONGRESS

Twenty-six years ago today, Representative FRANCIS E. WALTER, Easton Democrat, went to Congress for the first time as Representative of Pennsylvania's 15th District. Like the man who came to dinner, he's still there.

Walter is currently ninth in individual Democratic seniority and seventh in group seniority in the House. Among both Democrats and Republicans, he ranks 12th in House seniority.

No other Pennsylvanian in history has served in either House or Senate for as long as Walter.

The 15th District includes Monroe, Carbon and Northampton Counties. Its 1950 population of 276,574 persons has increased considerably since the last census.

Walter, who will be 65 in May, seriously considered not running for reelection last year because of his health. His friends persuaded him to return to Congress.

That he ranks high among his fellow legislators is indicated by the fact he heads the important House Committee on Un-American Activities as chairman.

He is also a member of the House Judiciary Committee and the Joint Senate-House Committee on Immigration and Nationality Policy.

A long-time fighter against communism, he has been frequently criticized—and praised—for the actions of the Un-American Activities Committee.

He was not always so alert to the dangers of Communist expansion, however. Speaking at the annual dinner of the Four-County Firemen's Association in East Stroudsburg last summer, WALTER recalled that he once voted against funds for the very committee he now heads.

WALTER is a native of Easton. He received his bachelor of arts and bachelor of law degrees from Georgetown University.

During his college career he was a member of Phi Delta Theta, Phi Alpha Delta, and Pi Gamma Mu.

He served as Northampton County solicitor from 1928 to 1933 and is a veteran of World Wars I and II. He has decorations from several foreign governments.

WALTER still maintains a law office in Easton. In addition, he is a director of the Easton National Bank and vice president and director of the Broad Street Trust Co. of Philadelphia.

Since he has been in Congress, he has served as chairman of the Democratic caucus; chairman of the subcommittee on immigration and naturalization; chairman of the House Patronage Committee and member of the Government Security Commission in addition to his present committee assignments.

He was elected Speaker pro tempore of the 81st Congress and has served on the post-war economic policy and planning and select European aid committees, the latter of which did the groundwork for the Marshall plan.

He also served as representative of the United States and spokesman for the Provisional Intergovernmental Committee for the Movement of Migrants From Europe, designed to relieve overpopulation of European countries by migration to countries needing population.

Walter is a member of the Loyal Order of Moose, Patriotic Order of Sons of America, Elks, Sons of the American Revolution, American Legion, Veterans of Foreign Wars, American and Pennsylvania Bar Associations and is a member and past commander of the Amvets.

Among his awards are: Americanism Award, Catholic War Veterans, Department of Maryland, 1957; American Bar Association award for outstanding services, 1946; Patriotic Order of Sons of America award for worthy patriotic services; life membership, American Legion, for noteworthy service to all veterans.

Outstanding citizen award, Sons of American Revolution; John Carroll Award for 1952, presented by Georgetown University Alumni Association; award, Japanese Government, 1956; Distinguished Service Medal, Pennsylvania Department, Amvets, 1957.

Golden Deeds Award, Exchange Club of Easton, 1953; award from Young Jeffersonians Democratic Club, Summit Hill, 1957, honoring him for 25 years service in the House; Order of Orange-Nassau by the Netherlands Government for distinguished service to international migration, 1957, and certificate from the Americanism Commission of the American Legion at the 40th annual convention last year.

## We the People

EXTENSION OF REMARKS
OF
### HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. HALPERN. Mr. Speaker, I would like to call the attention of the Congress to a matter of grave concern to the people of Queens County, N.Y., a matter which I am sure could be multiplied many times in many congressional districts of this Nation. It involves the proposed expressway which needlessly will cut through the heart of Queens sweeping in its wake some 1,500 homes, places of business, churches, and other buildings and forcing thousands of persons to relocate in areas against their will and in dwellings not of their choosing; this, despite the fact that a far more appropriate alternate route is available.

While I realize Congress cannot legislate on such a matter, I strongly believe in view of the severe impact of this move, that the great forum of this House should hear this petition in protest of an ar-

bitrary act so strongly against the wishes of the people.

Furthermore, the prepared report on the alternate route was never properly presented to the New York State Department of Public Works or the Federal Bureau of Public Roads, as it should have been in accordance with paragraph (c) section 116, page 12, of title 1, Federal-Aid Highway Act of 1956.

The usurpation of the democratic process is despicable wherever it occurs, either local, national or international, and I feel it incumbent to pinpoint any indication of its existence.

That is why I bring this case to the House. That is why I present this petition which graphically discloses the story of these outraged taxpayers. I refer to the petition from two civic and taxpayer organizations in my district, the Bayside Neighbors Council, Inc. and the Bellaire Gardens Taxpayers Association, Inc., protesting this routing and calling for an immediate halt to this project by the appropriate authorities. Under unanimous consent I include in the RECORD at this point the petition from these fine civic-minded people:

PETITION TO EACH MEMBER OF THE U.S. SENATE AND THE HOUSE OF REPRESENTATIVES, FEBRUARY 28, 1959

We, the people, unnecessarily and very disastrously affected by the proposed route of the Clearview Expressway, in Queens County, N.Y., from the proposed Throggs Neck Bridge through the heart of Bayside via 207th Street, crossing the new Long Island Expressway, veering somewhat eastward and extending through Holliswood, Bellaire, Queens Village, St. Albans, and Laurelton to Idlewild Airport, homeowners, taxpayers, businessmen, members of religious and other organizations and other victims of the arbitrary, ruthless, and capricious selection of a route that will remove 1,500 or more homes, business, religious, and other buildings, assessed at millions of dollars from the tax rolls with the anual loss of the taxes thereon, make this plea. We victims will be forced to relocate in places not of our choice and will be unable to obtain equal facilities or in as desirable locations as we had, for the compensation we will receive. In addition a "Chinese Wall" will be placed through the very heart of the above communities.

We homeowners hired a competent consulting engineer, at a cost of many thousands of dollars, to survey the 207th Street route and another suggested route through the city-owned Alley Park meadowland, a short distance to the east and report to us. His report stated that the Alley Park route was more desirable and would save millions of dollars and take very little property from the tax rolls. This report was never properly presented to the New York State Department of Public Works or the Federal Bureau of Public Roads as it should have been in accordance with paragraph (c) section 116, page 12, of title 1, Federal-Aid Highway Act of 1956. The suggested route was summarily dismissed by the local authorities as not feasible and we were told we should not be concerned with the cost as the Federal Government was going to pay 90 percent of the cost, but the annual loss of the tax money was not mentioned nor were we told that this loss would have to be borne by our taxpayers every year.

In spite of the work already done, the contracts let and properties condemned, it is not too late to change the route. The properties taken can be sold at a profit and the money saved by using city-owned property, the annual savings in taxes and the lessened cost of construction will many times repay the cost so far incurred and save millions of dollars in addition and will eliminate the tribulation that is being inflicted on these communities now and forever. All the taxpayers in the Nation will benefit now and forever. This wanton and needless destruction of homes and other valuable buildings and public utilities should be stopped immediately, when Federal, State, and city governments are faced with huge deficits and greatly increased taxes. This change should be the concern of and receive the support of all. It was not too late to recover Tea Pot Dome after it had been stolen and the proposed route of the expressway is causing and will cause much more grief.

We suggest reading "Extinction by Thruway" in the February Reader's Digest, to understand the plight of the people in this ruthless outrage by appointed bureaucrats, answerable to no one, making a mockery of democratic government and wasting millions of dollars of public funds, uselessly and unnecessarily, to aggrandize their own egoism. The Seventh Avenue route of the approach to the proposed Narrows Bridge, in Brooklyn, Kings County, N.Y., is another example of diabolical devastation and waste of public funds.

Pursuant to article 1 of the Bill of Rights (first amendment to the Constitution), we earnestly petition that you use all the powers vested in you to—

1. Immediately stop all work on the Clearview Expressway and Throggs Neck Bridge;
2. Have the arbitrary selection of the 207th Street route investigated by an unbiased individual or body, not having any previous connection with the matter;
3. Have the Daniel J. O'Connell report considered by the investigators.

We believe it is never too late to right a wrong, correct an injustice, or save the taxpayers' money.

GEORGE P. AMES,
*Committee Executive Secretary.*

(Bayside Neighbors Council, Inc., 35–42 207th Street, Bayside, N.Y., Joseph W. Maneri, president; Bellaire Gardens Taxpayers Association, Inc. (affiliated with adjacent civic organizations), 93–47 210th Place, Hollis, N.Y., Peter P. Bach, president.)

## Sesquicentennial of Giles County, Tenn.

EXTENSION OF REMARKS
OF
## HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. BASS of Tennessee. Mr. Speaker, Giles County, Tenn., will observe its 150th anniversary with a special sesquicentennial celebration July 11 through July 17 of this year. In honor of this momentous occasion, the 81st General Assembly of the State of Tennessee has unanimously adopted a resolution endorsing and commending the celebration; and, under leave to extend my remarks, I would like to offer this resolution for inclusion in the RECORD. I would like, also, to take this opportunity to congratulate the citizens of Giles County, of which I am honored to be one, and to offer my best wishes to them for a successful and happy celebration.

The resolution follows herewith:

HOUSE JOINT RESOLUTION 39

Resolution relating to the sesquicentennial of Giles County

Whereas by chapter LV of the Public Acts of 1809, adopted November 14, 1809, the eighth General Assembly of Tennessee created and established a new county, known and designated as Giles County; and

Whereas this county at the suggestion of Maj. Gen. Andrew Jackson was named for the Honorable William B. Giles, Congressman, U.S. Senator, and Governor of the great State of Virginia, a statesman who stood stalwartly and at the forefront of those who advocated and urged the admission of Tennessee into the Federal Union; and

Whereas in the aforesaid act creating and establishing Giles County, the legislature designated and appointed James Ross, Nathaniel Moody, Tyree Rhodes, Gabriel Bumpass, and Thomas Whitson, as county commissioners and directed them to "proceed to fix on a place on Richland Creek as near the centre [sic] of the county as an eligible scite [sic] can be procured, at which scite the said commissioners shall procure at least 100 acres of land * * * on which they shall cause a town to be laid off, with the necessary streets, at least 80 feet wide, reserving at least 2 acres, for a public square, on which shall be built a courthouse and stocks, also reserving a public lot, sufficient to contain a jail in a convenient part of the town, which town shall be known by the name of Pulaski"; and

Whereas responsive to this legislative mandate, the commissioners selected and laid off the county seat town named in honor of Count Casimir Pulaski, the Polish nobleman who cast his lot with the downtrodden people of colonial America and lost his life while leading Pulaski's Legion during the War of the Revolution in the historic Battle of Savannah; and

Whereas the legislature further directed the commissioners to sell lots in said town, using the proceeds to erect a courthouse, prison, and stocks. Thus it was that the early pioneers of this county purchased their county seat town and paid for their public structures and so, without subsidy, they builded upon the firm foundation of economic self-reliance in local government without which true self-government cannot exist; and

Whereas this county, which was a canebrake inhabited by the wild beasts of the forest and a part of the hunting grounds of the Cherokees, the Chickasaws, the Creeks, and the Choctaws, has now become truly a land flowing with milk and honey; and

Whereas down through the 150 years of its existence it has not only abounded richly in natural resources but in the rich heritage of the strong men and courageous women who plunged into the wilderness country and established their homes, schools, and churches, to the end that cultural pursuits, religious worship, and the home and fireside might form the firm cornerstone of their future existence; and

Whereas this county from its very beginning has stood stalwartly and steadfastly for the Jeffersonian concept of democracy, in fact to such an extent that one historical sketch recites that "while the commissioners named the streets for the Presidents, there is no Adams Street, they taking care to see that no Massachusetts Federalist President should receive the honor of commendation at their hand"; and

Whereas three distinguished Giles Countians, Aaron V. Brown, Neil S. Brown, and John C. Brown, served with honor and distinction as Governor of the State of Tennessee; and

Whereas so strongly did the citizens of Giles County feel on the theory of States rights that when they voted on the question of seceeding, some 2,456 voted in favor of casting their lot with the cause of the Confederacy whereas only 11 misguided individuals were counted in opposition thereto; and

Whereas Giles County, Tenn., was the scene and situs of the No. 1 atrocity of the War between the States—the execution of Sam Davis, Confederate scout who was hanged as a spy even though wearing the uniform of the Confederate Army, but who set an example for dying rather than betray a trust; and

Whereas when the South was writhing under the fell clutch of the carpetbagger and the scalawag, it was in Pulaski that there came into being the patriotic organization known as the Invisible Empire, of which Gen. Nathan Bedford Forrest, the world's greatest natural cavalry genius, became the grand wizard; and

Whereas Pulaski, the county seat of Giles County was the first municipality in Tennessee to receive the blessing of TVA current; and

Whereas with this tradition, background and heritage, the citizens of Giles County are planning a sesquicentennial celebration, commemorating the 150 years of the proud and progressive history of their county, and this celebration will be highlighted by appropriate ceremonies during the period, July 11, to July 17, 1959: Now, therefore, be it

*Resolved by the House of Representatives of the 81st General Assembly of the State of Tennessee, (the Senate concurring)*, That we do endorse and commend the sesquicentennial celebration of Giles County and that we offer our congratulations to its constituted citizenry; be it further

*Resolved*, That a copy of this resolution be sent to the county judge of Giles County and a copy to the chairman of the sesquicentennial committee.

WM. D. BAIRD,
*Speaker of the Senate.*
JAMES L. BOMAR,
*Speaker of the House of Representatives.*

Approved February 27, 1959.

BUFORD ELLINGTON,
*Governor.*

## Hawaiian Statehood

SPEECH
OF
## HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 50) to provide for the admission of the State of Hawaii into the Union.

Mr. GIAIMO. Mr. Chairman, today is an historic day in the history of our beloved country.

Today by our vote on Hawaii we have shown once again to the world, as we have done throughout the history of our Nation, that ours is indeed a living, dynamic, and freedom-loving country dedicated to the principles enunciated in our Bill of Rights.

Today we have done our part to assure statehood for Hawaii. We have said to the world that the United States truly measures up to the oft-stated expression that it is man's greatest experiment in self-government. Our laws have long provided for admission to statehood of incorporated Territories when they should have attained the standards required for admission.

Today we are seeing these laws live and with such a magnificent vitality.

We are welcoming to the sisterhood of States an incorporated American Territory, 2,200 miles out in the Pacific Ocean, southwest of California, whose population is 85 percent native-born American and of diverse racial and national backgrounds, which are 23 percent Caucasian, 37 percent Japanese, 17 percent Hawaiian, and the remainder Filipino, Chinese, Korean, Puerto Rican, and others.

In effect we have proclaimed to all the world that America is for all Americans regardless of color, creed, or racial origin. We are welcoming a group of loyal Americans to the sisterhood of States realizing full well that the racial and national backgrounds of a majority differ from those of most continental Americans.

Surely this proves the spirit and words of the Constitution of these United States that America is not for some people, dependent on their race or color, or nationalistic background or religious belief, but rather that it is for all Americans. This has always been the heritage of America. This has always been the mission of America.

Today it has been proven once again to those who may need the proof.

I shall always remember with the greatest of pride for my country what has been accomplished in these last 2 days for Hawaiian statehood.

Truly, this has been a day in which history has been made and with humility and gratitude I am happy to have participated in it.

## The Telephone a Necessity, Not a Luxury

EXTENSION OF REMARKS
OF
## HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. HOFFMAN of Illinois. Mr. Speaker, there is a growing demand that the Federal excise tax imposed on telephone messages during World War II be repealed.

My own State senator, the Honorable Lottie Holman O'Neill offered a joint resolution in which she was joined by Senators Peters, Groen, and Collins expressing the consensus of opinion of the 71st General Assembly of the State of Illinois to the House of Representatives that this tax be now repealed. The resolution was adopted in the State senate and it is expected to receive early action in the House. The resolution follows:

PRESENTATION OF RESOLUTIONS

Senators O'Neill, Peters, Groen, and Collins offered the following senate joint resolution:

"SENATE JOINT RESOLUTION 10

"Whereas there is in existence an unfair and unnecessary Federal excise tax of 10 percent on all telephone calls; and

"Whereas this tax was imposed during World War II not as a revenue measure but essentially as a method of restricting the use of the telephone because of the critical wartime shortage in the communications field and has continued since World War II although no shortage in available communications exists today; and

"Whereas the Federal excise tax on the telephone is unfair because it is the only such excise now imposed on household utility services such as electric, gas, and water service: Therefore, be it

*"Resolved by the Senate of the 71st General Assembly of the State of Illinois, the house of representatives concurring herein,* That the U.S. Congress is respectfully requested to repeal the Federal excise tax now imposed on telephone service and that suitable copies of this resolution be sent to the Speaker of the U.S. House of Representatives, the President of the U.S. Senate, and each Member of Congress elected from the State of Illinois."

Senator O'Neill moved that the rules be suspended for the purpose of immediately considering the foregoing senate joint resolution.

The motion prevailed and the rules were suspended.

Senator O'Neill moved that senate joint resolution 10 be adopted.

The motion prevailed.

Ordered that the secretary inform the house of representatives thereof and ask their concurrence therein.

## Question Is, How Much Is Enough?

EXTENSION OF REMARKS
OF
## HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. BOLAND. Mr. Speaker, an editorial in the Springfield, Mass., Union on Tuesday, March 10, asked the question "How much is enough?" in appropriations for an adequate defense budget.

This is a very pertinent question at this time and one that certainly merits a considerable amount of study. I think we must listen to the individual views of members of the Joint Chiefs of Staff if we are going to be fully enlightened on this subject.

We must study their recommendations and weigh them in the light of potential threats of aggression, the type of war that a potential enemy might choose to fight; and at the same time seriously consider the cost of a defense budget that would insure an adequate defense posture for this country.

Under leave to extend my remarks, I include the Springfield Union editorial in the Appendix of the RECORD:

QUESTION IS, HOW MUCH IS ENOUGH?

The Berlin crisis is a powerful new argument for those who think our military spending ought to be increased. Some in the armed services and a number of lawmakers contend our defenses are being weakened by economy considerations.

Well, it certainly would be a matter of concern if there were a serious weakening of the defense structure. The sticking point is: How much is enough? What kinds of wars are being prepared against? In what year?

No one knows how much is enough. The only possible basis for military planning is an informed guess about the potential enemy's capabilities and intentions. There must be adequate firepower in being to make it impossible for an enemy to overwhelm this country in a quick series of sudden blows, and consequently enough to show him it would be stupid to try.

No one knows, either, what kind of wars we may be forced to fight. The only sensible approach is to prepare, as we are preparing, for the onslaught of a total nuclear war that might finally be won by conventional arms. If the Nation prepares to fight that kind of big war, it is automatically preparing to fight a little war with troops and normal weapons.

No one knows, finally, when the enemy may strike. This is the costliest part of military planning. In the world today a major war is not expected next year or the year after. In that situation, how much, and what, is it safe to cut? Cuts in troop strength, within reason, are probably the least risky.

In a long-pull military preparation such as we necessarily have, the continual replacement of old weapons with new is fantastically expensive. In a short time billions of dollars worth of military hardware is ready for the junkyard, and new weapons must be designed for 10 and 20 years hence. A future war will use, in addition to conventional arms, the instruments of the atomic-rocket age. So if war comes in 15 years, we will be saved not by the instruments being built today but by the research being done today.

Sound military planning must also depend on the allocation of total Government resources. Government spending cannot constantly rise without impeding economic growth and encouraging inflation and so, in the end, weakening the military itself. If more is spent on defense, then it must come out of savings on other and less essential Federal programs, and the military themselves will be under an increased obligation to examine their own apportionment of funds and to make a concerted attack on waste and duplication.

## Detroit Newspaper Endorses Urban Renewal and Area Redevelopment Legislation

EXTENSION OF REMARKS
OF
### HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mrs. GRIFFITHS. Mr. Speaker, the following editorial appeared in the Detroit Times on Monday, March 9, 1959:

WHAT WE NEED

Three events which occurred in government-industry relationship last week deserve review.

On Monday, Senator DOUGLAS, Democrat, of Illinois, staged hearings here on his proposed $383 million area redevelopment act, a proposal to pump Federal loans into areas distressed by continued unemployment.

On Tuesday, the board of assessors of the city of Detroit announced the total assessed valuation of the city dropped $71 million under 1958 levels. It was the second successive year of reduction and was caused primarily by loss of industry.

On Wednesday, the Ford Motor Co. and the Michigan Consolidated Gas Co. simultaneously announced separate expansion programs that will mean a total investment in their Detroit area installations of $69 million.

The hearings staged, and we use the word advisedly, by Senator DOUGLAS, revived last year's State election campaign issue of whether high wages and high taxes in Michigan have created an "unhealthy climate" for industry here.

The bulk of the testimony came from witnesses Senator Hart, Democrat, of Michigan; Governor Williams, Mayor Miriani, and Walter P. Reuther. All heartily endorsed the Douglas measure, as DOUGLAS had expected.

But Senator WALLACE BENNETT, a Republican from Utah and DOUGLAS, colleague on the committee, raised a question whether Michigan did not need first to get its house in order before Federal assistance would be of benefit. Some wee small Republican voices from outstate echoed his sentiments.

Reuther replied that unemployment is a national problem, showed that most of the distressed areas are in the East.

Miriani placed the blame on industrial blight—old factories which must be torn down and replaced with new, efficient ones, if Detroit is to regain high employment and maintain sufficient tax revenues.

The announcement of the decreased assessed valuation was like an exclamation mark after the mayor's testimony.

Announcement of the expansion plans of Ford and Michigan Consolidated seemed further to show that Michigan is a good place to do business.

The series of events aptly, and in rapid-fire succession, dramatize how Detroit and Michigan are being swept by crosscurrents of transition. The winds of politics help fan these crosscurrents.

Primary cause for the dispersion of industry in this area has been decentralization and automation in the automotive industry.

This is the basic reason Michigan has not recovered as quickly as some other States from the effects of the recent recession.

There is an element of truth in the charges that high wages and high taxes may discourage new industry from locating here.

There is an element of truth also in the contention that industry had had to disband some of the old Detroit factories because they are obsolete.

But no single source ever seems to tell the whole story. And no one seems to have enough wisdom to get the entire matter into perspective.

From the testimony submitted to the Douglas committee, however, it should be clear that Detroit and many upstate cities could utilize to advantage the provisions of the Douglas bill.

It would provide loans to private industrial firms for building new plants and loans to local units of government for building such facilities as waterlines, and roads to service these plants. The money would be repaid to the Federal Government.

As Mayor Miriani pointed out, the bill would help rejuvenate industry here.

It should be made clear that the Douglas bill does not provide outright grants to cities or anyone else either for slum clearance or for building new plants.

The slum clearance grants are included in other legislation labeled "urban renewal," also currently under consideration in the Senate.

Money from the Douglas bill could be utilized by the new industries expected to locate here once old factories have been torn down and the land made available by the city.

Detroit badly needs both the urban renewal legislation and the Douglas bill if it is to stave off industrial decay.

## Threshing Straw: Civil Rights School Probe Beyond Jurisdiction

EXTENSION OF REMARKS
OF
### HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a very fine editorial which appeared in the Nashville Banner, concerning the hearings of the Civil Rights Commission in Nashville, Tenn.

It is my belief that each Member of Congress will want to read this editorial on the hearings which were specifically addressed to the field of voting but injected an assumed authority in the school dispute.

The editorial follows:

THRESHING STRAW: CIVIL RIGHTS SCHOOL PROBE BEYOND JURISDICTION

As was expected, the Civil Rights Commission has threshed mostly straw in its Nashville hearing on school desegregation—a fact due to several circumstances glaringly apparent from the outset:

By Chairman Hannah's own statement, the body's intrusion on the school question was by a role self-assigned. The act creating it for a 2-year study of discrimination, elaborately refrained from mentioning education. The only field to which it was specifically addressed was that of voting, and it is far more than a necessary inference that the Commission's injection of its assumed authority in the school dispute was not the intent of the lawmakers who enacted the 1957 act.

Notwithstanding that language of the law is at points ambiguous, full debate in Congress elicited assurance that as finally drawn it was restricted, and extremists on the integration side bewailed the fact that it provided no carte blanche. There is every evidence that had Congress foreseen the present use of this act in the absence of express authority, it would have defeated the legislation.

Not without cause, therefore, have representatives of the Deep South States stayed away. They are not parties to this advertised study—agreeing that, however much it may fatten the files of the Commission preliminary to expiring, it can help not at all the State problems created by Supreme Court decree. These will remain, part and parcel of what Commissioner Hannah has called a constitutional crisis all but unequaled in our life as a Nation, after the Commission has folded its tent and finally stolen away.

The hearing if it had to be held in contravention of what was the accepted interpretation of the body's domain did not belong in Nashville. Washington would have been one place for it, or in the other direction St. Louis—either point geographically nearer most of those in attendance. Nashville did not invite it. It did abide by the rudimentary rule of good manners. It could point, as did Mayor West, to the fact of a working system, by good sense spared the exactions of extremists on either side.

Virginia, South Carolina, Alabama, Georgia, Louisiana, Mississippi, and Florida were not represented—and there was ample reason.

They have no big race problem of their own making. The controversy stirred has been by Supreme Court creation, and by agitation of it through outside agencies coming in to foment such where historically good and improving race relations have pre-

vailed. These would include the NAACP and its camp followers on the one hand—the Operation Dixie boys like Senators PAUL DOUGLAS and JACOB JAVITS in that train—and on the other, the professional hate baiters like John Kasper.

The Civil Rights Commission could render a service—helpful to eventual solution of this constitutional crisis which it properly deplores—if it reported that; if its recommendation on the basis of logic and of fact dwelt on the principles of States rights which have been put in jeopardy by these elements. It is impossible not to believe that some members of that body are sensitive to these points.

Barring such recommendation, probable or improbable, the next best thing will be for the Commission to get back to its valid and expressly legalized domain of operations—the matter of voting. If it fails to do that, there is even more abundant reason to let it expire in September—and let these busy gentlemen resume their several private occupations.

## Cooperative League of the U.S.A.

EXTENSION OF REMARKS
OF
## HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. HALPERN. Mr. Speaker, on Tuesday I was privileged, with Representative BYRON JOHNSON, of Colorado, to address a workshop session at the second national conference on cooperative housing being held this week at the Hotel Statler, here in Washington, under the auspices of the Cooperative League of the U.S.A. I would like to call the attention of the House to this splendid gathering which is searching out ways and means to improve, promote, and further the development of cooperative housing in America.

This excellent form of middle-income housing offers a practicable means of meeting a goodly share of America's housing needs.

The cooperative movement is a constant training ground in democracy, and cooperative housing projects in particular are instrumental in promoting the values most cherished in our traditions.

The housing cooperatives, however, are running into some difficulties in a period of rising costs. Two problems are of particular significance. The first is the maintenance of reasonable monthly carrying charges within the means of the middle-income owner occupants of existing cooperatives. The second is the encouragement of new cooperative housing construction with adequate sized units for today's middle-income families and for which the monthly carrying charges are bearable.

Those financed under section 213 of the National Housing Act will receive some relief under the provisions of S. 57 as reported from the Banking and Currency Committee. In my remarks at the Cooperative League workshop session I pointed out that I was not at all sure that the proposed measures would be adequate to do the job, and I offered several suggestions to strengthen and expand the legislation to meet the needs of the present and potential owners of cooperative housing.

Because of the importance of this vital housing program and the timeliness of the conference, I would like to present to this House the talk I gave at the league's session on Tuesday which in substance discusses the cooperative housing provisions of S. 57:

Ladies and gentlemen, it is my sincere pleasure to be with you today and to participate in this workshop on legislative proposals on cooperative housing pending before Congress. This is a field of great interest to me and I am pleased that I have secured membership on the House Banking and Currency Committee where I can, I hope, effectively carry the objectives of your league.

In my short capacity as a Member of Congress and of the committee I have worked since the start of the current session for legislation of assistance and benefit to the cooperative housing movement. In this regard I have received sound advice, counsel and background from my friends in the coordinating council of 213 cooperative many of whose members are in my district, from its first president and counsel Si Gallet whose aid has been invaluable; from Paul Golz, executive secretary of the council, with whom I have been in constant touch; from Gerry Meyers, president of the council who has contributed so much; and, I might add, the helpful background offered by Bernie Walpin; and from many groups and other individuals who are interested in cooperative housing. Now I feel I'm part of the co-op family and can earn the good counsel of the parent group, the Cooperative League of the U.S.A.

Cooperative housing is one of the finest ways to provide worthwhile and adequate homes for people in the middle income group. It offers the opportunity to secure attractive, durable homes at reasonable carrying charges. It provides an excellent solution to urban housing problems.

But, as your discussions have brought out, there seem to be two significant problems confronting cooperative housing in this period of rising costs. The first is the maintenance of reasonable monthly carrying charges within the means of the middle-income owner-occupants of existing cooperatives. The second is the encouragement of new cooperative housing construction with adequate sized units for today's middle-income families and for which the monthly carrying charges are bearable.

The pending legislation before Congress does include some provisions of benefit to new owners and of supposed benefit to existing owners. We all welcome these provisions which Congressman JOHNSON has described so well for us. But they do not, in my opinion, go far enough, particularly in helping existing owners to maintain reasonable monthly carrying charges.

I would like to discuss with you some other possibilities and perhaps amendments to a few of the provisions in the proposed legislation which, if enacted, would, together with most of the pending legislation, make up a portfolio of instant and real benefit to cooperative owners, present and potential.

As this point I would like permission to have included in the record at the conclusion of my statement a copy of the views on section 213 cooperative housing which Congressman FINO and I presented as supplemental views in the report on the omnibus housing bill from the House Banking and Currency Committee. I do not wish to take up too much of your time, and if the views could be included with these, it would save time all around.

Briefly, the report covers the various amendments I had offered in committee to fill what I feel to be obvious gaps in the omnibus housing bill.

First, for the benefit of owners of existing management-type cooperatives with commercial or community facilities, there is the proposal that such mortgages be open-ended to permit the inclusion of new commercial or community facilities. Cooperatives could utilize this provision to up-date their facilities and acquire the same facilities for their needs such as could be secured by new cooperatives after the passage of the pending legislation. Mortgages could be opened up in an amount which together with the original obligation would not exceed any principal obligation limits in effect after the passage of the Housing Act of 1959. The advantages which would flow to owners of existing management-type co-ops from this privilege are self-evident. They range all the way from the acquisition of needed new facilities to retardation of obsolescence.

Second, for new cooperatives, proposals would: (a) Authorize new sales-type and investor-sponsored co-ops to include both commercial and community facilities in their mortgages. This would provide income to both types to aid in keeping the monthly carrying charges at a reasonable level, and would provide a stimulus to construction because of the assurance that many of the needs of the owners could be provided for; (b) extend the amortization period of mortgages of new co-ops from 40 to 50 years. This is predicated on the supposition that present interest rates will not be changed. Although by stretching out the amortization period the eventual total cost to the owners will be greater, such an extension would help to reduce monthly carrying charges; and (c) increase the FNMA per unit limit on special assistance purchases to $20,000. This would be more in accord with provisions in the pending legislation which increase the per-room limits for FHA insured mortgages, and would help to meet the needs of today's middle-income families for adequate sized homes, particularly in high cost areas.

These were the amendments I offered to the so-called Rains housing bill when it came before the full House Banking and Currency Committee. They are contained in the supplemental report to which I referred and in separate legislation I sponsored. At the committee meeting I was given full assurance that they would be fully reviewed by the Housing Subcommittee and that ample opportunity will be given the proponents to present their case.

Since the publication of the report further consultation with counselors in the cooperative housing movement—and here again I want to point to the enlightened information provided by Si Gallett—has convinced me of the need to broaden the scope of the open-ending proposition. It should include authority for capital improvements and replacements. Costs such as $14,000 for the rewiring of air-conditioning systems, as was presented to one co-op, or costs for the resurfacing of sidewalks, among others, should be included in the open-ending suggestion. Legislation to cover this is now being prepared and will be introduced within a matter of days.

But, particularly I want to discuss two proposed changes in the pending legislation which, if adopted, would be of great benefit to owners of existing cooperatives.

One of these is discussed in the supplemental views referred to. It relates to extending the proposed one-quarter of 1 percent insurance premium minimum to existing cooperatives. I am happy to see the provision in the pending House bill which grants this benefit to new co-ops, but it should and can be extended to existing co-ops. If it were, occupants would be accorded a well-merited reduction in monthly carrying charges and they would obtain some relief in a period of rising costs.

It is my understanding that a surplus of between $7 and $10 million exists in the insurance fund. There is no reason why, if the proposed lower rate can be applied to new co-ops which will be built at higher costs, existing co-ops which have been paying at the one-half of 1 percent rate on lower mortgages cannot acquire the same privilege.

When this question comes up, the proponents have run into the argument that in order for individual mortgages to benefit, the consent of the mortgagee banks would have to be obtained. This it is argued, is because a stated insurance premium rate forms a part of the mortgage contract with the banks. A reluctance to open all the mortgages to renegotiation has prevented acceptance of the legislation. That is what others have been told; that is what I was faced with as I offered the proposal. My legislative aid, Bob Tienken, also has been faced with this reasoning and has been trying to effectuate an answer.

Here again, working together with your able brains in this field—I should mention Si Gallett again—sound basis has been found to refute this contention. We are convinced that this matter of contract renegotiation is a misunderstanding and that, in fact, the co-op mortgages, in the main, only refer to the mortgagors paying each month, one-twelfth of the annual premium. As a result, it is possible to enact legislation which does not refer to obtaining the consent of mortgagees, but which need only state that the rate of one-quarter of 1 percent will be applicable to existing cooperatives after the date of passage of the Housing Act of 1959. The rate is a matter of interest to the mortgagors and the FHA, and legislative change in the rate is all that should be required. It would not be made retroactive but only apply to premium payments by existing co-ops as of the passage of the 1959 act.

The second issue affecting carrying charges for owners of existing co-ops relates to the application to existing mortgages of the pending provisions for the establishment of mutual insurance funds. Under the pending legislation the excellent mortgage amortization experience of co-ops would be pooled, and return insurance premiums paid back to owners over a period of time. The proposed bill provides, however, that the consent of the mortgagees must be obtained if existing mortgages are to participate in the new funds. This might delay or prevent existing co-ops from sharing in the benefits of the mutual funds. On the reasoning which I have presented as to the relationship of the mortgagors and mortgagees concerning inclusion of references to the insurance fund in the mortgage contracts, I do not believe that consent of the mortgagees is necessary in this regard either. Again, the question of insurance would seem to be of interest to the mortgagors and the FHA, and thus, since contract renegotiation is not necessary, the requirement for consent of the mortgagees can be stricken from the pending legislation.

New legislation is being prepared (a) to provide for broadening the open-ending possibility; (b) for extending the one-quarter of 1 percent to existing co-ops, on which I am working closely with Congressmen HOLTZMAN and FINO, two of the pioneers in this field; and (c) for deleting and reference to the consent of mortgagees when existing co-ops join the mutual insurance funds. And I will continue to press the committee to consider the other legislation that I outlined earlier and which, I was assured, would be given full review.

If such additions can be made to the pending omnibus housing legislation I believe that the greatest benefit will accrue to both existing and future co-ops.

I thank you for this opportunity to discuss certain features of the pending legislation. It has been a real pleasure to me to be present with you. I want to again thank all my friends in the cooperative housing movement who have given me wise advice and counsel and who are helping me in my efforts, Paul Golz, Si Gallett, Gerry Meyers, Bernie Walpin. My appreciation and profound thanks to you, Wallace Campbell, for giving me this privilege to be with you.

I want you and all those who are interested in cooperative housing to know that my door in the House Office Building is always open to you, and that my aid, Bob Tienken, my staff, and myself are always ready to work with you in this good fight.

I assure you that it is a real pleasure to be with you, and I hope that the word "cooperative" will also be descriptive of my own endeavors in this extremely important field.

## Observations on Civil Defense

EXTENSION OF REMARKS
OF
### HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. KOWALSKI. Mr. Speaker, some very interesting and provocative observations on civil defense are contained in a letter written by Mr. Keith Hook of Hartford, Conn., to the Director of Civil Defense in that city.

The opinions expressed by Mr. Hook might well be studied by us all, for they refer to a situation which might occur though we hope it never does.

Here is the text of Mr. Hook's letter:

THE CONNECTICUT MUTUAL
LIFE INSURANCE CO.,
*Hartford, Conn., March 9, 1959.*

DIRECTOR OF CIVIL DEFENSE,
*City of Hartford,*
*Hartford, Conn.*

DEAR SIR: The new civil defense plan to send workers home on 1 hour's notice of an air raid appears to be a plan for mass slaughter and utter confusion. With people working staggered hours, we now have considerable traffic congestion. What would it be like with everyone in a hurry—full of fear and panic—and much more traffic on the streets. And suppose minutes after such a signal there is signaled take cover because of missiles launched from Soviet submarines off the Atlantic Coast which could reach Hartford in a matter of minutes from the time of launching? It would take days to recover from the chaos even if the missile never struck. And when these people get home, what shelter or protection do they have? The protection afforded by public buildings, offices and industrial plants is substantially greater than that afforded by residential homes.

Presumably, an air raid would occur only if there is a war with all the restrictions and shortages, and demands for production which go with it. With missiles traveling at the rate of 1,000 to 2,000 miles an hour, anything coming across the Arctic to a target east of the Rockies would presumably necessitate a tactical alert for the entire area. One or two of these a day, if this is followed throughout the country, would confuse and disrupt production and demoralize community life in general.

This plan would seem to indicate the total bankruptcy of our entire civil-defense thinking. By us, I mean everybody—the Civil Defense officials are merely the butt of it. It starts with the President, the Department of Defense, and Congress on down. I am not aware that any Federal buildings are being constructed with any shelter provisions. One doubts whether military installations generally have much in the way of shelter provisions and one believes that no provision has been made for the dependents of military personnel even those living on the base. Apparently the Department of Defense has the idea that a few Nike installations and air defense wings are sufficient, and that no passive civilian defense measures are important. This is like teaching a soldier how to fire a gun but not how to dig a trench or foxhole and take advantage of cover.

The only sound plan would appear to be to seek shelter at the point each person happens to find himself. All new construction should make some provision for shelters—at least new public buildings, office buildings and industrial plants. The use of a small percentage of the construction costs of this purpose could provide much more protection than would otherwise be afforded where such a problem is not considered.

I think the public should be informed of the thinking and reasons behind this decision for a tactical alert so that the public itself can weigh the pros and cons.

Very truly yours,

KEITH HOOK.

## Editorials Back American Bar

EXTENSION OF REMARKS
OF
### HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. SCHERER. Mr. Speaker, 2 weeks ago I place in the RECORD the report of the special committee on Communist tactics, strategy, and objectives of the American Bar Association whose recommendations were adopted overwhelmingly by the American Bar Association at its Chicago meeting.

The Cincinnati Enquirer on March 2, 1959, and the Pittsburgh Sun-Telegraph on February 25, 1959, commented editorially on the action of the American Bar Association. These are excellent editorials which I feel should be read by every Member of the Congress. I am therefore inserting them in the RECORD:

[From the Pittsburgh Sun-Telegraph, Feb. 25, 1959]

PLUG THEM UP

The governors of the American Bar Association have endorsed a report of a special committee on communism, which we consider of primary importance.

It calls on Congress to plug up technical loopholes upon which disturbing Supreme Court decisions have been based, and which "have had the effect * * * of freeing the subversive to go forth and further undermine our Nation."

This is no scatter-gun attack. In fact, the committee recognizes the Supreme Court and an independent judiciary, the "ultimate guardians of our bill of rights and the protectors of our freedom."

What concerns it is that decisions have "encouraged an increase in Communist activities." The concern, in other words, is the same as the Hearst newspapers have expressed often.

It is that Supreme Court decisions have sacrificed the rights of the community for protection against subversion by excessive

attention to the rights of individuals. Both rights must be kept in balance.

In this connection the resignation of Chief Justice Warren from the bar association, reportedly in anticipation of and protest against the report, can only strengthen the committee's case.

The report makes these specific recommendations:

Give States clear authority to enforce their own laws against subversion.

Empower the Secretary of State to withhold passports from subversives.

Clarify the Smith Act against conspiring to teach or advocate the overthrow of our Government.

Apply the Federal employees security program to so-called nonsensitive as well as sensitive jobs.

Tighten immigration laws for deportation of Communists.

We support them all and we hope Congress gets to work on them without delay.

---

[From the Cincinnati Enquirer, Mar. 2, 1959]

SUPREME COURT ON TRIAL

It's a rare and significant event when the representatives of 200,000 American lawyers register a scathing criticism of the U.S. Supreme Court and call upon Congress to remedy what the Court has done. Yet precisely that happened at the midwinter meeting of the American Bar Association House of Delegates at Chicago.

What aroused the lawyers' indignation and concern was a long series of Supreme Court rulings—24 in all—involving accused Communists or antisubversive legislation. For many months a special committee of the ABA on Communist tactics and strategy has been studying those rulings in the light of the internal threat from Communist and Communist-front groups. The committee has concluded that the majority rulings have been consistently and dangerously easy on the Communists.

"Many cases," says the committee report, which was given overwhelming approval at Chicago, "have been decided in such a manner as to encourage an increase in Communist activity in the United States." The net result is a paralysis of our internal security, resulting from the Court's reliance upon technicalities which play into the hands of the Reds—whose aim, of course, is to destroy our whole judicial process.

This is not the first evidence of concern in sound and experienced American legal minds. The conference of State chief justices last year felt compelled to call upon the U.S. Supreme Court to exercise the power of judicial self-restraint in dealing with subversion cases. There have, too, been frequent dissenting opinions, worded in language suggestive of alarm.

The most telling sidelight on this controversy was the action of the ABA house of delegates last week in accepting the resignation of Chief Justice Earl Warren, fountainhead of the go-easy trend in Court rulings on subversion cases.

What is now to be done about it? The ABA delegates recommended that, wherever there are reasonable grounds to believe that as a result of Court decisions internal security is weakened. Congress should step in and pass laws to seal up the leaks. Specifically, they demanded that State laws against a sedition should have enforcement powers concurrent with Federal laws. The Court has held that antisedition laws are the exclusive province of the Federal Government.

A State has little chance, of course, against a Federal Supreme Court bent upon a certain course of action. But Congress can pass laws to undo the effects of wrong-headed Court rulings. And if a Court arbitrarily rules such laws unconstitutional, the people can adopt a constitutional amendment.

In one way or another, and legally, the internal security of this Nation must be preserved. The blunt fact is that that security has been weakened by judicial misguidance at the highest level and it is time to call a halt.

---

## Balance Budget for Bright Economy

---

EXTENSION OF REMARKS

OF

## HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to enclose part of the transcript of a television program filed February 27, 1959, for presentation over KOMO–TV, Seattle, Wash., and KVOS–TV, Bellingham, Wash.

The program is an interview between myself and Dr. Raymond J. Saulnier, chairman of the President's Council of Economic Advisers. I believe Dr. Saulnier's remarks are of interest not only to the citizens of my own Second Congressional District of Washington, but also to all citizens of this land.

The transcript follows:

TRANSCRIPT OF INTERVIEW BETWEEN REPRESENTATIVE JACK WESTLAND AND DR. RAYMOND J. SAULNIER

Mr. WESTLAND. Practically everybody is interested in the future economy of the country and just what it holds for us in the way of economic development. I have been getting a lot of letters from people in my district and from people outside my district, talking about this budget we have, whether or not it should be balanced, and about our economy in general.

I believe that this subject is important and people all over the country are interested in it. In order to bring some discussion of this matter to you, I have as my guest today, Dr. Raymond J. Saulnier, better known among his friends as Steve. Steve is chairman of the Council of Economic Advisers to the President. Maybe, he'll be able to answer some of the questions that I'll ask here. Steve, it's good to have you on this program with me.

Mr. SAULNIER. Well, I'm delighted to be here. It's a flattering invitation.

Mr. WESTLAND. Tell me, just what is the Council of Economic Advisers, and what is its relationship to the President?

Mr. SAULNIER. The Council is a body set up by law—set up in the Employment Act of 1946. That means the Council has been in operation now for 12 years. Our job is to follow developments in the economy, to keep the President informed, and to work with the administration generally, appraising the impact of legislation and administrative actions on the economy and on jobs and income.

* * * * *

Mr. WESTLAND. The President has recently made a statement, Steve, that this last recession—the 1958 recession—was the sharpest and the shortest one we've ever had in history. Just how sharp was it and how long do you feel it lasted?

Mr. SAULNIER. Well, I think I'd want to correct that just a bit. We've had some sharper ones but we've had very few shorter ones. This is not to say that it wasn't a sharp recession, because it did fall off very quickly, beginning about the middle of 1957 and continuing through for about 9 months. We hit a boom, so to speak, in April. Now that's a very short recession by most of our historical experience.

* * * * *

Mr. WESTLAND. Well, do you feel that it is over now?

Mr. SAULNIER. I don't think that there is any question about that, in the sense that we are on a recovery path. The fact of the matter is we, certainly, in terms of production, have recovered by now the ground that was lost. In terms of employment we have recovered a bit less than the full amount of the ground that was lost.

Mr. WESTLAND. Well, that was one thing I want to discuss just a little bit later, Steve. But, now, this was one recession where we came out of it without any of these tremendous Federal programs. Remember, we had many recommendations or suggestions for sort of another WPA program, a tremendous building program which we avoided. We did do some things, but how do you account for this recovery without those other types of Government intervention?

Mr. SAULNIER. Well, I think fundamentally the most important feature of the recession and recovery was the fact that sales at retail stores through the country stayed up very well throughout the recession. There was a remarkably small drop in sales and that meant confidence was maintained and recovery came fairly quickly. Now, this is not to say that there weren't some industries that were badly hit—the automobile, for example.

Mr. WESTLAND. Yes, you're right. The lumber industry, for example, in the Pacific Northwest was hit quite badly, Steve, because the fact is, I think, that we only built about 900,000 homes in 1957.

Mr. SAULNIER. In 1957, but, I'm glad to say that's pretty much as, let us say, we expected. The building industry was one of the first to pick up and the pickup has been, as you know, very substantial. I certainly hope that we can continue a high level of building through the rest of this year and 1960.

Mr. WESTLAND. Well, actually, we've gotten off into home building and that's a real important thing in the Pacific Northwest, of course, to the lumber industry as a whole. I think we built pretty close to 1,200,000 homes, wasn't it, in 1958?

Mr. SAULNIER. That's correct, and we now are operating at a level a little bit better than 1,300,000.

Mr. WESTLAND. A million three hundred thousand?

Mr. SAULNIER. At the present time. And we are hopeful that that can be continued. I can assure you one of the things we have tried to do in Government has been to maintain a high rate of home building and there is hardly anything that has a more beneficial effect throughout the economy generally.

Mr. WESTLAND. That's right. The ramifications of it are tremendous. It gets not only into our lumber, of course, but also into all of the utilities and so many other things.

Mr. SAULNIER. That is correct. Then there is another aspect of it. And that is, we like to see homes being built.

Mr. WESTLAND. Yes, we like that, too. Steve, I think it was a week or so ago a professor at one of the universities, was talking about inflation. I believe he said that 3 percent inflation was creeping inflation, but that 5 percent inflation was galloping inflation. Now it is pretty hard for me to distinguish between these two. I'm basically opposed to any kind of inflation. But do you feel that we must have inflation if we're going to have this so-called full employment?

Mr. SAULNIER. No, I don't think so at all. I not only do not think that we need to have it in order to have full employment, but what is even more important, if we get into an inflationary period, we're just not going to have full employment. I feel very strongly about this. We can't sustain economic growth over a long period of higher levels if we are indulging in an inflationary spree.

Mr. WESTLAND. Why?

Mr. SAULNIER. Well, there isn't any such thing, really, you know as a moderate or creeping inflation. It starts at a low rate and that in itself will tend to pick up, feed on itself. This encourages all kinds of developments in the economy that at some point come to a crisis. Then you have disaster. What we want to do is to avoid that and have steady sustainable growth.

Mr. WESTLAND. What can we do here, say my job as Congressman, and others in the same area that you're in, to try to prevent inflation, Steve?

Mr. SAULNIER. There are a lot of things we can do, and as a government, many things. Now there's a program, that we think will promote steady growth and high employment and will avoid inflation, put forward by the President. It is spelled out in some detail in the Economic Report of the President which he sends to Congress every year, and sent in January. The cornerstone of that, I can tell you, for the Government, in my judgment, is a balanced budget.

Mr. WESTLAND. Just how important is a balanced budget?

Mr. SAULNIER. Well, I think it's vitally important, not only just for technical, economic reasons, the sort of reasons as economist can spell out for you in some detail. There's a psychological factor as well, and I think that at this time a balanced budget would do more for the psychology of Americans and for people around the world than any other single thing that government can do.

Mr. WESTLAND. Well, it's good to hear you say that, Steve, because that certainly repeats the feeling I've had for a long time. We're getting some brickbats thrown at us, such as you can't meet the enemy with a balanced budget. But it does seem to me that unless a country, as well as an individual, lives within its income it can go broke just as it happened in France or in Germany in the extreme. It could happen, I suppose, here.

Mr. SAULNIER. Of course, it could happen and we don't want that to happen. It is perfectly possible, as the President has shown, to have an adequate defensive budget within the framework of an overall balance, and that is the kind of budget which we have presented.

Mr. WESTLAND. Steve, the cost-of-living index has been remaining pretty stable for about the last 8 or 9 months. This is real important, Steve, to people who are retired or are trying to live on social security or their own pension plans. Is this balanced budget going to affect that or is it going to help keep it on a level keel?

Mr. SAULNIER. I think it will. I know it will. Of course, we're pretty grateful that it has been stable now for 8 or 9 months. I honestly believe that the outlook for some time ahead is for stable prices in general. On the other hand, we can upset this. One of the ways to upset it, in my judgment, is to engage in a level Federal spending that is not needed in terms of the needs of our country and is not matched by necessary revenues.

Mr. WESTLAND. Steve, in 30 seconds can you tell me what you see for the future economic wealth of this country?

Mr. SAULNIER. Well, I think the future is very good. Quite sincerely, I think the outlook for the rest of this year is good. We've had a good recovery so far and it is my own feeling that 1960 is even better.

Mr. WESTLAND. Thank you, Steve, that's good news and thanks very much for having been on this program with me.

## Statemaker: Leo William O'Brien

EXTENSION OF REMARKS
OF
## HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. ASPINALL. Mr. Speaker, the gentleman from New York [Mr. O'BRIEN] received a most deserved recognition from the New York Times in their issue of Friday, March 13, 1959, for the magnificent part he has played in the struggle for statehood for the Territories of Alaska and Hawaii. The great contribution which he has made will, of course, be written clearly and bright in history's pages of this era. In order that his many friends and associates may have the opportunity and pleasure of reading the profile written in the Times, I take pleasure in having it inserted in the Appendix of the CONGRESSIONAL RECORD:

STATEMAKER: LEO WILLIAM O'BRIEN

WASHINGTON, March 12.—A small, gray-haired, quick-witted, easy-going dynamo who likes to refer to himself as "one of the laziest men alive" has nonetheless found sufficient energy to pilot two new States into the Union.

Last summer Representative LEO WILLIAM O'BRIEN did it with Alaska. Today he did it with Hawaii. In both cases the task was made relatively easy by the intensive work done by the Albany Democrat in his capacity as chairman of the House Interior Subcommittee on Territories.

To hear the 58-year-old Representative tell the story, it all came about because "basically I'm a lazy guy, and I figured that if I got rid of enough Territories by making them States I wouldn't have so much work to do in my subcommittee."

But there are other, more serious motives:

"I have five grandchildren," he says. "They're coming along faster than the States are—and, well, when they read their history— books about the 49th and 50th States coming into the Union—they're going to have to give some thought to the old man. How many other Congressmen have that assurance?"

Statehood for these two long-hopeful Territories became something of a personal challenge to Representative O'BRIEN when he was first assigned to the Territories subcommittee 7 years ago.

The then-chairman, now Senator, CLAIR ENGLE, Democrat, of California, told him, "These are your babies."

"There was something about the way he said it," Representative O'BRIEN recalls, "that sounded sort of like, 'nobody else wants to be bothered with 'em, so you worry about 'em.' I decided I'd see what I could do."

The man who was to play such a major part in expanding the Union was born in Buffalo, N.Y., on September 21, 1900, attended St. Joseph's Collegiate Institute, Mount St. Joseph School, and Niagara University, from which he was graduated with a B.A. degree in 1922.

Unlike many a Member of Congress who says dreamily, "I was a newspaperman myself, once," on the basis of a few summers on the hometown weekly, Representative O'BRIEN can say it with reason. For 30 years he was a working newspaperman. He was a correspondent in Albany for International News Service and represented the New York Times there.

From 1935 to 1952, when he was elected to the 82d Congress to succeed the late Representative William T. Byrne, he served on the Albany Port District Commission.

Representative O'BRIEN is married to the former Mabel Jean of Cambridge, Mass. They have two children, Robert and Mary.

## Aid to Haiti Opposed

EXTENSION OF REMARKS
OF
## HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the editor of the New York Times:

AID TO HAITI OPPOSED—MAINTENANCE OF REGIME DECLARED NO SOLUTION TO ISLAND'S PROBLEMS

TO THE EDITOR OF THE NEW YORK TIMES:

The policy of the State Department as reported in the New York Times on February 26 to extend financial and diplomatic support to the government of Dr. François Duvalier of Haiti is incomprehensible. In the light of recent Latin American and Caribbean developments this support can only raise extremely serious difficulties for the United States in the future. The reasons purportedly given that Dr. Duvalier's overthrow would lead to chaos and that his alleged incongruous opponents are united only in their ambition to gain power are both false and misleading.

It is the dictatorship of Dr. Duvalier, backed by his secret police and the army, following his fraudulent election in the summer of 1957 that has presently created political chaos and financial bankruptcy. To try to maintain this regime by loans and other grants-in-aid may possibly aid existing conditions but cannot solve the Haitian problem in the future. For even were Dr. Duvalier to finish his term, he must sooner or later surrender his power. His successors, who already represent at least two-thirds of the Haitian people, will surely be among those now opposing him.

Moreover, to denigrate his three leading political opponents by challenging their good intentions to establish a functioning democracy flies in the face of any intelligent foreign policy. Also to rest a program of support of a dictatorship upon the alleged political incongruity of the Duvalier opposition is, to say the least, bizarre when it is considered that there are such disparate elements in the Democratic Party, for example, as Senator EASTLAND and Senator HUMPHREY.

ANNOUNCEMENT OF LOAN

A question may also be raised as to the manner in which this policy has been arrived at. It was preceded by and followed closely the announcement by a group of American economic and financial advisers to the Haitian Government that the Economic Cooperation Administration had made available a loan of $6 million. Undoubtedly the State Department and other Federal agencies have been contacted by public relations and economic experts representing the Haitian

Government in connection with this and other matters. It therefore seems unusual that this U.S. Government loan is first announced by the borrowing country's private agents rather than by the officials of our Government.

It is to be hoped that there will be a reconsideration of the implications of the policy to shore up the Duvalier regime, and that there will result a policy more in keeping with the lessons we should have learned from our recent Latin American experiences.

CLIFFORD FORSTER.

NEW YORK, March 2, 1959.

## Reuniting of Families

EXTENSION OF REMARKS
OF
### HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. DANIELS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include my statement issued in connection with a bill I introduced on March 11, 1959, to amend the Immigration and Nationality Act to facilitate the reuniting of families:

TO FACILITATE REUNITING OF FAMILIES

On March 11, 1959, I introduced a bill to amend the Immigration and Nationality Act to grant nonquota status to certain immigrants who are brothers, sisters, sons, or daughters of American citizens. These close of kin are classified under the fourth preference quota section of the act, and it is unjust and inhumane to prevent them from being reunited with their families. One of the cardinal principles of our immigration laws should be to facilitate the reuniting of families.

Fourth preference visas can be issued only when deficiencies occur in the first, second, and third preferences, which are allotted 100 percent of the quota. It is unjust to permit American citizens to file petitions for their brothers, sisters, sons, or daughters, granting them approval and then let them pile up in a huge backlog at the American consulates abroad without the hope of any visas being issued.

There are approximately 100,000 petitions on file and many of these were filed as far back as 10 years ago. The petitioners have been waiting hopelessly for many years to be reunited with their parents, brothers, or sisters. In Italy, for example, there isn't a single available quota for the fourth preference group nor is it contemplated that there will be one for many, many years to come. This is true of Poland, Hungary, Spain, Greece, Portugal, and many other countries. The consulate in Iraq is now processing applications filed in 1946 and applications from Turkey are presently being processed which were first filed in 1945. It is estimated that there is a backlog of some 100,000 people who daily crowd the offices of our consulates abroad and unless this conversion is made from quota to nonquota, the number will grow and the pressure will increase.

This backlog is due primarily to our national origin quota system which gives such pitifully small quotas to the countries of southern Europe and Asia and gives to Great Britain 65,360 of our total annual quota of 152,000. Yet Britain uses only 10 percent of this alloted quota and the rest is wasted.

To rectify this inequity of opportunity, I therefore introduced a bill which, following the precedent established by the act of September 11, 1957, will provide for the conversion of the fourth preference category registered up to July 1, 1959 to nonquota immigrant status. It is my considered opinion that this is the just and humane thing to do in the interest of the United States.

## We Can Go Broke

EXTENSION OF REMARKS
OF
### HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Peoria Journal Star of March 8, 1959, entitled "We Can Go Broke":

WE CAN GO BROKE

Numerical symbols expressing the national debt and annual Federal spending no longer correspond with anything in human experience. Such amounts are beyond our ability to imagine. Maybe that's why Americans seem to feel that the Nation can't go broke. But they are wrong. Governments can go broke. The danger sign is weakening credit.

A recent offering of 3-year Government bonds at 4 percent failed by $2 billion to be taken. The Treasury had to issue short-term paper for the difference.

One editorial comment was: "Worried officials pointed out that short-term paper is much the same as printing-press money. The issuance of it has the effect of turning $2 billion of unbacked currency into the money supply."

A business publication commented: "Where there is aversion to a Government 3-year obligation at 4 percent, the technical financial position of the Government debt service does not seem too healthy."

Governor Williams of Michigan is a believer, like Leon Keyserling and Walter Reuther, of freer government spending. Michigan has gone broke, flat broke. Because it was unable to meet its payrolls or pay its bills, some Michigan industries prepaid $35 million in taxes. This, we understand, enabled the State to pay some employees who had received no checks since last November.

Doubtless the day is coming when other States will go broke. One major reason for this is that Federal taxation takes dollars while States are collecting dimes.

The Federal tax collector also makes the financing of local governments difficult. We pointed out not long ago that Peoria County's share of just the interest on the national debt runs into millions of dollars a year.

The national debt has increased $12 billion in the last 10 years. At the same time, the total debt of local governments has increased $32 billion. The total State and local government debt now is more than $50 billion. Add this to the national debt and you get a figure around one-third of a trillion dollars. And the total is still going up. Is anybody foolish enough to believe that there is no limit?

The United States can go broke, of course. We are well on our way when the dollar depreciates by more than 50 percent in 20 years.

What can we do? We can do what any prudent family would do on the brink of bankruptcy, start living within our income and paying off our debt.

We certainly can't do it, as today's Alice-in-Wonderland economists urge, by going further into debt.

## Poison in Your Water—No. 37

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. DINGELL. Mr. Speaker, an article appeared in the Boston, Mass., Globe on September 24, 1957, discussing water in the United States.

Some remarks there discussed how one river along the once beautiful Ohio is affected by pollution. That article tells of the Ohio River in the following language:

When the Ohio River is flowing at minimum stage, one quart of every gallon of water flowing through the faucets of Cincinnati has been through someone's toilet or a kitchen sink upstream, or through a mine dump or industrial plant.

This situation we find everywhere in this country and, indeed, it will get worse rather than better with our population growing at the most rapid rate in history.

If we are to leave a land where our children can have pure water we must take vigorous action now to clean up the filth that we dump in our streams.

The article from the Boston Globe follows:

RIVER TAPPED FOR DRINKING WATER SO POLLUTED FISH CAN'T LIVE

(By Sidney Goldberg)

When the Ohio River is flowing at minimum stage, one quart of every gallon of water flowing through the faucets of Cincinnati has been through someone's toilet or kitchen sink upstream—or through a mine dump or industrial plant.

The Ohio at such times is more like an open sewer than a river, and the disease possibilities are limitless. Although this water can be rendered harmless by chlorination, the fact is that Cincinnati has to go through enormous expense because of the sloppy habits of other cities.

This is no strange-as-it-seems example of what is going on in America. It is the common accepted fact.

Most cities enacted legislation decades ago to stop people from tossing their garbage into the streets. As far as the cities themselves are concerned, however, they toss their mountainous supply of waste products into America's rivers or streams without so much as a warning.

The Nation's Capital, indeed, is in the thick of it. The Potomac is so overloaded with sewage, largely human waste, that around Washington it is carpeted with garbage to a depth of several feet.

Many of America's rivers and streams have become so polluted that even the fish have died. Some river bottoms are lined for miles with coal dust, others with animal or vegetable wastes, which combine with so much oxygen in the water that fish can no longer breathe.

The latest count shows that there are 16,000 community water supply systems in the United States—but only about 9,000 sewage disposal plants. This means that 7,000 communities have no sewage disposal or purification systems whatsoever. Their system is a simple one: merely throwing their garbage—well beyond the city limits, of course—into the river that will carry it downstream to the next town. Very likely, the next city will do the same thing.

Industry is affected as much as the public by this defacing of America's rivers. Some industrial processes require water that is as pure—or purer than drinking water.

But industry, besides needing it clean, needs it cool. Yet water that is piped through factories to cool off the machinery and the water emerges pretty hot.

The Merrimack, lined from Manchester, N.H., to Lowell and Lawrence, Mass., by scores of industrial plants gets as hot as 110° during the summer.

The Mahoning River flowing through Youngstown, Ohio, is an extreme example. Water used by the steel industry for cooling is used sometimes as many as 10 times and on occasion this has raised the temperature of the river to 140°. Recent construction of reservoirs along the river has solved this problem somewhat, but expansion possibilities are limited in the area.

The Merrimack and the Mahoning, one might say, are relatively small rivers and can be overheated rapidly. But as industry moves south and west even the mightiest streams will start sizzling. The Atomic Energy Commission's plant at Hanford, Wash., for instance, casts off enough heat to raise the temperature of the whole Columbia River by one degree. And the atomic age is just beginning.

Because of pollution and heat, there is far less usable water in America's lakes and streams than one thinks. The logical answer is for every city and industrial plant to clean up its sewage through purification processes and then use it again before it accumulates and does serious damage to the life of the rivers.

Somehow Americans can't get used to the idea of drinking their own sewage, even after purification. They much prefer to go right on purifying other peoples' sewage and drinking it down heartily.

But a start is being made. In August 1956, New York City announced it would spend $225,000 to try to clean all its surrounding waters of sewage by 1965.

The Ohio Water Pollution Control Board has spent $200 million for municipal sewage disposal facilities since 1952, especially between Cincinnati and East Liverpool.

Factories are beginning to clean up too. When Kaiser set up a plant in Fontana, Calif., it installed a recirculation system that uses partially treated municipal sewage as a coolant. General Motors' new refinery at Ferndale, Wash., releases an affluent so thoroughly clean that salmon have been caught 100 yards below the sewage outlet.

Most towns, however, are wary of forcing antipollution measures on factories out of fear that the plants will pack up and move to a less prudish municipality.

The U.S. Public Health Service estimated in 1955 that, merely to keep pace with increasing pollution, the Nation's cities would have to spend at least $500 million every year for the next 10 years. By doing so, our rivers wouldn't be any cleaner—but at least we would be able to hold the line against further damage.

Until we start spending even more on this mammoth clean-up project, however, Public Health officials will continue characterizing many American streams as sewers a thousand miles long.

## The Unemployment Problem

EXTENSION OF REMARKS
OF
### HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. DADDARIO. Mr. Speaker, I should like to call the attention of this body to this statement in the March 1959 Monthly Review published by the Federal Reserve Bank of New York:

Total output and incomes have been expanding strongly so far in 1959. However, even measured by the most optimistic data, the accompanying recovery in employment has been disappointing compared with that achieved during the previous postwar business upswings. Unemployment, moreover, is still high for a period at which production is on the verge of, or even at, an all-time peak. A considerable further expansion of demand and output will be required to bring down the unemployment rate to its prerecession level.

This paragraph is the summation of a discussion of measurements of the business situation. I commend it to the reading of the House and I would respectfully emphasize that this unemployment problem remains one of the two most significant problems facing the Nation today.

## Preservation of Gettysburg Battlefield

EXTENSION OF REMARKS
OF
### HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 5, 1959*

Mr. DENT. Mr. Speaker, the great State of Pennsylvania is justifiably proud of its part in our history.

It is just as proud of the historic sites and landmarks that punctuate this history with lasting monuments.

The senate of that great State has passed a memorializing resolution, calling upon its Members in Congress to give their full support to any proposal in the U.S. Congress that will help in the preservation of one of these great monuments, the battlefield at Gettysburg, Pa.

I submit for the benefit of non-Pennsylvanians a copy of this resolution:

RESOLUTION

The battlefield of Gettysburg is one of the most sacred historic shrines in Pennsylvania and the United States as the scene of the great battle on July 1 to 3, 1863, which marked the turning point in the Civil War.

As the result of the initiative of Gov. Andrew G. Curtin, of Pennsylvania, and of other northern Governors, the site of the battle became a national cemetery and park which eventually passed into the care of the Federal Government.

The plans for the continuing development of the Gettysburg National Military Park which calls for the eventual inclusion in the park of the entire area where the battle was fought are seriously threatened by commercial enterprises which are stimulated by the volume of visitors to the park: Therefore be it

*Resolved*, That the Senate of the Commonwealth of Pennsylvania hereby recommends to the Pennsylvania delegation in Congress that they support any legislation and appropriations which will protect the environs of the battlefield of Gettysburg from encroachment by commercial enterprises and housing which may prevent the full and complete development of Gettysburg National Military Park by the National Park Service; and be it further

*Resolved*, That a copy of this resolution be sent to each U.S. Senator and Congressman from Pennsylvania.

## Hemingway Has Great Hope for Castro

EXTENSION OF REMARKS
OF
### HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal-American of March 9, 1959:

HEMINGWAY HAS GREAT HOPE FOR CASTRO
(By Emmett Watson)

SUN VALLEY, IDAHO, March 9.—It was early afternoon and the bright, high sun was melting the snow to slush on the walk to the Challenger Inn. The skiers were on the slopes and the village was nearly empty.

This was a good day for skiing. But the figure coming down the main walk on the west side of the village was unmistakable—tall, white-bearded, with steel-rimmed spectacles.

We had met Ernest Hemingway two nights before and he remembered. We went inside to a place called the Ram for a drink. The mountains would always be there, but a chance to talk with Hemingway doesn't come with every show.

We talked about Cuba and the Castro revolution—the first time Hemingway has commented on this historic event for any American newspaper.

Hemingway, 59, who has fought in two wars, observed firsthand the Franco revolution in Spain and has written about all three, called the Cuban uprising against dictator Fulgencio Batista the first revolution in Cuba that really is a revolution.

Hemingway said he has "great hope for the Castro movement."

Hemingway now lives in Ketchum, Idaho, with his wife, Mary. He is busy finishing his latest novel in Sun Valley.

The famed American novelist has lived much of his recent life in Cuba. "To Have and Have Not," a hard bitten but compassionate book, begun in 1933 and finished in 1936, had its setting in Cuba and part of it was written there. "The Old Man and the Sea," his most recent success, has as its central character an aging Cuban fisherman.

"I believe in the cause of the Cuban people," he said, during the relaxed hour-long talk. "They have had changes in government before in Cuba. But these were just changes of the guard. When the new ones got in, they went right on stealing from the people."

Hemingway, who has won both the Pulitzer and Nobel prizes for literature that spanned the past 30 years, spoke intently of Cuba.

"Some of Batista's officials and police officers were good, honest men," he said. "But a lot of them were thieves, sadists, and torturers. They tortured kids, sometimes so badly they would have to kill them."

Hemingway described how the bodies were found—horribly mutilated. He catalogued in unprintable details the methods of torture used by Batista police. He described the graft and corruption.

"These trials and executions are necessary," Hemingway said. "If the government doesn't shoot these people, they will be killed for vengeance. The result would be personal vendettas in every village and town."

Hemingway said the Castro movement depended, in large part, on its promise to the Cuban people that Batista men, responsible for atrocities, would be punished.

"The Government has to carry out its promises," he said. "There was a lot of criticism over the shooting of Batista officials.

"But the Government had to show it was in control, to give people a respect for law and order."

Hemingway talked of the Cuban revolution with scarcely a pause. He went on:

"When the executions are over, I believe the Government should ban capital punishment. Shooting a man is not necessarily the right punishment."

Hemingway said he believed the Cuban labor laws, under Batista, were good. "But the unions were closed to a lot of workers. Others couldn't get in. They were closed, and a lot of people couldn't work. They were actually going hungry."

He spoke of returning soon to Cuba to live. "Cuba has been good to Americans," he said. "It's a wonderful place to live."

Hemingway sipped his Scotch and lime slowly; his working day was over and he seemed relaxed and happy.

The huge, roughly-dressed writer has become a legend in Sun Valley, where he has lived, intermittently, since the early days of the village, and where he wrote parts ("the parts with snow in it") of "For Whom the Bell Tolls."

He loves to fish and hunt with a few close friends, or with an occasional visiting celebrity.

He said he works in the mornings, writing in longhand, and that his new book is nearly completed. Almost apologetically, he refused to discuss it.

"If you talk about it," he explained, "you lose it. Something happens to it."

Hemingway is slimmer and much older than when he wrote "Green Hills of Africa." But if someone asked him, as Kandisky did, "and what do you want?" he would still reply, as he did in 1935, "To write as well as I can and learn as I go along. At the same time I have my life which I enjoy and which is a damned good life."

## H.R. 5464: A Bill Providing for a Patent-in-Fee-Simple Covering Rosebud Tribal Land

EXTENSION OF REMARKS
OF
### HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mr. BERRY. Mr. Speaker, I have today introduced legislation similar to H.R. 5468, directing the Indian Department through the Secretary of Interior to issue a patent-in-fee-simple to Bartley M. Mills, covering Rosebud tribal land he should receive in exchange for deeded land.

In this instance Mr. Mills made application for trade with the Rosebud Tribe in 1950. At that time both tracts of land were appraised at equal value by Indian Bureau appointed appraisers. Mr. Mills proposed to exchange 160 acres of his land in Todd County for 80 acres of tribal land located in Tripp County.

On January 10, 1950, Mr. Mills conveyed his patented land to the United States in trust for the Rosebud Sioux Tribe. The deed was recorded in the register of deeds office in Tripp County on September 20, 1950. Since that time the Rosebud Sioux Tribe has had title to Mr. Mills' 160-acre tract, has collected lease rentals from both pieces of land, and Mr. Mills has been waiting to receive title for the N½NW¼ S. 32, T. 100 N., R. 75 W., Fifth Principal Meridian, in Tripp County, S. Dak., which is the land he was to receive for his land.

Both tracts of land have been off the tax list since 1950. The local governments have been deprived of tax revenues from both tracts. All steps in the transaction have been handled and approved by the Department. There is no excuse for the delay other than abnormal Bureau redtape.

The transaction was never completed, however, and on March 5, 1958, the Rosebud Sioux Tribe adopted a resolution disapproving all exchanges involving tribal lands.

## Berlin

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. George E. Sokolsky which appeared in the Washington Post and Times Herald on Thursday, March 12, 1959:

BERLIN

(By George E. Sokolsky)

The United States, Great Britain, France, and Soviet Russia are in Berlin as an act of war because they defeated Hitler and conquered Germany. Germany itself came to be divided into two parts, East Germany and West Germany. East Germany developed into a satellite of Soviet Russia, a part of the Soviet universal state; West Germany developed into a free country, rich, effective, competitive in world markets with Great Britain and the United States.

No peace treaty has ever been arranged with Germany because there can be no agreement as to which of these two is Germany. Therefore World War II never ended in Europe.

Since the end of World War II as a fighting phase of a continuous war since 1914, various attempts have been made to find a formula for uniting the two Germanys but all such efforts have failed. The fact is that whereas West Germany can speak for itself in the voice of Chancellor Konrad Adenauer, the voice for East Germany comes from the Kremlin in Moscow and its owner is Nikita Khrushchev.

Errors were made during World War II at Yalta and Potsdam in the determination of the fate of Germany on the assumption that Soviet Russia was a loyal ally which sought the same kind of a peaceful world that the West sought. The imperialistic characteristics of Soviet Russia were not identified, with the result that today, 14 years later, the question of Berlin and of the unification of Germany is still before us and may lead to world war III.

Two courses are open to the United States:

1. Berlin and West Germany can be abandoned to the imperialistic purpose and strength of Soviet Russia;

2. The United States and its allies can refuse to abandon Berlin and West Germany.

The first course would bring the power of Soviet Russia to the Rhine and France would have to prepare to defend itself from being absorbed in the Soviet Universal State; the second course could lead to a general war involving the United States.

The second course indicates that patience has been exhausted and that the Western world will defend itself; the first course indicates that the West has become obsolescent and gives up under threat.

Eugene Lyons, who is an authority on Russia and a senior editor of the Reader's Digest, said:

"The real enigma is why we who are earmarked for conquest prefer to kid ourselves that communism can somehow be bought off, or contained, or induced to commit suicide by suddenly renouncing global conspiracy and world domination. We behave as if this were a conventional disagreement between nations—a question of territory and markets and colonies, as in the past. But it's nothing of the kind. What's involved is the 'permanent revolution' unleashed by Lenin, promoted with increasing zeal and increasing success by all his successors. And we're doomed to defeat as long as we subsist on political tranquilizers."

This view is absolutely correct. It can only be hoped that it is not too late. Soviet Russia seeks the absorption of the continent of Europe in the Soviet universal state, which would give the Soviet universal state an industrial base unequalled in world history and which would reduce the significance of the United States considerably. In Germany, Soviet Russia would find a hard working, initiating, and imaginative people.

The ultimate target is, of course, the United States, which is the principal stumbling block to Soviet Russia's imperialistic ambitions. The Communists have always held that they can defeat the United States without a fighting war. The mechanism for that is for Soviet Russia to use capitalistic methods to compete with American manufacturers in world markets. In this phase of the cold war, Soviet Russia is progressing rapidly. Secondly, Soviet Russia employs the psychological phases of the cold war to raise our budgets, to stimulate inflationary measures in this country, and a flight of nervous capital to Switzerland, and other tax and money havens.

Khrushchev may retreat from his threats over Berlin but that will be of no significance. He will try in Iran; he will try in Cuba or Venezuela, or Bolivia; he will try in Indonesia. Should Khrushchev fall or die, the same program will be followed.

## Poison in Your Water—No. 39

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. DINGELL. Mr. Speaker, pursuant to premission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Charleston, S.C. News & Courier of May 29, 1958, entitled "Harbor's Pollution Warning Is Issued."

The waters of Charleston Harbor were described in this article as a "huge dumping ground for tons of raw sewerage daily" which "post a threat of infection to swimmers or persons shellfishing in the harbor area."

This is just another of the prices that Americans in all corners of our land must pay for the filth and sewage which we dump into our waters.

HARBOR'S POLLUTION WARNING IS ISSUED

The waters of Charleston Harbor—a huge dumping group for tons of raw sewerage daily—pose a threat of infection to swimmers or persons shellfishing in the harbor area.

A spokesman for the County Health Department said yesterday that water pollution control studies made in Charleston Harbor indicated harbor waters were polluted by raw sewerage and swimming or shellfishing were not advised. The amount of contamination varies depending on the amount of raw sewerage dumped into the harbor daily, the Health Department said.

He continued that it was not practicable to post warnings on the entire harbor perimiter, but public announcements of the condition were made from time to time.

## Meet the Weintraubs From North and South

EXTENSION OF REMARKS
OF
**HON. HUGH J. ADDONIZIO**
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. ADDONIZIO. Mr. Speaker, Mr. M. Martin Turpanjian, the president of the New Jersey League of Weekly Newspapers, and associate editor of Spotlight magazine, has kindly sent me an article which will be of interest to the membership. The article appeared in a recent issue of the Spotlight magazine, which this year is celebrating its 25th anniversary as the "Bible for Who's Who in New Jersey." Mrs. Conrad Lyons is the editor and publisher.

This article is a fascinating account of two men, one of whom I am privileged to claim as a constituent, with the same name and profession who have carved distinguished records in two different sections of the country. It reads as follows:

MEET THE WEINTRAUBS FROM NORTH AND SOUTH

Two men, same name, same profession, bearing a superficial resemblance to each other, but with an uncanny similarity of handwriting, have written another chapter in the familiar American success story in two different States of the Union.

In New Jersey, Joseph Weintraub is the chief justice. Born in March 1908, the third month of the year has played an important part in his life on two other occasions. March 1943 he was inducted into the Army, from which he was inactivated 3 years later with the grade of captain, Judge Advocate General's Office; and in March 1956 he was appointed judge of the superior court of New Jersey.

An unassuming man, he moves with the quiet dignity the responsibilities of his office entail, but his own charming, considerate, and gracious personality is a powerful force that is immediately felt by all who come into contact with him. He is noted for his courtesy and his kindness both off and on the bench.

One of the youngest men ever to hold the highest office in New Jersey's judicial scale, Weintraub has enjoyed a truly meteoric career.

Educated at Barringer High School, Newark. Bachelor of arts degree, Cornell University. Elected to Phi Beta Kappa, Phi Kappa Phi, and Alpha Kappa Delta. Bachelor of laws degree with special honors, Cornell Law School. Editor in chief, Cornell Law Quarterly. Elected to the Order of the Coif. Admitted to New Jersey bar 1930. Counselor 3 years later. Associated continuously in the practice of law with Edward R. McGlynn, Newark, becoming a member of the firm of McGlynn, Weintraub & Stein in 1948. Special assistant to attorney general, 1941–43. New Jersey member, waterfront commission, New York Harbor, 1954. Counsel to the Governor. Appointed to the superior court 1956 (March) and in November 1956 to the supreme court, becoming chief justice August 19, 1957.

Chief Justice Weintraub was a member of the board of editors of the New Jersey Law Journal. He is a member of the American Bar, New Jersey State Bar, Essex Bar, and Judge Advocates Associations. His hobby is golfing, and he is said to be championship material.

His elevation to the highest bench in New Jersey came as no surprise to lawyers who have long recognized that in Joseph Weintraub "law" is personified.

Since the age of 13, when he became an office boy in the law firm to which he finally ascended to full membership, he has lived and breathed Blackstone. His amazingly retentive memory, his long years of study, his extensive headings, and even his travels, have been in the interest of law and law enforcement. He is presently engaged in a program of streamlining the New Jersey courts.

In Florida Joseph Weintraub, lawyer, brilliant, witty, and delightful personality, combined a background of the law, with his knowledge of finance to place himself in the forefront of the South's outstanding citizens.

Born in Waynesboro, Ga., December 10, 1904, he was educated at the University of Virginia, 1922–25; New York University, 1925–26. Admitted to the Florida bar 1927. Admitted to practice U.S. District Court 1927; and before the Supreme Court of the United States in 1937.

He has practiced law in Miami since 1927, and now heads the law firm of Weintraub, Martin & Schwartz.

Among his many other interests are: Organized American Title & Insurance Co., 1936. President since 1940. Director since 1936. Proprietor Cortez Hotel. President and director of Gibson Security Corp. since 1936. President, Equity Fire Insurance Co., Ltd., of Basle, Switzerland, 1951. President, Management Co. Swiss National Insurance Co. Chairman of board South Atlantic Title Insurance Co. Vice chairman of board, Mercantile National Bank of Miami Beach. Director, Metropolitan Bank of Miami. Director, Bank of Hollywood Fla. Director, South Atlantic Mortgage Co. of Miami. Member of Florida and American Bar Associations. Member, American Judicature Society.

A joiner he is a Mason, Elk, Shriner, Rotarian and president of the Westview Country Club and Variety Club.

The Florida Joseph Weintraub is married to the former Hortense Katz, and they have two children Joanne and Michael.

## Statehood for Hawaii

EXTENSION OF REMARKS
OF
**HON. FRANCES P. BOLTON**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mrs. BOLTON. Mr. Speaker, on Wednesday and Thursday when H.R. 4221, the Hawaii statehood bill, was before the House, I was unable to be present because of illness. Having been a supporter of such legislation for many years, I regret missing the two votes very much. Had I been able to be present, I would have voted "yea" on the rule for consideration and "yea" on passage of the bill.

I extend my congratulations to the people of Hawaii, and shall hope to visit our 50th State sometime in the not-too-distant future.

## When Pope John Goes to Moscow—That Will Be the Day

EXTENSION OF REMARKS
OF
**HON. JAMES B. UTT**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial, "When Pope John Goes to Moscow—That Will Be the Day," which appeared in the March 8, 1959, issue of the Indianapolis Sunday Star:

WHEN POPE JOHN GOES TO MOSCOW—THAT WILL BE THE DAY

For 1,000 years the leaders of Irish independence declared they would stand by their principles "until hell freezes over." It was a picturesque way of saying never.

Now we would like to suggest a modern paraphrase: "When Pope John goes to Moscow—that will be the day." It, too, means never.

Nobody in this world expects Pope John to go to Moscow to beg for peace or negotiate for mercy or to plead for cooperation. And why don't they? Because they know that to try to make a deal directly with atheistic murderers, mass killers, unprincipled destroyers of the people's liberties, liars and persecutors of religion would be unthinkable for the Pope, the leader of Catholic Christianity.

This is so because the Pope has taken an inflexible, unchangeable and absolutely firm stand on the question of the existence of God. He does not believe there could be any compromise on that important matter. Any flexibility on that issue would of course destroy the church, the Christian religion and indeed our whole civilization. There can be no coexistence agreement between God and Satan, and you cannot reconcile good with evil. Neither can you reconcile democracy and freedom with communism and slavery.

But if it is unthinkable for the Pope, why is it not for the leaders of Christian nations, of religious peoples, of free institutions? Why does Prime Minister Macmillan trot obligingly off to Moscow at the behest of the evil Khrushchev and permit himself to be slapped in the face with insult and treachery? Why does President Eisenhower even consider going to Moscow or sending Vice President NIXON as his emissary to the Kremlin to receive the same rough treatment? Why does Dag Hammarskjold, Secretary General of the United Nations, plan a trip to Moscow where he, too, can only expect to be received with calumny and sneers?

Do you know why? Because they are afraid not to go. That is all there is to it. Khrushchev, the dictator of a backward and brutal tyranny, has become like a Roman

emperor in our world, calling in the neighboring kings to be exhibited scornfully to the jeering crowd of onlookers just to prove that he is master of the world.

By these craven missions to Moscow, the leaders of the free world are acting like those European and Asiatic ambassadors who trekked across the Russian plains to the abode of the great khans to grovel and beg for mercy when these Mongol tyrants were sweeping half the world before their murdering cavalrymen. But Khrushchev is no Genghis Khan. Nor is his force so irresistible. As Adm. Arleigh Burke told us the other day, the United States of America has the power to destroy the Soviet Union should Khrushchev trigger an attack. Our Nation is the most powerful nation, with or without allies, in the world.

But power, without the will to use it when necessary, is useless. The British and French discovered this when they faced a daring and rearming Hitler across the Rhine, and ended up with appeasement at Munich and war. The Romans, centuries before them, discovered this when their great and glittering empire was assaulted by the barbarian tribes from the north who coveted their riches. The Babylonians, with their brilliant but decadent civilization, had the same experience when the Assyrians came down like a wolf on the fold, their helmets all gleaming with purple and gold.

Are Americans or Europeans no different from these faded civilizations which have risen to the heights only to die in the depths when they lost their will to independence and freedom from barbarous tyranny? Will we, too, quail before the rough and arrogant barbarian ruler who now tells us that he intends to bury us and all we hold dear?

The Communists in the Soviet Union are openly bent on the destruction of free Europe and the United States. They have told us, as repeatedly as Hitler told his neighbors what he intended to do to them, that they will make us Communist captives if they can. Yet while we still have the power to resist and defeat them, while we have the strength to protect our liberties and secure our nationhood against these terrors, we accept with honor and hospitality Khrushchev's suave and cunning ambassador Mikoyan, the murderer of thousands of Hungarian patriots. The British Prime Minister went on his pilgrimage to Moscow only to be rudely insulted while he was forced to listen to our own leaders being reviled. And still some of our legislators in Washington entertain thoughts of accepting this tyrant's terms for a summit conference and the Berlin seizure, calling it "flexibility." There can be no flexibility when compromise and surrender mean tyranny and slavery.

Flexibility is just a new diplomatic word for cowardly appeasement.

It is better to die on your feet, if you must, than to live on your belly. It is better for the United States to revive its old revolutionary slogan, "Don't Tread on Me," and face the consequences of a brave and determined policy against communism than meanly to give away, a bit at a time, our pride, the liberties of our friends, our treasure, and finally our independence as a nation.

## Greater Safety in the Mining Industry

EXTENSION OF REMARKS
OF
### HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mrs. KEE. Mr. Speaker, the action of the Public Health Service in approving a research grant of $79,775 for the Beckley Memorial Hospital at Beckley, W. Va., for studies in cardiopulmonary diseases is a well-deserved recognition of the fine hospital and medical system created by the miners welfare fund.

The Federal grant will go to build and equip a health research laboratory, supplementing existing facilities, for studies in the disease which is prevalent in the West Virginia mining area, much of it being pneumoconiosis presumably related to coal dust.

The facility will provide for biochemical studies, microbiological studies, morphologic pathology with a limited amount of space for animal quarters.

This facility represents another step forward in the program to bring greater safety into the mining industry.

West Virginia University received a grant of $56,328 for equipping a new medical center building, and for this we are very grateful, Mr. Speaker.

## Farm Frustration

EXTENSION OF REMARKS
OF
### HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Peoria Journal Star of Monday, March 9, 1959, entitled "Farm Frustration":

FARM FRUSTRATION

Pulling up stakes and leaving the country is a pretty drastic way of making a protest but that is what Stanley Yankus, poultry farmer of Cass County, Mich., is preparing to do.

Infuriated at Government collection of a $5,000 fine against him because he ignored wheat acreage controls imposed on him, Yankus has put his farm up for sale and says he is going to Australia.

While we doubt the wisdom of his move—Australia has crop production controls too—we can sympathize with Mr. Yankus' frustration. Had he voluntarily signed up for the wheat production program, it would be different. Then he could have expected to have to abide by acreage allotments set by a control board. Mr. Yankus, however, did not join in the production control program. He received no financial benefits as a result of withholding a certain amount of his acreage from production.

The Yankus case is made more complex by the fact that he didn't place any of the wheat he raised on the market, at least in the form of wheat. He used its as feed for his chickens and the chief commodity produced on his farm was eggs.

The Yankus case demonstrates graphically what happens when a Government engages in a program of crop control. Not only the people who want to join in such a program and receive recompense for withholding acreage from production have to accept controls. So do those who ask no aid and want no part of the program. The whole idea of free enterprise is throttled by such a program.

On top of everything else, acreage controls are ineffective, anyway. Some farmers get paid for withholding certain amounts of land from production, then raise more on the ground they have left by using greater amounts of fertilizer or engaging in more intensive methods of production. The objective of reducing production is defeated.

The Yankus case is a prime example of the futility of governmental meddling with agricultural production.

## Army Defends Nike-Zeus, Sidetracked ICBM Killer

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following new story written by Mr. Bem Price which appeared in the Philadelphia Inquirer on February 23, 1959, and an editorial from the same newspaper of February 24, 1959:

[From the Philadelphia Inquirer, Feb. 23, 1959]

ARMY DEFENDS NIKE-ZEUS, SIDETRACKED ICBM KILLER

(By Bem Price)

WASHINGTON, February 22.—Embittered Army sources claimed today the United States is much closer to a workable defense against intercontinental ballistic missiles than testimony before Congress would indicate.

The sources for this story—3 months in the gathering—stretch from Redstone Arsenal at Huntsville, Ala., to Fort Bliss, Tex., to Washington. None can be identified.

Permission to use some of the information gleamed since early November was granted by these sources after testimony before Congress by Dr. Herbert C. York, Director of Research for the Defense Department's Advanced Research Projects Agency.

MAJOR DEFENSE PROBLEMS

At the moment the Nation's major defense problem is development of a missile which can intercept and destroy warheads loaded with small hydrogen bombs aimed at this country over intercontinental ranges and traveling at speeds of 15,000 miles an hour plus.

The Army believes it has such a defense in the projected antimissile missile, the Nike-Zeus. The Zeus is a nuclear missile which is intended to destroy enemy ICBM's out in space.

An artist's sketch of the Nike-Zeus accompanies this story. It is based on well-authenticated details and, so far as is known, is the first reliable sketch of the kind to be published.

APPROPRIATION REJECTED

What has embittered Army sources is Secretary of Defense Neil H. McElroy's rejection of a request for $730 million to produce the Zeus.

W. J. McNeill, Assistant Secretary of Defense, has explained that the defense budget seeks no money for production of the Nike-Zeus missile because it is not far enough advanced.

He told the Senate-House Economic Committee that the budget does contain money to perfect the missile "but we have not put in money for bases or production lines because the missile is not ready."

YORK BACKS M'ELROY

On February 17, York testified before the House Space Committee that he believed

McElroy was right in making the turndown; that Zeus had not reached a point in development where large scale production was warranted.

Douglas Aircraft Corp., at Santa Monica, Calif., is now in limited production on components of the yet-to-be produced prototype of the Zeus.

Western Electric Co. is the prime contractor for Zeus and is engaged in research on a huge new radar system for picking up targets.

READY FOR TEST SHOT

The Army sources claim that work on the Zeus is so far advanced that they are ready to build a prototype and haul it to a mid-Pacific island to test fire against a nose cone from a Redstone missile.

The Redstone is the Army's 500-mile range, liquid propelled missile. On a long shoot the nose cone reenters the earth's atmosphere from an altitude of about 300 miles at a speed of 15,000 miles an hour.

So confident is the Army that the Zeus will work that the U.S. Air Defense School at Fort Bliss already has appointed a Zeus projects officer to get training courses ready.

The over-all configuration of the Zeus is essentially that of the Nike-Hercules, a powerful and antiaircraft missile which can reach to the upper limits of the atmosphere.

HAS RADICAL LAUNCHER

The Hercules is launched from a rail-like track which can be installed above or below the ground.

The Zeus launcher is a radical departure from the Hercules concept. As now designed the Zeus will be hurled upward from an underground concrete cylinder in much the same fashion as a rifle bullet is fired.

At present the plans are to mount 24 Zeus missiles on a launching pad which will look from the air like a rectangular, perforated ceiling tile.

In each Zeus defense complex there will be three or more such launching pads capable of hurling between 60 and 90 antimissile missiles into the air almost simultaneously.

TREMENDOUS THRUST

Each Zeus would be propelled initially by engines remaining on the ground which generate 450,000 pounds of thrust in less than 3 seconds. Such an engine was test fired successfully at Redstone Arsenal August 26.

As the Zeus takes off, an airborne booster cuts in and sends the missile streaking upward at an even faster speed. This booster eventually will drop away and a sustainer engine will begin operating as a source of power for space travel.

At burnout of the third stage—the second airborne stage—the missile is designed to travel at substantially the same speed as the incoming missile on an intercept course.

All engines involved will employ solid propellants which burn almost instantaneously, giving off a controlled explosion.

NOT NEAR CITIES

None of the Zeus launching complexes would be located near populated areas as are the antiaircraft Nike Hercules, but would be scattered on what one source called our far flung continental frontiers.

The key to the success of any antiaircraft or antimissile missile is radar.

Since a ballistic missile would require only 30 minutes to reach from Moscow to New York, the first 10 minutes of flight would be vital.

In these 10 minutes, the ballistic course of the enemy missile must be computed. At the end of another 6 minutes, the target track must be firmly established by radar.

FOUR MINUTES TO FIRE

The Army sources figure that as soon as the missile's track has been ascertained, they have 4 minutes in which to aim, fire, and intercept. In brief, the missile's warhead—containing nose cone must be knocked down 20 minutes after launching and 10 minutes short of U.S. targets to protect against even partial nuclear destruction.

Under the Zeus system as now contemplated the Air Force's long-range radar would be used to give early warning of an enemy launch and the Army's newly designed target tracking radar would take over and fire the antimissile missiles automatically.

NINETEEN HUNDRED AND SIXY READY DATE

These Army sources, all of whom are close to the Zeus program or who have followed its progress intimately, believe that with the radar now available or in the advanced design stage, a workable system could be obtained by mid-1960.

To the scientists' objection that the system has yet to be proved, these sources retort that the United States is behind in ballistic missile development because scientists once advised the military that the atom bomb could not be made small enough to mount in a missile.

---

[From the Philadelphia Inquirer, Feb. 24, 1959]

ANTIMISSILE DEFENSE IS VITAL, TOO

Part of confusion about national defense bears heavily on pulling and hauling among the branches of the armed services. To this is now added an appearance of conflict between the Secretary of Defense or others in the Defense Department and the Army.

The particular case in point is a contention from Army sources over conditions that may squeeze off intensive efforts to bring into early production an antimissile-missile designed to combat and destroy Russian intercontinental ballistic missiles.

Soviet ICBM's are declared to be in a flourishing stage of production and capable of landing, 5,000 miles away—H-bomb and all—on any target desired. Some kind of counterweapon is very much needed.

Army sources insist they have under development such a weapon, called the Nike-Zeus, to combat ICBM's, of which Soviet Boss Nikita Khrushchev has been boastful. As this stands, it appears there is money provided in the prospective budget to perfect the Army device. But an Army request for $730 million to produce it has been rejected by Secretary of Defense McElroy.

The reason given is that the preliminary research and development for it has some distance to go. As reported, the production rejection has embittered Army enthusiasts. So, in one direction we are told that further progress is not feasible; in another that it is.

Here is a painfully familiar parallel to other missile and missile defense plans—large question marks about what to do and when to do it. We can't figure the answers, from our home bases. But answers are needed, clear and positive.

The paramount requirement is to have projects, and keep them moving, to get missiles—all sorts necessary—and defenses against them going ahead toward concrete results, and fast. And also to have full understanding that no interservice contentions or cross purposes will interfere. What's most essential is assurance to the American people that progress, even though it costs a great deal, will be maintained.

---

## Very Much Canada's Business

EXTENSION OF REMARKS
OF
### HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

Mr. VANIK. Mr. Speaker, a great deal has been said about the position of Canada on the Chicago water-diversion bill H.R. 1.

I would like to submit the following editorial which appeared in the Financial Post, of Toronto, Canada, of February 21, 1959, entitled "Very Much Canada's Business":

Trying to justify a further diversion of Great Lakes water by Chicago for floating sewage and ships down its private canal into the Mississippi, the Chicago American says this:

"Lake Michigan is traditionally an American body of water. It is the only one of the Great Lakes entirely within U.S. borders, and what Congress does with it would not seem to be Canada's business."

That is garbage.

What Chicago does, or is permitted to do, with Lake Michigan would not interest Canada in the slightest provided only Lake Michigan were involved. But as every reader of the Chicago American must know there is no dam across the upper end of Lake Michigan and what water Chicago takes from the southern end, Lake Michigan takes from Lake Superior and Lake Huron. If Chicago were permitted to keep on increasing its diversion, as it is trying to do, conceivably it could drain the Great Lakes right down to Windsor and Detroit, dry up the St. Lawrence Seaway and put out of commission every powerhouse at Niagara and on the St. Lawrence.

Water levels on the Great Lakes are very much Canada's business and those of every American State touching the lakes as well. As the Buffalo News points out: "The lakes are not the private cisterns of any one city or State—or country. Chicago should meet its water needs without robbing others. Congress should say so by standing firm against this raid as often as Chicago chooses to attempt it."

---

## Encouraging Development in the Coal Industry

EXTENSION OF REMARKS
OF
### HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, March 9, 1959*

Mrs. KEE. Mr. Speaker, the action of the President in imposing mandatory quotas on the imports of residual fuel oil was an encouraging development for the coal industry. Certainly, it is not the complete answer to the very serious problem of unfair competition offered to the coal industry by this cheap, foreign produced fuel.

Mr. Speaker, this is the first time we have been able to persuade the Federal Government to recognize the threat to coal posed by these imports, and it took strong and definite action and persuasion by the West Virginia congressional delegation. It is true, that in the past, Government officials and agencies have cited residual oil imports as a threat and recommended action. The important difference is that this time the Government acted.

Imports will be limited to the amount brought into the country in 1957. In that year, about 475,000 barrels daily entered the country from abroad. This amount of foreign residual fuel oil represents the equivalent of more than 110 million tons of coal. It would have been

far preferable if the 1954 base, which has been suggested as more suitable, had been selected.

The pegging of imports at this high level will not win back many, if any at all, of the jobs in coal mines which have been lost because of the competition with foreign fuels oils. But at least it means that no additional jobs will be lost.

During the first 2 months of 1959, imports have been unusually heavy, running at an annual rate of the equivalent of 191 million tons of coal. I am hopeful that in carrying out the order, the Government will make the 1959 quota retroactive to January 1 and will not agree to an effective date of April. Otherwise, these extremely heavy imports will act as a drag on the coal market.

Mr. Speaker, the President's order for mandatory quotas was extremely gratifying to the West Virginia congressional delegation. The two West Virginia Senators and all Members of the West Virginia congressional delegation worked hard as a unit to convince the executive department of the compelling need for controls of some type on the ever-increasing flow of foreign residual oil into this country. The delegation appeared before every department and agency in Washington concerned with the foreign trade problem, arguing that the great domestic coal industry was being slowly but surely liquidated.

I was extremely gratified to have a colleague from a non-coal-producing State tell me that it was this untiring work by the West Virginia delegation which led to this victory. Perhaps this is an overstatement of the situation, but I know I speak for the entire delegation when I say that no development of recent years has been as welcomed as this.

Mr. Speaker, we have won a battle. However, the war to create a climate in which the coal industry can prosper and expand will be long and difficult, and there will be many battles to fight.

## March 15, 1959: Anniversary of Hungarian Independence Day

EXTENSION OF REMARKS
OF
### HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 24, 1959*

Mr. REUSS. Mr. Speaker, on March 15, 1848, the Hungarian people under the leadership of the famed Louis Kossuth, won freedom from Hapsburg rule. The freedom movement led to the abolition of serfdom and to enlarged public representation in political affairs. A charter of freedom also proclaimed the right to create a national government. This victory over tyranny, although short-lived, will never be forgotten by the people of Hungary.

It was the spirit of 1848, for example, that guided the October 1956 revolution against the rule of Communist Russia. Certainly no people have struggled more valiantly for freedom than the people of Hungary. I am sure that these people shall always rank freedom and independence as the highest goals that man may seek.

I salute the people of Hungary on the anniversary of their independence from the Hapsburgs 111 years ago. I am proud that many Hungarians have come to this country where they have enriched our own democracy with their high concept of freedom. I am proud of their traditions, proud of their remarkable past, and look forward with them to the day when this great heritage may come to its full fruition in Hungary.

## Statement in Opposition to H.R. 1, Lake Michigan Diversion Bill

EXTENSION OF REMARKS
OF
### HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks I include herewith a statement I presented to the Committee on Public Works on February 17 in opposition to H.R. 1, the Lake Michigan water diversion bill.

STATEMENT BY HON. FRANCES P. BOLTON, BEFORE COMMITTEE ON PUBLIC WORKS, HOUSE OF REPRESENTATIVES, IN OPPOSITION TO H.R. 1 AND OTHER BILLS TO REQUIRE A STUDY TO BE CONDUCTED OF THE EFFECT OF INCREASING THE DIVERSION OF WATER FROM LAKE MICHIGAN, ON FEBRUARY 17, 1959

Mr. Chairman, members of the committee, thank you for giving me an opportunity to present a statement in opposition to H.R. 1, a bill to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway.

As you know, this subject has been debated in practically every session of Congress since 1937. The Great Lakes Harbors Association, the port cities of the Great Lakes, the Lake Carriers' Association, and the governments of the States bordering the Great Lakes have always been united in opposition to the demands of Chicago for permission to divert additional water from Lake Michigan.

While we realize that the measure presently under consideration (H.R. 1) is deemed to be a study bill, we feel that its enactment will be a detriment to the best interest of all areas in the Great Lakes other than Chicago. In Ohio our industries have a great need for additional water for industrial use, however we oppose diversion of water where there is no means provided for returning water to the lakes.

The diversion of water from Lake Michigan will lower the natural level of that lake and the other Great Lakes, their connecting and tributary waters and the St. Lawrence River, thereby reducing the carrying capacity of ships and leading to higher transportation costs. At this time we in the Midwest are anticipating the opening of the St. Lawrence Seaway to large oceangoing vessels. When the Federal Government is spending large sums to deepen the Great Lakes connecting channels and improve the harbors on the Great Lakes to accommodate these deep-draft vessels, it would be most inconsistent to permit this measure to pass which will eventually result in lowering the lake levels.

It is my hope that the committee will table H.R. 1 and all other bills which would permit additional diversion of water into the Illinois Waterway.

## American Legion Protests Soviet-American Film Exchange

EXTENSION OF REMARKS
OF
### HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. STRATTON. Mr. Speaker, no organization has had a more consistent record in defense of American programs and principles than has the American Legion. For that reason, when the Legion speaks out the elected representatives of the people are always happy to listen. Recently, the Schenectady County Committee of the American Legion adopted a resolution opposing the cultural exchange of Soviet films with this country which has been proposed by the motion picture association.

We are all aware, Mr. Speaker, of the subtle and persistent campaign of Soviet propaganda that goes on in this country and in other parts of the free world. We are aware of the efforts the Soviets use not only to undermine our own system of government but also to represent their system in a far different light than is warranted by the facts. I believe there is a real danger that this exchange, brought about in the name of broader cultural understanding, could in fact contribute unwittingly to this subtle and insidious propaganda. For that reason, I believe the resolution of the Schenectady County Committee of the American Legion deserves the most serious consideration by those officials who have permitted this exchange program to take place. I include herewith the full text of the resolution:

SCHENECTADY COUNTY COMMITTEE,
*Schenectady, N.Y., February 12, 1959.*

Whereas the State Department has arranged a cultural exchange by which Soviet films, made under political censorship by the U.S.S.R., are to be shown in American theaters and on television; and

Whereas Soviet officials reserve the right to doctor any films in which America is reflected in favorable light, just as they have always done; and

Whereas the U.S.S.R. will send us films applying the soft sell as they would picture life under the Soviet system of atheistic communism, to be followed by the hard sell as and when the political climate in the U.S.A. may permit; and

Whereas certain U.S. Motion Picture Association officials, as parties to this deal with Soviet Russia, attack the New York censorship authority, accusing it of using the weapon of totalitarianism indicating that they believe that while the Soviets may censor our films, we are not to be permitted to censor theirs; and

Whereas it has been reported that Hollywood studios are about to let down all bars against employing known Communists, thus permitting Soviet Russia to perpetrate its long sought gradual infiltration of American

communication arts, in order to promote worldwide Marxist propaganda; and

Whereas Russia will seize with alacrity the opportunities to be offered by the greatly enlarged audiences of American television: Now, therefore, be it

*Resolved*, That Schenectady County Committee, American Legion, does hereby register its vigorous objection to, and protest of, the State Department's cultural exchange of films with Soviet Russia; and be it further

*Resolved*, That Schenectady County Committee, American Legion, also registers its vigorous objection to, and protest of, the hiring, by motion picture and TV industries, of known reds and pinks in American entertainment; and be it further

*Resolved*, That copies of this resolution be sent to our Senators and Representatives for their appropriate action; and be it

*Resolved*, That copies of this resolution be forwarded to the 4th District organization of the American Legion for further action; and be it

*Resolved*, That copies of this resolution be presented to local newspapers for publication.

## We Need a New Approach to Food and People

EXTENSION OF REMARKS

OF

### HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mrs. SULLIVAN. Mr. Speaker, one of the hardest-working Members of the House, our colleague from Michigan, the Honorable JOHN D. DINGELL, has always been in the forefront here of efforts to help the poor, the needy, the unemployed. I am particularly grateful to him for the invaluable assistance he provided me the last two times my food stamp bill came before the House for debate and vote. As we all know, a majority of the House voted for that bill last August, but it is not yet law.

I have discussed with the chairman of the Committee on Agriculture, the Honorable HAROLD D. COOLEY, the renewed urgency for this legislation, in view of continuing high levels of unemployment and distress, and I am hopeful that hearings can soon be arranged on H.R. 1359 and companion bills to establish a food stamp plan.

Recently, Congressman DINGELL introduced a companion bill to H.R. 1359, reemphasizing his long and effective interest in this proposal, and his remarks in introducing the bill were noted with great interest by many individuals and groups throughout the country. Among those taking particular note of the Congressman's views were the editors of the Louisville, Ky., Courier-Journal, who commented on them in a comprehensive editorial, which I believe is well worth the attention of every Member of Congress.

Therefore, Mr. Speaker, under unanimous consent, I submit for printing in the CONGRESSIONAL RECORD the Courier-Journal editorial of March 3, 1959, inspired by Mr. DINGELL's action in introducing a food stamp bill. The editorial follows:

WE NEED A NEW APPROACH TO FOOD AND PEOPLE

Representative DINGELL, of Michigan, is the latest of a number of Congressmen to sponsor a bill for distributing some of the Nations surplus food to needy Americans. His, like others, is a variant of the food stamp plan that did so much to make food available to persons on relief up to 1943.

The problem of islands of need in our ocean of plenty is not a new American phenomenon, but it is growing more acute. It is a problem that must trouble the Nation's conscience since one of the items of our democratic creed is that this bountiful land can produce enough to feed all its people. In truth, the land does produce enough and to spare. But the mechanics of distribution have broken down somewhere along the line and the lines of the ill fed, the ill clad, and the ill housed are haunting realities in every community.

As Ora Spaid pointed out in Sunday's Courier-Journal, the public responsibility for relief of the needy has only recently become a governmental function in our society. We have done something for various categories of human need, the poor and fatherless child, for instance, the indigent aged, the total cripples and misfits of our society.

But the human being who is in need only because he is out of a job does not fit into any of the categories. Governments and communities are only just now beginning to look at him with a new anxiety. His numbers are increasing. His joblessness is no longer a matter of a month or two. It is stretching into years. And this is no fault of his. For the most part he is comparatively young, productive, willing to work. He is also untrained, uneducated even in the basic three R's and has nowhere to turn to remedy these deficiencies.

From a purely callous viewpoint these are the people, even more than those already receiving some Government dole, who most urgently need the basic foods now bulging our warehouses, who need some sort of retraining and relocation program to fit them again for self-support. And these are the people who receive only token assistance grudgingly given, because of our long-cherished belief that an able-bodied man can find work if he really wants it.

A food stamp plan that would merely keep such people vegetating in idleness, prolonging life but destroying hope, is not a real answer to America's growing relief need of the moment. It is doubtful whether a real answer can be found within this administration which loses no opportunity to demonstrate that it is penny-conscious and dollar-foolish.

But now is the time for a Democratic planning committee to get together and plan for the rescue of this drowning segment of our society. It is a plan that should include unemployment compensation of limited amounts and for limited periods. It should also take a new look at the whole problem of our agricultural surpluses.

As these are now distributed, the Department of Agriculture, which is not in the business of giving relief any way, grudgingly distributes whatever can no longer be stored; cornmeal, wheat flour, dried milk and, occasionally, butter, are the staples. But cotton, feed grains, tobacco, peanuts, continue in storage or are given away abroad, where they are needed and gratefully received but still not consumed in sufficient quantity to empty the warehouses.

A first step in redistributing our agricultural wealth ought to be the creation of machinery whereby the crops in surplus could be sold to the Department of Health, Education, and Welfare, which could then trade its peanuts, tobacco and cotton for other foods and arrange to have the surplus feed grains fed to poultry and animals for human consumption.

RATS BEFORE PEOPLE?

Such a plan could not operate under the rigid price supports that Congress has enforced on the Department of Agriculture. Nor could it work under Secretary Benson's dog-eat-dog idea of farming. But under some modification of the Brannan plan, for instance, it could put food into hungry mouths and reduce the surpluses in a useful and humane fashion. It would not preclude foreign food aid. We have enough and to spare, and at the moment it is more available to rats than people.

But the plan for the needy should go farther. Forest farms for growing boys could be one of its aspects. Simplified schools and training courses for adults would be another. Such a plan should be given first priority by an administration that can assess the terrible waste of human hope and ability involved in the families now living on starvation's edge, and weigh it against the dollars and cents involved in putting all our resources to work for each other.

## Status of the Nation's Highway Programs

EXTENSION OF REMARKS

OF

### HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. STAGGERS. Mr. Speaker, I would like to call to your attention, and to the attention of the Congress, an address given by A. C. Leonard, Chief, Secondary Roads Branch, Bureau of Public Roads, U.S. Department of Commerce, recently.

I feel this address on the status of the Nation's highway programs should be of interest to every Member of Congress.

In this connection, I am still very hopeful that U.S. Route 50 will be included in the Interstate Highway System, especially that part of it which goes through West Virginia, and which is badly in need of straightening and widening. I believe this is one of the most important roads crossing America today.

STATUS OF THE NATION'S HIGHWAY PROGRAMS

(By A. C. Leonard, Chief, Secondary Roads Branch, Bureau of Public Roads, U.S. Department of Commerce)

I am particularly glad to be given this opportunity to speak with you an the status of the Nation's highway programs. For we have just completed the most productive year in Federal-aid highway history. The active program for the entire United States at the end of last year and including State matching funds amounted to $9.2 billion. This includes engineering and rights-of-way. By active program we mean projects in the programed, plans approved, and construction stages. One year earlier the active program amounted to $7.1 billion. Thus during 1958, highway activity in the Federal-aid production pipeline was increased from the 1957 level by $2.1 billion; a 49-percent rise. And significantly for your industry, almost all or $2 billion of the $2.1 billion increase was in work on which contracts had been awarded and was actually underway at the end of the year. In addition, there was over $500 million in projects on which contracts had been awarded but construction not yet started, and almost $500 million in plans approved but not yet awarded to contract at the end of the year.

When I said that we had just completed the most productive year in Federal-aid highway history, the we refers to the efficient partnership that exists between the Federal Government and the State highway departments in the undertaking. It refers also to the splendid cooperation obtained from consulting engineers, from equipment suppliers, from contractors, and from material suppliers, particularly your industry which, according to Bureau of Mines reports, supplies 75 percent of all the crushed or broken stone sold or used by producers in the United States.

A good portion of the work described as being in the pipeline at the end of the year, but on which plans had not yet been approved, will be translated into construction in 1959. About $2 billion in projects are in this program stage. In addition, there are substantial amounts of Federal funds apportioned to the States for highway projects awaiting programing to specific projects and matching with State funds.

Thus far I have been discussing the end-of-year status of all the Federal-aid highway programs combined. Of course, everyone is interested in the physical progress we have made in the individual Federal-aid programs since passage of the 1956 act.

Considering the Interstate System alone and using July 1, 1956, as the bench mark date for the beginning of the program, the total obligation of funds was on schedule.

As of December 31, 1958, construction was underway on 3,571 miles of the Interstate System at an estimated total cost of $2.33 billion. Construction contracts had been completed since July 1, 1956, on 3,159 miles at a cost of $944 million. Included in the program were 3,758 bridges underway and 1,643 completed. In addition, $1.83 billion had been spent or authorized since July 1, 1956, for preliminary engineering and rights-of-way.

On the regular ABC program, which is the program carried on with funds regularly authorized for improvements on the Federal-aid primary and secondary systems and the extensions of those systems in urban areas, construction contracts had been completed on 60,112 miles and 10,217 bridges, at a total cost of $3.56 billion by the year's end. Work was underway at the same time on 16,754 miles, including 4,002 bridges, at an estimated cost of $2.06 billion.

On the special program using $400 million of the so-called D funds authorized by Congress as an antirecession measure, as of December 31, 1958, the States had work completed on 2,689 miles and 80 bridges at a total cost of $59 million, and work underway on 8,394 miles and 1,178 bridges at a total cost of $489 million.

As you will recall, the special D funds were required to be under contract by December 1 of last year. Mr. B. D. Tallamy, the Federal Highway Administrator, in speaking before the American Association of State Highway Officials in San Francisco on that same date, announced that every cent of the $400 million authorized for this purpose had been obligated by the States. He went on to say, "Further, the improvements are urgently needed; they are not leafraking or boondoggling projects; they are being woven into the integrated road network which has been the ultimate goal of all Federal-aid legislation since 1916." He then complimented the State highway officials on the speed and initiative with which they had translated a legal authorization into work underway on projects of unquestioned value.

Continuing, he said, "This is important in itself but even more so in its implications. For we have demonstrated beyond question that, if the need to stimulate employment and bolster the economy should arise in future years, the dollars invested in highways will be among the soundest of the Nation's investments."

The eventual effect of the Federal highway programs on your industry probably is a difficult one for you to asses readily at this time. The figures released are large and not easy to grasp completely. Certainly through the stepup in volume should have begun to make itself felt to you since aggregates of all kinds are the major bulk ingredient of all highway construction and constitute the largest single element of cost. The cost of all types of aggregates including those used in premixed bituminous material and ready-mixed concrete amounts to one-fourth of that for all materials and supplies furnished by the contractor on Federal-aid work.

If it mattered much to you, I believe you would have a perfect right to object to some of our roadbuilding terminology. We speak of asphaltic concretes and portland cement concretes, giving the product the name of an ingredient which is present in only small quantities. Actually, the aggregate industry must supply the largest fraction of the material. And you as producers of crushed stone probably have found that in any area which produces a quality crushed stone, it is usually the aggregate of choice for both types of pavement. This is because the interlocking action apparent in nearly all crushed stone gives it the inherent advantage of resisting motion and displacement and provides basic stability for load distribution to the subgrade.

Over the years the Bureau of Public Roads has kept a running 3-year average of the tonnage of aggregates going into Federal-aid construction and we have found that for every million dollars of total cost approximately 100,000 tons of aggregates of all kinds are used. This is a mass figure and, of course, varies from State to State and from year to year within States and from project to project, but the national 3-year running average does not change appreciably. Unfortunately we do not have the tonnage broken down as to the proportion of crushed stone or crushed limestone in particular. However, it was estimated by a task force of the American Road Builders' Association, in connection with reports submitted to the President's Advisory Council on a National Highway program, that within the aggregates used for highway construction and maintenance, 40 percent of the total tonnage consumed is crushed stone either purchased from commercial sources or produced on the site.

Another indicator which should be of interest to you is contained in the reports received from 44 States by the Bureau of Mines. The Minerals Year Book for 1956 showed that crushed limestone constituted over two-thirds of all concrete and road stone sold or used by producers during that year.

While there are undoubtedly many fallacies in combining these factors, if you do, you can come up with a rough indicator of the ratio of dollars to crushed limestone in highway construction. First you divide the number of dollars by 10 to find the approximate tonnage of all aggregates combined, then divided by four to obtain the tonnage of crushed limestone involved. For example, we previously stated that there was an increase of $2 billion in the Federal-aid highway work underway at the end of 1958 as compared to the end of 1957. If we divide this figure by 10 we get 200 million as the approximate increased tonnage of all aggregates that will be required as the projects are advanced to completion. Dividing again by four, we get about 50 million as the increased tonnage of crushed limestone involved.

I want to repeat that there may be many fallacies in this method of arriving at a use factor for crushed limestone. It is intended only as a horseback estimate. However, it should be apparent that we are well underway in the most ambitious highway construction program of all time, and that the sheer volume of the bulk aggregates involved may or has already presented problems of trucking, shipping, storing, and handling. The trend toward stabilized aggregate shoulders and wider, thicker pavement designs will almost certainly result in even greater demands on your industry. This prognostication will not be entirely confirmed of course until completion of the AASHO test on the many various designs that are being carried on at Ottawa, Ill.

In summing up the status of the national highway programs, I would like to quote again from Mr. Tallamy's talk at the recent AASHO meeting. He said, "Since enactment of the Federal-Aid Highway Act of 1956 we are now approaching nationally the end of what corresponds to a tooling-up period in private industry. In the early stages of the program made possible by that legislation, it was inevitable that there would be a lack of uniform progress among the States for a variety of reasons which are familiar to all of you. The States did not start from scratch with the passage of the act of 1956. Some were far better prepared to launch the new program than others. A number of States had few if any plans that could be fitted into the interstate program. Inevitably, the program forged ahead fastest in the States that were best prepared. Ironically, the general public, which accepts as normal and routine the necessary leadtime or tooling-up period in private industry is not fully aware that there is also a necessary leadtime in the road program. It is not generally recognized outside of highway circles that the necessary preliminaries to actual construction—the engineering work and the acquisition of right of way for interstate projects—takes 18 to 24 months.

"In any case, while there is still some disparity in relative progress, most of the hurdles have been leaped and the States which have been trailing in the obligation of funds are closing the gap. I have no doubt that we are progressing toward the simultaneous completion of the Interstate System in all the States in accordance with the mandate given us by Congress in the act of 1956. The engineering shortage is pretty much a thing of the past, the question of matching funds has been resolved in many States and is nearing solution in others. The contracting industry, as well as the suppliers of materials and equipment are geared to meet all of the requirements of the program.

"I wish I could go further and say that all of our problems are solved. In all honesty, it would be nearer the truth to say that all of our problems are practically solved except the big one. Last August we apportioned to the States a total of $3.4 billion for the fiscal year 1960, including $2.5 billion for the Interstate System and $900 million for the ABC program. This was made possible by suspension of section 209(g) of the 1956 act—the so-called Byrd amendment—for the fiscal years 1959 and 1960. As matters now stand, however, we face the prospect of apportioning no interstate funds next summer for fiscal 1961 and possibly as little as $300 million for the following year. That, as you all know, is because of the operation of section 209(g) which limits apportionments of Federal funds to the amounts that will be in the trust fund when the obligations fall due.

"Revenues accruing to the trust fund during the fiscal years 1957 and 1958 totaled $3,526 million, or $41 million more than the original estimates. During the 4 months of this year the revenues have been slightly less than estimated for this period. On November 1 there was a balance of $811 million in the trust fund. This balance will be reduced during the remainder of the year and during fiscal 1960, since expenditures are estimated to exceed revenues during each of those years. That is the problem, stated

simply. The administration and the Congress are well aware of it and I would hope that during the course of the coming year a satisfactory solution will be worked out by the executive and legislative branches of the Government."

Since the next speaker has as his topic the financing of the highway program, I will close with that statement from Mr. Tallamy. Let me repeat that it has been a pleasure and a privilege to have been given this opportunity to speak with you.

## Attack on the FBI—VII

EXTENSION OF REMARKS
OF
## HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, March 12, 1959*

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks, I include the seventh in a series of articles by Pulitzer prize-winning reporter, Edward J. Mowery, dealing with the campaign to discredit the Federal Bureau of Investigation. The article, which follows, appeared in the Newark Star-Ledger of February 8, 1959:

FOES CRY "LONE WOLF" AT FBI—THAT'S NOT WHAT LAWMEN SAY

(By Edward J. Mowery)

WASHINGTON.—In the current campaign to belittle the Federal Bureau of Investigation, the agency is accused of playing lone wolf at the community level, ignoring cooperative local police and stealing the show.

Mutual cooperation and understanding between various enforcement agencies, an FBI spokesman explained today, is the very essence of successful law enforcement and every FBI operation is anchored to this concept.

Charge: When a big criminal case erupts in a community, the FBI swoops in and takes credit for capturing the criminals from other cooperating agencies.

The facts: The FBI always gives proper and full credit to such agencies and if a press release is issued, the assistance of local officers is specifically set forth. The FBI never attempts to steal credit from other peace officers or conceal their legitimate efforts in the handling of a case.

If the FBI stole publicity, as alleged, it couldn't enjoy the wholehearted cooperation from other agencies it receives throughout the country. But this isn't an enforcement one-way street.

To assist municipal, county, and State enforcement agencies in better fulfilling their responsibilities, the FBI renders many other services without charge.

These include scientific examination of evidence (criminal cases), fingerprint comparisons and identifications, police training assistance and exchange of information in matters of mutual interest.

The Director, J. Edgar Hoover, frequently sends letters of FBI appreciation to participating officers and their superiors. Bureau files are filled with such correspondence. Since the press gathers its own information on criminal cases and local police freely talk to the press, it would be quite a feat for the FBI to hog publicity, even if it so desired.

The Bureau does not cooperate with police departments or individual officers who aren't trustworthy, when it is likely that confidential information given a local officer will be made available to the underworld. The existence of criminal tie-ins or venal control of police, however, is becoming increasingly rare.

The FBI is proud of the cordial relations it enjoys with local enforcement throughout the Nation.

Charge: The FBI ignored other cooperating police agencies and took full credit in cases involving Bruno Hauptmann, "Machine Gun" Kelly, John Dillinger, Thomas Robinson, Harry Brunette and Merle Vandenbush.

The facts: Here's a brief résumé in each case:

Hauptmann: The Lindbergh kidnaping case was a joint venture of the FBI, New Jersey State Police and New York City police. Having no official jurisdiction, the FBI entered the case at the specific direction of the President. Teams, composed of representatives of each agency, combed New York banks for the ransom money.

In September 1934, a gold certificate turned up in one bank. Checked by one of the teams, it proved to be the clue leading to Hauptmann's identification.

Hauptmann was arrested by such a team. The tremendous public interest in this case plus blanket press coverage makes such a charge against the FBI ridiculous.

Kelly: A cordial relationship existed between FBI agents and Memphis police who cooperated in capturing Kelly (in 1933). On September 30, 1933, Hoover sent warm letters of thanks to Chief Will D. Lee, Detective Sgt. William Raney and other members of the Memphis force for their cooperation. No attempt was made by the bureau to hog publicity in this case.

Dillinger: He was killed while resisting arrest in July 1934 by FBI agents and East Chicago police who pursued investigative leads and coordinated their information. Agents worked closely with Capt. Timothy O'Neill and Sgt. Martin Zarkovich of the East Chicago police, who made available Mrs. Anna Sage, the so-called "woman in red" (who fingered the gunman).

Robinson: A report that a Lynn Allen (of Pasadena) supplied the tip leading to Robinson's arrest (as the alleged kidnaper of Mrs. Alice Stoll) is completely false. His arrest was exclusively the result of FBI-developed information.

Brunette: He was arrested by FBI agents assisted by New Jersey State Police (in 1936) following a raid on a New York City apartment (304 West 102d Street). A New York detective had left the area shortly after arrangements had been made to surveil Brunette and no member of the New York Police Department was in the vicinity when the raid commenced.

The New York detective left without telling New Jersey police or FBI agents where he was going or what plan (of action) he contemplated. The FBI at no time broke faith with any other enforcement agency in this case.

Vandenbush: He was arrested by Sgt. John C. Hergenhan and Patrolman W. G. Hendricks of the Armonk, N.Y., Police Department, following the February 25, 1937, robbery of a Katonah, N.Y., bank (Brunette was assertedly his partner in earlier escapades). The FBI established Vandenbush's identity via fingerprints.

On the day of his capture, Hoover wired congratulations to Acting Police Chief Hergenhan for the department's fine work in apprehending Vandenbush.

Any charges of an FBI attempt to hog publicity in these cases are completely false.

Charge: J. Edgar Hoover never made an arrest until the apprehension of Alvin Karpis. Then he forgot to bring along handcuffs.

The facts: It is true this was Hoover's first arrest. Congress didn't empower FBI agents to carry arms or make arrests until June 1934. Previously, agents had to request local officers to make such apprehensions. By the very nature and importance of his duties as FBI Director, Hoover wasn't expected personally to handle the many cases erupting in the field.

His primary function was, and is, to direct the vast FBI operation from his Washington headquarters.

(The true account of Karpis' capture appears here for the first time.)

Karpis, a vicious and vain hoodlum, had needled Hoover with postcards and letters for more than a year to come and get me. Naturally, Hoover was most eager to do just that when the criminal could be firmly located.

The word came on April 30, 1936. Karpis had been found in New Orleans and a stakeout had been placed on his apartment. Hoover had had a plane waiting. He boarded the plane in Washington and headed for the Louisiana city.

Hoover entered a car with three other agents in New Orleans and they drove to the vicinity of the Karpis hideout. Everything seemed to go wrong. Karpis unexpectedly left his apartment as the car bearing Hoover approached. He'd have to be taken immediately, in daylight. Gunplay (Karpis was heavily armed) could endanger citizens.

As Hoover's car neared the scene, a mounted policeman walking his horse, hogged the center of the narrow street. The car edged forward as Karpis left the building. A boy on a bicycle then came directly into the possible line of fire but wheeled away as Hoover and the agents ran toward Karpis.

The Director jammed his gun in Karpis' ribs. And to Hoover's surprise, Karpis recognized the FBI Director, explaining he had seen his picture the previous year in a Miami newspaper.

As to the handcuffs, unfortunately they had been left in another car but Karpis was quickly and thoroughly trussed with a Texas agent's necktie.

Later Hoover participated in the capture of many dangerous criminals, risking his life along with the men under him.

## Hungarian Freedom Day

EXTENSION OF REMARKS
OF
## HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. MULTER. Mr. Speaker, March 15 will mark the anniversary of Hungarian Freedom Day.

More than 100 years ago Europe experienced one of its recurrent revolutions. That revolution, begun in 1848, marked the rise and spread of national feelings, national dreams and aspirations. As the movement swept from Paris to other capitals, suppressed and subjugated nationalities were encouraged. They saw the chance of realizing their dreams, and all were stirred by the new wave of freedom and liberty. A number of old guard reactionary despots and governments were shaken. Among these was the arch enemy of freedom in Europe, the dominant Chancellor Metternich, of Austria, who had set the pattern of autocratic government throughout Europe for almost half a century. In 1848 his supremacy came to an end.

On March 15 of that year a group of liberty-loving and patriotic Hungarians, in their irrepressible zeal for freedom and independence, staged a bloodless demonstration, presented their grievances to the government, and demanded reforms and freedom. The government, apparently aware of the spreading discontents and dangers, acquiesced in these demands, and allowed the Hungarians certain freedoms. That March 15, the day on which demonstrations were staged, is marked in Hungarian history as a national holiday. Annually it is being celebrated as their Freedom Day.

Today they once more find themselves under tyranny and unable to celebrate this holiday. I am glad to join Hungarians in the free world in the celebration of Hungarian Freedom Day, in the hope that liberty may soon be restored to their homeland.

## Official Community Protests Against TVA Turbine Contract Award Abroad

EXTENSION OF REMARKS
OF
### HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. STRATTON. Mr. Speaker, the failure of the administration on March 9 to cancel the award of a large steam turbine generator by TVA to a British firm rather than to American firms operating in areas suffering from heavy unemployment, has made this a black week for the future of the American turbine industry. The feelings of those individuals whose jobs are scheduled to be lost as a result of this decision, and of the trend which it may establish, are nowhere better exemplified than in the official reactions of municipal governing bodies. I am submitting for the attention of every Member of the House the following two resolutions, one approved unanimously by the Common Council of the City of Gloversville, N.Y., the other unanimously by the Common Council of the City of Johnstown, N.Y.:

RESOLUTION BY COMMON COUNCIL OF THE CITY OF GLOVERSVILLE, N.Y.

Whereas Fulton County is already a surplus labor area; and

Whereas recent news reports indicate that the Schenectady plant of the General Electric Co. has lost a Government order for a large turbine unit to an English firm which will result in the loss of many jobs in this area; and

Whereas many Fulton County and Gloversville residents are dependent on the prosperity of the General Electric Co. for their livelihood: Now, therefore, be it

*Resolved*, That the Gloversville Common Council go on record as opposed to the future awarding of Government contracts to foreign firms; and be it further

*Resolved*, That copies of this resolution be forwarded to Congressman SAMUEL S. STRATTON, and U.S. Senators JACOB K. JAVITS and KENNETH B. KEATING.

RESOLUTION BY COMMON COUNCIL OF THE CITY OF JOHNSTOWN, N.Y.

Whereas it is general public knowledge that this area is considered a critical labor area, and

Whereas a recent contract amounting to several million dollars for a turbine for the Tennessee Valley Authority was awarded to a foreign firm in preference to the General Electric Co., the lowest American bidder; and

Whereas in order to promote employment in the labor markets of the United States and to relieve the critical labor situation the above said contract should have been awarded to an American corporation: Now therefore be it

*Resolved*, That the mayor and common council of the city of Johnstown hereby oppose the awarding of the above said contract to the foreign firm and request that the contract be rescinded and awarded to an American firm, and be it further

*Resolved*, That a copy of this resolution be forwarded to the Congressman for this district and the Senators for the State of New York.

## That Taxpayers' Revolt

EXTENSION OF REMARKS
OF
### HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. WESTLAND. Mr. Speaker, a taxpayers' revolt has erupted in my State of Washington, because the people are concerned about taxes and unnecessary Government spending. So far, the revolt has been directed against the State government, but the implication is clear. The people want a realistic, sensible and responsible fiscal policy on all levels of government.

What I have just said is in line with a well-expressed editorial that appeared in the Edmonds, Wash., Tribune-Review on March 5, 1959. The Tribune-Review, I might add, has the largest paid circulation of any weekly newspaper in my district and its publisher is aware of public sentiment on the issue.

Under leave to extend my remarks in the RECORD, I include this editorial entitled "That Taxpayers' Revolt." The editorial follows:

THAT "TAXPAYERS' REVOLT"

About the most interesting thing that has happened during this session of the Legislature—or Congress—is the "taxpayers' revolt" that has spread (like wildfire, of course) across the State, starting over in eastern Washington. It has long been a favorite gambit of politicians to shrug their shoulders while levying new taxes and intone solemnly: "You understand, dear people, that it kills us to put on these taxes, but then you asked for all these things, so naturally you're going to have to pay for them." But the rebelling taxpayers reply, to paraphrase their petitions: "Whatever we're getting from the Government now, that's enough. We don't want any more Government services, and therefore we don't want any more taxes being raised on the pretext of paying for them."

This of course runs counter to the philosophy enunciated as far back as a quarter century ago, that the best way to keep a party in power was to spend and spend, tax and tax, and elect and elect. It's been followed pretty successfully all these years—until suddenly something so simple and dramatic as a "taxpayers' revolt" brings a slight pause in the proceedings.

Inasmuch as the Democrats are in complete power in the State, it's natural that the Republicans, recognizing a good thing when they see it, should jump on the bandwagon and help urge along the petitions to Olympia. But paying taxes is not exactly a partisan operation, and there are indications that a good many people on both sides of the political fence are joining forces to impress upon the legislators the idea that before they get too eager to figure up more new tax sources, they take a second look to see if all that money in the budget is really needed.

While we're inclined to sympathize with the taxpaying petitioners, we would hate to see all this energy just channeled to Olympia, and neglect Washington, D.C. The closer you get to the taxpayer himself, the more supervision you have of his tax funds. Thus the State is only one jump away from the local tax level, and in fact many local facilities, most importantly schools and highways, depend upon that State tax dollar for their income.

The farther away the taxes get, the more chance there is of real waste, so the boys in Olympia are playing with peanuts compared to what goes on in Congress. Only this week, for example, a House subcommittee reported enough money being wasted in foreign aid funds alone to supply a big chunk, if not all, of our entire State budget. A week or so before, the papers delved into the comfortable situation of Congressmen who have wives and sons on the payroll at something around $1,000 a month, added to their own $22,000 annual stipend, figures which make the proposed raises for Washington State officeholders look paltry indeed.

If the taxpayers' rebellion results in clipping a few million off the State's take, that's fine—but we'd like to see even more energy put into convincing Congressmen that they too were elected for something else than just figuring new ways to spend money.

## Hawaii Statehood

SPEECH
OF
### HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, February 12, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 50) to provide for the admission of the State of Hawaii into the Union.

Mr. FASCELL. Mr. Chairman, on this historic occasion I am happy and privileged, on behalf of the people whom I represent in the Fourth Congressional District of Florida, to add my support to the legislation which is pending before this Committee granting statehood to Hawaii.

The record is abundantly clear that Hawaii, its people and its government have met every fair criteria and condition for joining us in this great union of sovereign States.

Over the many years that the issue of Hawaiian statehood has been considered, the people of Hawaii have waited patiently, and yet as Americans, have acted vigorously so that as this outstanding event in history takes place, the people of Hawaii can note with pride the progress which they have made.

As a star in the Pacific, the new State of Hawaii expresses a fulfillment of a hope—not only to Hawaiians, but to all people in the world who love and cherish freedom and respect of the individual found under our form of government.

Let us hope that the favorable and affirmative action which we take here today in the creation of the State of Hawaii will long be a shining light to the mass of humanity in this world still struggling mightily to achieve some small measure of a life free from fear, economic want, and political tyranny.

---

## ECAFE—Remarks by Hon. Henry Kearns, Assistant Secretary for International Affairs, Department of Commerce

EXTENSION OF REMARKS
OF
## HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by the Honorable Henry Kearns, Assistant Secretary of Commerce for International Affairs:

REMARKS BY THE HONORABLE HENRY KEARNS, ASSISTANT SECRETARY FOR INTERNATIONAL AFFAIRS, DEPARTMENT OF COMMERCE, TO THE COMMITTEE ON INDUSTRY AND NATURAL RESOURCES, ECONOMIC COMMISSION FOR ASIA AND THE FAR EAST, BANGKOK, THAILAND, FEBRUARY 6, 1959

The United States is convinced that the economic development of the ECAFE region is essential. Not only as a basis for increased trade but as a foundation for peace and tranquility in the world. Among the elements of economic development are industrialization and adequate utilization of natural resources, which will increase the living standards of the people, their self-reliance and assume the long-range development of the area.

The U.S. delegation respectfully submits the results of its examination into the potentialities, the problems and the aspects of this very important region.

First as to govermental assistance. The contributions of the countries of the free world are well known and require no recital.

It is the intention of my country to continue, to the limit of its ability, substantial assistance programs. It must be recognized, however, that funds made available by our Government are produced as a result of taxation upon the people. From time to time resistance to such heavy taxation is experienced with the result that there is a definite limitation placed upon the amount of aid that can be available from this source.

An analysis of developmental projects that are desired and needed by the developing countries of the ECAFE region indicates that they may be divided roughly into two classes.

The first will be those of an industrial or production nature; the type the free world has historically assigned to private enterprise.

The second is that type of activity that cannot best be carried on by private sector. This may include (a) development of highways necessary to move products to the markets and raw materials to industrial facilities. (b) Adequate harbors that are necessary for the reduction of shipping costs and to expedite the flow of materials into and the flow of exports out of the countries. (c) Railroads for the transfer of goods within the country or for shipment to ports for exporting. (d) Educational facilities that are needed to increase the ability of people in the developing countries to meet the requirements of an industrial society. And (e) in some cases, the generation of power to provide the energy necessary to operate industrial plants.

It would appear to us that the assumption of governmental responsibilities in these fields poses a tremendous challenge and will tax the utmost financial facilities of your government even when aided to the fullest possible extent by friendly foreign countries. If these areas are adequately developed the basis for the necessary increase in industrial potential and raw material production should be realized with a minimum of delay or conflict.

It is well, of course, to observe that there is some hazard in heavy reliance on loans. Inasmuch as it is always expected that interest must be paid and repayments made, both will place a fixed burden upon the developing country.

Our Secretary of State recently set forth the U.S. policy on economic aid in these terms: "In the United States, economic expansion has paralleled the peaceful evolution of political and social life. But we work not for ourselves alone. We live in a community of nations, with each member dependent in varying degrees on the other."

Now we turn to the development of industrial plants and the exploration and production of raw materials. The U.S. delegation, of course, has no desire to impose its views on any country, and we recognize that each of the countries represented here has its own traditions and independence of action. We do, however, hope that our analysis may be of some assistance. It may be remembered that compared with the ancient civilizations of the world, we are a new country with our industrial development occurring in recent years, consequently it is possible to review the causes and effects of such developments from actual experience.

It is apparent to us that productive facilities develop and flourish if there is the combination of capital, technical skills, management, desire to succeed, and a knowledge of markets and market trends. We believe that all of these elements are necessary for sound and sustained productive development. From the experience within our country the best method of producing the combination of these facilities is through the encouragement of private enterprise.

You may be interested in some of the effects of U.S. private investment that has gone abroad in recent years. The rate of such investment has been approximately $4 billion per year and the total amount of this private capital invested abroad as of the end of 1958 was approximately $37 billion. A detailed study of the flow of this capital indicates that with rare exceptions U.S. investors abroad do not attempt to repatriate their capital. Our studies indicate that very seldom do the investors remove the earnings of the capital from the host country. The effect of this can be seen when it is estimated that at the end of last year the net value of the American investment had grown to more than $60 billion. This, of course, means that a country receiving American private capital need not be concerned that this capital will be hastily withdrawn causing exchange problems for the host country. It may be pointed out that our studies indicate that American private capital is only withdrawn when it is threatened by some overt action that appears to jeopardize its safety.

A further study of capital outflow reveals that there are several types of American investment, each type of a nature that will fit a particular need in a developing country. Some of these types include (1) a wholly U.S.-owned branch or subsidy. (2) A partnership arrangement in which the U.S. investment joins with capital for the host country. A third type is where the U.S. investor purchases a minority equity and provides either working capital or developmental capital. And a fourth type that is becoming increasingly popular is that of a "pay-back contract" in which the capital is provided to be paid back out of earnings. Each of these types of investment can be modified by either partially or completely providing management and technical direction.

It is a general trend today of American investors abroad to establish training programs through which the nationals of the host country are trained to assume top management jobs and technical direction at the very earliest possible moment. Increasingly this has become an important factor in improving the productive and industrial capacity of the developing country. Full use is made of the experience and training facilities of the successful private business, avoiding the trial and error period that is so costly when such knowledge is not available.

Historical examination of American private capital flowing abroad reveals that it went largely into the field of the extraction of mineral resources. A change, however, is taking place where it is apparent that substantial amounts of capital are now available for manufacturing and industrial facilities. The flow of capital also has been toward areas of the greatest security, particularly those that are close to or adjacent to the United States. However, there are many examples of the willingness of substantial capital going abroad if and only if developing countries indicate a real and sincere welcome. As to the amounts of available capital, the recent actions of our stock market indicate that when confidence is established there are tremendous pools of investors funds within our American public. The largest reserve of available capital is in the many thousands of medium and small sized investors. Those investments will flow in sums from a few thousands to many millions of dollars when the investment climate is favorable. Experience has taught us that the most desirable type of capital development is that where the workers and the managers each can see an opportunity for partial ownership of a profitable and successful enterprise.

It is our belief that if substantial sums of private capital from abroad are invested in the countries of this region that they in turn will increase the confidence of the people of the host area and will ultimately result in local capital formation that will sustain not only continuing but accelerating industrial expansion.

We must now examine some of the deterrents that reduce the flow of private capital to the developing countries. First, is the unfortunate result of constantly changing attitudes, unfriendly pronouncements and harassing local regulations. Second, violent fluctuations in currency values. Third, a governmental competition in the industrial field. Fourth, restrictive import laws that make it difficult for industrial concerns to operate upon a continuous basis. Fifth, capricious and discriminatory tax laws.

Evidence or threat of these actions serves to discourage the person or the company who controls substantial amounts of capital, management, and technical skills. Any country desiring to increase the flow of capital can profitably examine its actions in the light of these factors: It will, of course, be remembered that private capital will not be forced into any area—but will flow freely when it is assured of reasonable safety, earning potential and opportunity for growth.

The U.S. delegation is proud to work with this committee. We look forward towards attaining a greater knowledge of your view points and we hope that through this cooperative action a further step can be taken in increasing economic well-being of this very important area. If we are successful, we will expect to increase our trade and to improve the opportunities for peaceful development of the world.

## Poison in Your Water—No. 38

EXTENSION OF REMARKS
OF
### HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. DINGELL. Mr. Speaker, an article in the Onancock, Va., Eastern Shore News of February 6, 1958, shows another of the dangers inherent in water pollution.

The article, entitled "Science Warns of Pollution Dangers," tells how "the world's largest marine resource, the U.S. menhaden industry," is threatened by water pollution.

Dr. J. L. McHugh, director of the Virginia Fisheries Laboratory at Gloucester Point, told of the danger to this resource and pointed out:

Most of our important seafoods spend at least a part of their lives in the rivers and estuaries, where they are vulnerable to the effects of industrial and domestic pollution.

He pointed out the danger exists not only to oysters but to shad, river herring, blue crabs, croakers, spot, trout, and menhaden.

[From the Onancock (Va.) Eastern Shore News, Feb. 6, 1958]

SCIENCE WARNS OF POLLUTION DANGERS

Water pollution threatens the world's largest marine resource, the U.S. menhaden industry. So stated Dr. J. L. McHugh, director of the Virginia Fisheries Laboratory at Gloucester Point, today.

Addressing members of the Virginia Fisherman's Association, holding their annual convention at the Chamberlain Hotel at Old Point Comfort, Dr. McHugh stressed the dangers to Virginia's important fishery resources of increasing population and industrial expansion. "Most of our important seafoods spend at least a part of their lives in the rivers and estuaries, where they are vulnerable to the effects of industrial and domestic pollution," he said.

"Oysters are not the only important resources that may be harmed by the effects of expanding civilization and industrialization," he stated. "Fish like shad, river herrings ascend the rivers into fresh water to spawn and the young spend their first few months of life in these waters. The estuaries also are important nursery grounds for blue crabs, croakers, spot, trout, and menhaden.

Dr. McHugh paid high tribute to Virginia's water-control board and State agency responsible for pollution control and abatement. "The water-control board and its able staff headed by A. H. Paessler, is doing a wonderful job against terrific odds," he asserted. "Methods of sewage treatment are known, and cities and towns are required to meet rigid standards in treating their domestic wastes."

## The Protocol of Humphrey

EXTENSION OF REMARKS
OF
### HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleague the following article by Joseph Alsop which appeared in the New York Herald Tribune of March 13, 1959:

THE PROTOCOL OF HUMPHREY
(By Joseph Alsop)

WASHINGTON.—Until recently the protocols of Zion held their rank as history's most influential fraud. In case anyone has forgotten about them, the protocols were a gross anti-Semitic forgery that helped to warp the mind of Adolf Hitler, and then helped Hitler warp the mind of the German people.

Now, however, one begins to wonder whether the protocols of Zion are not losing first place to what may be called the protocol of Humphrey. This is the theory of George Magoffin Humphrey, supported by a wholly unverifiable quotation from Lenin, that the true Communist strategy for the defeat of the West is to force us "to spend ourselves into bankruptcy."

From a moral standpoint, of course, the two cases are as different as chalk from cheese. The people who peddled the protocols of Zion were creatures from the gutter instinctively dealing in garbage. George Humphrey is a courageous, high-minded, and patriotic man. Where on earth he picked up the protocol of Humphrey the record does not reveal. He peddles it, moreover, only because he knows a great deal more about the management of large industrial enterprises than he knows about the forces at work in the modern world.

From a practical standpoint, however, the protocol of Humphrey has the utmost significance. It was twice cited by the President himself when he discussed the Berlin crisis with congressional leaders before the weekend. On that occasion, the President gave Lenin as his authority for the theory, just as his friend, the former Secretary of the Treasury, customarily gives Lenin as his authority. At his press conference, President Eisenhower did not quote Lenin, having perhaps been warned that the quotation was unverifiable. But he again insisted on the validity of this theory that the real Communist aim is to cause the collapse of the free economies by excessive defense spending.

Hence it is necessary to say again, in the most emphatic terms, what has been said already by Marguerite Higgins, by this reporter and by one or two others. The protocol of Humphrey is a transparent, glaring, and rather ridiculous fraud.

There is not one iota of discoverable evidence to support or excuse the fraud. There is also a vast mass of evidence to prove the fraud. Over and over again, the Soviet leaders have said that spending for armaments is the sole prop of the free capitalist economies. Without this stimulus, they have declared, capitalism would soon totter and fall. Furthermore, every knowledgeable expert on the Soviet Union agrees the Soviet leaders are sincerely convinced that heavy defense spending is necessary to keep free capitalism going.

In these circumstances, the question arises why a former Secretary of the Treasury and a President of the United States should both be parroting such nonsense. As to Humphrey, the answer clearly lies in his peculiar conviction that the American economy is desperately fragile.

"Two more years of Truman budgets," he once told this reporter with perfect solemnity, "would have landed this country in communism anyway." On being asked whether he truly meant communism, rather than some vague, unpalatable form of left-wing experimentation, Humphrey replied the he meant communism in the literal sense. If he could believe this much—as he certainly seemed to do—it must have been easy for Humphrey to discern a Soviet plot behind the pressure for defense spending created by the arms race.

As to the President, there is no secret about the vast power over Eisenhower's mind that Humphrey early acquired and still retains. The protocol of Humphrey, being believed by Humphrey, would have at least three chances in four of gaining Eisenhower's credence, too.

To be sure, the $7 billion of tax revenues that George Humphrey sacrificed when first in office would alone be enough to balance the budget after paying all the bills for overcoming the missile gap. But this reminder will hardly alter the opinion of Humphrey, which seems to be shared by Eisenhower, that a serious attempt to defend this country is really much more dangerous than leaving this country quite inadequately defended.

## Welcome to the United Christian Youth Movement

EXTENSION OF REMARKS
OF
### HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. FULTON. Mr. Speaker, the delegates of the United Christian Youth Movement of the National Council of the Churches of Christ in the United States of America are visiting Washington, D.C., during the current week. This is a significant and unique representation of the church youth of America, and is a welcome indication of the responsible attitude of our modern youth today.

The President on Thursday, March 12, 1959, received the delegation of the United Christian Youth Movement officers and national denominational youth presidents at the White House. The delegation has called during the past several days on Senators and Congressmen, as well as certain key leaders of our Government, active in areas of concern in which they are vitally interested.

In order to acquaint the Congress and the American people with the purposes of this UCYM visitation during 1959, I am including for the RECORD their current memorandum on UCYM involvement in White House interests, as well as their current background memo which has been sent to their membership when the Washington visitation was proposed.

My high congratulations go to the delegates, officers, and members of the

UCYM for their dedicated and responsible approach to the problems facing our young people in the United States and the world today. It is a real pleasure to welcome such a fine group of youth leaders to Washington, D.C., and I hope that you plan to make the Washington visitation an annual event which will be productive in knowledge to the delegation attending and also have a lasting imprint on the conduct of U.S. affairs at home and abroad:

MEMORANDUM OF UCYM INVOLVEMENT IN WHITE HOUSE INTERESTS

The United Christian Youth Movement has a long record of active and responsible involvements in matters of national and international concern. Among its current involvements, in which it is known the White House also has deep interest are:

1. Foreign aid: A consistent record of support of this program was most dramatically demonstrated this past year with UCYM testimony directly to the House subcommittee and entered in the record of the Senate. The UCYM, also, was one of the 40 or so national organizations which joined in immediate and coordinated support of the President's television appeals to the Nation on behalf of the mutual assistance legislation.

2. People-to-people: An associate executive secretary of UCYM serves as a member of the Executive Committee of the Youth Committee of the People-to-People program which was directly inspired by the President. In addition we are sponsors of the new International Christian Youth Exchange program of the churches (high school overseas exchange).

3. White House Conference on Children and Youth: Mr. John Tannehill, a member of UCYM's Outreach Commission and chairman of its International Affairs Policy Committee has just been named a youth member of the National Committee for the 1960 White House Conference.

4. National Day of Prayer: The UCYM national chairman (Mr. Stuart Langton) and an Associate Executive Secretary of the Movement were privileged to attend the October 1 services with the President at National Presbyterian Church, and information on this observance has been shared with our constituents.

5. Traffic safety: One of our five current special concerns is in the area of youth traffic safety in which we work directly with the National Safety Council and indirectly with the President's Committee.

6. Disarmament: Members of a UCYM delegation had personal conversations with Mr. Stassen while he was on the White House staff to better understand the complex issues involved in this important issue and more clearly understand the various proposals and plans under discussions.

7. Integration: The UCYM and its constituent groups have been deeply involved for the past 2½ decades in seeking the goal of a nonsegregated church in a nonsegregated society. The USYM never has held a meeting or function in segregated circumstances. In direct mailings and staff and officer visitation throughout the southeast and in the Nation in general we have called for communication and conciliation between persons of differing views and different heritages. Thousands of church young people have had their first positive and profound interracial experiences in UCYM-sponsored activities. At every point possible, we have supported efforts of the administration to simultaneously guarantee adherence to the law of the land and to lead men to support law and order.

8. United Nations N.G.O. status: A reflection of our intense and continuing interest in world peace and the support and strengthening of the United Nations may be found in our maintenance of "Non-Governmental Observer" status at the United Nations. That this is no mere listing of interest may be seen in our cosponsorship (with some 30 other N.G.O.'s) of the community action booklet "In Your Hands" and the nationwide TV program based upon it, both in observance of the 10th anniversary of the Universal Declaration of Human Rights.

9. And, one final item, Miss Kathy McElroy, our national secretary was privileged to share with the President in applying mortar to the cornerstone for the new Inter-Church Center in the New York ceremonies on October 12th last.

---

BACKGROUND MEMORANDUM ON A PROPOSED WASHINGTON VISITATION

All around the world today one may hear the charge that America's youth are apathetic and complacent, poorly informed, and obviously little concerned about the critical state of the world's affairs. Even in our own land, this evaluation has wide circulation and acceptance.

On the other hand, it must be recognized that U.S. church young people have their own overseas relief and mutual assistance operation in the nature of direct youth-fund giving, amounting to well over $1 million annually; that countless thousands of their number are engaged in "pen pal" relationships with young people overseas; that many hundreds of them, at their own personal expense, are annually engaged in overseas work camps and voluntary service programs or high school and college student exchange programs, and that many are earnestly preparing for careers in overseas service of church, industry, or government.

Admitting that all of the above, significant in their own right, are but a drop in the bucket in terms of either the vast numbers of youth comparatively untouched by such programs or the great need of a world in crisis, but sincerely convinced that young people can and will act intelligently and responsibly when live possibilities are given them to make their individual witness count, the church youth programs represented in the United Christian Youth movement are now embarked on a concerted effort in the realm of international affairs study and action as described in the enclosed paper.

We feel that we are now far enough along in that emphasis to be able to speak of the realistic enthusiasm with which it has been received and which is being reflected in ever-wider circles of our church young people.

We feel that it is time to demonstrate to the Nation and the world that U.S. Christian youth are concerned and active, and to dramatize our progress so as to attract the attention of even larger circles of young people.

For these reasons, and in respectful stewardship of the time of persons in important positions, we would like to bring a group of about 20 persons (a cross-sectional representation of the presidential leadership of our many denominational member movements) to call on the President, the Secretary of State, and leading Members of the Congress to briefly present a picture of what U.S. church youth are doing in support of their sincere efforts for peace; solicit their personal reactions and advice as dedicated churchmen regarding the role of the layman in international or governmental service careers; and together demonstrate and dramatize the vital, supportive role of an informed citizenry and call other young people to join in similar programs in their own churches and synagogues.

We feel that 1959 is the appropriate year in which to undertake such a visitation in order to avoid the partisan overtones present during 1960 and yet stimulate widespread interest and study in time to prepare the citizenry for intelligent participation in the decisions of the months and years ahead. In addition, a 1959 experience would find direct reflection in the nationwide observance of Youth Week, the 1960 theme for which is in the area of Christian citizenship.

---

## Romulo Hopeful—Leaves for United States

EXTENSION OF REMARKS
OF
## HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. DINGELL. Mr. Speaker, there have been press reports in some of our newspapers about so-called strained relations between our Government and that of the Philippines. Our Ambassador to Manila, Charles E. Bohlen, and the Philippine Ambassador to Washington, Gen. Carlos P. Romulo, were recalled by their respective home Governments for consultation. Both have now returned to their posts.

Some American magazines, particularly the Time magazine and also the U.S. News & World Report, have printed articles stating that there is a developing anti-American sentiment in the Philippines. In a recent statement on the floor of this House, the gentleman from Massachusetts [Mr. MCCORMACK], who is the majority floor leader, declared that General Romulo has denied this and an interview with the Philippine Ambassador published by a Manila paper was included in the remarks of our distinguished floor leader in which the General explained the present temper and attitude of his people.

I have recently received a more comprehensive statement by Ambassador Romulo on the same subject, published by the Manila Daily Bulletin of February 19, and written by the paper's editor, Felix G. Gonzalez, considered in the Philippines as one of the most outstanding newspapermen of that country, highly respected for his integrity and ability. The Bulletin is owned by a distinguished Philippine citizen, Hans Menzi, whose war record was highly praised by General MacArthur, and who is a great industrialist whose successful business enterprises are contributing to the economic welfare of the Philippines. During the enemy occupation of the Philippines, Mr. Menzi played an active role in the resistance movement.

Because General Romulo's statement as published by the Bulletin is vital background material essential for the proper comprehension of the problems now facing our two Governments, and because we have a high regard in this House for the views of our esteemed former colleague, I ask for permission to include the whole article in the RECORD, as follows:

ROMULO HOPEFUL, LEAVES FOR UNITED STATES

(By F. G. Gonzalez)

Gen. Carlos P. Rombulo, Philippine Ambassador to the United States, slipped out of town quietly at midnight last night conscious of the hard task that lay ahead of him but confident that with the huge reservoir of good will in America for the

Philippines all differences between the two countries would be ironed out amicably and to the satisfaction of all concerned.

Only a few immediate members of his family and some close friends were at the airport to see him off. He had kept his departure so secret that many of his intimate friends did not know when he would leave and even his family was notified only at the last hour.

Since his return last January 26, for consultations with the Government on growing difficulties in P.I.-U.S. relationship, he has not granted a press conference and has avoided getting into the limelight. He has held closed-door conferences with high Government officials—with President Garcia at Baguio and again here, and with Congress leaders and committees of both Chambers and with leaders of commerce and industry.

As he left last night he was reported to have been fortified by the feeling that he enjoys the confidence of the responsible segment of the population, from President Garcia down to prominent men in and out of Government whose interest lay in the welfare of the country to which furtherance of close Philippine-American relations can contribute in large measure.

People close to him said he had set for himself the interlinking goals of presenting to American officials and the public the validity of Philippine monetary claims on the United States and the restoration and augmentation of the close ties that bind the two countries. And with the support and confidence of people in his home country, General Romulo felt that he could not fail in the difficult tasks that confronted him as envoy of the Philippines to America.

He had confided to intimates that he felt he could obtain settlement of several items in the $900 million omnibus claim of the Philippines against the United States, such as the $130 million in additional war damage payments now object of committee hearings in the U.S. Congress, and the $23 million due the Philippines when the United States devalued the dollar in 1934.

(Official sources have reported that other items in the omnibus claim not now subject of U.S. Government action would be taken up in discussions here between Secretary of Foreign Affairs Felixberto Serrano and U.S. Ambassador Charles E. Bohlen upon the envoy's return from Washington where he has been since January 29 for consultation with high officials on Philippine problems.)

In this enterprise of briefing American officials on Philippine monetary claims Romulo's course of action has been carefully charted in the course of conferences with high officials here. Playing an important part in this project is a review of Philippine-American relations from the time of Governor General William Howard Taft who was first to enunciate, shortly after the turn of the century, the policy of "Philippines for the Filipinos."

Over the opposition of some segments of the population in America and of the military in the Philippines, Taft paved the way for political independence of the Philippines by supplanting the Philippine Commission with the Philippine assembly where Filipino leaders were given ample opportunities to learn and practice democracy.

With the passage of the Jones law, definitely committing the United States to grant independence to the Philippines as soon as a stable government can be established here, the Philippines took rapid strides toward freedom in preparation for severance of political ties with the United States. Then U.S. Congress passed the Hare-Hawes-Cutting Act setting a definite date for Philippine independence after an interim of Commonwealth government. Philippine officials now recall that if the so-called Hare-Hawes-Cutting law lost in the plebiscite held here it was because of objections to its provisions relative to U.S. military bases here.

Finally the Tydings-McDuffie Act was passed under the provisions of which the Philippines went through the commonwealth period and attained independence with the establishment of the Republic. Under the Republic the Philippines enjoys complete political independence from the United States, exercising all attributes of a sovereign state.

This review of the political aspect of Philippine-American relations, carefully considered and adopted in several top-level conferences here, has been drawn principally to call attention to the parallelism between these steps and those that are now being taken to attain economic independence.

High officials recalled that under the Philippine Trade Act, our economic ties with the United States will be severed in 1974, when our preferential market there will no longer exist. In view of this, Philippine efforts to open up markets outside the United States should not be misinterpreted as anti-Americanism but rather as steps in anticipation of a development in Philippine economy dictated by necessity.

These officials have hastened to ease apprehension on both sides of the Pacific over Philippine efforts geared toward curtailment of dependence on the American market. They stressed Philippine confidence in American understanding and sympathetic attitude toward Philippine problems. They recalled that in the campaign here for approval of the Parity Act, granting American citizens equal rights and privileges with Filipinos, some sectors voiced apprehension over possibility Wall Street moguls would rush in and secure a stranglehold on Philippine economy. Such fears have been proven unfounded, officials point up proudly, adding that Filipinos can continue secure in their faith in America.

Expanding on official thinking here, men in high Government positions have linked current economic difficulties with efforts toward economic independence. In the alleviation of these hardships the United States has contributed as a friend by recognizing valid claims of the Philippines and by acting to pay them, according to officials.

If these monetary claims are being presented now, officials say, it is because the Philippines is hard pressed and payment of some of them has been due for years. Furthermore, it is pointed out, the claims are submitted as a matter of right and the United States, recognizing justice, will see its way clear to meet its obligation. Thirdly, officials declare, settlement now will certainly remove an irritant in Philippine-American relations.

These considerations are reported to be reflected in high quarters in Government and shared by General Romulo. The Philippine diplomat has consistently turned down requests for a press conference and up to his departure maintained silence when queried on the conferences he had with high Government officials. However, intimates claimed that he shared official thinking on Philippine-American issues and that his views ran closely parallel to official sentiment as reported above.

At the same time, General Romulo was understood as wishing that Philippine Congress leaders would exercise greater moderation and temperance in their public utterances so that they could better cooperate in the creation of a favorable atmosphere for the bilateral negotiations scheduled to start soon both here and in America. He is known to feel that given an atmosphere of amity and understanding no issues outstanding between the two nations cannot be resolved satisfactorily.

"It would be a shame," he was heard to remark, "if the indissoluble bounds (between the two countries) forged in peace and in war should be allowed to weaken over problems that could arise in the best of families."

---

## The American Bar Association and the Supreme Court

EXTENSION OF REMARKS

OF

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, March 10, 1959*

Mr. MULTER. Mr. Speaker, I inserted in the CONGRESSIONAL RECORD of March 9, 1959, an editorial entitled "A Mickey From the Bar." In the same connection, I commend to the attention of our colleagues the following letter to the editor of the New York Times which appeared in that newspaper on March 5, 1959. The letter was written by Jefferson B. Fordham of Philadelphia:

LAWYERS GROUP CRITICIZED—BAR ASSOCIATION SAID TO ALINE ITSELF WITH LAY CRITICS OF COURT

(The writer of the following letter is dean of the Law School of the University of Pennsylvania.)

To the EDITOR OF THE NEW YORK TIMES:

By action of its house of delegates taken on February 24 the American Bar Association failed the American public in interpreting for the citizens the work of the Supreme Court in our constitutional and legal system. What the bar association did, in short, was to aline itself with lay critics of the Court. I am grieved that this is so.

On that date the house of delegates adopted recommendations put forth by the association's special committee on Communist tactics, strategy, and objectives. These recommendations began by declaring that it was the duty of members of the bar to defend the institutions of the judiciary from unfair and unjust attacks and expressed disapproval of proposals to limit Supreme Court jurisdiction.

They went on, however, to laud the Internal Security Subcommittee of the Senate Committee on the Judiciary and the House Un-American Activities Committee for their "records and accomplishments and great service to the Nation" and to recommend a number of changes in Federal legislation.

In calling for changes in Federal legislation the House of Delegates has left a very strong impression that the reason it is considered to be needful is the bad job the Supreme Court is thought to have done in interpreting the Constitution and Federal statutes, the latter in particular. To suggest statutory change is one thing, to imply that it is needed due to bad work by the highest Court is another.

EFFECT ON SECURITY

I simply do not believe that any weakening effect on internal security has been shown or that the association's attack on the Court can be effectively sustained on a lawyer-like basis. The decisions that the Court has made in cases involving security problems have been supported by legal reasoning and methods of interpretation which are familiar to members of the legal profession and generally respected.

It is, for example, a well-understood and well-accepted doctrine in constitutional interpretation that a constitutional question is to be avoided in the interpretation of a statute if this can be done without violence

to the measure examined in its totality. Yet when the Court followed this doctrine in the Yates case and thereby made it unnecessary to pass upon a serious question as to the constitutionality of the Smith Act, the critics of the Court seemed to be able to see nothing but the fact that the result in the case was not to their liking. The ABA would so change the Smith Act as to present squarely the substantive constitutional question which, under the present language, the Court was able to avoid in the Yates case.

The action of the House of Delegates discloses strong preoccupation with matters of internal security rather than with the protection of civil liberty. I do not suggest that lawyers have no proper concern with internal security. But I must say that I find a serious imbalance reflected in the action of the House of Delegates. In my system of values the preeminent concern of lawyers, as individuals and as a group, is with human liberty. Security does not mean much to me except as a means to preserve the conditions under which there will exist maximum freedom for individual human expression and fulfillment.

APPLAUSE FOR COURT

The bar association action has a Maginot line psychology. For my part, I am glad to record the opinion that instead of being charged by the organized bar with reaching decisions inimical to our internal security, the Supreme Court should be warmly applauded by the profession for its fidelity to the substantive and procedural safeguards of the Bill of Rights and for its interpretation of statutes in keeping with the spirit of the Bill of Rights.

When it comes to recommendations for substantive legislation I think the A.B.A. should assert leadership in the realm of civil rights and civil liberties. For years the committee on Communist tactics, strategy, and objectives has been very active and strongly supported, while the committee on the Bill of Rights has languished.

Considered as recommendations for legislative change the bar association proposals are vulnerable. I invite particular attention to the proposal that Congress specifically provides that State statutes forbidding sedition against the United States be enforceable concurrently with the Smith Act.

The Smith Act was interpreted in the Nelson case to supersede a Pennsylvania State sedition law so far as sedition against the United States was concerned. The State supreme court has held that, as to sedition against the United States, the Smith Act superseded the State law. The Supreme Court of the United States agreed with this.

Is not national security a national responsibility? How would it aid to leave each State free to have its own law and enforcement machinery on this subject? I can see in such a system ample grist for the mill of politically ambitious local prosecutors, with the attendant hazards to fair play and civil liberty, but I do not delude myself with the notion that the cause of national security would be served.

JEFFERSON B. FORDHAM.

PHILADELPHIA, *February 26, 1959.*

## Dr. Flemming's Formula

EXTENSION OF REMARKS
OF
## HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. METCALF. Mr. Speaker, the Secretary of Health, Education, and Welfare, Dr. Flemming, has recently applied his talent to the development of a formula which he states would solve the classroom shortage.

Under the Flemming formula, the Federal aid will be supplied to the States which will enable the building of an additional 75,000 classrooms over the next 5 years. In order for this formula to work, however, it will be necessary for the States and local districts to repeal debt limitations, for many State to amend their constitutions, and for others to completely revamp the system of State aid which they and the local districts have worked out over the years. To Dr. Flemming, these are only minor obstacles.

Dr. Flemming has expressed great concern over the problem of supplying an adequate number of competent teachers for the public schools but, as yet, his administration has not seen fit to take any action in this field. He has not made sufficient application of his own ingenious formula.

He should consider applying the Flemming formula to other education problems—teaching the English language, for instance. Under the Flemming formula, all he would have to do is change the basic rules of grammar.

Then a noun does not have to agree with a verb. And there would not be nothing wrong with a double negative. It would be all right to mispel words and use a preposition to end a sentence with.

This application of the Flemming formula might help solve the classroom and teacher shortage. Children would not have to spend so much time learning English. Fewer English teachers and fewer classrooms would be needed. Of course, this is an absurd application of Dr. Flemming's formula but no more absurd than his contention that the classroom shortage can be overcome by changing State constitutions and taxing concepts.

## Hon. James A. Farley Honored

EXTENSION OF REMARKS
OF
## HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. DELANEY. Mr. Speaker, on February 3, 1959, the National Democratic Club of New York gave a dinner in honor of one of its most distinguished members, the Honorable James A. Farley, to mark the 40th anniversary of his membership in the club.

It was truly a well-deserved tribute. No American has ever served his country with greater devotion. Jim Farley's contributions to Government, to poltics—in the best sense of that term—and to the welfare of his fellow citizens, have, in his lifetime, won him an enduring place in our history. He has always been motivated by the highest ideals, and his service has been, and continues to be, an inspiration to all of us, regardless of party.

Mr. Speaker, I ask unanimous consent to include the wording of an inscription which was on a plaque presented to Mr. Farley on this occasion.

The National Democratic Club presents this token of respect and esteem for our distinguished first vice president, Hon. James A. Farley, on the occasion of the 40th aniversary of his membership in the National Democratic Club.

An outstanding citizen, admirable public official and revered gentleman who by his exemplary and outstanding civic and governmental achievements, contributed greatly to the welfare of his Nation, his church, his community and his fellow club members.

His distinguished career has set a high moral standard to which all public officials can aspire and brings to mind the oft-quoted words of the bard, Longfellow:

"Lives of great men all remind us we can make our lives sublime, and departing leave behind us footprints on the sands of time."

Presented on behalf of the board of governors.

CARMINE G. DESAPIO,
*President.*
JEROME H. FRANK,
*Second Vice President.*
THOMAS A. LENANE,
*Secretary.*
C. JOSEPH DANAHY,
*Treasurer.*

## Hawaii Statehood

SPEECH
OF
## HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, March 12, 1959*

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 50) to provide for the admission of the State of Hawaii into the Union.

Mr. ROGERS of Texas. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have only one question to ask. There has been extended debate here concerning communism, but there is this one question I would like to ask of the distinguished chairman who has had control of this bill. The gentleman filed a report over his name in which he admitted that the union that has leaders in it who are members of the Communist Party had control of the economy of Hawaii, and I heard the distinguished gentleman from Pennsylvania who has done such great work against the Communist menace in this country, say that same thing was true and that he also found that. Then they undertook to take the position that the granting of statehood to Hawaii would provide the means by which you could combat that Communist menace. I think the record ought to be clear here during this debate as to where the responsibility lies at the present time for the failure to effectively combat communism in the Hawaiian Islands up to this date. I sincerely hope that the chairman of the committee or someone can answer that question for us.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield.

Mr. EDMONDSON. The gentleman is aware of the fact that the report to which he makes reference calls attention to the passage of a dock seizure bill by the legislature of Hawaii in 1949 which

was stoutly resisted by the ILWU and the Communist element and which they have been trying to repeal ever since its passage, but without success.

Mr. ROGERS of Texas. That is not the question I asked. The fact of the matter is it was stated there has been no effective combating of the Communist situation in Hawaii up to date. I think we ought to know who is responsible for the failure up to date. Is it this Congress who is responsible or who is responsible for not having done something up to this date? I yield to the chairman because I think he is the one who ought to be permitted to answer that question in view of the report that he filed.

Mr. O'BRIEN of New York. Mr. Chairman, the report by the committee which visited Hawaii did not say that nothing was being done to combat communism in Hawaii. In fact, the very strength of our report was based upon what they were doing, and what they are doing in Hawaii. We were told by the highest authorities and the people responsible for security that the Communist apparatus there had become ineffective. We know of our own knowledge that the punishment meted out to the Communists there was punishment meted out by the people of Hawaii and by a Hawaiian jury, and these people escaped jail by a decision outside of the islands.

Mr. ROGERS of Texas. Mr. Chairman, I do not yield further, because the gentleman is not answering my question. If that is true the ILWU still has control of the economy of Hawaii.

Mr. O'BRIEN of New York. May I say to the gentleman, if he has asked me that question, that as far as the security of the United States is concerned that control to whatever extent it may be is just as serious to us whether Hawaii is a Territory or a State; but we believe that with statehood they can combat it even better than they are now doing.

Mr. PILLION. Mr. Chairman, will the gentleman yield?

Mr. ROGERS of Texas. I yield to the gentleman from New York.

Mr. PILLION. Does the gentleman from Texas know that within the past month Mr. Hall, the Communist director of the ILWU, joined with Mr. Charles Kuomi, a member of the House of Representatives in Hawaii, and other radical ILWU members of the lower house of that legislature, and the whole membership of the Republican Party, to depose and get rid of the Democratic speaker, Mr. Esposito? And that the speaker who replaced that gentleman is now a creature of Mr. Hall and Mr. Kuomi? He was a leader of the Communist Party and the gentleman they put in as speaker sent a gavel to Mr. Bridges to open up the ILWU convention in San Francisco, and they now control the lower body of the House of Representatives in the Legislature of the Territory of Hawaii.

Mr. ROGERS of Texas. I thank the gentleman from New York.

## The Need for a Food-Stamp Plan

EXTENSION OF REMARKS
OF
### HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, February 24, 1959*

Mr. REUSS. Mr. Speaker, the labor columnist, Victor Riesel, writing in the Milwaukee Sentinel recently, vividly described the paradox of "hunger in the midst of plenty" caused by our high unemployment on the one hand and the Government's $9 billion surplus of farm commodities on the other hand.

The solution to this problem, the food-stamp plan for the distribution of surplus foods to needy persons, long advocated by my outstanding colleague from Missouri, Congresswoman LEONOR K. SULLIVAN, has been rejected as too expensive by Agriculture Secretary Benson. This seems to me the height of folly, especially in light of the fact that it is going to cost Secretary Benson $1,200 million of the taxpayers' money next year just to pay the storage bill on his surplus foods.

I quite agree with Mr. Riesel that the time has come to take some of our surplus food out of high-cost Government storage and put it on the dinner tables of the people who need it. Mr. Riesel's column follows, and I recommend it highly:

HUNGRY JOBLESS DENIED SURPLUS FOOD
(By Victor Riesel)

It's time for lots of us with money in our wallets to say it: Soon there will be actual hunger in the midst of plenty of prosperity in this Nation. There are poverty pockets. There are heartbreaks at plant gates each week. There are tens of thousands of charity cases. There are loaded welfare lists. All this, in the midst of plenty—of memories of the Thirties.

And all the while the Agricultural Department is nursing more than $9 billion worth of surplus foods. Yet there are thousands of families of unemployed men who need this sustenance but will have to grovel or sell their toasters, TV sets or old washing machines and prove themselves absolutely destitute before they can get what is stored up in Federal bins.

It takes a trip such as I've just made through this land to see personally that in these poverty pockets in the midst of our very real boom are an estimated 1 million of the 5 million jobless. They need help desperately.

They've been out of work so long, they'll be hungry—real 1930-type hungry—in the next 6 months.

But it's a rare community—possibly only Bristol, Pa.—which has set up efficient offices to apply for the surplus foods and distribute them in such hard-hit areas as Pennsylvania, northern New York, and Michigan.

Yet the Government's Commodity Credit Corporation—official keeper of the stores—now has over $9 billion worth of foods such as dried milk, soybeans, cheese, meats and wheat on hand. By June 1960, this vast surplus stockpile of edibles (and a few other commodities such as cotton) will hit $10½ billion.

And just imagine, the sheer cost of keeping this stuff from rotting each year could feed most of the unemployed. Government records reveal that in the 1959 fiscal year it will pay $850 million for storage, transportation and interest on the surpluses. Next year this cost will jump to $1,200 million just for the handling of stuff which apparently will never be eaten by anyone.

This money has absolutely nothing to do with the cost of purchasing the surpluses—it's just the handling charges, let me reemphasize.

But despite the need of those caught in the Nation's poverty pockets, only a few million dollars worth of this gargantuan store of staples has been distributed this year. The AFL–CIO community services committee, headed by Leo Perlis, reports that some of the neediest unemployed will go along on meager diets rather than see themselves left with just meager shreds of dignity.

They feel they lose their self respect when they are required to fill out forms stating they have no close relatives working, that they have less than a few hundred dollars in the bank, or that they have no assets such as a TV set or an old car.

And even when they have convinced Scrooge-type officials that they are not moochers, they get a handout of dry milk, cheese, or soy beans. The officialdom just doesn't bother to attempt to make available the other varieties of surpluses such as meats or eggs.

All this—and more—will be spoken of bitterly at the AFL–CIO unemployment demonstration in Washington which labor's four-man task force planned in detail in Washington last week.

From all over the Nation, representatives of jobless councils will come by plane, train, and chartered bus to hear speakers demand a Nation moratorium on debts of the unemployed. They will hear pleas for a holiday on taxes in the form of reduced withholding amounts from pay envelopes each week. Orators will urge a free medical plan tied to the distribution of surplus foods and free legal aid and psychological guidance for families hit by the strains of sudden poverty.

There will be calls for the kind of laws you would expect a march on Washington to demand. There will be a surplus of such demands—but, agree with them or not, let's get those billions of dollars worth of foods from the Federal bins to the breadbaskets of the folks who need our help.

## Thirtieth Anniversary Testimonial Banquet of the National Conference of Christians and Jews

EXTENSION OF REMARKS
OF
### HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following proceedings of the 30th anniversary testimonial banquet of the National Conference of Christians and Jews, in honor of the Honorable Maximilian Moss, Surrogate of Kings County, held at the Hotel St. George in Brooklyn on October 16, 1958.

Mr. Andrew S. Roscoe, president of the Equitable Savings & Loan Association of Brooklyn, was the toastmaster.

Mr. ROSCOE. Distinguished officers, guests, and friends, this is the 30th annual award dinner of the Brooklyn region, National Conference of Christians and Jews.

Each of these 30 years has been significant in bringing men of faith together in common purpose, peace and freedom. But, this is very special, a very extraordinary gathering of men and women of good will, for it honors a very great person, a true leader, one who embodies all the ideals of brotherhood, one whose entire life represents just this—the promotion of good will and understanding among all the people—the Honorable Maximilian Moss, Surrogate, Kings County.

As you can see in this crowded ballroom, this is the largest assembly we have ever held. The success of our dinner is due to the selfless, infinite labors of our chairmen: Mr. Chester A. Allen, treasurer; and Alexander Aldrich, Vincent Caristo, and Arthur Levitt, regional cochairmen. And there are others whose help has been strong and eager: The members of our executive dinner committee, and, as well, the workers of our general committee, who worked with unsparing time and labor.

There are many, many credits, many thanks to offer to many of you tonight. But let me mention just a few quite casually: Mr. Joe Weinstein, who contributed great moral and substantial support and presented us with a gracious reception and gave us these beautiful flower arrangements.

Mr. Harry Aschkinasi, the spark plug of the professional staff.

Mr. Joseph L. Edwards, director, Brooklyn region, National Conference of Christians and Jews, and finally, each of our many sponsors, who really made this historical event possible by their good will and solid effort.

Cochairman of the Brooklyn division of the National Conference of Christians and Jews, and cabinet officers of the police commissioner in charge of Youth welfare, deputy commissioner of the New York Police Department, the Honorable Alexander Aldrich.

Brooklyn philanthropist and banker, recipient of the 1957 Brotherhood Award, president of the Brooklyn Chamber of Commerce, the treasurer of this 30th anniversary testimonial dinner, Mr. Chester A. Allen.

Distinguished statesman, organizer of the Italian Board of Guardians; military leader and veteran; knighted by Pope Pius XII because of humanitarian service to all, especially children of unhappy homes, Hon. VICTOR L. ANFUSO.

A truly admirable public servant, a beaver in the municipal government, budget director of the city of New York, Hon. Abraham Beame.

A philanthropic leader, honorary president of the Jewish Hospital of Brooklyn; and associate justice of the appellate division of the supreme court, the Honorable George J. Beldock.

A philanthropist and distinguished jurist who has provided strong, unfailing support for Brooklyn's effort in vigorous social progress, Hon. A. David Benjamin.

A philanthropist, and a dedicated public servant, justice of domestic relations court, Hon. Maurice Bernhardt.

A devoted leader of human understanding, vigorous leader in every effort to increase human tolerance among all classes and creeds, vice president of the National Conference, Dr. Sterling Brown.

Chaplain of the Italian Board of Guardians, whose service to troubled youth is of inestimable value, and rector of Our Lady of Grace Church, the Very Reverend Monsignor Salvator B. Cafiero.

Distinguished philanthropist and builder, cochairman of the Brooklyn division of the National Conference of Christians and Jews, Mr. Vincent Caristo.

The first citizen of Brooklyn, and my dear friend, the borough president of Brooklyn, Hon. John Cashmore.

A distinguished lawyer and a philanthropist, vice president of the Flatbush Boys' Club, Hon. Daniel G. Connolly.

Executive director of the Brooklyn division of the Protestant Council, Dr. David M. Corey.

Vigorous, youthful, energetic community leader and responsible, devoted, public servant, builder of highest standards of civil and human justice, senior judge of the supreme court of New York, Hon. Anthony DiGiovanna.

Able, consistent worker for local progress and national security. Sturdy representative of human rights and honest government, and member of our Brooklyn team of representatives, Hon. FRANCIS E. DORN.

Participant in every worthy cause in our community, a worker of genuine sincerity and energy, and the hardest worker for this dinner, Mr. Joseph J. Dreyer.

Executive director of the National Conference of Christians and Jews, Brooklyn division, and the sparkplug of this dinner and of the conference all year around, Mr. Joseph V. Edwards.

The municipal court of the city of New York is the primary frontier of justice in our great frontier town, the welcoming harbor of our Nation.

We are privileged to have the president justice of this court, Hon. Harry Eppig.

A communal leader in manifold fields, chairman of the Brooklyn chapter of American National Red Cross, vice president and general manager of the New York Telephone Co., Mr. Walter A. Giles.

One who portrays the best of American womanhood and dedicated to the service of all worthy community endeavors, Miss Elizabeth A. Goodman.

An educator of international distinction; recipient of many deserved honors and awards, including the French Legion of Honor. A distinguished companion of our superintendent of schools, Dr. Jacob Greenberg.

Recipient of the 1957 Brotherhood Award, trustee of two great colleges, philanthropist, industrialist, and banker, Mr. John W. Hooper.

The "Horatio Alger" of Brooklyn, good friend of the conference, and member of the public service commission, Hon. Aaron L. Jacoby.

A former member of the American diplomatic corps, educator, philanthropist, and industrialist, president of the Navy Yard Boys' Club, Mr. Douglas James.

A distinguished leader in social welfare and public service, president of the Brooklyn Borough Gas Co., Mr. Walter M. Jeffords, Jr.

Back in darker days of the Nation's history our homeowners had a friend in the Halls of Congress, presently a guiding member of the House Ways and Means Committee, a distinguished Member of Congress, Hon. EUGENE J. KEOGH.

A distinguished, untiring leader in the field of social welfare and community effort, Mrs. Bertha Kirsch.

Distinguished young banker, chairman of the board of governors of the Brooklyn Academy of Music, unfailing leader in Brooklyn cultural education, Mr. Everett Livesey.

Philanthropist, industrialist, and former recipient of the brotherhood award of our conference, Mr. Lester Martin.

A generous, great-hearted citizen, public official, lawyer, and banker, immediate postcochairman of the Brooklyn division of the National Conference of Christians and Jews, Hon. John P. McGrath.

Great champion of freedom of enterprise and the dual banking system, Superintendent of Banks Hon. George A. Mooney.

Distinguished Congressman, thorough student of economics and political science. Recognized leader of our national parliament and member of a grand and worth team representing the Borough of Brooklyn, Hon. ABRAHAM J. MULTER.

Distinguished war veteran, aristocrat of merchants, and one who brings philanthropy and integrity to our community, Maj. Benjamin H. Namm.

A friend of our guest of honor from a distant land, human and compassionate American, esteemed by those who know him, former mayor fo the city of New York and former U.S. Ambasador to Mexico, Hon. William O'Dwyer.

Ever kindly, sympathetic and understanding friend of humanity, a distinguished community leader, judge of the eastern district of the State of New York, Hon. Leo F. Rayfiel.

Our good and able friend, director of the National Conference of Christians and Jews, Dr. Allyn Robinson.

Dedicated community leader well in the vanguard in every movement for community improvement, leader of the city council, Hon. Joseph T. Sharkey.

A soldier, a lawyer, a corporate executive, and a philanthropist, president of Mays Department Stores, and our host of this evening's reception, Maj. Max L. Shulman.

A distinguished leader in business, social welfare, and community effort, president of Abraham and Strauss, Mr. Sidney L. Solomon.

Active in all worthy efforts and dedicated to community welfare, judge of the court of claims, Hon. Sidney Squire.

The businessman of our city administration, champion of human rights, and president of the city council, Hon. Abe Stark.

Poet laureate and spiritual leader of our guest of honor and rabbi of Temple Ahavath Sholom, Rabbi Alexander Steinbach.

A big heart whose warmth embraces everything worthwhile in human relations, outstanding industrialist and businessman, chairman of the board of May's Department Store, Mr. Joe Weinstein.

A devoted, consistent community servant, justice of the municipal court of the city of New York, and designated as an acting justice of the city court, Hon. Oliver D. Williams.

One who has dedicated himself to our community's welfare; a distinguished philanthropist and an outstanding businessman, president of Martin's Department Store, Mr. Harry Zeitz.

In introducing our speakers tonight, allow me, please, to limit my introduction to extraordinary phases of these distinguished careers, only referring to the peaks of their communal service, for it is community service and community conscience that bring them here with us tonight.

Distinguished statesmen, our good friend, Col. Arthur Levitt, comptroller of the State of New York, is more than a great public official. He represents civic and communal life on its highest level here in our community of Brooklyn. He is our cochairman of the National Conference of Christians and Jews, Brooklyn region; cochairman for civil defense of Brooklyn; former vice chairman of the Brooklyn chapter of the American Red Cross; president and trustee of the Union Temple of Brooklyn, counsel and director of the Pride of Judea Children's Home, and past commander of the Sydney Rosenberg Post, American Legion, and former president of the Board of Education of the city of New York.

Fellow guests, it is a great honor to present to you a citizen of our community whose breadth of vision and intelligence is as great as his community service and sense of duty, The Honorable Arthur Levitt.

Mr. LEVITT. The sum total of activities of the National Conference of Christians and Jews is devoted to building brotherhood. There are a number of ways that this is being done in the Borough of Brooklyn.

Brooklyn high school students have attended the annual High School Youth Conference at Camp Lake Bryn Mawr in Pennsylvania and these students form a nucleus of a group actively working in the Brooklyn region.

Much is being done in educating Brooklyn teachers who are in direct touch with the adults of the future. Teams of teachers have attended workshops at colleges and universities throughout the Nation. Many more are taking courses in human relations, and a group of five has journeyed to Puerto Rico to better equip themselves to work with the Puerto Rican children in the Brooklyn school population.

A unique program is the National Conference of Christians and Jews training in human relations for the Police Department. High-ranking officers are attending these courses on their own time with the approval of the Commissioner of Police, Stephen P. Kennedy. Last year a similar program was conducted for members of the Bureau of Internal Revenue in Brooklyn.

Apart from these specific programs, the National Conference of Christians and Jews has rendered services to all types of schools, community, and religious organizations that wish to promote the idea of brotherhood.

The National Conference of Christians and Jews exists to create harmony and understanding among the many different groups that make up America. As much as any place in this country, Brooklyn has representatives of every race, religion, and national group in the world. Fortunately, we've been able to live together in harmony and understanding, but it is only because of organizations like the National Conference of Christians and Jews, which have taught us to appreciate the fundamental necessity of the brotherhood of man under the fatherhood of God.

Mr. ROSCOE, distinguished jurist, justice of the supreme court of the State of New York—in introducing this good friend of ours, let me tell you some of his less known achievements because his major accomplishments in his distinguished career are part of the history of Brooklyn and the history of the State of New York.

Judge Keogh began his professional career as a teacher in Public School 183 in Brooklyn, N.Y. Apparently, Judge Keogh has dedicated himself to public service ever since those early days in 1924 when the young boys and girls of Brooklyn first knew him. For he has served the citizenry of youth of our community well and consistently ever since as borough commissioner of the Boy Scouts of America, trustee of the Brooklyn Juvenile Guidance Center, Brooklyn Cancer Committee, New York Heart Campaign. He is now president of the Brooklyn Council of Boy Scouts of America and vice president of the Friends of the Brooklyn Public Library.

As teacher, community friend, author, distinguished jurist and scholar and, above all, able leader of the best in Brooklyn, we proudly introduce the Honorable J. Vincent Keogh.

Representative KEOGH. Mr. Toastmaster, reverend clergy, our guest of honor and his lovely family, Borough President John Cashmore, Dr. Jones, my colleagues on the bench, our friend, Ambassador O'Dwyer, distinguished guests, ladies and gentlemen, friends of the Conference and of Surrogate Moss:

When one as our guest of honor has been acclaimed in so many tangible ways with medals, plaques, loving cups, desk sets, and citations, it is appropriate to recall Keats' classical expression from Endymion, "A thing of beauty is a joy forever." The great artists were not only those of the dim past—there are some who are contemporary, and one of them is Leslie Huvos whom I should like to have join me. Mr. Huvos was kind enough to execute for the Conference of Christians and Jews the presentation I am about to make. His great artistry now joins the company of the Winged Victory of Samothrace, Venus de Milo, Michaelangelo's David and Moses and the other great works of art, even to those now exhibited in the Museum of Modern Art. Mr. Huvos, who did not always live in the United States, was considered the outstanding sculptor of middle Europe. His works are in the Paris Opera House and throughout Europe. Most of the statues in the public squares of Budapest are his creations. He created the St. Christoper monumental statue in the Salon des Artistes Francais in Paris and was complimented therefor by President Theodore Roosevelt at the unveiling. The statue was blessed by the Pope.

Among other works of art of this sculptor are the busts of Admiral Horthy in the royal castle in Hungary, Hector Berlioz in the opera houses of Budapest and Paris, Toscanini, Frantz Liszt, and Chopin. Surrogate Moss, an artist of such talent was chosen so that on this occasion we could tangibly present to you a creation that will live forever and is less expendable than even a car, that forever will reflect the talents, attributes and congenital humanity of one who stands out in our community as representing all that which is noble American democracy. A lawyer, veteran of World War I, then for many years associated with an outstanding law firm in Brooklyn, president of the New York City Board of Education, our guest of honor has contributed to the interests not of any one particular group, but of our entire borough and city, not only president of the Jewish Community Council, but interested in the work of the Salvation Army and yes, even the defunct Dodgers' Knothole Club, not only a member of the executive committee of the Federation of Jewish Philanthropies, but active in our Boy Scout and Red Cross movements, not only past vice president of the Brooklyn Zionist region, but a member of the advisory council of the Sister Kenney Foundation, and on the Columbus Day Citizens Committee, and also Brooklyn Week for the Blind, elected a justice of the supreme court in 1951 and later as surrogate of Kings County in 1955, maintaining the dignity, high standards and sincere understanding of that long line of surrogates, Ketcham, Wingate, McGarey, and Rubenstein. We who work with and know our guest of honor take pride this evening in reminding him of his many unselfish community activities, all consonant with the philosophies and ideals of the Conference of Christians and Jews. Surrogate Moss, it is my heartfelt pleasure on behalf of all those assembled, to make this presentation.

Mr. Moss. Revered members of the clergy, Mr. Chairman, Borough President Cashmore, President Jones, my brethren on the bench, distinguished guests, ladies and gentlemen, and my family, particularly Richard and Nikki, the eldest two of my seven grandchildren.

Although Judge Benjamin could have expressed it better than I, yet I would not be happy without paying my personal respects to that genuine lovable human being, our dynamic chairman, Andy Roscoe. Only those who worked closely with him know of the hard labor performed by him even until 3 in the morning; and always with patience and much charm.

But no man can stay out, day after day, until the early hours of the morning without an understanding wife, and therefore we owe much to Ethel, Andy's better half, and incidentally to my own dear wife, Grace. Both have our genuine gratitude.

Now, when a president of a bank gives his time to a community project, it cannot be done without the consent of its board of directors, and therefore we tender our thanks to the board of the Equitable Savings and Loan Association.

You will see that this is a chain reaction, for when the directors of a bank give leave to their president to engage in a communal endeavor, it is because this is agreeable to the superintendent of banks.

In this audience, we are privileged to have Mr. George Mooney, superintendent of banks of the State of New York, and, Mr. Mooney, I know I bespeak the voice of Brooklyn when I say that we appreciate deeply the policy which you pursue of encouraging presidents and officials of banks to become part of all worthwhile community endeavors. Your presence and their presence tonight attest to that.

My appreciation also goes to the dedicated sponsors, chairmen, and members of the various committees, and to Mr. Edwards and Mr. Aschkinasi of the professional staff; and, of course, to my own spiritual leader, Rabbi Steinbach for his kind words. But transcending all, we recognize that you in this ballroom are the dedicated persons who really made this dinner.

And I cannot restrain myself from singling out the man who first brought me into public life; one whose picture has always occupied the most conspicuous place in my chambers, one whom I have never deviated in my opinion, admiration and love, in storm as well as fair weather—our former Mayor Bill O'Dwyer.

To Mr. Leslie Huvos: I feel very humble to have merited the attention of such an outstanding sculptor. A thousand thanks for having recorded so faithfully my wrinkles and facial muscles; and my deep appreciation to the gentlemen who donated the bust to the conference without a penny's expense to the organization.

And finally my gratitude to my very dear friend, Judge Keogh for his laudatory, but undeserved remarks.

I would not be human if I were not profoundly touched by all of this; and I pledge to you that the events of this evening will seal within me that inspiration which guides men to devote their lives to their community.

The presence of so many people demonstrates clearly an essential aspect of the American way of life; that American culture is no abstract isolated concept but rather a living and growing force which has fed upon the established cultures and religions of all the faiths.

There is in this audience, Prof. Abraham Katsch of New York University, who said in a lecture that on close analysis, our practical democratic creed turns out to be merely an affirmation of the common basis of all the many faiths; that democracy is a masterful symphony, the mellowness and richness of which depend upon an amalgam of the traditions and cultures of all its peoples, brought into an harmonious accord.

The freedom of the human mind is a gift of God to man. But the distortion of the human mind is the act of man, which Dr. Jones has just described as "wicked and destructive", and which we hope can be changed by education. That is why so many of us of all faiths are behind the work of the National Conference of Christians and Jews.

History has a habit of repeating itself, for today we are witnessing a resurgence of hate. The ministers of God recognize it.

As an example, in a recent sermon at solemn Mass in St. Patrick's Cathedral, Father Francis X. Duffy declared, "God cannot be adequately loved by any person who harbors hate." He said that it "is a disease of the spirit." He called it, "Murder from the heart which can express itself in the sharp tongue, the heavy fist, and open war."

The instigators of the hate campaigns care little for the aftereffects of their poison, which by careful studies of the past, have proved beyond doubt that the person who, for example, today is antisemitic, tomorrow becomes anti-Negro, anti-Catholic or anti-

Protestant, and vice versa; antieverything outside his own particular group.

This is not mere surmise but stark past history. And to show you the truth of this assertion, I need only bring to your mind a few examples:

In 1826, an Anti-Masonic National Party was started in America. One history book said: "Anti-Masons were as thick as hornets in the rural Yankee Belt from Maine to Ohio."

The Anti-Masonic Party was the first American party (I hate to call it "American") to hold a presidential nominating convention, which it did in September of 1831 in Baltimore.

The party carried Vermont.

The party ran ahead of President Jackson in Massachusetts.

But, as I said before, prejudice and hatreds once engendered have habits of changing quickly from one scapegoat to another.

And so, a few years later in 1844, an anti-Catholic party was formed, called the "Native Americans." (Notice how all these anti forces always use the cherished name "American.")

As a result of the formation of this anti-Catholic party, many persons were killed and ancient Catholic churches here and elsewhere were burned.

This was the predecessor group to the Know-Nothings, which elected Governors in Kentucky, Maryland, Delaware, and four New England States. They also elected a mayor in New York City and even President Fillmore later became one of their party.

Today the world has made tremendous progress. Dr. Jones has touched on our rocket exploration as but one example. Man's brain has thus brought great scientific triumphs. But it seems that as man's mind becomes sharper in material things, the world becomes more hazardous. And because of that we must encourage every organization and group, whose purpose is to direct man's brain to the more important victories of spiritual triumphs. If the history of civilization proves anything, it proves that the flesh is endowed with something which lifts it above the material, and that something is the divine spirit in man.

Man's future and his progress throughout the ages have always been the history of his spirit. It is no different today, and happily there is a growing realization of this infinite power in both our young and old.

Oh, if the peddlers of hate could only learn in their lifetime, that regardless of the extent of their hates and prejudices, in the republic of the grace, all men, at last, are equal. The tragedy of the world today is that this eternal truth is unfortunately learned by too many, only in death. If only the world would hearken back to the Book of Genesis, for then they would realize that all the people of the earth sprang from the same ancestry; that there is a unity of the human race; that God is the common Father, the creator of all; that it is His divine law which declares all men to be brothers.

---

## Impact of the 1957–58 Recession in Relation to Unemployment Insurance

EXTENSION OF REMARKS

OF

### HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 24, 1959*

Mr. REUSS. Mr. Speaker, unemployment continues to increase in this country. It has now reached a seasonally adjusted figure of 6.1 percent of the working force. That is, 1 of every 16 working people are out of jobs.

Fortunately, we are better prepared to deal with unemployment and its attendant problems today than in the past. The University of Michigan's subcommittee on income maintenance has just released its study entitled "Significant Findings on the Impact of the 1957–58 Recession in Relation to Unemployment Insurance." The authors of this study, William Haber, Fedels F. Fauri, and Wilbur J. Cohen, have made a significant contribution to the unemployment problem which is especially timely in light of the current debate over extending emergency unemployment benefits. A related study will be offered for the CONGRESSIONAL RECORD at a later date.

The aforementioned study follows:

PART 1. SIGNIFICANT FINDINGS ON THE IMPACT OF THE 1957–58 RECESSION IN RELATION TO UNEMPLOYMENT INSURANCE

(By William Haber, Fedele F. Fauri, and Wilbur J. Cohen)

I. SURVEY RESEARCH CENTER DATA

Information from continuing studies by the Survey Research Center of the University of Michigan on the nationwide impact of the recession during 1957–58 in relation to unemployment insurance indicates the following significant findings:

*Impact of unemployment on families* [1]

Eighteen percent of all families in the Nation had one or more family members unemployed during the 12-month period prior to October 1958.

In 14 percent of the families the head experienced some unemployment;

In an additional 4 percent of the families another member experienced some unemployment.

*Relation of annual unemployment to October unemployment* [1]

In the month of October 1958, nearly 6 percent of American families had one or more members unemployed while an additional 12 percent of families experienced some unemployment during the previous 12 months, a total of 18 percent in the 12-month period.[2]

*Duration of unemployment* [1]

The average duration of unemployment was 18 weeks for individuals who experienced some unemployment in the previous 12 months.

For those who were unemployed in October the average duration of unemployment was 26 weeks; 42 percent of this group had been unemployed more than 26 weeks.[3]

For those who were back on the job in October 1958, the average duration of unemployment was about 14 weeks.

*Impact of the recession* [1]

An estimated 13 million different persons experienced a period of unemployment during the 12 months, October 1957–58. This compares very roughly with the 9.8 million different persons who were unemployed during the year 1956, according to the U.S. Census Bureau. The recession thus had the double effect of increasing the number of unemployed as well as lengthening the duration of unemployment.

The number of unemployed during the 12-month period of 1957–58 was roughly 35 to 40 percent greater than in the calendar year 1956. The duration of unemployment also substantially increased. In 1956, according to the census, about one-third of all individuals experiencing unemployment during the year had only 4 weeks or less of unemployment, while the corresponding October 1957–58 figure from the survey was about 13 percent. On the other hand, the proportion experiencing unemployment for more than 26 weeks increased from about 11 to 22 percent during the same period.

About 25 percent of all families reported in October that they experienced unemployment or shorter hours at some time during the previous 12 months. In four-fifths of these families, the main breadwinner was affected. About two-thirds of the unemployed, and half of those whose working hours were cut, attributed this to the recession. An additional 13 percent of families felt that the recession had hurt their financial situation, even though they had experienced neither unemployment nor shorter hours. For some of these families earnings in their own business were lower, others said that their wages or salary had been reduced, that an anticipated raise did not materialize, or that the recession affected them because prices rose.

In all, 38 percent of all families reported either unemployment, shorter hours, or some other setback to their financial situation which they blamed on the recession.

*Income losses of unemployed families* [1]

Income losses were unevenly distributed among the unemployed families. The median net income loss (after taking into account unemployment insurance benefits) for the year reported in the families where the head was unemployed was approximately $900. About 3 percent of the families, where the head was unemployed, reported that they suffered no net income loss and about 18 percent reported they suffered a net income loss of $2,000 or more in the year.

*Measures taken by families to adjust to loss of income* [1]

The most important measures taken by families to adjust to the unemployment of the head of the family were in the order of importance: use of savings, cutting down on buying, help from relatives, piling up bills, and borrowing money. Some families moved to cheaper quarters, were able to have another member of the family go to work, or sought relief from a public welfare agency.[4] The average family with unemployment took two of these measures. The larger the income loss, the more measures were taken to meet the unemployment situation.

*Relation to receipt of unemployment insurance* [1]

Most significant was that of those families where the head received unemployment insurance benefits during the entire period of his unemployment, about 85 percent still took one or more measures (such as those listed above). Unemployment insurance benefits by themselves did not assure to these families sufficient income to continue their previous level of living without some basic adjustments.

The kinds of measures taken differed significantly, however, for those heads of families who received unemployment insurance benefits during the entire period of their unemployment as compared with those who received benefits for only part of their unemployment or not at all. For instance, use of savings was more often resorted to by the first group than the second while piling up bills and borrowing money were more often resorted to by the second group than by the first.

*Relation to thrift* [1]

About 44 percent of the unemployed heads of families reported that they had some savings which they used in the emergency. Although the extent of the savings drawn is not known, reliance upon savings was by far the most important measure taken by heads of unemployed families who received unemployment insurance for their entire duration of unemployment. This fact indicates the extent to which thrift and self-responsibility are relied upon to meet unemployment emergencies.

---

Footnotes at end of speech.

*Relation to help from relatives* [1]

Twenty-three percent of the families in which the head was unemployed reported that they received some help from relatives. Although the extent of the aid is not known, the general magnitude indicates that family aid plays an important role in providing some protection in an unemployment emergency.

*Moved to cheaper quarters* [1]

About 7.5 percent of all heads of families who received unemployment insurance benefits during the entire period of their unemployment moved to cheaper quarters. This figure increased to about 18 percent for those who received only some or no benefits. Thus, it appears unemployment insurance benefits played an important role in helping unemployed persons maintain their previous housing arrangements.

*Relation to public welfare* [1]

About 6.5 percent of all heads of families who were unemployed sought and obtained public relief from welfare agencies. For those with unemployment of less than 14 weeks, the proportion who went on relief was negligible. But the proportion increased substantially as duration of unemployment increased.

*Impact by occupation* [1]

About 10 percent of the heads of families who were in clerical and sales ocupations experienced a period of unemployment during the 12-month period; 20 percent of those in service occupations; nearly 30 percent of craftsmen; and 40 percent of those in unskilled labor.

Taking all individuals who were unemployed during the 12-month period about 9 percent were clerical and sales persons; 10 percent were in service occupations; 53 percent were craftsmen; 16 percent were unskilled laborers; and 12 percent were in all other occupations.

*Impact by age* [1]

About 20 percent of all unemployed heads of families were between the ages of 18 and 29 and about the same percent were age 55 or over. However, of the younger group, 13 percent were unemployed 26 weeks or more while in the older group the comparable proportion was 29 percent. In other words, the older the person, the longer his unemployment tended to be.

*Unemployment within the family* [1]

Of those unemployed during the 12-month period, 71 percent were heads of families, 14 percent were wives of heads, 12 percent were sons or daughters, and 3 percent were other relatives.

Twenty-five percent of the unemployed were women (heads, wives and daughters).

*Evaluation of chances of finding another job* [1]

Of the heads of families who experienced some unemployment during the previous 12 months, 50 percent said their chances of finding a new job that would pay about the same would be bad, about 34 percent, they would be good. Seven percent were uncertain, and 9 percent were not ascertained.

*Differential expectations about business conditions* [1]

Pessimism about future business conditions was only slight higher for all unemployed persons compared with other persons. For example, while 15 percent of those unemployed 8 weeks or less expected bad times in the coming year, the figure was only 18 percent for those with unemployment of more than 26 weeks. The comparable figure was 8 percent for those individuals in the labor force not affected by unemployment or shorter hours.

Unqualified optimism about future business conditions declined sharply as duration of unemployment increased.

Persons who experienced a spell of unemployment and then became reemployed, however, had more optimistic expectations about future business conditions than those who were still unemployed in October, 1958.

*Receipt of unemployment insurance* [1]

About 36 percent of all unemployed individuals did not receive any unemployment insurance benefits. This was due to lack of coverage, as well as to the fact that some persons with short durations of unemployment were not eligible for benefits or did not choose to apply for them. Among individuals with unemployment of 5 weeks or more, a lower proportion of the unemployed did not receive any benefits.

*Opinions of Government policies during the recession* [1]

About one-half of all adults in the Nation (employed, unemployed, and retired) reported that the Government had done a good job during the recession. The major reason given—by 14 percent—for favorable responses was that the Government extended help, through unemployment insurance, social security, or other measures.

About 23 percent of all adults felt that the Government had done a poor job. Among only those persons who reported they were affected unfavorably by the recession (unemployment, shorter hours, business losses, or other reasons), a somewhat larger proportion—34 percent—were of that opinion.

*Duration of unemployment in relation to major purchases* [1]

About 60 percent of those unemployed 14 weeks or more made no major purchase during the survey year and did not spend money on home improvements. The corresponding figure for all persons not affected by unemployment or shorter hours was 40 percent. The proportion for persons with unemployment of 8 weeks or less was about the same as those who were not affected.

Plans for major expenditures during the coming year also were lower among those with prolonged unemployment than among those in the general population, despite the lower level of purchases of the unemployed in the past year.

---

[1] All findings marked under this footnote are results obtained from interviews with a random sample of 1,323 families taken in October 1958 on a nationwide basis by the Survey Research Center of the University of Michigan. Unemployment in the survey includes all unemployment experience over a 12-month period, in contrast to the monthly census report on the labor force which measures only current unemployment in a month. It should be noted that the census also publishes annual data on unemployment occurring within a calendar year.

[2] The 18 percent of families unemployed is slightly higher than the rate of unemployment of individuals in the labor force—17.2 percent. Both the family and the individual rates cited understate the volume of unemployment since the study conducted by the survey research center did not include the unemployment of persons aged 14–17 or new entrants into the labor market.

[3] The census reports the average duration of unemployment for those unemployed in October as 17 weeks. The difference between the survey data and the census data reflects the difference between the total duration of all spells of unemployment experienced by individuals in the 12-month period (survey research data), and the duration of the last spell of unemployment (census data).

[4] It is significant that less than one-half of 1 percent of all those who suffered an income loss reported that they sold their car or some other durable.

## The United Christian Youth Movement and International Affairs

EXTENSION OF REMARKS

OF

### HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, March 11, 1959*

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following information explaining the important work being done in the field of international affairs by the United Christian Youth Movement:

THE UNITED CHRISTIAN YOUTH MOVEMENT AND INTERNATIONAL AFFAIRS

The United Christian Youth Movement (UCYM) is the official cooperative agency for the youth program of 30 national denominations reaching some 10 million young people between the ages of 15 and 23. The United Christian Youth Movement has structural entity in a national general council, 40 State Christian youth councils, and hundreds of community and area councils across the Nation, and, through its contacts with denominational program directors and editors and the resources and curricular materials they prepare and circulate, reaches into every local church youth program.

The national general council of the United Christian Youth Movement is an officially delegated assembly, bringing together the National and State leadership of the churches' youth program. It attempts to provide leadership for all church youth by focusing attention on areas of common concern, speaking the mind of youth to both church and community, lifting up critical problems for priority consideration by all the churches, and planning cooperative projects through which all Christian youth may make manifest their unity in Christ.

In fulfillment of these functions, the 1956 session of the general council voted to embark on a 5-year emphasis on education and action in international affairs, believing that Christian youth have a role and responsibility in the world today, that the issues of peace and war are among the most critical of our time, that responsible study and action can be effective in swaying the balance.

The general council sought to avoid a superficial rash of activities and projects directed that careful study and preparation precede any action phase. A highly selected group of 35 denominational leaders met in a Preparatory Commission on International Affairs in the spring of 1957. They spent a week in intense conversation with administration and congressional leaders, officials of the United Nations, professors of political science, theologians, and leading churchmen, and developed a fourfold strategy ("principles," "policies," "program," "projects"), including very careful and responsible coordination with the overall concerns and program of the churches as reflected in various units of the National Council of Churches (missionary education materials on "Into All the World Together"; Department of International Affairs program, including the Fifth World Order Study Conference and coordinated field program, Church World Service, etc.).

Small study groups within each constituent unit worked for nearly 2 years in the drafting and redrafting of a statement of basic principles underlying any concern or action in this field. The statement, "Moral and Theological Principles for Action in International Affairs," now stands as an official and major statement of the movement and

has been received with widespread respect and enthusiasm.

A similar process of intense study is now being pursued in the development of policy statements and discussion resources in several critical areas (disarmament, human rights, rapid social change, nuclear control, nationalism).

A handbook for use by local church leaders is now in prepaartion and is expected to be published early in 1960. The nationwide observances of Youth Week by all of our cooperating denominations and churches will focus attention in late January of 1960 on the role of youth in responsible citizenship and in 1961 on worldwide responsibilities.

Projects already under way include international Christian youth exchange, world youth projects, share our surplus, participation in trick-or-treat support of UNICEF, numerous U.N. and Washington seminars, and similar programs in several State capitals.

Projects being prepared include a teenage clothing drive for refugee relief, information and recruitment for careers in international affairs, development of a realistic and positive program of alternative service opportunities, and increased contact with congressional and administration leaders to reflect the concerns and opinions of Christian youth.

Already, at least a dozen of the national denominational youth organizatons and an even larger number of the cooperative state Christian youth councils have given major blocs of time in their annual meetings and summer conferences to a consideration of the ways in which this emphasis can be implemented in their constituency. Several are now developing their own supplementary programs of study and action.

The entire emphasis is geared to increased involvement of even larger numbers of young people in responsible, intelligent, informed study and action in international affairs concerns. The emphasis will have its major field thrust in 1960 and 1961 as the years of careful planning and basic study begin to reach the local level in widespread fashion. It is our faith and hope that Christian youth as instruments of God can influence change toward His will as a part of the world mission of the Church.

THEOLOGICAL AND MORAL BASES FOR CHRISTIAN ACTION IN INTERNATIONAL AFFAIRS—STATEMENT OF THE GENERAL COUNCIL OF THE UNITED CHRISTIAN YOUTH MOVEMENT

Christian faith speaks to our time. In this revolutionary world our faith and the urgency of international issues call us to prayer, thought, and action.

The revolutionary love of God in Christ has been a motivating factor in transforming men and nations. It has led men to seek such things as social reforms, political freedom, and personal equality.

Vast revolutions are taking place throughout our world in industrialization, nuclear power, communications, population explosions, anticolonialism, nationalism, race relations, and struggles for human rights and dignity.

As Christian young people we act in faith believing that both individuals and social orders can be transformed. Christian youth, as instruments of God, can influence change toward His will as a part of the world mission of the church.

There is a new urgency for us to know more clearly the meaning of our faith and how it is related to the life and death decisions of our generation in this nuclear-space age. Certain elements of our faith have particular meaning in this time as imperatives for action that will be most effective for peace and order with justice and freedom.

SOME ELEMENTS OF OUR FAITH

We believe in God the Creator of heaven and earth and Father of all mankind. "He made from one every nation of men." Racial, social, economic, and political distinctions made by man do not hold with God who "shows no partiality." He wills that all His children should live in love, in intelligent good will toward others.

God is Sovereign, Ruler over time, history, nations, and peoples. God has revealed Himself to be a God of justice, order, love, and peace. He desires that all people of the world live these qualities of life.

In a race against time to find ways of peace, we are sustained by our faith that God who is working in time is also the Maker and Sovereign of time.

In working to affect decisions of history, we are aware that men can serve as instruments of God and His purposes while the final issues are with Him, the Lord of History.

We maintain that the nations of the world are not ultimately sovereign, all powerful, or ends in themselves. They are under the sovereignty of God. Therefore, we hold that nations should strive for equality, cooperation, and community; they should serve the good of all individuals; and they should seek to promote justice, freedom, and peace, which God wills. It is the responsibility of the church to remind nations that ultimate sovereignty belongs to God.

We believe in Jesus Christ as the Son of God, through whom God redeems man and reveals His nature as a God of love. "God was in Christ reconciling the world to Himself." The cross of Christ represents that death to sin and resurrection to new life which is man's redemption. In His teachings and practices, Jesus set an example of love in action. He counseled that men should love their enemies, and He, Himself, responded with love to His enemies when He said, "Father, forgive them, for they know not what they do."

We believe that man has been created by God in His own image. This spiritual dimension in man imports to every man a sacredness. Jesus emphasized the unique value and potentialities of every individual. Man in his relative freedom is capable of depths of sin, including self-righteousness, pride, greed, hatred, prejudice, perversion of power, and in other ways exalting himself to the place of God; but he is also capable by the grace of God of self-evaluation, humility, selflessness, love, justice, and devotion to God. By acknowledging his limitations and sinfulness before God and by the strength of Jesus Christ dwelling in him, man is enabled to move toward a life of obedience to God. Such obedience involves more than complying with a set of rules; it results from love, a love responsive toward God which issues forth in love toward man.

We believe that the spirit of God at work within us can and will take hold of our total being and negate our self-centeredness and sin. Thus when we come into a meaningful relationship with Jesus Christ, we do not merely change our mode of conduct. Rather, our lives, in totality, are transformed so that we share this creative and active love.

We believe that Christians are called to new life in Christ which is given to us as we are receptive and aware of the opportunities and the imperative to become instruments and channels of God's will rather than our own. In this new obedience what we are and what we say and do become witness and proclamation of the power of the gospel. As the Christian witnesses in love he is to remember: "Nevertheless, not I but Christ who dwelleth in me."

We believe that Christians are members of a community, the church, and are bound together by the grace of Jesus Christ and their loyalty to Him and have the responsibility of providing in their common life and fellowship the kind of community God wills for the world. In the growing ecumenical movement the Christian Church, transcending national, political, economic, and social distinctions, is increasingly a proving ground of world-wide community. The church as a redemptive, suffering, serving fellowship also has a responsibility for working to transform the society in which we live, for our faith is relevant to all of life.

SOME MORAL IMPERATIVES

In theological convictions, moral imperatives appear. We are reminded that Jesus spoke of man's duty to man in light of man's duty to God. Jesus not only taught, but He "went about doing good." For the Christian, consideration of God's love for us implies the necessity for moral action by us to serve God by serving mankind. "For he who does not love his brother whom he has seen, cannot love God whom he has not seen."

This Christian love is not a sentimental feeling but an attitude of life rooted in the nature of God and in our relationship with Him.

Christian love involves responsibility. Because of what God in His love has done for us, we are awakened to responsibility for our fellowmen. This demands of us many things: We are constantly to strive toward more order, harmony, and unity in the world, acknowledging that distortion of these elements means distortion of God's creation, and we are to practice faithful stewardship of God's abundance.

Christian love involves reconciliation. As God was in Christ reconciling the world to Himself, we are to be reconciled to our fellowmen and to serve as ministers of reconciliation. This means forgiveness and the developing of new relationships among men and nations. All men and nations are under judgment and stand in need of God's forgiveness, grace, and power for rebirth in newness of life.

Christian love involves respect for all men. We respect each individual because he is created in the image of God. He deserves that which we ourselves need—recognition of the dignity of self. Respecting him we respect his rights. We also respect the culture resulting from the exercise of these rights, insofar as the rights of other humans, who are also God's creatures, are not endangered.

Christian love involves concern. All people are within our Christian concern. When we understand the needs of others, Christian love changes these needs into demands upon us. Our Christian love changes these needs into demands upon us. Our belief in the equality of men under God gives us a concern for people which requires a just society. Discrimination, exploitation, segregation, unequal opportunities for health, work, and education, and gross inequities in living standards must be eliminated. Recognizing that all men are conditioned greatly by their environment, the Christian is thus inescapably responsible for actions to help shape society, under God, for human well-being.

Christian love involves self-sacrificing service. Jesus said, "He who finds his life will lose it, and he who loses his life for My sake will find it." The love of God revealed in Jesus Christ is a new dynamic in the life of men and nations which moves us to respond with compassion to the needs of the hungry, naked, sick, and homeless, remembering that, inasmuch as we do it to one of the least of these His brethren, we do it to Him. We recognize limited self-interest as a valid concern of men and nations but we also believe that we have a mandate to apply the scriptural precept of "the suffering servant."

Christian love must be expressed in relation to key values in international relations such as peace and order, justice, and freedom. These broad, general objectives are rooted in the Scriptures, Christian theology, philosophy, and history. They must be kept in balance with one another and with love.

Peace is not simply the absence of war but the development of order with justice and freedom. Nations have been driven by the quest for national security to a practical and as yet limited order as exemplified in the United Nations. Christians are also concerned that there be deeper motivation. We believe that the peace our world hungers for will be brought nearer as and if the nations strive for more of God's order with a real sense of responsibility to all men. Peace involves disarmament, the beating of swords into plowshares, the elimination of the causes of war, and the dealing realistically with the existence and use of power. We work for peace in light of the mission of Jesus Christ who preached good news to the poor, proclaimed release to the captive, gave sight to the blind, and set the oppressed free.

Justice which protects the rights and dignity of the human person is essential to peace. It is demanded by the will of God and by the realities of human experience. Justice demands dynamic economic and political structures which will give equal opportunities to all individuals and groups to develop their potentialities and make their contributions to society. Such justice based on the rule of law promotes human welfare and peace.

Freedom which enables God's creatures to live their lives after the will of their Creator is also essential to peace. Such feedom gives men the power to control, cirticize, and change their government. This freedom must also guarantee civil liberties to every man. We believe all people must have the opportunity to know the truth which makes men free.

To act in love for peace and order, justice, and freedom, we must move from principles to specifics. This involves no easy, direct application, but a working through "middle axioms." "Middle axioms" are limited goals not necessarily binding for all time, but setting forth general direction for necessary decision and actions in given times and situations. For example, in our time we are moved to work for more effective international organizations, for increasing provisions for human rights, for world economic development, for institutions for peaceful settlement and peaceful change.

A CALL TO PRAYER, THOUGHT, AND ACTION

Christians have been expressing love in worldwide witness through missions, world service, evangelism, and prayer. These have made important contributions in international relations. They are essential, and we desperately need more of all such efforts in new forms and with new urgency in our revolutionary age.

As a part of the total world mission of the church, we also need further development of specific actions immediately related to foreign policies and international affairs. It is not enough for the churches to proclaim was as "the supreme sin."[1] Churches and Christians, knowing and declaring this, must work to root out the causes of war—personal and social, psychological and ideological, cultural and military, economic and political—and to promote in every possible way the things which make for peace.

Historically, the Christian in the United States has won the freedom to confront his society with the higher spiritual order. We have felt that we must obey God, rather than man, and we have had the liberty to obey God's will. With this providential freedom comes increased duty. God's order is brought nearer to reality as we critically weigh our society from within, using Christian values and constructive attitudes. But these evaluations and attitudes must lead to effective action. "Every one to whom much is given, of him will much be required."

"Eternal God, who committest to us the swift and solemn trust of life, since we know not for a moment what the day may bring forth, but only that the hour of serving Thee is always present, may we wake to the instant claims of Thy Holy Will, not waiting for tomorrow but yielding today."

(This statement of "The Moral and Theological Bases for Christian Action in International Affairs" was first projected by the Preparatory Commission on International Affairs (March 1957), drafted by a special committee of qualified young people, accepted as a study document by the 1957 general council of the United Christian Youth Movement, referred to the constituent national denominational youth organizations and State Christian youth councils for study and reaction, and revised and accepted as an official statement of the United Christian Youth Movement by its duly elected and representative general council, August 1958.)

## Oregon's 100th Birthday

EXTENSION OF REMARKS
OF
## HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

*Monday, February 16, 1959*

Mr. ULLMAN. Mr. Speaker, Mr. H. L. Propst, Orofino, Idaho, has forwarded to me a copy of a letter written in 1850 by his great grandfather, Mr. C. C. Parrish.

On the occasion of Oregon's 100th birthday, I think it is very fitting to print this letter. I think it is one of the finest descriptions of the thinking, the feelings, and the way of life of the great pioneers who settled the Oregon Territory. I think my colleagues will find it most interesting:

NEAR SYRACUSE, MARION COUNTY,
OREGON TERRITORY,
*November 15, 1850.*

HUGH & SAREPTA NICKERSON, DER CHILDREN:

By this you may see that we still live, it is by the mercy of a kinde & indulgent Heavenly Father that we are thus faivored. Seven long years have hastened away since we took the parting hand with our friends upon the old walks of Ohio, to go, we then knew not where, but our kind guide conducted us safely to this good land, and now may we not inquire, what shall we render to God for all his benefeits. Oh, what cause of thankfulness have we, seeing that we all live, and enjoy life, and the bounties of a good providance. While we are continually hearing of the doings of the monster Death, and, notwithstanding, we feelingly condole with our friends in their losses and bereavments, yet, we all have cause to thank God that it is no worse; for when we morne, not as those do, who have no hope, we find in the cup of sorrow, a mixture of joy which nothing but the religion of Jeasus can inspire. O, then let us lean on the Saviour for support, and all will be well. As for my familly, we have nothing to complain of except our own unworthyness, and not much to desire that we have not, except it is religion and the means of grace, we have long looked and desired to see the day when some of our good preachers would come to our releaf. And we are now cheered with prospect and are beginning to sing. There is a better day a coming—we are plased to here that our friends are waking up to a sence of their own intrust in view of coming to this country, the best we honestly believe on this side of Heaven. When we try to discribe it, we fall short about half way, yet the people of the States think it is romance. Business is now verry lively in this territory. Markets are pretty good. Jackson and his mother has just returned from Oregon Ct. with the team. They sold 23 bushels of onions at seven dollars per bushel, 126 pounds of butter at one dollar per pound, 24 hed of cabages at fifty cents per hed, 14 bushels of oats at two dollars per bushel—Beets were worth four dollars per bushel but they took none with them—They bought good calico at 12½ cents per yd by the bolt. Bleached muslin at 18 cents pr yd by the bolt. Brown muslin at the same. Sugar at 18 cts. per pound, salt 4 cents per pound. We sold our peaches this year at six dollars pr bushel and from .25 to .50 pr doz. In this way we took in some 300 dollars. Potatoes are worth three dollars at the Citty, but we have sold them at home this year

for one dollar, and as low as fifty cts, they are plenty here now, for all the prices are so high, yet provisions of all kinds are exceding by plenty for every boddy, hereabouts. I wish to say to you, and threw you to all my relations and old acquaintances that we are prepairing to supply you with provisions, on the cheepest terms, we have already planted considerable many potatoes, and but for the school, we should be at it today, as the weather is fine.

While I am writing I look out at the window upon the prairies and fields and they remind me of your middle of May. The emigrants have bin coming in, more or less for two months, their stock is poor, but all they have to do is to let them loos and look after them a little and they soon come out of the kinks. A large portion of this years Emigration started for California, but on hearing of the grass being burned of on that road they turned for Oregon, but being so verry late in the season, fall raines came on, then snow caught them in the Cascade Mountains. Much of their stock died, they had to leav Waggons and all behind, and be carried out on hors back. O, take warning of this, start early on Brother Clancies plan, and when you start, press on, be fourmost if possible. You may be here by the tenth of August at farthest, then you may bring in your stock in good condition, weather dry and pleasant—bring your beads and clothing with plenty of provision. Feather beds are harder to come at then anything els, if I was Hugh & Mc. I would bring a small box of small tools, such as match plains and the like with plain bits, as timber is plenty in Oregon. Broad axes, addzes, augers and the like are plenty and of good quality. I wish Hugh and ——— and the friends to help McClure to a deacent outfit so that he may bring his family along with the rest of the friends as comfortably and as independently as the rest, having his own Wagon and team, and I will take it as a faivour, and will refund the money on your arrival at my place. The propper way will be to take his note or receit and present it to me, as I cannot bare the idea of having him left—I want to say a word on a dilicate subject. It is this—it sometimes comes to pass that we are admonished that before we can posably get threw this long journey that we must have an increas of familly, and of cours we cannot go this season, now for the information of all such, we can inform you that we had a great many such ocurances in our Emigration and are prepaired to say that we a whole, we never knew Mothers and infants to do better, our frolicks mostly came on in the nite, and when the signs of the times indicated a storm it was easy to select a suitable place in the incampment and we were always ready to role out in the morning with the company—I want to say a word about the journey, that it is long and tiresom, is a matter none of ya need doubt, but if you can keep health, the continual occurance of knew objects will make the time pass along more agreeably—how to preserve health, in ordinary seasons you will not be likely to git sick if you conduct with prudence untill you reach the great Plat River.

This river is like no other River, perhaps in the world, it is made by the streams of the Rocky Mountains, water pure at first, but is flows down with a courant bold and majestic, its bed is sand and that continually, conciquently, the water is muddy, looks like it is not fit for man or beast to drink. To avoid this dificulty, our Emigration resorted to well diging with a spade. You can dig a well 2 or 3 feet deep in a few minutes when clean water imediately comes in plenty, this practice became general, and the conciquence was we soon had sickness plenty, the River water is the best by far, and you should avoid those stink holes as you would avoid poison. Now friends, I wish you to take this advise, provide buckets or other vesels sufficient to hold water nough to do you threw the night and some to put in your water bag in the morning, by standing threw the night it settles with the sand at the bottom—but if you put a little sweet milk in the water, it settles in a few minits reddy for use, take this cours and plenty of good Cayanne and Labeliei, with the blessing of God and industry and you may get threw in good time and perhaps better health than when you started—One word more for McClure, we wish him and his family to take courage. I think he will get money before you get this, as James R. Robb (a good fellow) has written to his partner at New York to send him money, but if he should not git it in that way, let the friends who can, advance it for him doubting not Robb, Gamahil and myself all stand readdy and pledged to refund the cash on sight, my wish is that you take pains to let this paper have a circulation among all the friends—my opinyan is that prices will be a little reduced by the time you arive, but if prices should keep up, all the better, as it will soon be your turn to sell to others—This is the easiest place to make a living, to make property, or even cash if you pleas that you ever saw—My sheet is now full, I must bid you fairwell for a while, be sure, write when you start from Misoury and tel us know who is coming.

C. C. PARRISH & WIFE.

## The Resolutions and the Platform for 1959 of the American Association of School Administrators

---

EXTENSION OF REMARKS

OF

## HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, February 25, 1959*

Mr. THOMPSON of New Jersey. Mr. Speaker, more than 20,000 persons attended the 91st annual meeting of the American Association of School Administrators held during February this year in Atlantic City, N.J. The association unanimously passed a number of important resolutions and pledged to work toward their attainment.

The American Association of School Administrators spoke out courageously on many of the significant issues of our day.

I am pleased to include here the 1959 resolutions and the platform, together with a letter I have received from Dr. Finis E. Engleman, executive secretary of the American Association of School Administrators. This fine organization is a department of the National Education Association:

AMERICAN ASSOCIATION OF
SCHOOL ADMINISTRATORS,
*Washington, D.C., March 10, 1959.*

Congressman FRANK THOMPSON, Jr.,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. THOMPSON: As you may know, more than 20,000 persons recently attended the 91st annual meeting of the American Association of School Administrators held in Atlantic City, N.J. The association unanimously passed a number of resolutions and pledged to work toward their attainment. I believe the administrators spoke out courageously on several significant issues and because of your known interest, we are forwarding a printed copy of the resolutions for your perusal and study.

Sincerely,

FINIS E. ENGLEMAN,
*Executive Secretary.*

---

THE 1959 RESOLUTIONS AND THE PLATFORM, AMERICAN ASSOCIATION OF SCHOOL ADMINISTRATORS

REPORT OF THE RESOLUTIONS COMMITTEE, ATLANTIC CITY CONVENTION, FEBRUARY 18, 1959

The American Association of School Administrators believes that the educational goals of this Nation are an expression of the convictions of successive generations regarding their faith in democracy and the opportunities and responsibilities of free men. The association further believes that improvement in education is so important that it cannot await the ideal circumstance or the perfect climate. Now is the time to exercise wisdom, insight, imagination, and creativity so that continued improvement is made in organization, finance, curriculum, instruction, teacher training, recruitment, and administrative leadership. The association pledges its unwavering support to these ends and dedicates the following statements indicating convictions with respect to persistent and emerging problems.

1. Education for all American children and youth: This association reemphasizes and believes that the public schools in the United States were established and have been developed on the fundamental premises that each and every child is important, that each is endowed with unique aptitudes and abilities, that the strength and well-being of this Nation are dependent upon developing these capacities to the fullest extent, and that a well-informed, educated electorate is essential to the survival of a free society. The association urges school board members, administrators, teachers, and citizen groups who are making timely and much needed efforts to develop the full capacities of the extremes in ability and motivation (either the intellectually gifted and academically talented pupils or the retarded and handicapped pupils) to be continuously mindful of the majority of the children who do not fall into these or other special categories. The problem is not that of deciding which groups should take precedence over the others; rather it is one of identifying the weaker points in the program and strengthening them to the end that the abilities of each and every child can be developed to full capacity. The American Association of School Administrators is firmly committed and pledges its full strength and support to the preservation and further development of public schools undergirded by and committed to this basic principle.

2. Priority for education: The American Association of School Administrators believes that we must assign an ever higher priority to our schools. While we still believe ours is the best educational system in the world and does enjoy a high priority, we reflect that our total endeavor in this regard is not comparable to the manner in which we attack those lesser goals involving comfort and pleasures. If the United States wants good schools, adequate for our time, we have the resources. The American Association of School Administrators is convinced that the citizens of the United States desire to attach an increasingly higher priority to its youth and to their education. The association pledges every effort to the achievement and justification of this goal.

3. Quality education: The major purpose of school administration is to facilitate and assure quality instruction. We believe it is the responsibility of school administrators to provide leadership to communities and

boards of education to develop the essential prerequisites if the educational program is to have quality characteristics. We consider it a responsibility of the superintendent of schools to make clear to the community and the board of education the necessity for adequate facilities, appropriate instructional materials, a diversified program, and a full staff of qualified specialists and teachers, each with a reasonable work load. As administrators we reaffirm our commitment to work for improved teaching and learning.

4. Spiritual values: The members of this association recognize that the future will demand of our citizens a moral fibre seldom required of any society. The complex and difficult problems which they will face require a strength of character and a set of values which give them the power and the courage to hold steadfastly to those ideals and spiritual concepts on which this Nation was founded. We believe that the school should play an important part in building spiritual values. We also believe that the school should do this in cooperation with the home, the church, and other community organizations which have as their goal a service to children and youth. Since public education in the United States was established to help all citizens achieve the highest aspiration of man, the schools dare not falter in their responsibility.

5. The creative arts: The American Association of School Administrators commends the president, the executive committee, and the staff for selecting the creative arts as the general theme for the 1959 convention. We believe in a well-balanced school curriculum in which music, drama, painting, poetry, sculpture, architecture, and the like are included side by side with other important subjects such as mathematics, history, and science. It is important that pupils, as a part of general education, learn to appreciate, to understand, to create, and to criticize with discrimination those products of the mind, the voice, the hand, and the body which give dignity to the person and exalt the spirit of man.

6. Strengthening teaching: The association is fully aware of the wide range of competencies required of the qualified teacher. We pledge to assist in providing suitable physical environments, tools, and conditions for teaching which will include such features as adequate classrooms, laboratories, libraries, audio and visual teaching aids, reasonable work assignments, class size consistent with the task at hand, and specialized personnel and community resources.

We recognize that education demands teamwork and cooperation of all professional people. Support of each to the other is essential to individual and professional staff development.

Because of the important contributions made by classroom teachers to improvement of schools through professional organizations, we recommend establishment of appropriate policies of releasing, without loss of pay, teachers who are invited to serve as participants in conferences and conventions of major professional organizations at local, State, and national levels.

We shall also assist in the establishment or continuation of programs that will make classroom teaching more attractive as a career, such as tenure, sick leave, and adequate retirement provisions.

7. Recognition of professional competency: The association believes that the degree to which the public schools meet their responsibilities to the Nation depends upon the competency of professional personnel at all levels. We call upon the school districts of our country to pay teachers and other personnel salaries which are commensurate with their responsibilities and which compete effectively with salaries in other fields of human endeavor. We suggest that boards of education give careful study and consideration to salary plans and other means of recognition designed to attract and retain competent people in the service of public education.

8. Citizenship rights: The American Association of School Administrators urges every school system, in its written personnel policies, to guarantee to all personnel full political equality with other citizens in the exercise of their political rights and responsibilities.

9. Preparation of administrators: The American Association of School Administrators pledges its continued support to dedicated efforts for improving school administration. To this end, it enthusiastically commends and congratulates colleges and universities which have established careful student selection programs, have developed sound and comprehensive programs of preparation in school administration, and have incorporated field experience under careful guidance as an integral part of the total planned sequence of preparation. The association further recommends that a program for preparing school administrators such as outlined in "Something To Steer By" be implemented as rapidly as possible.

10. Maintaining perspective: Those who would fully understand the value of the school as a public institution must have knowledge of it as an entirety. The association urges its members to be diligent to maintain balanced perspective in these crucial years so that we should not take false stands or allow any one segment of the educational curriculum or program to dominate or skew the total picture.

Forthright criticism based on accurate information and directed toward constructive purposes has been in the past, and continues to be, a vital force in shaping the public schools. Such criticism is sought and welcomed by the association. The association commends those who approach evaluation in a sane, comprehensive, considerate, and intelligent manner.

11. Control of certification: The American Association of School Administrators is unalterably opposed to any and all Federal legislation that would place, with any national board or committee, the authority to exercise control over public education through the establishment of certification regulations for teachers in science and mathematics or any other field. Further, the association objects to any proposal whereby Federal funds would be utilized to augment teachers salaries contingent upon national certification.

12. Communication: The association commends producers, writers, publishers, and others who are directly or indirectly responsible for bringing educational problems and progress to the attention of the people of this Nation through mass media of communication. The association recognizes that responsibility for accurate and comprehensive communication rests with both the educational leaders and the leaders in the field of communication, and the association pledges its wholehearted support to all efforts aimed at improving the scope and methods of communication.

13. Use of texts: The importance and usefulness of tests in evaluation and teaching cannot be overestimated. There is a great need for improved and more adequate instruments for evaluation of many kinds of educational growth. The misuse of tests and the misinterpretation of test data continue to be a glaring danger to good educational programs. Any testing instrument should be selected and used in terms of what a particular school had intended to teach. To judge a school solely on the basis of data derived from any battery of examinations is an invalid and dangerous venture. State or national examination results used without due regard for the educational objectives of the school and the nature of the student body, are likely to be misleading.

14. Desegregation: In this Nation composed of people with diverse cultural backgrounds, traditions, customs, and preferences, there is a common core of ideals fundamental to its greatness. The association believes that free and equal opportunities for education for all children and youth are essential to the perpetuation of these ideals. The association realizes that adjustment consistent with the Supreme Court ruling on school segregation is a process, complex in nature and deep seated in social and cultural conflict, which calls for calm judgment, tolerant understanding, careful planning, and concerted effort by lay citizens as well as by educational leaders. We believe this can be achieved without abandoning those fundamental principles of public policy which have established the public schools as the one sound educational institution to be supported by public tax funds. We commend those school superintendents and community leaders whose efforts have led all races and creeds to study the issues involved and to approach the problem with open minds and willingness to seek the good of all. We urge people in all States and all communities to do this in a spirit of good will, good faith, patience, and courage, fraught with humility.

15. School district organization: The association commends legislatures, State departments of education, boards of education, school administrators, and other citizens who have assisted in the elimination of those small school districts which are inadequate. It further commends the progress that has been made in some States toward the improvement of the intermediate unit as an effective instrument for providing special services to the local districts. The association deplores the existence of nonoperating school districts which serve no purpose other than to provide an avenue of escape from sharing a fair and just responsibility for school support.

16. Fiscal responsibility: This association believes that boards of education as representatives of all the people and agents of the State should be held responsible for the maintenance of good schools. This responsibility implies a freedom from other governmental agencies and a fiscal independence controlled only by the people. This position is based on the belief that educational matters should be decided by the boards to which the State and the people have delegated this special function. The association is of the opinion that the presence of any noneducational authority standing between the local board of education and the people makes it extremely difficult if not impossible for the board of education to fulfill its responsibilities.

17. Federal and State support: Realizing that, under present tax structures, resources for local school purposes are woefully inadequate for quality school programs in many areas, and observing that recent events make it more clearly apparent that public education is essential to national strength, security, and welfare, the American Association of School Administrators reiterates its belief that substantial financial resources available to the Federal Government should be made available for the support of public schools. Unprecedented increased enrollments and the need for additional staffs and new physical plants make it urgent that greatly increased funds be made available for education in the immediate future. The association therefore urges that State legislatures and the Congress of the United States at once make major appropriations to strengthen the general programs and facilities in the public tax-supported schools and colleges.

Until such time as these appropriations are forthcoming, the American Association of School Administrators strongly urges the Congress to provide the necessary appropriations needed for the continuance of exist-

ing federally supported programs in education.

The association expresses its sincere appreciation to those Members of the Congress, of State legislatures, and other officials at all levels of government who have consistently sponsored and supported legislation for the improvement of financing public education.

18. Use of public tax funds: The association again expresses its opposition to use of funds collected by public taxation for nonpublic elementary and secondary schools, whether intended to strengthen or support teaching, scientific training, or school facilities.

19. Student and teacher exchange programs: The association is highly gratified with and lends its full support to arrangements for the exchange of teachers, students, and administrators with other countries. To foster international understanding, the association urges its members to seek the benefits resulting from exchange of teachers and students by making arrangements for such exchanges in local school systems.

20. Research: The association recognizes the great interdependence of research and technology and firmly believes that basic research and its application must evolve concurrently if further progress is to be made in an increasing number of fields. To this end the association urges the Federal Government, institutions of higher education, State departments of education, individual and combinations of local school districts, and foundations to give continuing and increased concern to this great need in education and to allocate the finances and personnel needed to further educational research and its utilization.

21. Kindergartens: In view of the need for constantly improving the quality of public education at every point, the association reaffirms its belief that the kindergarten level is an essential and integral part of the community's educational program.

22. Public education beyond the high school: As the economic, social, and technical aspects of our civilization become broader, deeper, and more complex, it becomes increasingly imperative that we both intensify the preparation of all citizens and extend the opportunities for additional education to increasing proportions of our total population. The American Association of School Administrators urges the continued expansion and rapid development of 2-year public junior colleges, community colleges, or other similar public post high school educational opportunities, and further recommends that vigorous measures be taken to continue to improve the quality of existing programs.

23. Adult education: The American Association of School Administrators believes that a comprehensive and diversified educational program for adults should be an integral part of every school system. To this end the association recommends and strongly urges local and State boards of education to make provisions for educational opportunities at the adult level for all who desire and can profit from such experiences.

24. W. K. Kellogg Foundation: The American Association of School Administrators expresses its sincere gratitude and stands in great debt to the W. K. Kellogg Foundation for its generosity, its foresight and planning, and its valuable guidance through the cooperative program in educational administration and presently through the Committee for the Advancement of School Administration.

25. National Congress of Parents and Teachers: The association pledges anew its trust and confidence in the National Congress of Parents and Teachers, and again expresses its admiration and gratitude for the splendid efforts that great association has made toward improving public education. In support of these efforts, boards of education are urged to make school facilities readily available to local parent and citizen school groups.

26. National School Boards Association: The association recognizes the outstanding educational leadership of the National School Boards Association and offers full cooperation to that organization in its efforts toward improving the public schools of this country.

27. U.S. Office of Education: A strong and effective U.S. Office of Education, sensitive to the needs of education throughout the Nation, is an essential part of the educational picture now and in the future. We commend the many improvements which have been made in the operation of this governmental function. We consider it imperative that the Federal Government establish conditions and provide funds adequate to employ educational leadership of the highest professional competence.

James H. Corson, *Chairman;* Walter A. Anderson, Robert R. Ashworth, Samuel M. Brownell, Jim Cherry, William H. Flaharty, Frederick W. Hill, Carl Jensen, Kermit A. Johnson, Robert H. Johnson, Everett Keith, Robert E. Lucas, Charles L. Mills, Robert D. Morrow, D. Ross Pugmire (deceased), F. L. Schlagle, William H. Soule, G. E. Watson, E. Davis Woodbury.

THE PLATFORM OF THE AMERICAN ASSOCIATION OF SCHOOL ADMINISTRATORS AS REVISED BY A SPECIAL COMMITTEE AND ADOPTED BY MAIL BALLOT OF THE MEMBERS IN DECEMBER 1951

Preamble: As citizens of the United States of America, we cherish our heritage of freedoms and government under law as expressed in the Declaration of Independence and the Constitution. We regard our freedoms as a sacred trust which imposes upon each of us an obligation to help build a society in which respect for the individual is recognized as the basis of all human rights. In such a society opportunity is provided for the advancement of the political, social, economic, educational, and spiritual welfare of all its citizens. In the belief that universal, free public education provides the principal means for the achievement of these ends by the individual and by the Nation, we—the members of the American Association of School Administrators—pledge ourselves to the support of the program and principles contained in this platform.

A. As citizens of the United States of America we believe—

1. That the maintenance and extension of the basic principles of our American democracy, including individual freedoms and human rights, are essential to us and to the world for the solution of social, economic, and political problems.

2. That peace which preserves our freedoms and our democratic way of life is a requisite to all other qualities of individual and group welfare.

3. That education is the greatest constructive force at the disposal of democratic peoples for the solution of their problems.

4. That every privilege in a democracy must be matched by an equal responsibility.

5. That our traditional policy of separation of church and state is essential to our American way of life.

6. That expanding and unlimited sources of nuclear power are one of the most significant developments of our age for the welfare of mankind.

7. That the strength of the Nation will depend upon the conservation and intelligent development of our human and natural resources.

8. That progress in our social, economic, and political life must keep pace with changes in our material and technological environment, such progress can result from a better program of education and spiritual growth.

9. That the United Nations needs and should have the support of every citizen.

B. As educators we believe—

1. That the purpose of education in the United States of America is the development of each individual for the fullest participation in the American democratic way of life.

2. That universal free education must be made available by and to all peoples in the interests of world understanding, citizenship and peace.

3. That the American democratic way of life may be perpetuated.

(a) Through universal free education fitted to the abilities, interests, and needs of each person and of the society in which he lives; and

(b) Through teaching the individual how free America permits him to choose and plan his own goals, provides him increasing equality of opportunity to reach these goals, allows him to keep the rewards for his work, and matches these privileges with serious duties of citizenship.

4. That the school program should emphasize the worth and dignity of all essential work.

5. That the quality of education will be determined principally by the quality of the persons who teach.

6. That the structure of American school systems should be adaptable enough to meet the educational needs of a changing society.

7. That the total educational experience of each individual must be designed to contribute to the development of effective ethical character.

8. That spiritual, social, civic, economic, and vocational competencies are as important as academic literacy.

C. In order that these principles may be realized in our society, we as school administrators propose to work for—

1. Professionally competent administrative leadership, dedicated to the service of good teaching in every community.

2. The recruitment, preparation, and in-service growth of outstanding individuals as teachers, administrators, and other professional workers to assure good teaching.

3. Salaries and conditions which will attract and retain good teachers.

4. A curriculum which includes teaching the background of the thinking of our Founding Fathers, so that pupils may have a thorough understanding of the intent and possibilities of our form of Government for the individual and society.

5. Smaller classes, more attention to each individual, and more adequate materials and equipment—thus providing a better educational program for each child.

6. Wide sharing with teachers and lay groups in the cooperative formulation of educational policies and programs on local, State, and national levels.

7. An extended use of all school facilities for educational and recreational purposes.

8. School districts large enough to meet modern educational needs effectively and economically.

9. A program of joint lay and professional activities which will lead to an intelligent appreciation of the work and needs of the schools and to the development of ways and means of meeting those needs.

10. Complete fiscal independence of local boards of education.

11. Federal aid for operating and providing facilities for publicly supported and controlled schools, administered, without Federal control, through the U.S. Office of Education and State departments of education.

## Victims of Charity

EXTENSION OF REMARKS
OF
## HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, March 13, 1959*

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

VICTIMS OF CHARITY

(By Dan Wakefield)

"Charity," the speaker said, "begins at home."

The hall, full of some of our affluent era's most underpaid and poorly benefited workers, clapped and cheered. They are workers who commonly average $34 a week, without unemployment and disability benefits, without union representation, and in some cases, with a 6-day week. They are waging a large-scale battle now against one of New York City's most useful and important instruments of charity—the voluntary hospitals, supported mainly by private philanthropy. That philathropy is not their benefactor, but their boss. In the kind of wages it pays, it has driven many of its workers to seek extra help from the public welfare agencies of the city and State. Such are the tangled curses and blessings of our affluent society.

Until last year, some 30,000 men and women who have now been tagged as "New York's forgotten workers" were quietly toiling away in the city's 81 voluntary hospitals with wages and benefits—or lack of benefits—that made even most of the exploiting employers who operate in conjunction with the "racket unions" seem rather progressive. But the hospital-employer was breaking no law, indulging in no sort of labor-racket trickery, and sweating no personal profits from the lowly-paid workers. Because of their status as charitable, nonprofit institutions, the voluntary hospitals are excluded from jurisdiction under the Taft-Hartley Law and the State Labor Relations Act, and are exempt from unemployment and disability payments.

A comparable situation exists throughout the United States in voluntary hospitals, which make up a vital part of the Nation's health service. There are three main types of hospitals, based on their means of support: City and State, voluntary, and private. The first type is supported by city and State funds; the voluntary hospitals are subsidized mainly by religious institutions or by contributions from private philanthropic agencies (for instance, the Federation of Jewish Philanthropies, which helps support Mount Sinai and Montefiore in New York City) and individual and family money (for instance, support from the Winthrop and Vanderbilt families of New York Hospital); the proprietary or private hospitals are privately owned and, unlike the others, operate on a profit basis. The private hospitals are usually smaller institutions, ranging from 20–120 beds, but there are a number of them, and it is estimated that they employ around 12,000 workers in New York City. But the much larger voluntary hospitals, numbering 81 in New York City and employing roughly 30,000 workers, rank with the city-supported hospitals in total number of beds. The city hospital employees have been organized by the State, County, and Municipal Employees, and a Teamsters Union local, but until the last few months, all efforts had failed to launch a large-scale organizing drive among the underpaid workers of the voluntary hospitals.

Except for a few abortive efforts during the massive CIO drives of the thirties, unions had largely left these hospitals alone. The thousands of workers required to run them had been forgotten by unions, employers, and public alike. But within the shining walls, beneath the highly paid and always short supply of doctors, beneath the efficient squadrons of Florence Nightingales (also short in supply, and organized into a professional nurses' group, though not a union) there have simmered in silence the thousands of nonprofessional and nonprotected workers whose daily tasks are essential for the hospital's maintenance. They are cooks and dishwashers, nurse's aids, and lab technicians, janitors and clerks, plumbers and laundry workers. In New York City, most of them are Negro and Puerto Rican.

A citywide drive to organize these workers is boiling now under the leadership of the Retail Drug Employees Union, Local 1199 (an affiliate of the Retail, Wholesale, and Department Store Union). The local broke the traditional nonunion front of the voluntary hospitals last December with a decisive 628–31 representation vote at Montefiore Hospital, climaxing 8 months of organizing activity. Up till that time, the only voluntary hospital in New York City that had recognized a union was Maimonades, which had been passed on to local 1199 of the Retail Drug Employees by the Teamsters several years ago. Local 1199, which was born in the thirties, has organized 85 percent of the city's pharmacists, a total of about 6,000 workers. Now it has decided to try to extend the single voluntary hospital group it already has in the fold into a wide-scale movement that will crack the whole nonunion policy of these institutions.

The crack at Montefiore resounded through the New York City press with a long belated discovery of the forgotten workers in the voluntary hospitals. When Montefiore recognized the union, the New York Times editorialized:

"Montefiore President Victor S. Reisenfeld and President Leon J. Davis of local 1199 deserve public applause for having settled their dispute * * * With City Labor Commissioner Felix they can take great satisfaction for having jointly blazed a trail that looks as if it will be widely followed."

Local 1199 jumped into this clearing in the woods with everything it had, and shortly after its December victory at Montefiore was distributing cards and leaflets at 41 of the city's 81 voluntary hospitals. Meetings were scheduled nearly every night at the local's midtown headquarters for workers from hospitals all over the city. Requests for information grew—especially from Puerto Rican workers—as El Diario de Nueva York, the largest Spanish language daily in the city, published more stories and editorials on what it called La Cruzada de Local 1199.

La Cruzada in many ways is the only union-organizing drive of the fifties that the word "crusade," in any language, seems appropriate to attach to without provoking a tongue in the cheeks of the organizers, or a flush in the cheeks of the reporters looking on. To walk into one of these organizing meetings is to walk back into a time of the 5½- and 6-day week, the wages under a dollar an hour, the fears of firing from the boss for talking union, and the almost revival meeting enthusiasm of workers, suddenly awakened to a way out of their plight.

Last January, some 50 workers from Lenox Hill Hospital sat in a smoky meeting room at local 1199 and looked up, not toward a white-coated superintendent, but to an organizer in open-necked sport shirt and horn-rimmed glasses. He was telling them in firm, slow words, "It is no secret that till recently workers in this city felt a hospital job was one you come into, save a little, and go on. Everyone felt there was no future in hospitals. Now, for the first time, they know that if they organize well enough they can get decent wages and conditions until they can look on hospital work as a job where they can be treated as respectable human beings."

The organizer said that Lenox Hill, with a total of 600 workers, now had 200 signed up with the union; he asked the brothers and sisters assembled how the prospects looked for getting a majority.

A Negro lady from the nurse's aides' department spoke up to say: "We're doing pretty good in our department, but a lotta people are afraid—they think they're gonna be fired. And some of the nurses told the girls they shouldn't join a union because then the hospital would be like a business."

The others hooted, and one voice raised above the rest to say, "It's all right for the nurses to talk, they get plenty and they don't want us to get it."

A lady from the kitchen staff raised her hand and reported that "The ladies in the cafeteria say they get paid mostly by tips and the union cant' help them. One of the supervisors said the union can't help us, we'll still have to work no matter what the union does. Well, all I know is when I see those people making $32 a week I'm ready to join anything."

After most of the departments had reported their progress, and the organizer had answered questions and urged them on, a Negro organizer from the union staff got up to assure his people in the audience of the fair treatment they would get in this union. The union, he said, had no discrimination, and welcomed Negro people, Puerto Rican people, Jewish people. Later on, he asked how the Puerto Ricans were doing. A Puerto Rican boy rose to report with pride: "We signed up all the Spanish people in the kitchen but the cook."

The organizer smiled and said, "You fellas can do a good job, see, you can speak on the job and the boss don't know what you're talkin' about."

Before the questioning was over, there arose the problem that comes up in all these sessions—the balking of the white-collar and professional workers. Clerks and lab technicians don't fare much better than the other workers, but in the grand old tradition, attempt to supplement their income with pride through distinction from the masses. College-trained lab technicians usually make less than $50 a week in these hospitals, but along with the office workers, they are the last to accept the union. It was the constant task of the organizers to remind the other workers that the white-collar brothers and sisters usually didn't make enough to keep their collars white.

The Lenox Hill meeting was about to break up, with another scheduled for 2 weeks off, when a lady hesitantly raised her voice to ask what seemed a possibly embarrasing question: "Some of the ladies heard they have to pay dues and a big fee to get in the union, and I don't know what to answer 'em." It was the organizer's pleasure to assure the assemblage that "We're not asking hospital workers to give us one penny for dues or anything else—until the day we get a contract for them with better wages and conditions. Then, our dues are $3 a month; but the rest of our union has decided that the hospital workers are getting so little to begin with that they won't have to pay an initiation fee at all."

The audience applauded in relief and approval, and got up to file out the door, some of them stopping to pick up more cards for the continuing crusade. These smaller conclaves of organizing committees and department meetings, both at union headquarters, and at temporary halls rented out near the

larger and hotter hospitals of the campaign, had grown by the first week of February to rallies of hundreds of workers from hospitals that had reached a majority. By then, Local 1199 had rolled up majorities at four hospitals and claimed to be nearing the mark in several others. President Leon Davis of Local 1199 on February 4 sent letters to the directors of Mount Sinai and Beth David in Manhattan, the Jewish Hospital in Brooklyn, and the Bronx Hospital, announcing that a majority had been reached and requesting recognition and contract negotiations. He also announced that the union was approaching majorities at Knickerbocker, Lenox Hill, and Flower Fifth Avenue hospitals.

The Mount Sinai workers, who represented the largest of the bastions newly encircled by the union, met at 1199's headquarters on February 4 to hear new congratulations and exhortations. There to express the shame of neglect and promise of fulfillment from the city's organized labor movement was Morris Iushewitz, secretary of the Central Labor Union Council of New York, who admitted that the 30,000 unorganized toilers in the voluntary hospitals are the shame of the labor movement of this city.

Davis told the hall, packed with more than 300 workers from Mount Sinai, that they were finally making their way out of the wilderness: "I don't know of any organizing drive that took on the kind of crusading spirit that you have—it's taken exactly 3 weeks and 2 days to get the majority signed up at Mount Sinai. * * * This is the beginning of a new day—a new day of dignity and self-respect. The hospitals will never be the same and the workers will never be the same."

The audience was with it, and out of the rows came low "Umm-hmm"s of approval in the tone and cadence of the "Aaaamenn"s that rise spontaneously at revival meetings. "Yes, yes. * * * You said it. * * * Oh yes * * *" came from ladies swaying slightly back and forward in assent. The problem of the union was not so much to urge them on as to keep them in line.

"We must," said one of the organizers, "have discipline." He explained that some overzealous workers in the hospital had already broken ranks in private "strikes" of their own invention: "Last week a couple of people in oxygen decided to strike on their own—they just walked off the job, and now they're waiting to be called back. * * * A couple of others over at the animal house, in the lab, stopped working and started making demands. Well, we just can't do it that way."

Local 1199 has a specially sensitive responsibility in organizing the hospitals because of the obvious dangers involved in workers walking out of oxygen wards and surgery rooms. Such potential dangers have been major factors in keeping the hospitals a sacrosanct field long held untouchable by unions. The very phrase "hospital strike" sounds almost villainous. But local 1199 threatened just that at Montefiore—though of course with careful safety precautions that would keep essential functions going—and had even hired a strike hall before the last-minute recognition was granted. Davis has said that his union will use the strike, as a last resort, in fighting for recognition at the other hospitals. But at the meeting of the Mount Sinai workers, the union leaders repeatedly urged the group to have patience, and not to make any sort of move without consent from the union. The crowd listened to all these appeals for faith and patience, and at the end of the evening a man from the back of the hall got up to ask the first question: "When," he asked, "are we going to strike?"

After their long sleep, the hospital workers have awakened with impatience and outrage. There is still a long way to go before the traditional nonunion front of the voluntary hospitals is broken, but the first break has come and thousands of workers are knocking at the white-painted walls. Already a major step toward better conditions has been brought about by the union drive through a $12 million increase in the city's payments to voluntary hospitals, announced last month by the mayor. The city contributes $16 a day for each ward patient in the voluntary hospitals, but the cost of maintaining these patients is $25 a day. The new grant will mean an increase to $20 a day for each ward patient, effective July 1; and in 3 more years the grant will rise to $24 a day. It has been the argument of the nonprofit voluntary institutions that they already operate at a deficit, and can't afford to increase workers' wages. The union can now point to the increase as a source to be used for this purpose.

The tide that is running now in New York will also inevitably seep into the hinterlands. Only in California are other voluntary hospitals organized, but the precedent in New York City will probably shake the customs across the country. The last of the "forgotten workers" seem finally launched on the crusade that most of their brothers performed in the thirties. The rhetoric of battle is nearly the same, but in our complex era of affluence these underprivileged workers are not the victims of profiteers, but of charity.

---

## "Painter's Self-Portrait"

EXTENSION OF REMARKS
OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. DINGELL. Mr. Speaker, I take pleasure in joining with my friend, Mr. Philip Slomovitz, the distinguished editor of the Detroit Jewish News, in honoring one of the great leaders of our country, the eminent lawyer, Mr. James N. Rosenberg, of New York.

Mr. Slomovitz, in his nationally syndicated column "Purely Commentary," commented on Mr. Rosenberg's book, "Painter's Self-Portrait." In his article, Mr. Slomovitz wrote:

Every lover of art and all who are interested in the highlights of American history, especially the major incidents relating to the Jewish communities, should read Louis N. Rosenberg's "Painter's Self-Portrait" and should make a study of his great number of drawings and paintings, many of which are reproduced in this volume.

PURELY COMMENTARY—MAJOR EVENTS OF THE CENTURY EVALUATED IN JAMES N. ROSENBERG'S "PAINTER'S SELF-PORTRAIT"

(By Philip Slomovitz)

Mr. Rosenberg deals with many problems. His reminiscences serve as warnings to the complacent not to be fooled into believing that all traces of anti-Semitism have disappeared. They admonish us never to forget the Nazi holocaust. They remind us of the days when anti-Semitism was rooted in social life in our colleges and was rampant in fraternities.

A very successful lawyer, Mr. Rosenberg, who is now in his 85th year, practiced his profession during the day and painted at night. He devoted his vacations, his weekends, his free days, to art.

Many of Mr. Rosenberg's works are now in the Metropolitan Museum of New York, in the Museum of Fine Arts of Boston, in the Fogg Art Museum of Harvard University, in the New York Public Library, in the Smithsonian Institution, in the U.S. State Department, in the Cleveland Museum of Art, in the Georgia Museum of Art (Athens, Ga.), in U.S. Embassies, in many other national galleries here and abroad, and in many private collections, including those of the Herbert Lehmans.

The rise of Hitlerism and the consequent Nazi horrors inspired the Rosenberg art works which will remain indelibly in the art world's history. Mr. Rosenberg's evaluation of Hitler, in "Is This the Man That Made the Earth to Tremble?" in his Ironism series (Pastel, 1944), is a historic document. So are a number of others which the eminent artist was moved to draw and to paint as an expression of protest against the terror that gripped the world.

He befriended Sholem Asch and David Ben-Gurion and drew impressive portraits of them.

His "Peace on Earth," a Hanukah-Christmas montage, is exceptionally interesting. He specialized in landscapes, and he also revealed his moods in various paintings that were the results of historic occurrences in his 50 years' activities as a painter.

The value of "Painter's Self-Portrait" as a great human document is evident in many of its aspects. Mr. Rosenberg, hailing from a religious background, was raised in a rather un-Jewish environment. He was born in Allegheny City, Pa., November 20, 1874; his grandfather, Louis Naumburg, who reached the ripe old age of 87, was cantor, and officiated as rabbi of Rodeph Shalom Synagogue in Pittsburgh; but when his family moved to New York in 1879, his "parents forsook the strict rituals of orthodox Judaism, joined the Ethical Culture Society, headed by Felix Adler," and James N. Rosenberg attended ethical classes. But in the course of time, in college and elsewhere, experiences brought him to an awareness that he was a Jew.

Mr. Rosenberg might have become a Detroiter. He relates, after accounting for his early law practice and his association with the late Abram Elkus (who later was U.S. Ambassador to Turkey).

"In 1912, when I was 38, there came to me the U.S. Motor Receivership. This was my big-best case up to that time; it was presided over by Judge Hough. When its reorganization in 1913 created the Maxwell Motor Co.—now Chrysler—George W. Davison, chairman of the reorganization committee, invited me to abandon the law, move to Detroit (at a large salary and a stock of bonus), and become the company's head. This was another of those crucial moments which make or mar a man. What, I wonder, would have happened had I accepted that tempting proposal to become an industrial leader? Success or failure? Leader? Or slave? I declined the offer. Somehow, I had the sense to realize that to accept would have meant farewell to the kind of life I wanted to lead."

The question often is asked in our community: Why weren't there Jews in the pioneering automobile industry in Detroit? There was one such pioneer: the late Bernard Ginsburg (father of Mrs. Golda Krolik), whose truck manufacturing venture was short lived. Had Mr. Rosenburg come here, a different story might have been recorded.

In his self-portrait, however, he does relate his numerous successes in law, the friendship that was established with Judge Hough after he had won a case, as a young practitioner, against the veteran, eminent lawyer, Max D. Steuer.

But he had a special love—for art—for which he finally forsook his lucrative law practice 12 years ago—and his motivation, in refusing the tempting Maxwell offer, is understandable.

He begins his narrative of his Jewish activities in a chapter in his book under the heading "Another World." In it he tells of the meeting with Felix M. Warburg and the invitation that he go to Russia to work for the American Jewish Joint Distribution Committee. It led to his friendship and his joint activities with the great Jews of his day, with Louis Marshall, Warburg, Justice Louis D. Brandeis, Judge Julian W. Mack, Cyrus Adler, Herbert H. Lehman, and many others.

He assisted in the formation of the Jewish Agency in Zurich, in 1929, went to Palestine and later to Israel, cooperated in major movements for rehabilitation of suffering Jews. He was the coworker with Dr. Joseph A. Rosen in the Agrojoint (American Jewish Joint Agricultural Cooperation) which established self-supporting colonies for 300,000 Jews in the Crimea in Russia, and he had occasion to meet with Stalin and to confer with Soviet leaders. During World War II these colonial settlements were completely destroyed. It is one of the tragedies of our time referred to in Mr. Rosenburg's accounts of his Jewish activities.

There is much—very much—more that can be said about Mr. Rosenberg, and a great deal that is worth quoting from it. One additional incident must not be overlooked. He went to Berlin, in the course of his agrojoint mission, and he tells this story:

"A dinner party was given for me at the splendid Wahnsee home of Lola Hahn, glamorous daughter of Felix Warburgh's brother Max. There I met some 20 topmost German Jews, who were eager to know about the Crimean work. Albert Einstein was one of the guests.

"When the time came for me to speak, I dealt but briefly with the Crimea and turned to another topic. This, be it remembered, was 1926. Taking a magazine called Bren Essel (Nettle) from my pocket, I told how by chance I had picked up that savage anti-Semitic journal at the Berlin railway station. Pointing to hideously offensive caricatures of some of the very men who sat at that dinner table and to inciting libels against them, I asked what was being done to stop Hitler. They listened tolerantly to this ignorant American and assured him that Hitler was just another one of those harmless demagogs who from time to time rose briefly to the surface and soon vanished. Germany, they told me, suffered no such anti-Semitism as did we of the United States of America. They were members of some of Germany's most exclusive clubs. Einstein's warnings were heeded no more than were mine. Who can blame them?"

At this point your commentator couldn't avoid recalling the activities of the late Rev. Dr. Leon M. Birkhead. He was a Christian minister in Kansas City, Mo., and had gone to Germany on a vacation in the early 1930's. There, by chance he visited a book exhibit. It was a display of anti-Semitic literature arranged by Streicher, and the sponsors of the exhibit indicated that most of the tremendous mass of hate literature was published in the United States. Our good friend Birkhead began to wonder: Was it possible that such vile, hate-inspiring pamphlets could find sponsors in his own country and he was unaware of it? He returned to this country, began to study the situation, learned of the extent of bigotry, became acquainted with the growing anti-Semitic movement, and he gave up the ministry to devote himself to the fight against bigotry. His movement, "Friends of Democracy," made great headway in warding off mounting prejudices in our land.

This is the story of a great book and a great man. It keeps us fully aware of what had happened to us and to our people in this and the last generation. It admonishes us to be on guard against the inroads of bigotry into our civilized democracy.

It reminds us of the immense philanthropic efforts of Mr. Rosenberg's contemporaries, and, above all, it causes us to sit in admiration for a man who was so socially minded, who was great in his profession—the law—and who, at 84, remains a keen observer, a sensitive artist, a dedicated fighter against all types of prejudices, a remarkable Jewish leader.

"Painter's Self-Portrait" by James N. Rosenberg assumes one of the most cherished spots in our bookshelves.

## Now Castro Faces the Harder Fight

EXTENSION OF REMARKS
OF

## HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Friday, March 13, 1959*

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the magazine section of the New York Times, March 8, 1959:

NOW CASTRO FACES THE HARDER FIGHT

(By Herbert L. Matthews)

HAVANA.—The dawn of February 17, 1957, in a sunless jungle grove of Cuba's Sierra Maestra was a bare lightening of the gloom and wetness. A week of cloak-and-dagger negotiations in Havana, an all-night drive to the eastern end of the island, the tricky penetration of the army cordon at the foot of the mountains the next evening, the long, slippery climb in the dark after midnight, the 2 hours of welcome sleep on the ground in the rebel outpost—all this had now led to the anticipated moment.

A swift crackling of branches and leaves, a sweeping commotion as if a sudden gust of wind had hit us, and there was Fidel Castro. His younger brother, Raul, was with him. So were Vilma Espin, now Raul's wife; Haydee Santamaria, wife of the present Minister of Education, Armando Hart; Celia Sanchez, still Fidel's faithful companion. In the encampment were Ernesto (Che) Guevara, the Argentine doctor; Juan Almeida, the Negro who was to become an outstanding column leader; Camilo Cienfuegos, now Cuban Chief of Staff; Faustino Perez, Minister of Recuperation in the present government; Frank Pais, who was killed.

All these names will go down in Cuban history, and that meeting in the Sierra Maestra was, too, in its way to make Cuban history when the story was published in the New York Times a week later. The Government of Gen. Fulgencio Batista had given out that Fidel Castro was dead and Batista himself believed it.

I was talking to a hunted man, so closely pursued by army troops that all of us had to speak in whispers. My guess, at the time, was that Fidel Castro had 300 or, at most, 400 men. General Batista had an army of 30,000 using the latest American equipment, as Castro pointed out bitterly. It seemed safe enough for me to write that the rebels were invincible, given the impregnability of the Sierra Maestra and their fighting spirit. But their position was essentially defensive and could not have been further from the seat of power in Havana.

For 3 hours we sat there in the semigloom while Fidel talked in a passionate whisper of the hopes, dreams, and ideals he had. A conversation with Fidel Castro, as everyone has discovered lately, is something of a monologue on his part. Words flow like a torrent.

This much was certain: Here was a powerful personality, a powerful physique. Passionate convictions and courage were also obvious enough. The intelligence had a quality of youthful brilliance—cocksure, dogmatic but untrained, inexperienced, a bit fuzzy. The ideals were admirable, but there was no apparent conception of how difficult it is to put such ideals into practice. The ignorance of economics was notable.

Castro had to be conceded a good chance of victory even then, presuming he was not going to be killed, leading his men—as he always did. Anyone knowing the situation in Cuba at that time realized how overwhelming was the popular antagonism to the Batista dictatorship, which meant that Fidel Castro was not fighting alone. Clearly, he was going to be the symbol and rallying point for the opposition. But what a long distance Havana was from the Sierra Maestra.

Exactly 2 years later, the two of us were together again, in his new house at Cojimar, outside Havana. In those 2 years the hunted, besieged little group of rebels had swollen to thousands of effective fighters. They had spread out over Oriente Province in the east and gradually worked westward.

Popular support grew steadily, as General Batista met the threat and the attacks of the opposition with counterterrorism. Cubans now estimate as many as 20,000 civilians were killed by the Batista regime, many or most after torture. By late 1958, the sugar crop, on which Cuba lives, was seen to be in danger. The war moved closer, and when Santa Clara, 150 miles from Havana, fell, Batista gave up and fled, on New Year's Day.

Now Batista was in exile in the Dominican Republic. Late the night before my visit, Fidel Castro had been sworn in as Prime Minister of Cuba. "This is slavery," he exclaimed. "If I were a king, I would abdicate in favor of my nephew."

I had spoken to him three times in the wild, exultant first days of his victory. Six weeks had since passed. The excitement was over. The dreams had turned into harsh realities. For 4 afternoon hours, sometimes surrounded by his barbudos (the bearded ones who fought with him in the Sierra) and by the women who were looking after him, but mostly alone with me indoors or strolling around the grounds of his house, he talked and occasionally listened.

Standing or sitting, he gets right up close. He cannot bear to sit even 2 feet from the person he is talking to. His face is inches away; his dark rich brown eyes are hypnotic in their intensity; one or both hands are on your shoulders or knees and the flow of words comes with such animation and fervor that it is hard to keep one's mind clear to argue or even grasp what is saying.

The ideals he was expounding now were just the same as 2 years before, only better formulated. He looked the same in his famous fatigue uniform of green khaki and the peaked kepi that he kept on his tousled brown hair indoors and out. Around his neck was a small gold religious medallion on a gold chain which he chewed on now and then, as he did the end of his straggly beard. His one touch of luxury was an expensive gold wrist watch on a wide gold band.

Watching him so closely all afternoon made nonsense of a rumor (bola is the Cuban word) that is current in Havana, which is that he keeps going on benzedrine or some similar stimulant. Apparently it is hard for some to understand how otherwise he can work so feverishly for 20 or 21 hours a day, every day without a break. But the answer is simple: he has the build of a professional football player and the strength of a bull.

To complicate the metaphor, he eats like a horse. Soon after striding into his house—and he does stride rather than just walk—he packed away a lunch that would have satisfied three ordinary men. Miguel, his little Negro barbudo cook from the Sierre Maestra, is still with him and still "boiling things," as the disapproving women remarked. Celia

Sanchez supervised the huge meal and improved on Miguel's simplicities.

Fidel (no one ever calls him anything else in Cuba) obviously arouses all the maternal instincts in women. The only time he kept quiet all afternoon was while he downed his food at the kitchen table and the women chattered at him. Whether he listened was problematical.
